About This Manual

Printable View (12 KB)

Introduction

In response to feedback from technicians, Ford Motor Company has designed this manual in a more user-friendly format, which will allow quicker access to needed information to make repairs.

A comparison of numerous manufacturers' manuals was done, and a list of recommendations was given. A number of test sections were developed and presented to technician focus groups to get feedback on the recommendations. The recommendations that are being incorporated into this manual include:

- The addition of a "Component Location" view at the beginning of each section to assist in locating components on the vehicle.
- The "Specifications" tables moved to the beginning of the section to make them easier to locate.
- The addition of more theory of operation within Description and Operation.
- The addition of "Connector Circuit Reference" tables to Diagnosis and Testing as a reference point for any connectors tested within pinpoint tests.
- Reformatting pinpoint tests to make them easier to use, including "Normal Operation" and "Possible Causes" explanations before the first step.
- Listing any Special Service Tools, General Equipment and Materials at the beginning of each procedure to better prepare the technician.
- Using exploded views to better aid in Removal and Installation procedures. For further information, refer to How To Use This Manual in this section.
- The addition of the "Component Step Table" when there are multiple serviceable components included in a procedure.
- Using two-column format to reduce the physical size of the manual.

To make it easier to locate information, we have consolidated several small sections into a single section. Those sections are:

- 204-00 Suspension System (now includes front suspension, rear suspension and wheels and tires).
- 205-00 Driveline System (now includes driveshaft, axle and halfshafts).
- 206-00 Brake System (now includes front brakes, rear brakes, caliper, brake booster and parking brake).
- 211-00 Steering System (now includes steering gear, pump, linkage, column and column switches).
- 303-01 Engine (now includes accessory drive and emission controls).
- 303-04 Intake Air, Fuel Charging and Engine Electronics (now includes intake air, fuel charging, starting system and electronic engine controls).
- 307-01 Automatic Transmission/Transaxle (now includes cooling and external controls).
- 310-00 Fuel System (now includes tanks, lines, pump, filter, pedal and linkage and evaporative emissions).
- 412-00 Climate Control System (now includes air distribution, heating, air conditioning, auxiliary climate control and control components).
- 413-00 Information, Gauge and Warning Devices (now includes illumination, cluster, horn, clock, message center, warning devices, and parking aid).
- 414-00 Battery and Charging System (now includes battery and generator).
- 415-00 Entertainment System (now includes all video and audio components).
- 418-00 Module Communications Network (now includes all module diagnostics and configuration).
- 419-02 Electronic Features (now includes remote convenience, telematics, cell phone, navigation and compass).

- 501-00 Body System Exterior (now includes body panels, exterior trim, mirrors, glass, bumpers and wiper system).
- 501-01 Body System Interior (now includes interior trim, instrument panel and console and roof opening panel).

Replacement Parts

Ford and Motorcraft products are replacement parts made to the same exacting standards as the original factory-fitted components. For this reason, Ford Motor Company recommends that you use only genuine Ford or Motorcraft replacement parts.

Important Safety Instructions

Printable View (10 KB)

Appropriate service methods and correct repair procedures are essential for the safe, reliable operation of all motor vehicles as well as the personal safety of the individual carrying out the work.

This manual cannot possibly anticipate all such variations and provide advice or cautions as to each. Anyone who departs from the instructions provided in this manual must first establish that they compromise neither their personal safety nor the vehicle integrity by their choice of methods, tools or parts.

Warnings, Cautions and Notes

⚠ WARNING: Warnings are used to indicate that failure to follow a procedure correctly can result in personal injury.

⚠ CAUTION: Cautions are used to indicate that failure to follow a procedure correctly can result in damage to the vehicle or equipment being used.

NOTE: Notes are used to provide additional essential information required to carry out a complete and satisfactory repair.

As you read through this manual, you will come across WARNINGS, CAUTIONS and NOTES. A warning, caution or note is placed at the beginning of a series of steps if it applies to multiple steps. If the warning, caution or note only applies to one step, it is placed at the beginning of the specific step (after the step number).

How To Use This Manual Printable View (250 KB)

Manual Structure

This manual is structured into groups and sections, with specific system sections collected together under their relevant group.

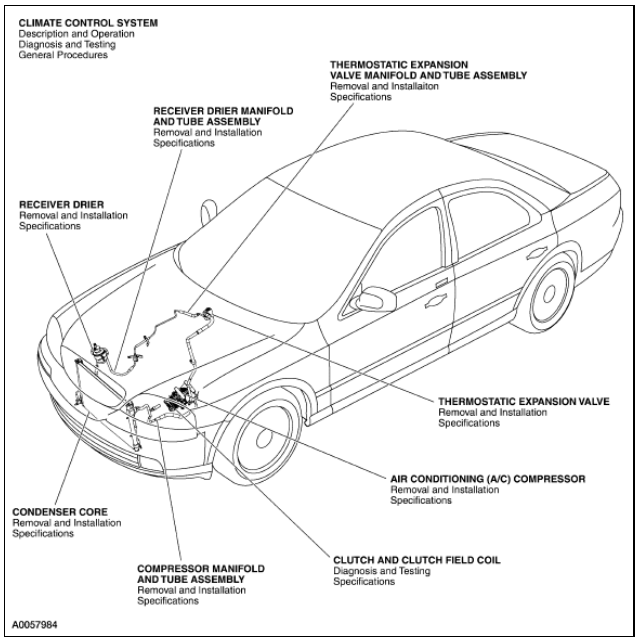
A group covers a specific portion of the vehicle. The manual is divided into five groups: General Information, Chassis, Powertrain, Electrical and Body and Paint. The number of the group is the first number of a section.

The Table of Contents at the beginning of the manual lists all sections available. Each section has a table of contents listing all procedures for that section.

Component Location Index

Each section begins with an illustrated component location index, which is a vehicle silhouette with a callout pointing to a component. Each callout lists the CD version hyperlink to the section that includes information about that component.

Component Location Example



Repair Procedure

The repair procedures in this manual include the following:

1. Special service tools, equipment and materials tables, which list all of the special tools and materials needed for the repair.

2. Introductory steps, which list any vehicle setup or steps required to clear the way for the repair.

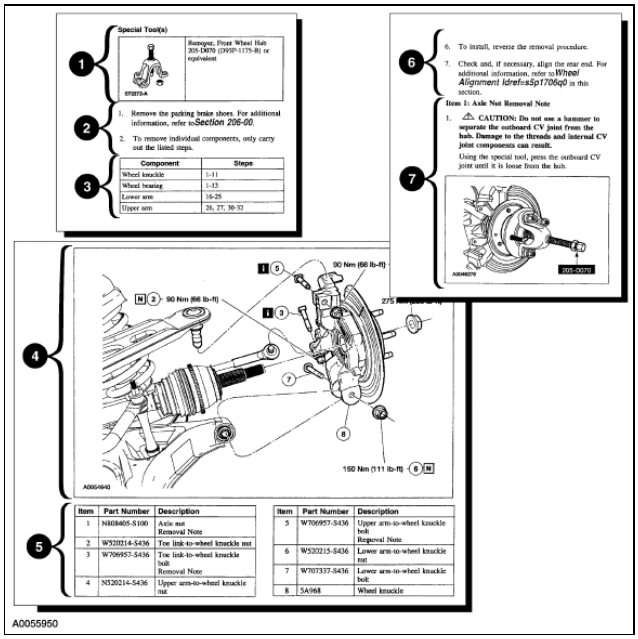
3. The component step table, which lists the specific steps to remove and install selected parts.

4. The overview illustration, which identifies the parts and shows how they fit together. This illustration also shows tightening torque, special tools, lubricants and sealants, and parts that must not be reused. Additionally, this illustration refers to important step details. Refer to these details when servicing the related part.

5. The overview illustration parts list table, which identifies the base service part number and the names of all parts in the procedure.

6. The steps after installation, which identifies the need to fill and bleed, top off fluids, or other steps required to complete the repair.

7. Important step details, which provide additional written instructions for those removal and installation steps that must be methodically carried out.



Item	Description
1	Special service tools, equipment and materials table
2	Introductory steps
3	Component step table
4	Overview illustration
5	Overview illustration parts list table
6	Steps after installation
7	Important step details

Icons

There are ten symbols indicating oil, grease, sealant, visual inspection, use of special service tools and removal and installation details. These symbols show the points of inspecting, applying or using such materials during service.

Symbol	Meaning
ST2680-A	Apply petroleum jelly
ST2681-A	Apply oil
ST2682-A	Apply fluid
ST2683-A	Apply grease
ST2677-A	Apply sealant
ST2679-A	Inspect
ST2676-A	Install new
ST2678-A	Use special tool
ST2674-A	Installation/assembly
ST2675-A	Removal/disassembly

General Standards

All left- and right-hand references to the vehicle are taken from a position sitting in the driver seat looking forward.

All left- and right-hand references to the engine are taken from a position at the flywheel looking toward the front camshaft pulley.

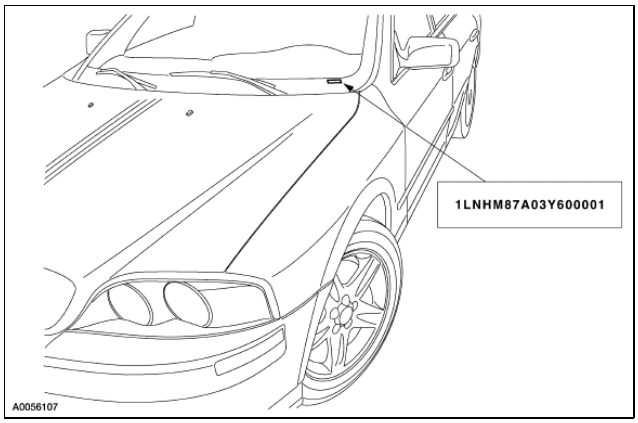
Where appropriate, instructions will be given for the use of Worldwide Diagnostic System (WDS), Ford Diagnostic System (FDS) 2000 or New Generation STAR (NGS) Tester diagnostic equipment.

Identification Codes

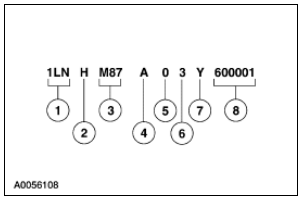
Printable View (391 KB)

Vehicle Identification Number

Vehicle Identification Number (VIN) Locator

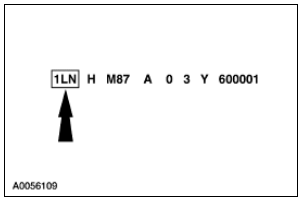


The vehicle identification number (VIN) is a seventeen-digit combination of letters and numbers. The VIN is stamped on a metal tab riveted on the instrument panel, top upper left of the dash. The VIN is also found on the vehicle certification (VC) label.



Item	Description
1	World manufacturer identifier
2	Brake type and gross vehicle weight rating (GVWR)
3	Vehicle line, series, body type
4	Engine type
5	Check digit
6	Model year
7	Assembly plant
8	Production sequence number

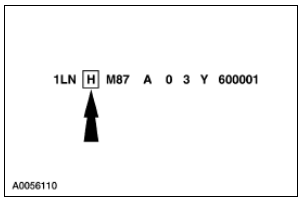
World Manufacturer Identifier



The first three vehicle identification number (VIN) positions are the world manufacturer identifier.

- 1LN Ford Motor Company Lincoln, USA, passenger car

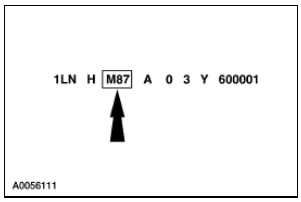
Vehicle Restraint Type



The fourth VIN position identifies the safety restraint system used.

- H Active safety belts (all positions) driver and front passenger air bags driver and front passenger side impact air bags

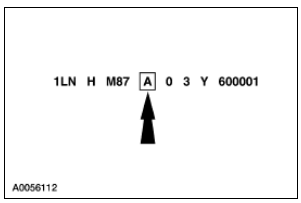
Line and Series



VIN positions five through seven indicate the vehicle line and series.

- M86 Lincoln LS six-cylinder, automatic
- M87 Lincoln LS eight-cylinder, automatic

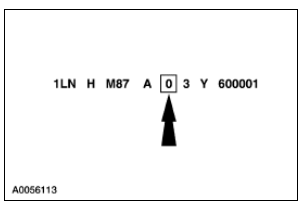
Engine Code



The eighth VIN position is the engine type (displacement and number of cylinders).

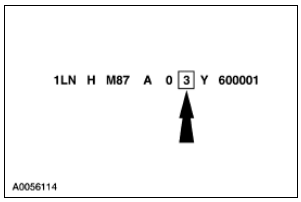
- A 3.9L, DOHC, EFI, eight cylinder
- S 3.0L, DOHC, EFI, six cylinder

Check Digit



The ninth VIN position is a computer generated check digit.

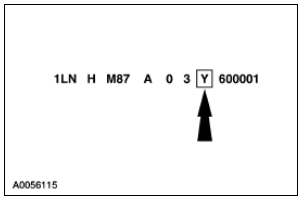
Model year



The tenth VIN position is the model year code.

- 3 2003

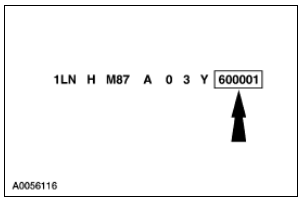
Assembly Plant



The eleventh VIN position is the assembly plant code.

- Y Wixom (Wixom, Michigan)

Build Sequence

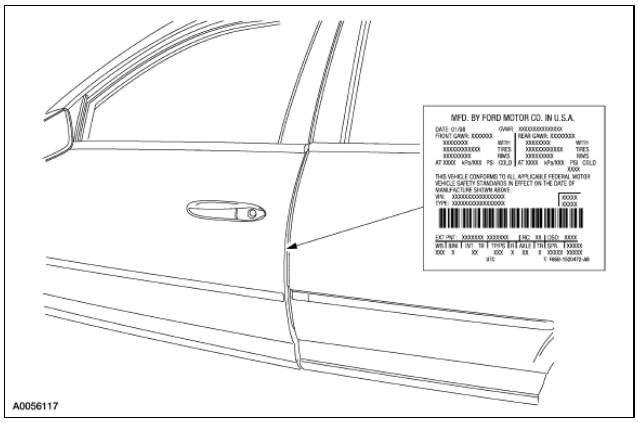


VIN positions twelve through seventeen are an alphanumeric code for the vehicle build sequence. This is also the vehicle serial and warranty number.

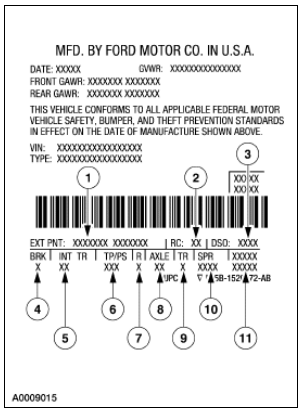
- Lincoln/Mercury begins at 600001

Vehicle Certification (VC) Codes

Vehicle Certification (VC) Label Locator

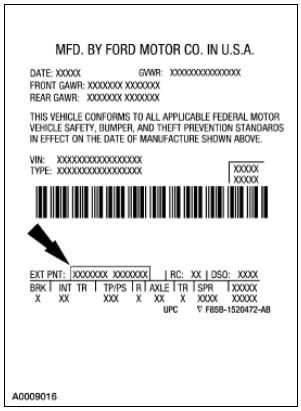


The vehicle (VC) label contains information on the manufacturer name, the month and year of manufacture, the certification statement and the VIN. This label also includes gross vehicle weight (GVW) information.



Item	Description
1	Exterior paint code
2	Region code
3	Domestic special order
4	Brake type code
5	Interior trim code
6	Tape/paint stripe code
7	Radio type code
8	Axle ratio code
9	Transmission code
10	Spring code
11	Powertrain calibration code

Exterior Paint

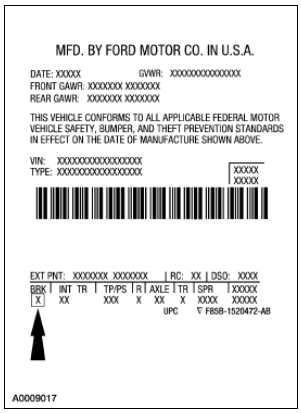


Exterior paint codes may be listed as a two-part code. The first set of characters listed indicate the vehicle primary body color. The second set of characters listed (if applicable) indicate a two-tone or accent body color. All codes are base coat/clear coat.

- BQ Light Parchment Gold
- DV Light Tundra
- F6 Ceramic White (tri-coat)

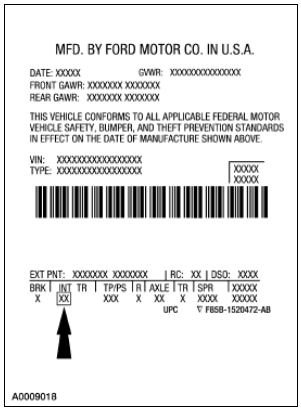
- GT Autumn Red
- HC Ivory Parchment (tri-coat)
- JP Silver Birch Metallic
- L2 True Blue Pearl
- P5 Aspen Green Metallic
- SP Medium Steel Blue
- TC Medium Charcoal Gray
- UA Ebony
- WF White Pearl (tri-coat)

Brake Type



- 3 Anti-spin Traction Control brake system
- 6 IVD brake system

Interior Trim



Interior trim codes are listed as a two-part code. The first character identifies the interior trim type. The second character identifies the interior trim color.

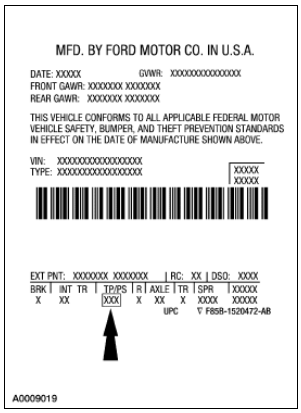
Interior Trim Type

- 4 G-Grain leather
- 6 Nudo leather

Interior Trim Color

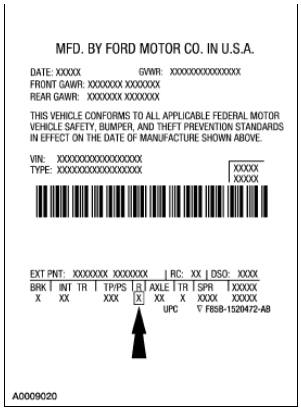
- E Espresso/Medium Light Stone
- M Dark Ash/Medium Ash
- W Black Ink

Tape/Paint Stripe



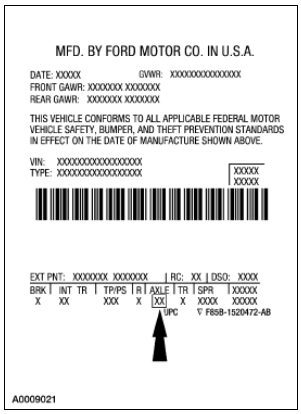
Tape and paint stripe codes do not apply.

Radio Code



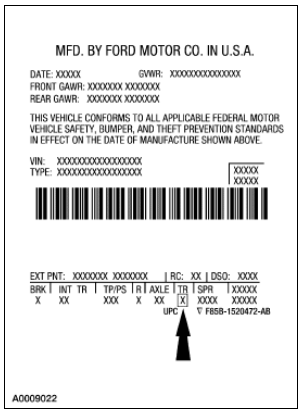
- 6 AM/FM stereo with cassette, compact disc (CD) player and clock
- 9 AM/FM stereo with compact disc (CD) player and navigation system
- X AM/FM stereo with compact disc (CD) changer (CDX6)

Axle Ratio Code



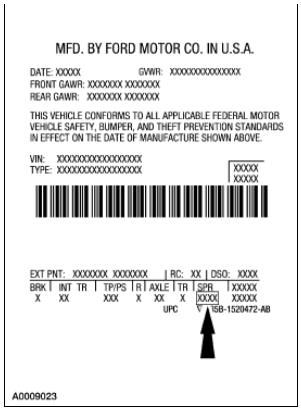
- 1 3.58 final drive ratio
- 3 3.07 final drive ratio

Transmission Code



- A Five-speed automatic overdrive, 5R55N

Spring Code



Spring codes are listed as a two-part code. The first character listed identifies the front springs. The second character listed identifies the rear springs.

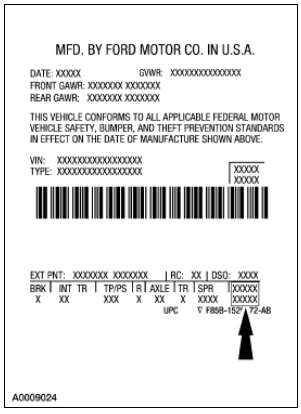
Front Springs

- Base part number 18B036

Rear Springs

- Base part number 18W002

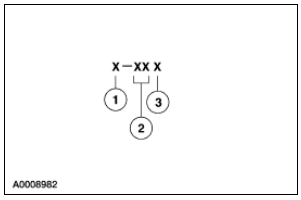
Powertrain Calibration Information



NOTE: Powertrain calibration information is limited to a maximum of five characters per line on the vehicle certification (VC) label. Because of this, calibration identification consisting of more that five characters will wrap to the second line on the VC label.

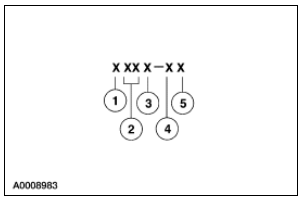
Powertrain calibration information is printed in the lower right corner of the vehicle certification (VC) label. Only base calibration information is printed. Revision levels will not appear, however, they can be found in On Line Automotive Service Information System (OASIS). For the current model year, Ford Motor Company is using three different protocols which describe powertrain base calibration. These protocols are designed to provide worldwide standardization for vehicle calibration. If the electronic calibration strategy was introduced in 1998 and carried into the current model year, Protocol 1 will be used. Refer to Protocol 1 below. If the electronic calibration strategy was introduced in 1999 and carried into the current model year, Protocol 2 will be used. Refer to Protocol 2 below. For electronic calibration strategy introduced in 2000 and beyond, Protocol 3 will be used. Refer to Protocol 3 below.

Protocol 1



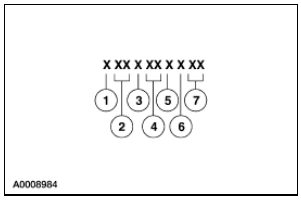
Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Engine code
3	Engine revision level

Protocol 2



Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Engine code
3	Transmission code
4	Emission standard (designates the specific country emission standard)
5	Design level (design level assigned to the engine)

Protocol 3



Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Vehicle code
3	Transmission code
4	Unique calibration (designates different hardware to similar vehicles). Example: tires, drive ratios, etc.
5	Fleet code (describes fleet to which the vehicle belongs). Example: 6 - evaporative emissions
6	Certification region (lead region where multiple regions are included in one calibration). Example: A - U.S. federal
7	Revision level (will advance as revisions occur). Not printed on label

Protocol 3

The following offers a more detailed explanation of the coding strategy used in Protocol 3.

Model Year
- 2 2002
- 3 2003

Vehicle Line
- LQ Lincoln LS

Transmission
- 1 Automatic transmission

Unique Calibration

The Emissions/CAFE/CO2 Compliance Department is responsible for assigning these calibration numbers. Unique calibration identifications are assigned to cover similar vehicles to differentiate tires, drive configurations, final drive ratios and other calibration-significant factors.

These two characters are chosen by the analyst to provide identifiable information unique to each calibration. For example, using the number 2 to denote a two-valve engine versus using the number 4 to denote a four-valve engine, offers an easily identifiable difference.

Fleet Code
- 0 Certification (U.S. 4K, final sale in an export market)
- 1 HDGE/Dyno
- 2 Fast AMA, U.S.
- 3 ADP, U.S.
- 4 Not assigned
- 5 Not assigned
- 6 Evaporative emissions
- 7 MACCA
- 8 On-board diagnostics (OBD)

- 9 Not assigned

Certification Region

- 5 U.S. fifty states
- A U.S. federal, including altitude, may include Canada and/or Mexico
- B U.S. California, includes U.S. green states
- C Canada
- D China
- E European Community
- F Israel, South Korea
- G Gulf Cooperative Council (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, Jordan, Lebanon and UAE)
- J Japan
- K Korea
- L Malaysia
- M Mexico
- N New Zealand
- P Australia
- Q South America (Brazil)
- U South America (unleaded fuel regions)
- V Vietnam
- X Rest of world (ROW)
- Y Military
- Z Israel

Revision Level (not printed on label)

- 91-99 Hardware calibration levels.
- 01-04 Preliminary levels.
- 00 Job 1 production (initial calibration).
- 05-09 Pre-job 1 revisions to calibrations.
- 10-89 Post-job 1 revisions to calibrations.
- 0B Durability test level.
- BD On-board diagnostics (OBD) intermediate level (pre-05).

Jacking

Printable View (69 KB)

⚠ WARNING: Never run the engine with one wheel off the ground, such as when changing a tire. The wheel still on the ground could cause the vehicle to move.

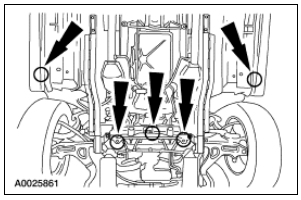
⚠ CAUTION: The jack (17080) provided with the vehicle is intended to be used in an emergency for changing a deflated tire. To avoid damage to the vehicle, never use the jack to lift the vehicle for any other purpose. Refer to the Owner Literature when using the jack supplied with the vehicle.

⚠ CAUTION: Under no circumstances should the vehicle ever be lifted by the front control arms, front I-braces, suspension arm brackets, rear stabilizer or differential housing. Severe damage to the vehicle could result.

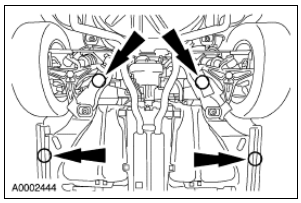
⚠ CAUTION: Do not attempt to use jack pressure on either the front bumper (17757) or the rear bumper (17906) of any vehicle. Damage to the bumper covers will occur.

Lift the vehicle using the following procedure.

Jacking Points



To lift the front or either side of the front end, position the floor jack or the hoist under the front frame lift points.



To lift the rear or either side of the rear end, position the floor jack or the hoist under the rear lift points.

Lifting Printable View (64 KB)

⚠ CAUTION: Do not allow the lift adapters to contact the steering linkage, suspension arms, front I-braces, stabilizer bar, or to compress the lower suspension arm stabilizer bar insulator (5493). Damage to the suspension, exhaust and steering linkage components may occur if care is not exercised when positioning the lift adapters prior to lifting the vehicle.

⚠ CAUTION: Never use the differential housing as a lift point. Damage to the differential housing and cover may occur.

⚠ CAUTION: Do not lift the vehicle on the rocker panel pinch flange except at the designated lift points or body damage may occur.

Lift the vehicle using the following procedure.

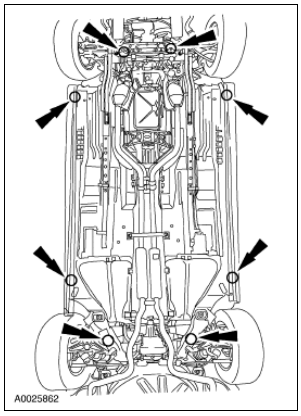
Lifting Points Drive-On Hoist

⚠ CAUTION: To prevent possible damage to the underbody, do not drive the vehicle onto the drive-on hoist without first checking for possible interference.

Check for interference between the upright flanges of the hoist rails and the underbody.

If an interference exists, modify the hoist flanges or build up the approach ramps as necessary to provide clearance.

Lifting Points Frame Contact Lift, Single-Post Lift, Two-Post Lift



⚠ CAUTION: Under no circumstances should the vehicle be lifted by the front control arms, front I-braces or rear control arms. Severe damage to the vehicle could result.

⚠ CAUTION: Do not position the lift pads under the No. 3 crossmember.

NOTE: Adapters maybe necessary to clear vehicle components to lift the vehicle safely. The adapters must be placed at the four designated contact points. Position the adapters so they are centered on the adapter contact area.

Lift the vehicle at the applicable lift points.

Maintenance Schedule Vehicles with Gasoline Engines

Printable View (31 KB)

The maintenance schedule is designed to protect against major repairs resulting from neglect or inadequate maintenance and to prolong the life of the vehicle.

General Maintenance Information

NOTE: This is a generic maintenance schedule for all Ford, Lincoln and Mercury vehicles. There may be items listed that do not apply to all vehicles.

The Normal Schedule applies to operation of the vehicle under typical, everyday driving conditions. The maintenance frequency in this schedule typifies what the vast majority of vehicles will require. The listed services should be carried out at specified mileage intervals. There are, however, additional services required that only the noted vehicles require.

If the vehicle is operated in one or more of the following special operating conditions, those additional services will be required. The special operating conditions are:

- towing or carrying heavy loads.
- extensive idling and/or driving at low speeds for long distances.
- driving in dusty conditions.
- off-road operation.

There are also exceptions to the Normal Operating Schedule which will require more frequent maintenance for some components. Those exceptions are:

- natural gas and propane vehicles fuel tank intervals.
- normal vehicle axle maintenance and lubrication.
- police and taxi vehicles maintenance and lubrication.
- engine oil and yellow coolant time and mileage-based interval.

Special Operating Condition Requirements

When towing a trailer or using a camper or car-top carrier:

- Change engine oil and install a new oil filter every 4,800 km (3,000 miles) or 3 months.
- Change transfer case fluid every 96,000 km (60,000 miles).
- Change manual transmission fluid as required.
- Inspect and lubricate U-joints as required.

During extensive idling and/or low speed driving for long distances, as in heavy commercial use such as delivery, taxi, patrol car or livery:

- Change engine oil and install a new oil filter, lube front lower control arm and steering linkage ball joints with zerk fittings (if equipped) every 4,800 km (3,000 miles) or 3 months.
- Inspect brake system and check battery electrolyte level (Patrol cars) every 8,000 km (5,000 miles).
- Install a new fuel filter every 24,000 km (15,000 miles).
- Change automatic transmission fluid, lubricate 4x2 wheel bearings, install new grease seals and adjust bearings every 48,000 km (30,000 miles).

- Install new spark plugs and change transfer case fluid every 96,000 km (60,000 miles).
- Install a new cabin air filter as required.

When operating in dusty conditions such as unpaved or dusty roads:

- Change engine oil and install a new oil filter every 4,800 km (3,000 miles) or 3 months.
- Install a new fuel filter every 24,000 km (15,000 miles).
- Change automatic transmission fluid every 48,000 km (30,000 miles).
- Change transfer case fluid every 96,000 km (60,000 miles).
- Install a new engine air filter as required.
- Install a new cabin air filter as required.

When operating in off-road conditions:

- Change automatic transmission fluid every 48,000 km (30,000 miles).
- Change transfer case fluid every 96,000 km (60,000 miles).
- Install a new cabin air filter as required.
- Inspect and lubricate U-joints.
- Inspect and lubricate steering linkage ball joints with zerk fittings.

Checks and Services

Certain basic maintenance checks and inspections should be carried out at specified intervals. Any recognized adverse condition should be corrected as soon as possible.

Maximum Oil Change Interval (Normal Schedule)

- 8,000 km (5,000 miles) or 6 months, whichever occurs first.

Maximum Oil Change Interval (Special Operating Conditions)

- 4,800 km (3,000 miles) or 3 months.

Monthly Checks

Check each of the following items every month:

- All interior and exterior lights.
- Tires for wear and correct air pressure.
- Engine oil fluid level.
- Windshield washer solvent fluid level.
- Check and drain fuel/water separator.

Six Month Checks

Check each of the following items at least every six months:

- Lap/shoulder belts and seat latches for wear and function.
- Spare tire air pressure.
- Power steering fluid level.
- Parking brake for correct operation.
- Safety warning lamps (brake, ABS, air bag, safety belt) for correct operation.
- Coolant system fluid level and correct strength.

- Battery connections. Clean if necessary.
- Clutch fluid level, if equipped.
- Windshield washer spray, wiper operation, clean all wiper blades.
- Lubricate all hinges, latches and outside locks. Inspect for correct operation.
- Lubricate door rubber weatherstrips. Inspect for excessive wear.
- Clean body and door drain holes. Inspect for clogs and obstructions.

Special Checks (Mustang Only)

Carry out the following check every 8,000 km (5,000 miles):

- Adjust clutch by lifting pedal (manual transmission Mustang only, as described in owner guide).

Normal Schedule

The following checks or procedures should be carried out for all cars, minivans, light trucks, sport utilities, vans, 4x4s, natural gas and propane vehicles.

8,000 Km (5,000 Miles)

- Change engine oil and install a new oil filter.
- Rotate tires and inspect for wear.

16,000 Km (10,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

24,000 Km (15,000 Miles)

- Change engine oil and install a new oil filter.
- If equipped, inspect automatic transmission fluid level with dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- If equipped, install a new cabin air filter.

32,000 Km (20,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

40,000 Km (25,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Drain coalescent fuel filter and replace filter (NGV).

48,000 Km (30,000 Miles)

- Change engine oil and install a new oil filter.

- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter.
- Install a new fuel filter. (See ADDITIONAL INFORMATION below.)
- If equipped, install a new cabin air filter.
- Change automatic transmission/transaxle fluid on all vehicles equipped with AX4S, 4F50N, 4R100, 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS and Aviator).

ADDITIONAL INFORMATION: If vehicle is registered in California, the California Air Resources Board (CARB) has determined that failure to install a new fuel filter at this interval will not nullify the emission warranty or limit recall liability prior to completion of the vehicle's useful life. It is, however, recommended that maintenance checks be carried out and recorded at the indicated intervals.

Natural gas and propane vehicles also require checking the fuel tanks and installing a new filter (propane vehicles).

56,000 Km (35,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

64,000 Km (40,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

72,000 Km (45,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect automatic transmission fluid level using dipstick, if equipped.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- If equipped, install a new cabin air filter.
- If filled with green engine coolant, change coolant.

80,000 Km (50,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Drain coalescent fuel filter and replace filter (NGV).

88,000 Km (55,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

96,000 Km (60,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter.
- Install a new fuel filter. (See ADDITIONAL INFORMATION below.)
- If equipped, install a new cabin air filter.
- Change automatic transmission/transaxle fluid on all vehicles equipped with AX4S, 4F50N, 4R100, 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS and Aviator).

ADDITIONAL INFORMATION: If vehicle is registered in California, the California Air Resources Board (CARB) has determined that failure to install a new fuel filter at this interval will not nullify the emission warranty or limit recall liability prior to completion of the vehicle's useful life. It is, however, recommended that maintenance checks be carried out and recorded at the indicated intervals.

Additional checks for natural gas and propane vehicles at this interval include inspecting fuel tanks, as well as draining coalescent fuel filter and installing a new filter.

104,000 Km (65,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

112,000 Km (70,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

120,000 Km (75,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect automatic transmission fluid level using dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new cabin air filter.
- Drain coalescent fuel filter and replace filter (NGV).
- Change green engine coolant, if equipped.

128,000 Km (80,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

136,000 Km (85,000 Miles)

- Change engine oil and install a new oil filter.

- Inspect tires for wear. Rotation recommended for optimal tire life.

144,000 Km (90,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter.
- Install a new fuel filter.
- If equipped, install a new cabin air filter.
- Change automatic transmission/transaxle fluid on all vehicles equipped with AX4S, 4F50N, 4R100, 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped.
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS and Aviator).

Additional services for natural gas and propane vehicles include inspecting fuel tanks, as well as draining coalescent fuel filter bowl and installing a new filter.

152,000 Km (95,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

160,000 Km (100,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect accessory drive belt(s).
- Rotate tires and inspect for wear.
- Install new spark plugs.
- If filled with yellow coolant, change coolant or at 5 years, whichever comes first.
- Install a new PCV on all cars and light trucks under 6,000 pounds Gross Vehicle Weight (GVW).
- Drain coalescent fuel filter and replace filter (NGV).

168,000 Km (105,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect automatic transmission fluid level if equipped with dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine coolant system and hoses.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- If equipped, install a new cabin air filter.
- If filled with green engine coolant, change coolant.

176,000 Km (110,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

184,000 Km (115,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

192,000 Km (120,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter.
- Install a new fuel filter. (See ADDITIONAL INFORMATION below.)
- If equipped, install a new cabin air filter.
- Install new accessory drive belt(s) (Escort).
- Install a new PCV valve on all cars and light trucks over 6,000 Gross Vehicle Weight.
- Change automatic transmission/transaxle fluid on all vehicles equipped with AX4S, 4F50N, 4R100, 4F27E. Inspect automatic transmission fluid level using dipstick on all other vehicles, if equipped.
- Install a new camshaft belt on all 2.0L, 4-cylinder engines (Escort, Focus, ZX2 and Escape).
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS and Aviator).

ADDITIONAL INFORMATION: Additional services for natural gas and propane vehicles include inspecting fuel tanks, as well as draining coalescent fuel filter bowl and installing a new filter.

200,000 Km (125,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.
- Drain coalescent fuel filter and replace filter (NGV).

208,000 Km (130,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

216,000 Km (135,000 Miles)

- Change engine oil and install a new oil filter.
- If equipped, inspect automatic transmission fluid level with dipstick.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new cabin air filter.
- If filled with green engine coolant, change coolant.

224,000 Km (140,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

232,000 Km (145,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect tires for wear. Rotation recommended for optimal tire life.

240,000 Km (150,000 Miles)

- Change engine oil and install a new oil filter.
- Inspect brake pads, shoes, rotors, drums, brake lines, hoses and parking brake system.
- Inspect wheel ends for end play and noise.
- Inspect engine cooling system and hoses.
- Inspect exhaust system and heat shields.
- Inspect steering linkage, suspension and (if equipped) driveshaft and ball joints.
- Rotate tires and inspect for wear.
- Install a new engine air filter.
- Install a new fuel filter. (See ADDITIONAL INFORMATION below.)
- If equipped, install a new cabin air filter.
- If filled with yellow engine coolant, change coolant or at 8 years, whichever comes first.
- Change automatic transmission/transaxle fluid and filter.
- Change rear axle lubricant on all rear wheel (RWD) vehicles.
- Install a new accessory drive belt(s) (if a new belt has not been installed within the last 100,000 miles).
- If equipped, install new climate controlled seat filters (Navigator, Lincoln LS and Aviator).

ADDITIONAL INFORMATION: If vehicle is registered in California, the California Air Resources Board (CARB) has determined that failure to install a new fuel filter at this interval will not nullify the emission warranty or limit recall liability prior to completion of the vehicle's useful life. It is, however recommended that maintenance checks be carried out and recorded at the indicated intervals.

Additional checks for natural gas and propane vehicles include inspecting fuel tanks, as well as draining and installing a new filter.

Exceptions To Normal Schedule

Yellow Coolant

- Change coolant at 5 years or 160,000 km (100,000 miles) of the vehicle's life, whichever comes first.
- After the initial change, change coolant every 3 years or 80,000 km (50,000 miles) thereafter.

Natural Gas and Propane Vehicles

- Inspect NGV fuel tanks from the date of tank manufacture every 3 years.
- Inspect propane fuel tanks from vehicle build date every 5 years.
- Install new NGV fuel tanks from the date of tank manufacture every 15 years.

Normal Vehicle Axle Maintenance

Rear axles and power take off (PTO) units containing synthetic lubricant and light duty trucks equipped with Ford-design axles are lubricated for life. These lubricants are not to be checked or changed unless service is required, or if a leak is suspected, or the axle assembly has been submerged in water.

The axle and PTO should be changed anytime they have been submerged in water. Non-synthetic rear axle lubricants should be replaced every 4,800 km (3,000 miles) or three months, whichever occurs first, during extended trailer tow operation above 21°C (70°F) ambient and wide open throttle for extended periods above 45 mph.

The 3,000 mile lube change interval may be waived if the axle was filled with 75W140 synthetic gear lubricant meeting Ford specification WSL-M2C192-A, part number F1TZ-19B546-B or equivalent. Add four ounces of additive friction modifier C8AZ-19B546-A (EST-M2C118-A) or equivalent for complete refill of Traction-Lok rear axles.

The axle lubricant should be changed anytime an axle has been submerged in water.

Police and Taxi Vehicle Axle Maintenance

Replace rear axle lubricant every 160,000 km (100,000 miles). Rear axle lubricant change may be waived if the axle was filled with 75W140 synthetic gear lubricant meeting Ford specification WSL-M2C192-A, part number FITZ-19580-B or equivalent. Add four ounces of additive friction modifier C8AZ-19B546-A (EST-M2C118-A) or equivalent for complete refill of Traction-Lok rear axles.

The axle lubricant should be changed anytime an axle has been submerged in water.

Noise, Vibration and Harshness (NVH) Printable View (162 KB)

Noise is any undesirable sound, usually unpleasant in nature. Vibration is any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down. Harshness is a ride quality issue where the vehicle's response to the road transmits sharply to the customer. Harshness normally describes a firmer than usual response from the suspension system. Noise, vibration and harshness (NVH) is a term used to describe these conditions, which result in varying degrees of dissatisfaction. Although, a certain level of NVH caused by road and environmental conditions is normal. This section is designed to aid in the diagnosis, testing and repair of NVH concerns.

Acceptable Noise, Vibration and Harshness

All internal combustion engines and drivelines produce some noise and vibration; operating in a real world environment adds noise that is not subject to control. Vibration isolators, mufflers and dampers reduce these to acceptable levels. A driver who is unfamiliar with a vehicle can think that some sounds are abnormal when actually the sounds are normal for the vehicle type. For example, Traction-Lok® differentials produce a slight noise on slow turns after extended highway driving. This is acceptable and has no detrimental effect on the locking axle function. As a technician, it is very important to be familiar with vehicle features and know how they relate to NVH concerns and their diagnosis. If, for example, the vehicle has automatic overdrive it is important to test drive the vehicle both in and out of overdrive mode.

Diagnostic Theory

The shortest route to an accurate diagnosis results from:

- system knowledge, including comparison with a known good system.
- system history, including repair history and usage patterns.
- condition history, especially any relationship to repairs or sudden change.
- knowledge of possible sources.
- using a systematic diagnostic method that divides the system into related areas.

The diagnosis and correction of noise, vibration and harshness concerns requires:

- a road or system test to determine the exact nature of the concern.
- an analysis of the possible causes.
- testing to verify the cause.
- repairing any concerns found.
- a road test or system test to make sure the concern has been corrected or brought back to within an acceptable range.

Glossary of Terms

Acceleration-Light

An increase in speed at less than half throttle.

Acceleration-Medium

An increase in speed at half to nearly full throttle, such as 0-97 km/h (0-60 mph) in approximately 30 seconds.

Acceleration-Heavy

An increase in speed at one-half to full throttle, such as 0-97 km/h (0-60 mph) in approximately 20 seconds.

Ambient Temperature

The surrounding or prevailing temperature.

Amplitude

The quantity or amount of energy produced by a vibrating component (G force). An extreme vibration has a high amplitude. A mild vibration has a low amplitude.

Backlash

Gear teeth clearance.

Boom

Low frequency or low pitched noise often accompanied by a vibration. Also refer to Drumming.

Bound Up

An overstressed isolation (rubber) mount that transmits vibration/noise instead of absorbing it.

Brakes Applied

When the service brakes are applied with enough force to hold the vehicle against movement with the transmission in gear.

Buffet/Buffeting

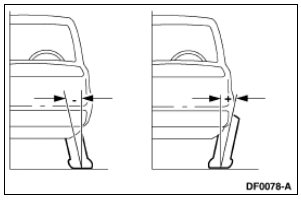
Strong noise fluctuations (less than 1000 Hz) caused by gusting winds. An example would be wind gusts against the side glass.

Buzz

A low-pitched sound like (200-5000 Hz) that from a bee. Often a metallic or hard plastic humming sound. Also describes a high frequency (200-800 Hz) vibration. Vibration feels similar to an electric razor.

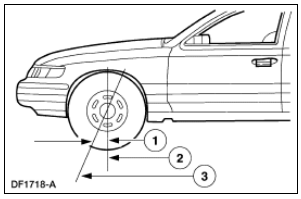
Camber

The angle of the wheel in relation to the true vertical as measured looking from the front of the vehicle. Camber is positive when the wheel angle is offset so that the top of the wheel is positioned away from the vehicle.



Caster

The angle of the steering knuckle in relation to the true vertical as measured looking from the side of the vehicle.



Item	Description
1	Positive caster
2	True vertical
3	Steering axis

Chatter

A pronounced series of rapidly repeating rattling or clicking sounds.

Chirp

A short-duration high-pitched noise associated with a slipping drive belt.

Chuckle

A repetitious low-pitched sound. A loud chuckle is usually described as a knock.

Click

A sharp, brief, non-resonant sound, similar to actuating a ball point pen.

Clonk

A hydraulic knocking sound. Sound occurs with air pockets in a hydraulic system. Also described as hammering.

Clunk/Driveline Clunk

A heavy or dull, short-duration, low-frequency sound. Occurs mostly on a vehicle that is accelerating or decelerating abruptly. Also described as a thunk.

Coast/Deceleration

Releasing the accelerator pedal at cruise, allowing the engine to reduce vehicle speed without applying the brakes.

Coast/Neutral Coast

Placing the transmission range selector in NEUTRAL (N) or depressing the clutch pedal while at cruise.

Constant Velocity (CV) Joint

A joint used to absorb vibrations caused by driving power being transmitted at an angle.

Controlled Rear Suspension Height

The height at which a designated vehicle element must be when driveline angle measurements are made.

Coupling Shaft

The shaft between the transfer case and the front drive axle or, in a two-piece rear driveshaft, the front section.

CPS

Cycles per second. Same as hertz (Hz).

Cracks

A mid-frequency sound, related to squeak. Sound varies with temperature conditions.

Creak

A metallic squeak.

Cruise

Constant speed on level ground; neither accelerating nor decelerating.

Cycle

The process of a vibrating component going through a complete range of motion and returning to the starting point.

Decibel

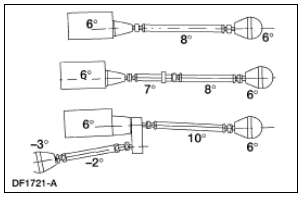
A unit of measurement, referring to sound pressure level, abbreviated dB.

Drive Engine Run-Up (DERU) Test

The operation of the engine through the normal rpm range with the vehicle standing still, the brakes applied and the transmission engaged. This test is used for noise and vibration checks.

Driveline Angles

The differences of alignment between the transmission output shaft, the driveshaft, and the rear axle pinion centerline.



Driveshaft

The shaft that transmits power to the rear axle input shaft (pinion shaft). In a two-piece driveshaft, it is the rearmost shaft.

Drivetrain

All power transmitting components from the engine to the wheels; includes the clutch or torque converter, the transmission, the transfer case, the driveshaft, and the front or rear drive axle.

Drivetrain Damper

A weight attached to the engine, the transmission, the transfer case, or the axle. It is tuned by weight and placement to absorb vibration.

Drone

A low frequency (100-200 Hz) steady sound, like a freezer compressor. Also described as a moan.

Drumming

A cycling, low-frequency (20-100 Hz), rhythmic noise often accompanied by a sensation of pressure on the ear drums. Also described as a low rumble, boom, or rolling thunder.

Dynamic Balance

The equal distribution of weight on each side of the centerline, so that when the wheel and tire assembly spins, there is no tendency for the assembly to move from side-to-side (wobble). Dynamically unbalanced wheel and tire assemblies can cause wheel shimmy.

Engine Imbalance

A condition in which an engine's center mass is not concentric to the rotation center, causing excessive motion.

Engine Misfire

When combustion in one or more cylinders does not occur or occurs at the wrong time.

Engine Shake

An exaggerated engine movement or vibration that directly increases in frequency as the engine speed increases. It is caused by non-equal distribution of mass in the rotating or reciprocating components.

Flexible Coupling

A flexible joint.

Float

A drive mode on the dividing line between cruise and coast where the throttle setting matches the engine speed with the road speed.

Flutter

Mid to high (100-2000 Hz) intermittent sound due to air flow. Similar to a flag flapping in the wind.

Frequency

The rate at which a cycle occurs within a given time.

Gravelly Feel

A grinding or growl in a component, similar to the feel experienced when driving on gravel.

Grind

An abrasive sound, similar to using a grinding wheel, or rubbing sand paper against wood.

Hiss

Steady high frequency (200-800 Hz) noise. Vacuum leak sound.

Hoot

A steady low frequency tone (50-500 Hz), sounds like blowing over a long neck bottle.

Howl

A mid-range frequency (200-800 Hz) noise between drumming and whine. Also described as a hum.

Hum

Mid-frequency (200-800 Hz) steady sound, like a small fan motor. Also described as a howl.

Hz

Hertz; a frequency measured in cycles per second.

Imbalance

Out of balance; heavier on one side than the other. In a rotating component, imbalance often causes vibration.

Inboard

Toward the centerline of the vehicle.

Intensity

The physical quality of sound that relates to the strength of the vibration (measured in decibels). The higher the sound's amplitude, the higher the intensity and vice versa.

Isolate

To separate the influence of one component to another.

Knock

A heavy, loud, repetitious sound, like a knock on the door.

Moan

A constant, low-frequency (100-200 Hz) tone. Also described as a hum.

Neutral Engine Run-Up (NERU) Test

The operation of the engine through the normal rpm range with the vehicle standing still and the transmission disengaged. This test is used to identify engine related vibrations.

Neutralize/Normalize

To return to an unstressed position. Used to describe mounts. Refer to Bound Up.

Outboard

Away from the centerline of the vehicle.

Ping

A short duration, high-frequency sound, which has a slight echo.

Pinion Shaft

The input shaft in a driving axle that is usually a part of the smaller driving or input hypoid gear of a ring and pinion gearset.

Pitch

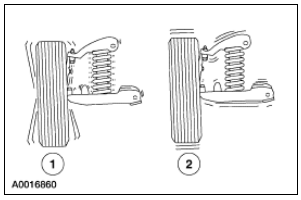
The physical quality of sound that relates to its frequency. Pitch increases as frequency increases and vice versa.

Pumping Feel

A slow, pulsing movement.

Radial/Lateral

Radial is in the plane of rotation; lateral is at 90 degrees to the plane of rotation.



Item	Description
1	Lateral runout
2	Radial runout

Rattle

A random and momentary or short duration noise.

Ring Gear

The large, circular, driven gear in a ring and pinion gearset.

Road Test

The operation of the vehicle under conditions intended to produce the concern under investigation.

Roughness

A medium-frequency vibration. A slightly higher frequency (20 to 50 Hz) than a shake. This type of vibration is usually related to drivetrain components.

Runout

Lateral runout means measuring the movement or "wobble" of a wheel or tire at the sidewall. Radial runout means measuring the out-of-round at the tread surface.

Rustling

Intermittent sound of varying frequency (100-2000 Hz), sounds similar to shuffling through leaves.

Shake

A low-frequency vibration (5-20 Hz), usually with visible component movement. Usually relates to tires, wheels, brake drums or brake discs if it is vehicle speed sensitive, or engine if it is engine speed sensitive. Also referred to as a shimmy or wobble.

Shimmy

An abnormal vibration or wobbling, felt as a side-to-side motion of the steering wheel in the driveshaft rotation. Also described as waddle.

Shudder

A low-frequency vibration that is felt through the steering wheel or seat during light brake application.

Slap

A resonance from flat surfaces, such as safety belt webbing or door trim panels.

Slip Yoke/Slip Spline

The driveshaft coupling that allows length changes to occur while the suspension articulates and while the driveshaft rotates.

Squeak

A high-pitched transient sound, similar to rubbing fingers against a clean window.

Squeal

A long-duration, high-pitched noise.

Static Balance

The equal distribution of weight around the wheel. Statically unbalanced wheel and tire assemblies can cause a bouncing action called wheel tramp. This condition will eventually cause uneven tire wear.

Tap

A light, rhythmic, or intermittent hammering sound, similar to tapping a pencil on a table edge.

Thump

A dull beat caused by two items striking together.

Tick

A rhythmic tap, similar to a clock noise.

Tip-In Moan

A light moaning noise heard during light vehicle acceleration, usually between 40-100 km/h (25-65 mph).

TIR

The acronym for total indicated runout is TIR.

Tire Deflection

The change in tire diameter in the area where the tire contacts the ground.

Tire Flat Spots

A condition commonly caused by letting the vehicle stand while the tires cool off. This condition can be corrected by driving the vehicle until the tires are warm. Also, irregular tire wear patterns in the tire tread resulting from wheel-locked skids.

Tire Force Vibration

A tire vibration caused by variations in the construction of the tire that is noticeable when the tire rotates against the pavement. This condition can be present on perfectly round tires because of variations in the inner tire construction. This condition can occur at wheel rotation frequency or twice rotation frequency.

Transient

A noise or vibration that is momentary, a short duration.

Two-Plane Balance

Radial and lateral balance.

Vibration

Any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down.

Whine

A constant, high-pitched noise. Also described as a screech.

Whistle

High-pitched noise (above 500 Hz) with a very narrow frequency band. Examples of whistle noises are a turbocharger or airflow around an antenna.

Wind Noise

Any noise caused by air movement in, out or around the vehicle.

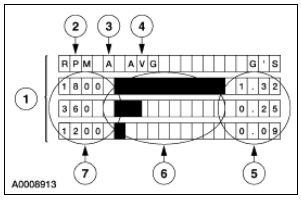
WOT

The acronym for wide open throttle is WOT.

Tools and Techniques

Electronic Vibration Analyzer (EVA)

The EVA is a hand-held electronic diagnostic tool which will assist in locating the source of unacceptable vibrations. The vibration sensor can be remotely mounted anywhere in the vehicle for testing purposes. The unit displays the three most common vibration frequencies and their corresponding amplitudes simultaneously. A bar graph provides a visual reference of the relative signal strength (amplitude) of each vibration being displayed and its relative G force. The keypad is arranged to make the EVA simple to program and use. Some of the functions include the ability to average readings as well as record, play back and freeze readings. The EVA has a strobe balancing function that can be used to detect imbalance on rotating components such as a driveshaft or engine accessories.



Item	Description
1	EVA screen
2	Frequency mode displayed in rpm or Hz
3	Active sensor input (A or B)
4	Current active mode
5	G force indicators or the strongest frequencies in descending strength of each vibration
6	Strength of each vibration
7	Frequency in rpm/Hz of each vibration

The EVA allows for a systematic collection of information that is necessary to accurately diagnose and repair NVH problems. For the best results, carry out the test as follows:

a. Test drive the vehicle with the vibration sensor inside the vehicle.
b. Place the sensor in the vehicle according to feel.

- If the condition is felt through the steering wheel, the source is most likely in the front of the vehicle.
- A vibration that is felt in the seat or floor only will most likely be found in the driveline, drive axle or rear wheels and tires.

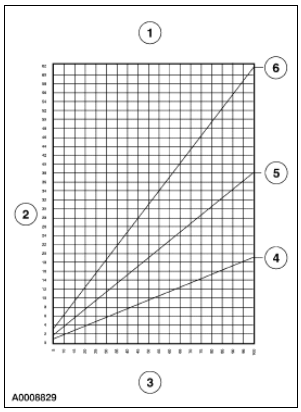
c. Record the readings. Also note when the condition begins, when it reaches maximum intensity, and if it tends to diminish above/below a certain speed.
   - Frequencies should be read in the "average" mode.
   - Frequencies have a range of plus or minus 2. A reading of 10 Hz can be displayed as an 8 Hz through 12 Hz.

d. Determine what the normal frequency is for the vehicle at a specified speed. Multiply the rear axle ratio by the Hz (1 Hz per every 5 mph). Example: A vehicle travelling 50 mph with a 3.08 rear axle ratio, the acceptable amount of Hz for the vehicle at that speed would be 10 (1 Hz per every 5 mph) X 3.08 (rear axle ratio) = 30.8 Hz.

e. Place the vibration sensor on or near the suspect area outside the vehicle.

f. Continue the road test, driving the vehicle at the speed the symptom occurs, and take another reading.

g. Compare the readings.
   - A match in frequency indicates the problem component or area.
   - An unmatched test could indicate the concern is caused by the engine, torque converter, or engine accessory. Use the EVA in the rpm mode and check if concern is rpm related.
   - Example: A vibration is felt in the seat. Place the sensor on the console. Record the readings. Place the vibration sensor on the rear axle. Compare the readings. If the frequencies are the same, the axle is the problem component. Also refer to the following chart as a reference to acceptable vibration and noise ranges for the specified components.



Item	Description
1	Acceptable vibration ranges for specified components
2	Hertz (Hz)
3	Miles per hour (mph)
4	First order tire (one disturbance for each revolution)
5	Second order tire (two disturbances for each revolution)
6	Driveline

Vibrate Software®

Vibrate Software® (Rotunda tool number 215-00003) is a diagnostic aid which will assist in pinpointing the source of unacceptable vibrations. The engine's crankshaft is the point of reference for vibration diagnosis. Every rotating component will have an angular velocity that is faster, slower, or the same as the engine's crankshaft. Vibrate Software® calculates the angular velocity of each component and graphically represents these velocities on a computer screen and on a printed vibration worksheet. The following steps outline how

Vibrate Software® helps diagnose a vibration concern:

- Enter the vehicle information. Vibrate will do all the calculations and display a graph showing tire, driveshaft and engine vibrations.
- Print a Vibration Worksheet graph. The printed graph is to be used during the road test.
- Road test the vehicle at the speed where the vibration is most noticeable. Record the vibration frequency (rpm) and the engine rpm on the worksheet graph. The point on the graph where the vibration frequency (rpm) reading and the engine rpm reading intersect indicates the specific component group causing the concern.
    - ♦ An EVA or equivalent tool capable of measuring vibration frequency and engine rpm will be needed.
- Provide pictures of diagnostic procedures to aid in testing components.

Combination EngineEAR/ChassisEAR

An electronic listening device used to quickly identify noise and the location under the chassis while the vehicle is being road tested. The ChassisEARs can identify the noise and location of damaged/worn wheel bearings, CV joints, brakes, springs, axle bearings or driveshaft carrier bearings.

EngineEAR Basic Unit

An electronic listening device used to detect even the faintest noises. The EngineEARs can detect the noise of damaged/worn bearings in generators, water pumps, A/C compressors and power steering pumps. They are also used to identify noisy lifters, exhaust manifold leaks, chipped gear teeth and for detecting wind noise. The EngineEAR has a sensing tip, amplifier, and headphones. The directional sensing tip is used to listen to the various components. Point the sensing tip at the suspect component and adjust the volume with the amplifier. Placing the tip in direct contact with a component will reveal structure-borne noise and vibrations, generated by or passing through, the component. Various volume levels can reveal different sounds.

Ultrasonic Leak Detector

The Ultrasonic Leak Detector is used to detect wind noises caused by leaks and gaps in areas where there is weather-stripping or other sealing material. It is also used to identify A/C leaks, vacuum leaks and evaporative emission noises. The Ultrasonic Leak Detector includes a multi-directional transmitter (operating in the ultrasonic range) and a hand-held detector. The transmitter is placed inside the vehicle. On the outside of the vehicle, the hand-held detector is used to sweep the area of the suspected leak. As the source of the leak is approached, a beeping sound is produced which increases in both speed and frequency.

Squeak and Rattle Repair Kit

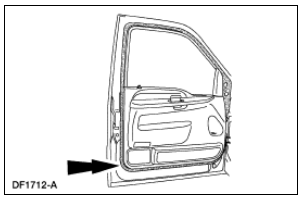
The squeak and rattle repair kit (Rotunda tool number 164-R4900) contains lubricants and self-adhesive materials that can be used to eliminate interior and exterior squeaks and rattles. The kit consists of the following materials:

- PVC (soft foam) tape
- Urethane (hard foam) tape
- Flocked (black fuzzy) tape
- UHMW (frosted) tape
- Squeak and rattle oil tube
- Squeak and rattle grease tube

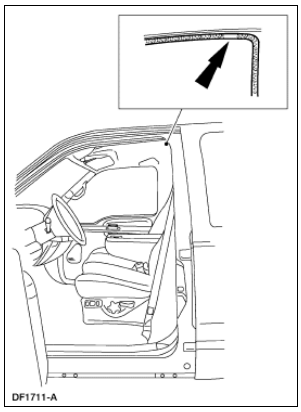
Tracing Powder

Tracing powder is used to check both the uniformity of contact and the tension of a seal against its sealing surface. These tests are usually done when a suspected air leak/noise appears to originate from the seal area or

during the alignment and adjustment of a component to a weatherstrip. Tracing powder can be ordered from Crest Industries as ATR Leak Trace. Carry out the tracing powder test as follows:



a. Clean the weatherstrip.
b. Spray the tracing powder on the mating surface only.
c. Close the door completely. Do not slam the door.
d. Open the door. An imprint is made where the weatherstrip contacted the mating surface seal. Gaps or a faint imprint will show where there is poor contact with the weatherstrip.



Index Card

Place an index card or a piece of paper between the weatherstrip and the sealing surface, then close the door. Slowly withdraw the index card or paper after the door is closed and check the amount of pressure on the weatherstrip. There should be a medium amount of resistance as it is withdrawn. Continue around the entire seal area. If there is little or no resistance, this indicates insufficient contact to form a good seal. At these points, the door, the glass, or the weatherstrip is out of alignment.

To assist the service advisor and the technician, a Write-up Job Aid and an NVH Diagnostic Guide are included with this material. The Write-up Job Aid serves as a place to record all important symptom information. The NVH Diagnostic Guide serves as a place to record information reported on the Write-up Job Aid as well as data from the testing to be carried out.

To begin a successful diagnosis, fill out the NVH Diagnostic Guide, record the reported findings, then proceed to each of the numbered process steps to complete the diagnosis.

Comments: _____

A0008914

1: Customer Interview

The diagnostic process starts with the customer interview. The service advisor must obtain as much information as possible about the problem and take a test drive with the customer. There are many ways a customer will describe NVH concerns and this will help minimize confusion arising from descriptive language differences. It is important that the concern is correctly interpreted and the customer descriptions are

recorded. During the interview, ask the following questions:

- When was it first noticed?
- Did it appear suddenly or gradually?
- Did any abnormal occurrence coincide with or proceed its appearance?

Use the information gained from the customer to accurately begin the diagnostic process.

2: Pre-Drive Check

It is important to do a pre-drive check before road testing the vehicle. A pre-drive check verifies that the vehicle is relatively safe to drive and eliminates any obvious faults on the vehicle.

The pre-drive check consists of a brief visual inspection. During this brief inspection, take note of anything that will compromise safety during the road test and make those repairs/adjustments before taking the vehicle on the road.

3: Preparing for the Road Test

Observe the following when preparing for the road test:

- Review the information recorded on the NVH Diagnostic Guide. It is important to know the specific concern the customer has with the vehicle.
- Do not be misled by the reported location of the noise/vibration. The cause can actually be some distance away.
- Remember that the vibrating source component (originator) may only generate a small vibration. This small vibration can in turn cause a larger vibration/noise to emanate from another receiving component (reactor), due to contact with other components (transfer path).
- Conduct the road test on a quiet street where it is safe to duplicate the vibration/noise. The ideal testing route is an open, low-traffic area where it is possible to operate the vehicle at the speed in which the condition occurs.
- If possible, lower the radio antenna in order to minimize turbulence. Identify anything that could potentially make noise or be a source of wind noise. Inspect the vehicle for add-on items that create vibration/noise. Turn off the radio and the heating and cooling system blower.
- The engine speed is an important factor in arriving at a final conclusion. Therefore, connect an accurate tachometer to the engine, even if the vehicle has a tachometer. Use a tachometer that has clearly defined increments of less than 50 rpm. This ensures an exact engine speed reading.

4: Verify the Customer Concern

Verify the customer concern by carrying out a road test, an engine run-up test, or both.

The decision to carry out a road test, an engine run-up test, or both depends on the type of NVH concern. A road test may be necessary if the symptom relates to the suspension system or is sensitive to torque. A drive engine run-up (DERU) or a neutral engine run-up (NERU) test identifies noises and vibrations relating to engine and drivetrain rpm. Remember, a condition will not always be identifiable by carrying out these tests, however, they will eliminate many possibilities if carried out correctly.

5: Road Test

NOTE: It may be necessary to have the customer ride along or drive the vehicle to point out the concern. During the road test, take into consideration the customer's driving habits and the driving conditions. The customer's concern just may be an acceptable operating condition for that vehicle.

The following is a brief overview of each test in the order in which it appears. A review of this information helps to quickly identify the most appropriate process necessary to make a successful diagnosis. After reviewing this information, select and carry out the appropriate test(s), proceeding to the next step of this process.

- The Slow Acceleration Test is normally the first test to carry out when identifying an NVH concern, especially when a road test with the customer is not possible.
- The Heavy Acceleration Test helps to determine if the concern is torque-related.
- The Neutral Coast Down Speed Test helps to determine if the concern is vehicle speed-related.
- The Downshift Speed Test helps to determine if the concern is engine speed-related.
- The Steering Input Test helps to determine how the wheel bearings and other suspension components contribute to a vehicle speed-related concern.
- The Brake Test helps to identify vibrations or noise that are brake related.
- The Road Test Over Bumps helps isolate a noise that occurs when driving over a rough or bumpy surface.
- The Engine Run-Up Tests consist of the Neutral Run-Up Test and the Engine Load Test. These tests help to determine if the concern is engine speed-related.
- The Neutral Run-Up Test is used as a follow-up test to the Downshift Speed Test when the concern occurs at idle.
- The Engine Load Test helps to identify vibration/noise sensitive to engine load or torque. It also helps to reproduce engine speed-related concerns that cannot be duplicated when carrying out the Neutral Run-Up Test or the Neutral Coast Down Test.
- The Engine Accessory Test helps to locate faulty belts and accessories that cause engine speed-related concerns.
- The Vehicle Cold Soak Procedure helps to identify concerns occurring during initial start-up and when an extended time lapse occurs between vehicle usage.

Slow Acceleration Test

To carry out this test, proceed as follows:

- Slowly accelerate to the speed where the reported concern occurs. Note the vehicle speed, the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify from what part of the vehicle the concern is coming.
- Attempt to identify the source of the concern.
- Proceed as necessary.

Heavy Acceleration Test

To carry out this test, proceed as follows:

- Accelerate hard from 0-64 km/h (0-40 mph).
- Decelerate in a lower gear.
- The concern is torque related if duplicated while carrying out this test.
- Proceed as necessary.

Neutral Coast Down Speed Test

To carry out this test, proceed as follows:

- Drive at a higher rate of speed than where the concern occurred when carrying out the Slow Acceleration Test.
- Place the transmission in NEUTRAL and coast down past the speed where the concern occurs.
- The concern is vehicle speed-related if duplicated while carrying out this test. This eliminates the engine and the torque converter as sources.
- If the concern was not duplicated while carrying out this test, carry out the Downshift Speed Test to verify if the concern is engine speed related.
- Proceed as necessary.

Downshift Speed Test

To carry out this test, proceed as follows:

- Shift into a lower gear than the gear used when carrying out the Slow Acceleration Test.
- Drive at the engine rpm where the concern occurs.
- The concern is engine speed related if duplicated while carrying out this test. This eliminates the tires, wheels, brakes and the suspension components as sources.
- If necessary, repeat this test using other gears and NEUTRAL to verify the results.
- Proceed as necessary.

Steering Input Test

To carry out this test, proceed as follows:

- Drive at the speed where the concern occurs, while making sweeping turns in both directions.
- If the concern goes away or gets worse, the wheel bearings, hubs, U-joints (contained in the axles of 4WD applications), and tire tread wear are all possible sources.
- Proceed as necessary.

Brake Test

To carry out this test, proceed as follows:

- Warm the brakes by slowing the vehicle a few times from 80 32 km/h (50 20 mph) using light braking applications. At highway speeds of 89 97 km/h (50 60 mph), apply the brake using a light pedal force.
- Accelerate to 89 97 km/h (55 60 mph).
- Lightly apply the brakes and slow the vehicle to 30 km/h (20 mph).
- A brake vibration noise can be felt in the steering wheel, seat or brake pedal. A brake noise can be heard upon brake application and diminish when the brake is released.

Road Test Over Bumps

To carry out this test, proceed as follows:

- Drive the vehicle over a bump or rough surface one wheel at a time to determine if the noise is coming from the front or the back and the left or the right side of the vehicle.
- Proceed as necessary.

Neutral Engine Run-Up (NERU) Test

To carry out this test, proceed as follows:

- Install a tachometer.

- Increase the engine rpm up from an idle to approximately 4000 rpm while in PARK on front wheel drive vehicles with automatic transmissions, or NEUTRAL for all other vehicles. Note the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify what part of the vehicle the concern is coming from.
- Attempt to identify the source of the concern.
- Proceed as necessary.

Drive Engine Run-Up (DERU) Load Test

To carry out this test, proceed as follows:

- **⚠ WARNING: Block the front and rear wheels, and apply the parking brake and the service brake, or injury to personnel can result.**

  ⚠ CAUTION: Do not carry out the Engine Load Test for more than five seconds or damage to the transmission or transaxle can result.

  Block the front and rear wheels.
- Apply the parking brake and the service brake.
- Install a tachometer.
- Shift the transmission into DRIVE, and increase and decrease the engine rpm between an idle to approximately 2000 rpm. Note the engine rpm and, if possible, determine the vibration frequency.
- Repeat the test in REVERSE.
- If the vibration/noise is duplicated when carrying out this test, inspect the engine and transmission or transaxle mounts.
- If the concern is definitely engine speed-related, carry out the Engine Accessory Test to narrow down the source.
- Proceed as necessary.

Engine Accessory Test

To carry out this test, proceed as follows:

- **⚠ WARNING: Block the front and rear wheels, and apply the parking brake and the service brake, or injury to personnel can result.**

  ⚠ CAUTION: Limit engine running time to one minute or less with belts removed or serious engine damage will result.

  NOTE: A serpentine drive belt decreases the usefulness of this test. In these cases, use a vibration analyzer, such as the vibration analyzer (VA), to pinpoint accessory vibrations. An electronic listening device, such as an EngineEAR, will also help to identify noises from specific accessories.

  Remove the accessory drive belts.
- Increase the engine rpm to where the concern occurs.
- If the vibration/noise is duplicated when carrying out this test, the belts and accessories are not sources.
- If the vibration/noise was not duplicated when carrying out this test, install each accessory belt, one at a time, to locate the source.

Vehicle Cold Soak Procedure

To carry out this procedure, proceed as follows:

- Test preparations include matching customer conditions (if known). If not known, document the test conditions: gear selection and engine rpm. Monitor the vibration/noise duration with a watch for up to three minutes.
- Park the vehicle where testing will occur. The vehicle must remain at or below the concern temperature (if known) for 6-8 hours.
- Before starting the engine, conduct a visual inspection under the hood.
- Turn the key on, but do not start the engine. Listen for the fuel pump, anti-lock brake system (ABS) and air suspension system noises.
- Start the engine.
- ⚠ **CAUTION: Never probe moving parts.**

  Isolate the vibration/noise by carefully listening. Move around the vehicle while listening to find the general location of the vibration/noise. Then, search for a more precise location by using a stethoscope or EngineEAR.
- Refer to Idle Noise/Vibration in the Symptom Chart to assist with the diagnosis.

6: Check OASIS/TSBs/Repair History

After verifying the customer concern, check for OASIS reports, TSBs and the vehicle repair history for related concerns. If information relating to a diagnosis/repair is found, carry out the procedure(s) specified in that information.

If no information is available from these sources, carry out the vehicle preliminary inspection to eliminate any obvious faults.

7: Diagnostic Procedure

Qualifying the concern by the particular sensation present can help narrow down the concern. Always use the "symptom" to "system" to "component" to "cause" diagnosis technique. This diagnostic method divides the problem into related areas to correct the customer concern.

- Verify the "symptom".
- Determine which "system(s)" can cause the "symptom".
  - ♦ If a vibration concern is vehicle speed related, the tire and wheel rpm/frequency or driveshaft frequency should be calculated.
  - ♦ If a vibration concern is engine speed related, the engine, engine accessory or engine firing frequencies should be calculated.
- After determining the "system", use the diagnostic tools to identify the worn or damaged "components".
- After identifying the "components", try to find the "cause" of the failure.

Once the concern is narrowed down to a symptom/condition, proceed to NVH Condition and Symptom Categories.

NVH Condition and Symptom Categories

A good diagnostic process is a logical sequence of steps that lead to the identification of a causal system. Use the condition and symptom categories as follows:

- Identify the operating condition that the vehicle is exhibiting.
- Match the operating condition to the symptom.

- Verify the symptom.
- Identify which category or system could cause the symptom.
- Refer to the diagnostic symptom chart that is referred to.

Operating Condition Vehicle is Not Moving

1. Static operation
    - Noise occurs during component/system functioning. GO to .

2. While cranking
    1. Grinding or whine, differential ring gear or starter motor pinion noise. GO to .
    2. Rattle. Exhaust hanger, exhaust heat shield or A/C line noise. GO to .
    3. Vibration. Acceptable condition.

3. At idle
    - Idle noise. GO to .
    - Idle vibration or shake. GO to .

4. During Gear Selection
    1. Vehicle parked on a steep incline. Acceptable noise.
    2. Vehicle parked on a flat surface. GO to .

Operating Condition Vehicle is Moving

1. Depends more on how the vehicle is operated
    1. Speed related
        - Related to vehicle speed
            - Pitch increases with vehicle speed. GO to .
            - Noise occurs at specific vehicle speed. A high-pitched noise (whine). GO to .
            - Loudness proportional to vehicle speed. Low-frequency noise at high speeds, noise and loudness increase with speed. GO to .
            - A low-pitched noise (drumming). GO to .
            - Vibration occurs at a particular speed (mph) regardless of acceleration or deceleration. GO to .
            - Noise varies with wind/vehicle speed and direction. GO to .
        - Related to engine speed.
            - Noise varies with engine rpm. GO to .
            - Vibration occurs at a particular speed (mph) regardless of engine speed (rpm).
    2. Acceleration
        - Wide open throttle (WOT)
            - Engine induced contact between components. Inspect and repair as necessary.
            - Noise is continuous throughout WOT. Exhaust system or engine ground out. GO to .
        - Light/moderate acceleration
            - Tip-in moan. Engine/exhaust noise. GO to .
            - Knock-type noise. GO to .
            - Driveline shudder. GO to .
            - Engine vibration. GO to .
    3. Turning noise GO to .
    4. Braking
        - Clicking sound is signaling ABS is active. Acceptable ABS sound.
        - A continuous grinding/squeal. GO to .

- ♦ Brake vibration/shudder. GO to .

5. Shifting
   - ♦ Noise or vibration condition related to the transmission (automatic). GO to .
6. Cruising speeds
   - ♦ Accelerator pedal vibration. GO to .
   - ♦ Driveline vibration. GO to .
   - ♦ A shimmy or shake. GO to .
7. Driving at low/medium speeds
   - ♦ A wobble or shudder. GO to .

2. Depends more on where the vehicle is operated
   1. Bump/pothole, rough road or smooth road. GO to .
      - ♦ Noise is random or intermittent occurring from road irregularities. GO to .
      - ♦ Noise or vibration changes from one road surface to another. Normal sound changes.
      - ♦ Noise or vibration associated with a hard/firm ride. GO to .

Pinpoint Tests

The pinpoint tests are a step-by-step diagnostic process designed to determine the cause of a condition. It may not always be necessary to follow a pinpoint test to its conclusion. Carry out only the steps necessary to correct the condition. Then, test the system for normal operation. Sometimes, it is necessary to remove various vehicle components to gain access to the component requiring testing. For additional information, refer to the appropriate section for removal and installation procedures. Reinstall all components after verifying system operation is normal.

PINPOINT TEST A: BRAKE VIBRATION/SHUDDER

Test Step	Result / Action to Take
A1 ROAD TEST THE VEHICLE LIGHT BRAKING	
• Check that the wheel and tires are correct for the vehicle. Inspect the tires for abnormal wear patterns. • Road test the vehicle. Warm the brakes by slowing the vehicle a few times from 80-32 km/h (50 to 20 mph) using light braking applications. At highway speeds of 89-97 km/h (55-60 mph), apply the brake using a light pedal force. • **Is there a vibration/shudder felt in the steering wheel, seat or brake pedal?**	**Yes** GO to A4 . **No** GO to A2 .
A2 ROAD TEST THE VEHICLE MODERATE TO HEAVY BRAKING	
• Road test the vehicle. At highway speeds of 89-97 km/h (55-60 mph), apply the brake using a moderate to heavy pedal force. • **Is there a vibration/shudder?**	**Yes** For vehicles with ABS, GO to A3 . For vehicles with standard brakes, GO to A4 . **No** Vehicle is OK. VERIFY condition with customer. TEST the vehicle for normal operation.
A3 NORMAL ACTUATION OF THE ABS SYSTEM DIAGNOSIS	
• During moderate to heavy braking, noise from the hydraulic control unit (HCU) and pulsation in the brake pedal can be observed. Pedal pulsation coupled with noise during heavy braking or on loose gravel, bumps, wet or snowy surfaces is acceptable and indicates correct functioning of the ABS system. Pedal pulsation or steering wheel nibble (frequency is proportioned to the vehicle speed) indicates a concern with a brake or suspension component. • **Is the vibration/shudder vehicle speed sensitive?**	**Yes** GO to A5 . **No** The brake system is operating correctly.
A4 APPLICATION OF THE PARKING BRAKE	
• **NOTE:** Begin at the front of the vehicle unless the vibration or shudder has been isolated to the rear. • This test is not applicable to vehicles with drum-in-hat type parking brakes. For vehicles with drum-in-hat parking brakes, proceed to the next test. For all other vehicles, apply the parking brake to identify if the problem is in the front or rear brake. At highway speeds of 89-97 km/h (55-60 mph), lightly apply the parking brake until the vehicle slows down. Release the parking brake immediately after the test. • **Is there a vibration/shudder?**	**Yes** GO to A8 . **No** GO to A5 .
A5 CHECK THE FRONT WHEEL BEARINGS	
	Yes GO to A6 .

• Check the front wheel bearings. Refer to Wheel Bearing Check in this section. • **Are the wheel bearings OK?**	**No** INSPECT the wheel bearings. ADJUST or REPAIR as necessary. TEST the system for normal operation.
A6 CHECK THE FRONT SUSPENSION	

• Check the front suspension for:
  • Broken or loose bolts.
  • Damaged springs.
  • Worn or damaged upper and lower control arm bushings.
  • Loose or rough front bearings.
  • Uneven tire wear.
• **Are all the suspension components in satisfactory condition?**
	Yes
	GO to A7 .
	
	No
	REPAIR or INSTALL new components as necessary. TEST the system for normal operation.

A7 RESURFACE THE FRONT BRAKE DISCS	
• ⚠ **CAUTION: Do not use a bench lathe to machine brake discs.** • **NOTE:** Follow the manufacturer's instructions to machine the brake discs. After machining, make sure the brake disc meets the thickness specification. • Resurface the front brake discs or drums. Refer to Brake Disc Machining in this section. Road test the vehicle. • **Is the vibration/shudder present?**	**Yes** GO to A8 . **No** Vehicle is OK.
A8 CHECK THE REAR SUSPENSION	

• Check the rear suspension for:
  • Broken or loose bolts.
  • Damaged or worn springs or spring bushings.
  • Worn or damaged upper and lower control arm bushings.
  • Worn or damaged trailing arms.
  • Loose or rough rear bearings.
  • Uneven tire wear.
• **Are all the suspension components in satisfactory condition?**
	Yes
	GO to A9 .
	
	No
	REPAIR or INSTALL new components as necessary. TEST the system for normal operation.

A9 RESURFACE THE REAR BRAKE DISC OR DRUM	
• ⚠ **CAUTION: Do not use a bench lathe to machine brake discs.** • **NOTE:** Follow the manufacturer's instructions to machine the brake discs. After machining, make sure the brake disc meets the thickness specification. • Resurface the front brake discs. Refer to Brake Disc Machining in this section. Road test the vehicle. • **Is the vibration/shudder present?**	**Yes** CHECK the front suspension for wear or damage. RESURFACE the front brake discs. TEST the system for normal operation. **No** Vehicle is OK.

PINPOINT TEST B: ENGINE TICKING NOISE

Test Step	Result / Action to Take

B1 CHECK FOR TICKING NOISE AT THE FUEL RAIL	
• Disconnect the first fuel line clip. • **Is the ticking noise gone?**	**Yes** CHECK for TSB for applicable vehicle. REPAIR as necessary. TEST the system for normal operation. **No** GO to B2 .
B2 CHECK FOR TICKING NOISE AT THE FUEL INJECTOR	
• Using an EngineEAR, listen at the fuel injectors by placing a probe on each injector. To isolate the faulty injector, disconnect the injector electrical connector and listen for the noise. • **Is the fuel injector the source of the ticking noise?**	**Yes** INSTALL a new fuel injector. REFER to Section 303-04A (3.0L [4.V]) or Section 303-04B (3.9L). TEST the system for normal operation. **No** GO to B3 .
B3 CHECK THE BELT TENSIONER FOR TICKING NOISE	
• Inspect the accessory drive. Check for the belt tensioner bottoming at end of travel or not at end of stroke. • Using an EngineEAR, listen at the belt tensioner. • **Is the belt tensioner the source of the noise?**	**Yes** INSTALL a new belt tensioner. TEST the system for normal operation. **No** GO to B4 .
B4 CHECK THE WATER PUMP FOR TICKING NOISE	
• Using an EngineEAR, listen at the water pump for ticking noise. • **Is the water pump the source of the noise?**	**Yes** INSTALL a new water pump. REFER to Section 303-03 . TEST the system for normal operation. **No** GO to B5 .
B5 CHECK FOR AN OBSTRUCTION OF THE COOLING FAN	
• Inspect the cooling fan for obstructions. • Check the cooling fan and shroud for wear or damage. • **Was there an obstruction or does the cooling fan show signs of damage?**	**Yes** REPAIR or INSTALL a new cooling fan. REFER to Section 303-03 . TEST the system for normal operation. **No** GO to B6 .
B6 CHECK THE OIL PUMP FOR TICKING NOISE	
• Check the oil pump using EngineEARs and probe at the oil filter adapter to verify the oil pump as a source. • **Is the oil pump the source of the noise?**	**Yes** INSTALL a new oil pump. REFER to Section 303-04A (3.0L [4.V]) or Section 303-04B (3.9L). TEST the system for normal operation.

	No GO to B7 .
B7 CHECK VALVE LIFTERS OR LASH ADJUSTERS FOR CORRECT OPERATION	
• Check valve lifter/lash adjuster for correct operation, using EngineEARs. • **Are the valve lifters/lash adjusters operating correctly?**	**Yes** VERIFY customer concern. CONDUCT a diagnosis of other suspect components. **No** INSTALL a new valve lifter/lash adjuster(s). TEST the system for normal operation.

PINPOINT TEST C: ACCESSORY DRIVE BEARING HOOT

Test Step	Result / Action to Take
C1 CHECK THE ACCESSORY DRIVE IDLER AND TENSIONER PULLEY BEARINGS	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • Place an EngineEAR probe directly on the pulley center post or bolt to verify which bearing is making the noise. • Key in OFF position. • **Is either bearing making the noise?**	**Yes** INSTALL a new pulley/idler. CARRY OUT the Vehicle Cold Soak Procedure and TEST the system for normal operation. **No** CONDUCT a diagnosis on other suspect accessory drive components.

PINPOINT TEST D: POWER STEERING MOAN

Test Step	Result / Action to Take
D1 CHECK THE POWER STEERING SYSTEM	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • Turn the steering wheel while the noise is occurring and listen for changes in sound pitch or loudness. • Key in OFF position. • **Does the sound pitch or loudness change while turning the steering wheel?**	**Yes** GO to D2 . **No** CONDUCT a diagnosis on other suspect accessory drive components.
D2 VERIFY THE SOURCE	
• Key in START position. • Place an EngineEAR probe near the power steering pump/reservoir while the noise is occurring. While an assistant turns the steering wheel, listen for changes in sound pitch or loudness.	**Yes** VERIFY that the supply tube to the pump is unobstructed. CHECK the fluid condition and level. DRAIN the fluid and REFILL. REFER to Section 211-00 . CARRY OUT the Vehicle Cold Soak Procedure and TEST the system for normal operation.

• Key in OFF position. • **Does the sound pitch or loudness change while turning the steering wheel?**	**No** Normal system operation.

PINPOINT TEST E: ENGINE DRIVEN COOLING FAN MOAN

Test Step	Result / Action to Take
E1 CHECK THE ENGINE DRIVEN COOLING FAN AFTER A COLD SOAK	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • Assess the airflow. • Raise the engine speed to 1500 rpm while listening for the moan to increase in proportion to the airflow. • Key in OFF position. • **Does the moan increase in proportion to the airflow?**	**Yes** TEST the fan for normal operation. If the fan tests normal, GO to E2 . Otherwise, REPAIR as necessary. **No** Normal system operation.
E2 CHECK THE ENGINE DRIVEN COOLING FAN AT NORMAL OPERATING TEMPERATURE	
• Key in START position. • Run the engine to normal operating temperature while listening for the moan to stop. • Key in OFF position. • **Does the moan stop?**	**Yes** Normal clutch operation. **No** INSTALL a new fan clutch. TEST the system for normal operation.

PINPOINT TEST F: DRUMMING NOISE

Test Step	Result / Action to Take
F1 CHECK THE EXHAUST SYSTEM	
• Key in START position. • Increase the engine rpm until the noise is the loudest. Note the engine rpm. • Key in OFF position. • Add approximately 9 kg (20 lb) of weight to the exhaust system. First place the weight at the tail pipe and test, then place it at the front pipe.  DF1768-A • Key in START position. • Increase the engine rpm and listen for the drumming noise. Note the engine rpm if the noise occurs.	**Yes** CARRY OUT Exhaust System Neutralizing in this section. TEST the system for normal operation. **No** GO to F2 .

• Key in OFF position. • Using a vibration analyzer (VA), determine the amount of vibration that occurs with the drumming noise. • **Is the noise/vibration reduced or eliminated, or does the noise/vibration occur at a different rpm?**	
F2 POWERTRAIN/DRIVETRAIN MOUNT NEUTRALIZING	
• Carry out Powertrain/Drivetrain Mount Neutralizing in this section. Test the system for normal operation. • **Is the noise reduced or eliminated?**	**Yes** Vehicle OK. TEST the system for normal operation. **No** CONDUCT diagnosis of other suspect components.

PINPOINT TEST G: ENGINE TICKING, KNOCKING OR CONTINUOUS RATTLE

Test Step	Result / Action to Take
G1 CHECK FOR NOISE AT THE VALVE COVERS AND THE FRONT COVERS (OHC ENGINES)	
• Carry out the Vehicle Cold Soak Procedure in this section. • Key in START position. • **NOTE:** For a short-duration ticking noise, multiple engine starts may be necessary. • Using an EngineEAR, listen closely at the valve covers and the front covers (OHC engines) by placing the probe near the surface of the valve cover and then on the surface front cover. • Key in OFF position. • **Is the noise source apparent?**	**Yes** REMOVE the appropriate cover and INSPECT for loose, worn/broken components. REPAIR as necessary. TEST the system for normal operation. **No** GO to G2 .
G2 CHECK FOR NOISE AT THE CYLINDER BLOCK	
• Key in START position. • Using an EngineEAR, listen closely at the cylinder block by placing a probe on or near each freeze plug. • Key in OFF position. • **Is the noise source apparent?**	**Yes** REPAIR or INSTALL new components as necessary. **No** GO to G3 .
G3 CHECK FOR NOISE WHILE DISCONNECTING EACH FUEL INJECTOR ELECTRICAL CONNECTOR, ONE AT A TIME	
• Key in START position. • Disconnect each fuel injector electrical connector, one at a time, to decrease piston force and listen for the noise. • Key in OFF position. • **Is the noise reduced or eliminated?**	**Yes** INSTALL a new fuel injector. REFER to Section 303-04A (3.0L [4.V]) or Section 303-04B (3.9L). TEST the system for normal operation. **No** INSPECT accessory drive or the transmission as a possible source.

PINPOINT TEST H: FRONT SUSPENSION NOISE

Test Step	Result / Action to Take
H1 ROAD TEST THE VEHICLE	
• Test drive the vehicle. • **NOTE:** An assistant will be needed for this road test. • During the road test, drive the vehicle over a rough road. Using ChassisEARs, determine from which area/component the noise is originating. • **Is there a squeak, creak or rattle noise?**	**Yes** GO to H2 . **No** The suspension system is OK. CONDUCT a diagnosis on other suspect systems.
H2 INSPECT THE STEERING SYSTEM	
• ⚠ **WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.** • Raise and support the vehicle. • Check the steering system for wear or damage. Carry out a steering linkage test. Refer to Section 211-00 . • Inspect the tire wear pattern. Refer to Tire Wear Chart in Tire Wear Patterns and Frequency Calculations in this section. • **Are the steering components worn or damaged?**	**Yes** REPAIR the steering system. INSTALL new components as necessary. TEST the system for normal operation. **No** GO to H3 .
H3 FRONT SHOCK ABSORBER/STRUT CHECK	
• Check the front shock absorbers/strut mounts for loose bolts or nuts. • Check the front shock absorbers/struts for wear or damage. Carry out a "bounce test". • **Are the front shock absorbers/struts loose or damaged?**	**Yes** TIGHTEN to specifications if loose. INSTALL new front shock absorbers/struts if damaged. TEST the system for normal operation. **No** GO to H4 .
H4 CHECK THE FRONT SPRINGS	
• Check the front spring and front spring mounts/brackets for wear or damage. • **Are the front springs or spring mounts/brackets worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to H5 .
H5 CHECK THE CONTROL ARMS/RADIUS ARMS	
• Inspect the control arm bushings for wear or damage. • Inspect for twisted or bent control arms/radius arms. • **Are the control arms/radius arms damaged or worn?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation.

	No GO to H6 .
H6 CHECK THE STABILIZER BAR/TRACK BAR	
• Check the stabilizer bar/track bar bushings and links for damage or wear. • Check the stabilizer bar/track bar for damage. • Check for loose or damaged stabilizer bar isolators or brackets. • **Are the stabilizer bar/track bar components loose, worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** Suspension system OK. CONDUCT diagnosis on other suspect systems.

PINPOINT TEST I: REAR SUSPENSION NOISE

Test Step	Result / Action to Take
I1 ROAD TEST THE VEHICLE	
• Test drive the vehicle. • **NOTE:** An assistant will be needed for this road test. • During the road test, drive the vehicle over a rough road. Using ChassisEARs, determine from which area/component the noise is originating. • **Is there a squeak, creak or rattle noise?**	**Yes** GO to I2 . **No** The suspension system is OK. CONDUCT a diagnosis on other suspect systems.
I2 REAR SHOCK ABSORBER/STRUT CHECK	
• ⚠ **WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.** • Raise and support the vehicle. • Check the rear shock absorber/strut mounts for loose bolts or nuts. • Check the rear shock absorbers/struts for damage. Carry out a shock absorber check. • **Are the rear shock absorbers/struts loose or damaged?**	**Yes** TIGHTEN to specifications if loose. INSTALL new rear shock absorbers/struts if damaged. TEST the system for normal operation. **No** GO to I3 .
I3 CHECK THE REAR SPRINGS	
• Check the rear springs and rear spring mounts/brackets for wear or damage. • **Are the rear springs or spring mounts/brackets worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to I4 .
I4 CHECK THE CONTROL ARMS/TRAILING ARMS	

• Inspect the control arm/trailing arm bushings for wear or damage. Check for loose control arm/trailing arm bolts. • Inspect for twisted or bent control arms/trailing arms. • **Are the control arms/trailing arms loose, damaged or worn?**	**Yes** REPAIR or INSTALL new components as necessary. TEST the system for normal operation. **No** GO to I5 .
I5 CHECK THE STABILIZER BAR/TRACK BAR	
• Check the stabilizer bar/track bar bushings and links for damage or wear. • Check the stabilizer bar/track bar for damage. • Check for loose or damaged stabilizer bar isolators or brackets. • **Are the stabilizer bar/track bar components loose, worn or damaged?**	**Yes** REPAIR or INSTALL new components as necessary. Test the system for normal operation. **No** Suspension system OK. CONDUCT diagnosis on other suspect systems.

PINPOINT TEST J: WHEEL AND TIRE

Test Step	Result / Action to Take
J1 ROAD TEST THE VEHICLE	
• **NOTE:** Wheel or tire vibrations felt in the steering wheel are most likely related to the front wheel or tire. Vibration felt through the seat are most likely related to the rear wheel or tire. This may not always be true, but it can help to isolate the problem to the front or rear of the vehicle. • Test drive the vehicle at different speed ranges. • During the road test, if the vibration can be eliminated by placing the vehicle in NEUTRAL or is affected by the speed of the engine, the cause is not the wheels or tires. • **Is there a vibration and noise?**	**Yes** GO to J2 . **No** The wheel and tires are OK. CONDUCT a diagnosis on other suspect systems.
J2 CHECK THE FRONT WHEEL BEARINGS	
• Check the front wheel bearings. Refer to Wheel Bearing Check in this section. • **Are the wheel bearings OK?**	**Yes** GO to J3 . **No** INSPECT the wheel bearings. ADJUST or REPAIR as necessary. TEST the system for normal operation.
J3 INSPECT THE TIRES	
• Check the tires for missing weights. • Check the wheels for damage. • Inspect the tire wear pattern. Refer to the Tire Wear Patterns chart in this section. • **Do the tires have an abnormal wear pattern?**	**Yes** CORRECT the condition that caused the abnormal wear. INSTALL new tire(s). TEST the system for normal operation.

	No GO to J4 .
J4 TIRE ROTATION DIAGNOSIS	
• Spin the tires slowly and watch for signs of lateral runout. DF1713-A • Spin the tires slowly and watch for signs of radial runout. DF1714-A • **Are there signs of visual runout?**	**Yes** GO to J5 . **No** CHECK the wheel and tire balance. CORRECT as necessary. TEST the system for normal operation.
J5 RADIAL RUNOUT CHECK ON THE TIRE	
• Measure the radial runout of the wheel and tire assembly. A typical specification for total radial runout is 1.14 mm (0.04 in).  DF1715-A • **Is the radial runout within specifications?**	**Yes** GO to J8 . **No** GO to J6 .
J6 RADIAL RUNOUT CHECK ON THE WHEEL	
• Measure the radial runout of the wheel. A typical specification for total radial runout is 1.14 mm (0.04 in). • **Is the radial runout within specifications?**	**Yes** INSTALL a new tire. TEST the system for normal operation. **No** GO to J7 .
J7 CHECK THE HUB/BRAKE DISC OR DRUM PILOT RUNOUT OR BOLT CIRCLE RUNOUT	

• Measure the pilot or bolt circle runout. A typical specification for radial runout is:
  • Pilot runout less than 0.15 mm (0.006 inch).
  • Bolt circle runout less than 0.38 mm (0.015 inch).
• **Is the radial runout within specifications?**
	Yes
	INSTALL a new wheel. TEST the system for normal operation.
	
	No
	REPAIR or INSTALL new components as necessary.

	REFER to Section 204-00 .
J8 LATERAL RUNOUT CHECK ON THE TIRE	
• Measure the lateral runout of the wheel and tire assembly. A typical specification for total lateral runout is 1.14 mm (0.04 in).  A0011804 • **Is the lateral runout within specifications?**	**Yes** Wheel and tires OK. CONDUCT diagnosis on other suspect systems. **No** GO to J9 .
J9 LATERAL RUNOUT CHECK ON THE WHEEL	
• Measure the lateral runout of the wheel. A typical specification for total radial runout is 1.14 mm (0.04 in). • **Is the lateral runout within specifications?**	**Yes** INSTALL a new tire. TEST the system for normal operation. **No** GO to J10 .
J10 CHECK THE FLANGE FACE LATERAL RUNOUT	

• Measure the flange face lateral runout. A typical specification for lateral runout is:
  • Hub/brake disc less than 0.13 mm (0.005 inch).
  • Axle shaft less than 0.25 mm (0.010 inch).
• **Is the lateral runout within specifications?**
	Yes
	INSTALL a new wheel. TEST the system for normal operation.
	
	No
	REPAIR or INSTALL new components as necessary. REFER to Section 204-00 .

PINPOINT TEST K: HIGH SPEED SHAKE OR SHIMMY

Test Step	Result / Action to Take
K1 CHECK FOR FRONT WHEEL BEARING ROUGHNESS	
• Chock the rear wheels. • Raise and support the front end of the vehicle so that the front wheel and tire assemblies can spin. • Spin the front tires by hand. Refer to Wheel Bearing Check in this section. • **Do the wheel bearings feel rough?**	**Yes** INSPECT the wheel bearings. REPAIR as necessary. TEST the system for normal operation. **No** GO to K2 .
K2 CHECK THE END PLAY OF THE FRONT WHEEL BEARINGS	
• Check the end play of the front wheel bearings. Refer to Section 204-00 . • **Is the end play OK?**	**Yes** GO to K3 . **No**

	ADJUST or REPAIR as necessary. TEST the system for normal operation.
K3 MEASURE THE LATERAL RUNOUT AND THE RADIAL RUNOUT OF THE FRONT WHEELS ON THE VEHICLE	
• Measure the lateral runout and the radial runout of the front wheels on the vehicle. Go To Pinpoint Test J . • **Are the measurements within specifications?**	**Yes** GO to K4 . **No** INSTALL new wheels as necessary and BALANCE the assembly. TEST the system for normal operation.
K4 MEASURE THE LATERAL RUNOUT OF THE FRONT TIRES ON THE VEHICLE	
• Measure the lateral runout of the front tires on the vehicle. Go To Pinpoint Test J . • **Is the runout within specifications?**	**Yes** GO to K5 . **No** INSTALL new tires as necessary and BALANCE the assembly. TEST the system for normal operation.
K5 MEASURE THE RADIAL RUNOUT OF THE FRONT TIRES ON THE VEHICLE	
• Measure the radial runout of the front tires on the vehicle. Go To Pinpoint Test J . • **Is the runout within specifications?**	**Yes** BALANCE the front wheel and tire assemblies. If any tire cannot be balanced, INSTALL a new tire. TEST the system for normal operation. **No** GO to K6 .
K6 MATCH MOUNT THE TIRE AND WHEEL ASSEMBLY	
• Mark the high runout location on the tire and also on the wheel. Break the assembly down and rotate the tire 180 degrees (halfway around) on the wheel. Inflate the tire and measure the radial runout. • **Is the runout within specifications?**	**Yes** BALANCE the assembly. TEST the system for normal operation. **No** If the high spot is not within 101.6 mm (4 inches) of the first high spot on the tire, GO to K7 .
K7 MEASURE THE WHEEL FLANGE RUNOUT	
• Dismount the tire and mount the wheel on a wheel balancer. Measure the runout on both wheel flanges. Refer to Section 204-00 .	**Yes** LOCATE and MARK the low spot on the wheel. INSTALL the tire, matching the high spot on the tire with the low spot on the wheel. BALANCE the assembly. TEST the system for normal operation. If the condition persists,GO to K8 . **No** INSTALL a new wheel. CHECK the

 DG0199-A • **Is the runout within specifications?**	runout on the new wheel. If the new wheel is within limits, LOCATE and MARK the low spot. INSTALL the tire, matching the high spot on the tire with the low spot on the wheel. BALANCE the assembly. TEST the system for normal operation. If the condition persists, GO to K8 .
K8 CHECK FOR VIBRATION FROM THE FRONT OF THE VEHICLE	
⚠ **WARNING: If only one drive wheel is allowed to rotate, speed must be limited to 55 km/h (34 mph) using the speedometer reading, since actual wheel speed will be twice that indicated on the speedometer. Exceeding a speed of 55 km/h (34 mph) or allowing the drive wheel to hang unsupported can result in tire disintegration or differential failure, which can cause serious personal injury and extensive vehicle damage.** • Spin the front wheel and tire assemblies with a wheel balancer while the vehicle is raised on a hoist. Feel for vibration in the front fender or while seated in the vehicle. • **Is the vibration present?**	**Yes** SUBSTITUTE known good wheel and tire assemblies as necessary. TEST the system for normal operation. **No** GO to K9 .
K9 CHECK FOR VIBRATION FROM THE REAR OF THE VEHICLE	
⚠ **WARNING: If only one drive wheel is allowed to rotate, speed must be limited to 55 km/h (34 mph) using the speedometer reading, since actual wheel speed will be twice that indicated on the speedometer. Exceeding a speed of 55 km/h (34 mph) or allowing the drive wheel to hang unsupported can result in tire disintegration or differential failure, which can cause serious personal injury and extensive vehicle damage.** • Chock the front wheels. • Raise and support the rear end of the vehicle so that the rear wheel and tire assemblies can spin. • Engage the drivetrain and carefully accelerate the drive wheels while checking for vibration. • **Is the vibration present?**	**Yes** GO to K10 . **No** TEST the system for normal operation.
K10 CHECK THE DRIVETRAIN	
⚠ **WARNING: If only one drive wheel is allowed to rotate, speed must be limited to 55 km/h (34 mph) using the speedometer reading, since actual wheel speed will be twice that indicated on the speedometer. Exceeding a speed of 55 km/h (34 mph) or allowing the drive wheel to hang unsupported can result in tire disintegration or differential failure, which can cause serious personal injury and extensive vehicle damage.**	**Yes** CHECK/TEST the drivetrain and driveline components. TEST the system for normal operation. **No** SUBSTITUTE known good wheel and tire assemblies as necessary. TEST the system for normal operation.

• Remove the rear wheel and tire assemblies. Refer to Section 204-00 . • Secure the brake drums (if so equipped), by installing wheel hub bolt nuts, reversed. • Carefully accelerate the drivetrain while checking for vibration. • **Is the vibration present?**	

Component Tests

Idle Air Control (IAC) Valve

1. Open the hood.

2. **NOTE:** Key symptom is elevated idle speed while noise is occurring.

   NOTE: "Snapping" the throttle can induce the noise.

   Verify the condition by operating the vehicle for a short time.

3. Inspect the IAC valve. If physical evidence of contamination exists, install a new IAC valve.

4. While the noise is occurring, either place an EngineEAR probe near the IAC valve and the inlet tube, or create a 6.35 mm (0.25 in)-12.7 mm (0.50 in) air gap between the inlet tube and the clean air tube. If the IAC valve is making the noise, install a new IAC valve.

5. Test the vehicle for normal operation.

Steering Gear Grunt/Shudder Test

1. Start and run the vehicle to operating temperature.

2. Set engine idle speed to 1200 rpm.

3. ⚠ **CAUTION: Do not hold the steering wheel against the stops for more than three to five seconds at a time. Damage to the power steering pump will occur.**

   Rotate the steering wheel to the RH stop, then turn the steering wheel 90 degrees back from that position. Turn the steering wheel slowly in a 15 degrees to 30 degrees arc.

4. Turn the steering wheel another 90 degrees. Turn the steering wheel slowly in a 15 degrees to 30 degrees arc.

5. Repeat the test with power steering fluid at different temperatures.

6. If a light grunt is heard or a low (50-200 Hz) shudder is present, this is a normal steering system condition.

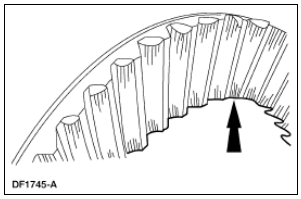
7. If a loud grunt is heard or a strong shudder is felt, fill and purge the power steering system.

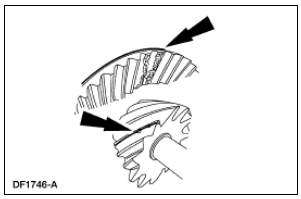
Checking Tooth Contact Pattern and Condition of the Ring and Pinion

There are two basic types of conditions that will produce ring and pinion noise. The first type is a howl or chuckle produced by broken, cracked, chipped, scored or forcibly damaged gear teeth and is usually quite

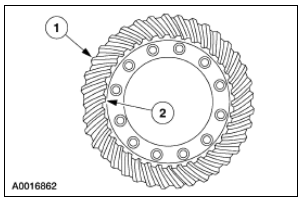
audible over the entire speed range. The second type of ring and pinion noise pertains to the mesh pattern of the gear pattern. This gear noise can be recognized as it produces a cycling pitch or whine. Ring and pinion noise tends to peak in a narrow speed range or ranges, and will tend to remain constant in pitch.

1. Raise and support the vehicle. For additional information, refer to Section 100-00 .
2. Drain the axle lubricant. For additional information, refer to Section 205-00 .
3. Remove the carrier assembly or the axle housing cover depending on the axle type. For additional information, refer to Section 205-00 .
4. Inspect the gear set for scoring or damage.





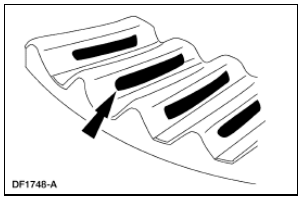
5. In the following steps, the movement of the contact pattern along the length is indicated as toward the" heel" or "toe" of the differential ring gear.



Item	Description
1	Heel
2	Toe

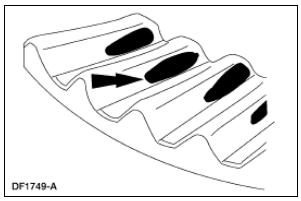
6. Apply a marking compound to a third of the gear teeth on the differential ring gear. Rotate the differential ring gear several complete turns in both directions until a good, clear tooth pattern is obtained. Inspect the contact patterns on the ring gear teeth.
7. A good contact pattern should be centered on the tooth. It can also be slightly toward the toe. There should always be some clearance between the contact pattern and the top of the tooth.

- Tooth contact pattern shown on the drive side of the gear teeth.



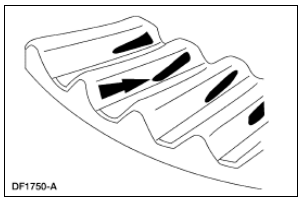
8. A high, thick contact pattern that is worn more toward the toe.

- Tooth contact pattern shown on the drive side of the gear teeth.
- The high contact pattern indicates that the drive pinion is not installed deep enough into the carrier.
- The differential ring gear backlash is correct, a thinner drive pinion shim is needed. A decrease will move the drive pinion toward the differential ring gear.



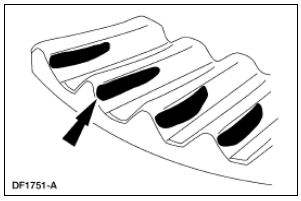
9. A high, thin contact pattern that is worn toward the toe.

- Tooth contact pattern shown on the drive side of the gear teeth.
- The drive pinion depth is correct. Increase the differential ring gear backlash.



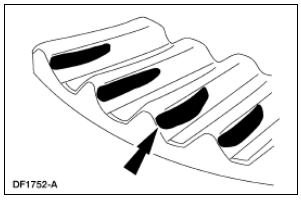
10. A contact pattern that is worn in the center of the differential ring gear tooth toward the heel.

- Tooth contact pattern shown on the drive side of the gear teeth.
- The low contact pattern indicates that the drive pinion is installed too deep into the carrier.
- The differential ring gear backlash is correct. A thicker drive pinion shim is needed.



11. A contact pattern that is worn at the top of the differential ring gear tooth toward the heel.

- Tooth contact pattern shown on the drive side of the gear teeth.
- The pinion gear depth is correct. Decrease the differential ring gear backlash.



Tire Wear Patterns and Frequency Calculations

Tire Wear Chart

TIRE WEAR	CONDITION	POSSIBLE CAUSES
	• Rapid wear at both shoulders.	• Tires underinflated. • Worn suspension components. • Excessive cornering speeds. • Lack of rotation.
	• Rapid wear at the center.	• Tires overinflated. • Lack of rotation. • Excessive toe on drive wheels. • Heavy acceleration on drive wheels.
	• Wear at one shoulder.	• Toe adjustment out of specification. • Camber out of specification. • Damaged strut. • Damaged lower control arm.
	• Feather edges.	• Toe adjustment out of specification. • Damaged or worn tie rods. • Damaged spindle or knuckle.
	• Bald spots or cupping.	• Unbalanced wheel. • Excessive radial runout. • Worn strut or shock absorber.
	• Tire scalloped.	• Toe adjustment out of specification. • Camber out of specification. • Worn or damaged suspension components.
	• Wear pattern - FWD vehicles.	• Excessive toe on non-drive wheels. • Lack of rotation.
	• Wear pattern - FWD vehicles. Edge of thread blocks worn.	• Excessive toe on non-drive wheels. • Lack of rotation.

DF1717-A

Wheel and tire NVH concerns are directly related to vehicle speed and are not generally affected by acceleration, coasting or decelerating. Also, out-of-balance wheel and tires can vibrate at more than one speed. A vibration that is affected by the engine rpm, or is eliminated by placing the transmission in NEUTRAL is not related to the tire and wheel. As a general rule, tire and wheel vibrations felt in the steering wheel are related to the front tire and wheel assemblies. Vibrations felt in the seat or floor are related to the rear tire and wheel assemblies. This can initially isolate a concern to the front or rear.

Careful attention must be paid to the tire and wheels. There are several symptoms that can be caused by damaged or worn tire and wheels. Carry out a careful visual inspection of the tires and wheel assemblies. Spin the tires slowly and watch for signs of lateral or radial runout. Refer to the tire wear chart to determine the tire wear conditions and actions.

For a vibration concern, use the vehicle speed to determine tire/wheel frequency and rpm. Calculate tire and wheel rpm and frequency by carrying out and following:

- Measure the diameter of the tire.
- Record the speed at which the vibration occurs.
- Obtain the corresponding tire and wheel rpm and frequency from the Tire Speed and Frequency Chart.
    - ♦ If the vehicle speed is not listed, divide the vehicle speed at which the vibration occurs by 16 km/h (10 mph). Multiply that number by 16 km/h (10 mph) tire rpm listed for that tire diameter in the chart. Then divide that number by 60. For example: a 40 mph vibration with 835 mm (33 in) tires. 40÷10 = 4. Multiply 4 by 105 = 420 rpm. Divide 420 rpm by 60 seconds = 7 Hz at 40 mph.

Tire Speed and Frequency Chart

Tire Diameter	**Tire RPM/Hz**	**Tire RPM/Hz**	**Tire RPM/Hz**	**Tire RPM/Hz**
mm (inch)	@ 16 km/h (10 mph)	@ 80 km/h (50 mph)	@ 97 km/h (60 mph)	@ 113 km/h (70 mph)
483 (19)	182	910/15	1092/18	1274/21
508 (20)	173	865/14	1038/17	1211/20

 ST2714-A	Automatic On-Car Brake Lathe 201-00022 or equivalent

Material

Item	Specification
Metal Surface Cleaner F4AZ-19A536-RA or equivalent	WSE-M5B392-A
High Temperature Nickel Anti-Seize Lubricant F6AZ-9L494-AA or equivalent	ESE-M12A4-A

⚠ WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.

⚠ CAUTION: Do not install brake discs that are less than the minimum thickness specified. Do not machine a brake disc below the minimum thickness specification.

1. Check wheel bearing end-play and correct as necessary.

2. **NOTE:** Begin at the front of the vehicle unless the vibration has been isolated to the rear.

   Remove the tire and wheel assembly.

3. Remove the brake caliper and the brake caliper anchor plate. Refer to the appropriate section in Group 206 for the procedure.

4. Inspect the brake linings. Install new brake linings if below specification. For additional information, refer to the appropriate brake section.

5. Measure and record the brake disc thickness. Install a new brake disc if the thickness after machining will be at or below specification. The specification is molded into the brake disc.
   - Do not machine a new brake disc.

6. For vehicles with a two-piece hub and brake disc assembly:
   - Match-mark before disassembly.

- Remove the brake disc.
- Clean the hub and brake disc mounting surfaces with metal surface cleaner.
- Using a die grinder with a mild abrasive (Scotch Brite® type), remove any rust or corrosion from the hub and brake disc mounting surfaces.
- Align the match-marks and reinstall the brake disc on the hub.

7. ⚠ **CAUTION: Do not use a bench lathe to machine brake discs.**

   NOTE: The depth of cut must be between 0.10 and 0.20 mm (0.004 and 0.008 inch). Lighter cuts will cause heat and wear. Heavier cuts will cause poor brake disc surface finish.

   Using an on-car brake lathe, machine the brake discs. Follow the manufacturer's instructions. After machining, make sure the brake disc still meets the thickness specification.

8. Using the special tools, verify that the brake disc lateral runout is now within specification. For additional information, refer to Section 206-00 .

9. Remove the special tool hub adapter.

10. Remove any remaining metal chips from the machining operation.

11. For vehicles with a two-piece hub and brake disc assembly:
    - Remove the brake disc from the hub.
    - Remove any remaining metal chips from hub and brake disc mounting surfaces and from the ABS sensor.
    - Apply a liberal amount of lubricant to the hub flange, pilot area and to the brake disc-to-hub mounting surface.
    - Using the match marks, mount the brake disc on the hub.

12. Install the brake caliper anchor plate and the brake caliper.

13. Install the tire and wheel assembly.

14. Test the system for normal operation.

Powertrain/Drivetrain Mount Neutralizing

Printable View (9 KB)

⚠ WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.

1. Raise and support the vehicle.
2. Loosen, but do not remove, the powertrain/drivetrain mount fasteners.
3. Lower the vehicle.
4. **⚠ CAUTION: Do not twist or strain the powertrain/drivetrain mounts.**

   Move the vehicle in forward and reverse 0.6-1.2 meters (2-4 ft).
5. Raise and support the vehicle.
6. Tighten the powertrain/drivetrain mount fasteners.
7. Lower the vehicle.
8. Test the system for normal operation.

Exhaust System Neutralizing

Printable View (10 KB)

⚠ WARNING: Exhaust gases contain carbon monoxide, which is harmful to health and potentially lethal. Repair exhaust system leaks immediately. Never operate the engine in an enclosed area.

⚠ WARNING: Exhaust system components are hot.

NOTE: Neutralize the exhaust system to relieve strain on mounts which can be sufficiently bound up to transmit vibration as if grounded.

1. **⚠ WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.**

   ⚠ CAUTION: Make sure the system is warmed up to normal operating temperature, as thermal expansion can be the cause of a strain problem.

   Raise and support the vehicle.

2. Loosen all exhaust hanger attachments and reposition the hangers until they hang free and straight.

3. Loosen all exhaust flange joints.

4. Place a stand to support the muffler parallel to the vehicle frame with the muffler pipe bracket free of stress.

5. Tighten the muffler connection.

6. Tighten all the exhaust hanger clamps and flanges (tighten the exhaust manifold flange joint last).
   - Verify there is adequate clearance to prevent grounding at any point in the system. Make sure that the catalytic converter and heat shield do not contact the frame rails.
   - After neutralization, the rubber in the exhaust hangers should show some flexibility when movement is applied to the exhaust system.
   - With the exhaust system installed securely and cooled, the rear hanger should be angled forward.

7. Lower the vehicle.

8. Test the exhaust system for normal operation.

Wheel Bearing Check

Printable View (73 KB)

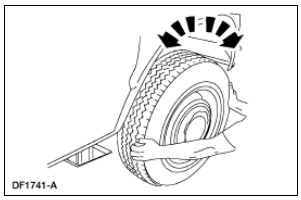
1. **WARNING: The electrical power to the air suspension system must be shut off prior to hoisting, jacking or towing an air suspension vehicle. This can be accomplished by turning off the air suspension switch. Failure to do so can result in unexpected inflation or deflation of the air springs, which can result in shifting of the vehicle during these operations.**

   Raise the vehicle until the front tires are off the floor.

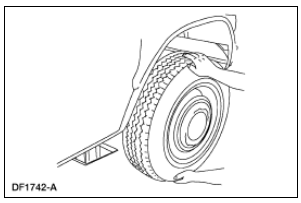
   - Make sure the wheels are in a straight forward position.

2. **NOTE:** Make sure the wheel rotates freely and that the brake pads are retraced sufficiently to allow free movement of the tire and wheel assembly.

   Spin the tire by hand to check the wheel bearings for roughness.



3. Grip each front tire at the top and bottom and move the wheel inward and outward while lifting the weight of the tire off the front wheel bearing.



4. If the tire and wheel (hub) is loose on the spindle, does not rotate freely, or has a rough feeling when spun, carry out one of the following:
   1. On vehicles with inner and outer bearings, inspect the bearings and cups for wear or damage. Adjust or install new bearings and cups as necessary.
   2. On vehicles with one sealed bearing, install a new wheel hub.

Body System Exterior Printable View (29 KB)

Body and Sheet Metal

The uni-body structure is a monocoque, lightweight, all-steel material with removable hood, front fenders, doors and luggage compartment lid.

Insulation

Insulation is comprised of urethane, poly-vinyl chloride (PVC), and recycled felt. Insulation is installed under the roof panel, over the front and rear floor areas, above and below the instrument panel, in the B-pillar and C-pillar sections and on the cowl sides.

Body Sealer Types And Applications

Liquid Butyl Sealer

Liquid butyl sealer does not run, is fast drying, remains semi-elastic and is used for seam sealing on the floor pan, wheelhouse, door openings and drip rails.

Caulking Cord

Caulking cord is a heavy-bodied, plastic base with a filler (commonly known as perma-gum) and is used on spot welds and between the surfaces not sealed with a gasket.

Weatherstrip Adhesive

Weatherstrip adhesive is a quick-drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

Silicone Lubricant

Silicone lubricant is used to keep the weatherstripping pliable and soft. It should be applied to the weatherstrip at every lubrication period, which will make the door easier to close and it will also retard weatherstrip squeaks and wear. It also helps to retain door window alignment by reducing friction between the glass frame and the rubber weatherstrip. Silicone lubricant should not be used prior to painting.

Rear View Mirrors

The exterior mirrors are electrically controlled by the exterior mirror control switch for both vertical and horizontal movement. The exterior mirror control switch is hardwired to the driver door module (DDM). When the LH exterior mirror is selected, adjustment is carried out by moving the control to the desired position. The DDM receives the adjustment command from the exterior mirror control switch and supplies power and ground to the appropriate exterior mirror motor to adjust the exterior mirror. The exterior mirror is controlled by the front electronic module (FEM). When the DDM receives an adjustment command for the RH exterior mirror from the exterior mirror control switch, the DDM interprets the command and sends the adjustment command over the standard corporate protocol (SCP) communication network to the FEM. The FEM interprets the command and supplies power and ground to the appropriate RH exterior mirror motor to adjust the RH exterior mirror.

Memory

The memory mirror function recalls the preferred positioning of the exterior mirrors. Memory is activated by the door-mounted switches, the remote entry transmitter or the keyless entry keypad. The DDM and FEM constantly track the exterior mirror position, using the potentiometers in the exterior mirror assembly. The positions remain in memory as long as the module retains power. When a memory position is recalled by the operator, the DDM and the FEM power the exterior mirror motors simultaneously and monitor the potentiometer circuits. When the stored memory position is reached, the DDM and FEM will remove power from the motors. If the exterior mirror control switch is operated during a memory recall, the modules will stop the recall and respond to the exterior mirror control switch command.

Heated Exterior Mirrors

The heated mirror function provides electric heating to both the LH and RH exterior mirrors which raises the temperature of the glass to clear frost and condensation. The heated exterior mirrors are activated when the heated rear window is in operation which automatically shuts off after ten minutes. The heated mirror power is supplied by the heated rear window relay through a separate battery junction box (BJB) fuse that isolates the heated mirrors from the heated rear window in the event of a concern with one of the systems.

Auto-Dimming Interior Rear View Mirror

This feature reduces glare caused by headlamps reflecting in the mirror. There are two integral sensors to control the dimming function. This feature is switched off by pressing the MODE switch to the OFF position. The auto-dimming interior mirror defaults to the normal setting when the transmission is placed in REVERSE. The rear electronic module (REM) receives a reverse input from the PCM over the standard corporate protocol (SCP) communication link then supplies a power signal to the interior mirror, causing the mirror to cancel any dimming function. When the transmission is moved out of REVERSE, the auto-dimming interior mirror returns to normal operation and resumes any interrupted dimming function.

If the REM does not receive the reverse input from the PCM, a communication DTC will be logged. As a default, the REM will supply power to the dimming circuit to prevent the automatic dimming function from operating until the communication is restored.

The transmission reverse information has a time delay before the message is sent by the PCM to the REM. This delay allows for the transmission selector to be moved through REVERSE without canceling the dimming operation.

This feature is configurable. Make certain this function is enabled before diagnosis.

Switched System Power (SSP)

The SSP is invoked by both the FEM and REM. This function removes power from relays that provide power to the exterior lamps, interior lamps and power door locks. This is only accomplished when both the FEM and REM are in sleep mode. The sleep function of the FEM and REM places the modules in sleep mode when the ignition switch is in the OFF position, and no wake up (input) signals occur for 30 minutes. The module will not sleep if the parking lamps or the hazard lamps are active. The following relays are controlled by the SSP function: SSP1, SSP2, SSP3 and SSP4. When either the FEM or REM are not in sleep mode, all SSP relays will be energized. Each relay, when energized, will supply power to multiple features/functions. For additional information, refer to the switched system powwer (SSP) Relay Index for diagnosis and testing of SSP-related issues.

Glass, Frames And Mechanisms

The glass, frames and mechanisms include the front door window motor(s), rear door window motor(s), window control switches, rear window glass, front door(s) window glass, rear door(s) window glass, rear quarter window(s) glass, front door window regulator(s), rear door window regulator(s) and the windshield glass.

One-Touch Down/Up Window

The one-touch down feature can be activated by pressing either front window control switch to the second down position. This allows either front door window glass to move downward until it is fully lowered. Momentarily pressing the front window control switch while the window is moving downward will stop the front door window glass and restore proportional down operation. The one-touch up feature can be activated and operated in the same manner.

Door Window Glass

The bottom of the door window glass is mounted on a slider bracket which is part of the door window regulator. Door window glass bracket spacers provide attachment points for the door window glass and prevent direct contact between the slider bracket and the door window glass.

Window Control Switch

The driver window control switch can be used to power any or all of the windows. A single window control switch is located on all passenger door armrests to activate that individual window only. The driver window control switch sends a voltage signal directly to the smart motors for operation of the front window motors in the commanded direction. The driver window control switch sends a voltage signal to the DDM. When rear window motor operation is desired, the DDM sends a message over the SCP network to the REM. The REM operates the rear window motors in the commanded direction.

Motor, Window

NOTE: The front window motors require initialization. Refer to Door Window Motor Initialization in this section.

New front and rear window motors are installed separately. The front window motors are "smart" window motors, meaning they have the one-touch up/down features. The rear window motors have no one-touch up or down operation, only proportional up/down operation.

Front Electronic Module (FEM) and Rear Electronic Module (REM)

The FEM receives inputs and delivers outputs to a majority of the electronically controlled features which reside primarily in the front of the vehicle, including the RH power window. The REM receives inputs and delivers outputs to a majority of the electronically controlled features which reside primarily in the rear of the vehicle, including the rear power windows. The FEM and REM are configurable modules and must be correctly configured to the vehicle. The modules may also be configured to allow additional features or functions to be added to the vehicle. The FEM and REM do not have any optional window control configurations.

Driver Door Module (DDM)

The DDM receives inputs from the remote keyless entry transmitter and hardwired components such as the LH front window control switch and delivers outputs in the form of SCP network messages and hardwired component control, including control of the LF and RF power window and roof opening panel (if equipped) during the global open/close feature. The DDM is a configurable module and must be correctly configured to

the vehicle. The DDM may also be configured to allow additional features or functions to be added to the vehicle. The only DDM window feature that can be optionally configured is the window global open and close feature.

Global Open/Close

The global open/close feature is controlled by the DDM. The global open feature involves the DDM either receiving a signal from the key lock cylinder being actuated to the UNLOCK position twice or the DDM receives a signal from a remote entry transmitter (when the customer presses the UNLOCK button twice on the transmitter to activate the feature) and sends a voltage signal to the LH front and RH front smart window motors and the smart roof opening panel motor (if equipped). The smart window motors and smart roof opening panel motor will carry out a global open (one-touch open). Pressing any button on the remote transmitter, or actuating the door lock cylinder to the UNLOCK or LOCK position will interrupt the global open function. The global close feature can only be accomplished with the key in the door lock cylinder. The key must actuate the door lock cylinder to the LOCK position twice, at which time the DDM will receive the door lock cylinder signal and send a global close signal to the smart window motor and the smart roof opening panel motors. The smart motors will then carry out a global close (one-touch close) function. The global close function can be interrupted in the same manner as the global open function.

Module Inputs and Outputs

This system is unique in that many of the inputs that the FEM, REM and DDM receive are over the SCP communication network. These input messages come from other modules connected to the network. The FEM, REM and DDM interpret the inputs then command the correct output that was requested. The modules also receive inputs which come from components directly hardwired to the modules, such as the window control switches.

One type of output the modules provide is over the SCP communication network in the form of messages. These types of outputs are usually generated from a module monitoring a hardwired input and sending a status message to another module. These outputs are commonly required by other modules to carry out their functions. The second type of output is the control of a component directly hardwired to the module.

Passenger Window Power Supply

The REM controls the power supply to all three passenger window control switches. To protect the REM from a potential failure, the REM removes power from the common passenger window power supply when a short to ground is sensed in any passenger window control switch, associated circuitry or the power output circuit of the REM. Power is be restored to the power output circuit upon a cycling of the ignition switch. If the REM output circuit is shorted to ground, the REM immediately removes power from the common power supply circuit. If any passenger window control switches or their associated circuits are shorted to ground, the power will remain on the REM output circuit until the switch or circuit containing the short to ground is activated.

Passenger Window Lock-Out

The LH front window control switch incorporates a passenger window lock-out switch. Activating the passenger window lock-out switch sends a separate voltage signal to the DDM. The DDM then outputs a message to the REM. The REM removes power to the passenger window control switches. Passenger window operation is allowed from only the LH front window control switch, or until the passenger window lock-out switch is turned off.

Passenger Front Power Window

The passenger front power window is controlled by input signals from the LH front window control switch or the RH front window control switch. The REM powers the RH front window control switch, which sends a

voltage signal (when activated by the passenger) to the RH front window smart motor. The window motor raises or lowers (proportionally or one-touch, depending on the command) the window according to the command signal from the RH front window control switch. The DDM powers the LH front window control switch so it may send a voltage signal (when activated by the driver) to the RH front window smart motor.

LH Rear and RH Rear Power Windows

The LH rear and RH rear power windows are controlled by the REM. Operating commands for the rear power windows are received from the LH front window control switch over the SCP network from the DDM, or directly from the LH rear or RH rear window control switches, which are hardwired to the REM.

Activating the LH rear or RH rear switch on the LH front window control switch causes the DDM to send a message to the REM over the SCP network. The REM will then control power and ground to the appropriate window motor to raise or lower the window.

Activating either the LH front or RH rear window control switch sends a voltage signal to the REM. The REM controls power and ground to the appropriate window motor to raise or lower the window. A voltage signal will only be received if the window lockout is OFF and the REM is supplying voltage to the rear window control switch power circuit. The rear window motors are not smart motors and have only proportional mode operation with no one-touch operation.

Heated Rear Window

The heated rear window is controlled by the REM, PCM and the dual auto temp control (DATC) module. The heated rear window switch is incorporated into the DATC module. When the switch is pressed ON, the DATC module sends a message over the SCP network to the REM. The REM checks other messages for vehicle rpm from the PCM. If the rpm message is received, the REM grounds the heated rear window relay coil control circuit (which is hardwired to the REM). The ground signal closes the heated rear window relay which applies power to the heated rear window grid. Fault management of the heated rear window feature prevents the heated rear window from operating when an rpm or ignition switch invalid/missing data message is received. The heated rear window eliminates condensation on the rear window.

Diagnosis

The FEM, REM and DDM constantly monitor their systems and generate diagnostic trouble codes (DTC) if there is a concern. DTCs can be retrieved with the diagnostic tool or an equivalent tester through the SCP communication network.

This vehicle design makes it unique in that electronic functions are divided into zones. The DDM controls features near the driver front door. The FEM controls features in the front portion of the vehicle and the REM controls the features in the rear portion. These systems use the SCP communication network in order to transmit and receive messages. It is vital when diagnosing the vehicle electronic systems to understand where the input (command) originates, all input information messages necessary in order for a feature to operate correctly, which module(s) receive(s) the input (or command message), if the module which received the input (message) controls the output of the feature or does it output a message over the communication network to another module, and which module controls the output of the feature.

Delayed Accessory

The delayed accessory feature allows the power windows, radio and roof opening panel (if equipped) to function for up to ten minutes after the ignition is turned OFF or until any door is opened. The delayed accessory function is controlled by the DDM. When the ignition switch is turned from ON to OFF, the DDM

begins the timing sequence. If a door is opened, the FEM or the REM (the FEM monitors the front door ajar switches and the REM monitors the rear door ajar switches) sends a signal to the DDM over the SCP network, and the DDM turns off the accessory delay function. If the ignition switch is turned to another position, the DDM will also cancel the delayed accessory function.

Heated Wiper Park

The heated wiper park grid (located within the lower painted area of the windshield) receives power from the heated wiper park relay located in the underhood auxiliary junction box (AJB). The heated wiper park relay coil is connected to a fused circuit from the underhood AJB. The heated wiper park relay is controlled by a switched ground from the dual automatic temperature control (DATC) module controlled heated wiper park ON/OFF switch. The heated wiper park grid is automatically activated by the DATC module when ambient air temperature drops below 3° C (38° F), and can be manually activated by pressing the heated wiper park ON/OFF switch. The system can be manually switched, and will shut off automatically when ambient air temperature rises above 3° C (38° F), or if the vehicle voltage is low.

Windshield Wipers

The windshield wiper motor receives inputs from the following: multifunction switch, ignition switch, battery junction box (BJB) and central junction box (CJB). The wiper and washer systems are controlled by the FEM. The wiper/washer portion of the multifunction switch is hardwired to the FEM. When the switch is moved to the desired position, the FEM processes this information and outputs the appropriate command(s) to one of the three relays. The relays control the wiper high and low motor speeds and washer pump actuation. Intermittent wiper speed control can vary depending on vehicle speed. When the wiper switch is in any of the intermittent positions, the FEM processes the information from the PCM and anti-lock brake control module and decreases the wiper delay time as vehicle speed increases.

The following components are integrated into the windshield wiper motor: the windshield wiper motor module, high/low speed relay, run/park sensor (Hall-effect) and the washer pump relay.

High Speed Windshield Wipers

High speed is activated when the multifunction switch supplies ground to the windshield wiper motor module inputs. The windshield wiper motor module then supplies ground to the run/park sensor and high/low relay coil, activating the relay with voltage supplied from the ignition switch (ON/ACC) through the CJB. When the windshield wiper motor module receives voltage from the run/park sensor, it removes ground from the run/park sensor, deactivating it. The windshield wiper motor continues to operate from voltage connected through the run/park sensor until the Hall-effect senses the magnet in the motor. When the Hall effect senses the magnet in the motor, the windshield wiper motor returns to the park position, the internal run/park sensor grounds the windshield wiper motor module input and the windshield wiper motor module removes ground from the windshield wiper high/low relay coil, deactivating the high/low relay and windshield wiper motor. The windshield wiper motor module continues to cycle the windshield wipers until the inputs from the multifunction switch are changed from the high speed position.

Low Speed Windshield Wipers

Low speed is activated when the multifunction switch supplies a specific ground to the speed inputs of the windshield wiper motor module. The windshield wiper motor module then supplies ground to only the windshield wiper run/park relay coil, activating it. When the windshield wiper run/park relay is activated, the deactivated windshield high/low relay connects voltage to the windshield wiper motor low input activating the wiper motor. The windshield wiper motor module continues to operate the windshield wiper motor in the same manner as in high speed, but in low speed with the wiper motor connected to the low speed input.

Intermittent Speed Windshield Wipers

The intermittent wiper speed is activated with grounds controlled by the multifunction switch inputs to the windshield wiper motor module. The windshield wiper motor module then activates the windshield wiper run/park relay coil and switches voltage through the windshield wiper high/low relay. The high/low relay remains deactivated, supplying the voltage to the wiper motor low speed input and activates the windshield wiper motor. When the windshield wiper motor module receives the grounded input, the motor continues to operate until Hall-effect sensor senses the wiper motor magnet, which turns off the run/park sensor output to the windshield wiper run/park software, deactivating the relay and disconnecting voltage to the wiper motor. The windshield wipers remain parked until the windshield wiper motor module completes a time-out and then repeats the intermittent windshield wiper cycle.

Default Mode

The windshield wiper motor defaults to this mode when the run/park sensor does not sense the Hall-effect magnet inside the wiper motor. This can be caused by an obstruction of the windshield wipers or a binding linkage. The windshield wiper motor continues to operate in a high/low speed condition for a period of 60 seconds.

Rain Sensor Wiper Function Rain Sensor Module

The rain sensor module is located (if equipped) on the inside of the windshield below the interior rear view mirror. When the ignition switch is turned to the ON position, the rain sensor module starts monitoring both the DELAY/WASH and the wiper mode circuits. When the multifunction switch is placed into the INT and AUTO positions, the rain sensor takes control of the mode circuit. In dry conditions the rain sensor module keeps the mode circuit at the correct voltage for the OFF position. In the presence of moisture the rain sensor module directs the mode circuit into individual low pulse, or continuous LOW or HIGH operation, based on the amount of moisture.

Washer System

The windshield washer is activated by the internal wiper motor module when it receives a ground from the multifunction switch between the washer input. Dependent on the correct ground, the internal wiper motor module activates the windshield washer relay (internal) by grounding the respective relay coil. When the relay is activated, it connects voltage to the washer pump while the washer level switch provides ground to the washer pump.

Low Washer Fluid Level Lamp/Indicator

The low washer fluid lamp/indicator feature is controlled by the FEM and the instrument cluster. The low washer fluid switch is hardwired to the FEM. If the fluid level is low, the FEM sends a message through the SCP communication network to the instrument cluster. The instrument cluster then processes the message and outputs an audible and visual warning. If equipped with a message center, a warning message will be displayed. For additional information, refer to Section 413-00 .

Heated Wiper Park

The heated wiper park feature is controlled by the dual automatic temperature control (DATC) module.

Material

Item	Specification
Silicone Gasket and Sealant F7AZ-19554-EA	WSE-M4G323-A4

Inspection and Verification

Leaks

NOTE: Damaged, wet or dusty trim panels will reveal the location of most leaks.

1. Remove any trim or carpet in the general area of the leak.
2. Road test or water test the vehicle.
3. Inspect for a dust pattern around the area in question. Inspect for water paths near and above the area in question.
4. Some leaks can be located by placing a bright light under the vehicle, removing any necessary trim or carpet, and inspecting the interior of the body at joints and weld lines.

Noise

Wind noise, rattles and their sources are detected by driving the vehicle at highway speeds. The vehicle should be driven in four different directions with all of the windows closed, the audio unit off, the blower motor off, and all of the ventilation ducts open.

Most wind noise leaks will occur at the door and window seals or at the sheet metal joints in the door or the door opening.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel. Select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP- or ISO circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for FEM, refer to Section 418-00 .
   - No response/not equipped for REM, refer to Section 418-00 .
   - No response/not equipped for DDM, refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the FEM, REM and the DDM.

7. If the DTCs retrieved are related to the concern, go to the Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index or Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index.

8. If the DTCs retrieved are not found in the following Front Electronic Module (FEM), Rear Electronic Module (REM) or Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Indexes, refer to the master Front Electronic Module (FEM), Rear Electronic Module (REM) or Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Indexes in Section 418-00 .

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

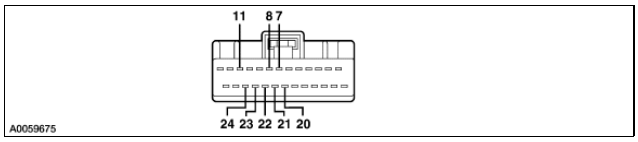
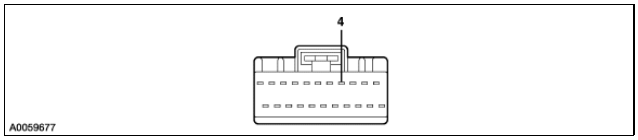
Front Electronic Module (FEM) C201e



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	8-AD19 (WH/RD) Left/right signal position for passenger exterior mirror	5 ohms or less between the FEM and the passenger exterior mirror connectors (both disconnected), 10,000 ohms or greater between circuit 8-AD19 (WH/RD) and ground.
8	7-AD19 (YE/RD) VREF to passenger exterior mirror position sensors	5 ohms or less between the FEM and the passenger exterior mirror connectors (both disconnected), 10,000 ohms or greater between circuit 7-AD19 (YE/RD) and ground.
11	10-AD19 (GY/RD) Up/down signal position for passenger exterior mirror	5 ohms or less between the FEM and the passenger exterior mirror connectors (both disconnected), 10,000 ohms or greater between circuit 10-AD19 (GY/RD) and ground.
20	34-AD11 (BU/OG) Power or ground to passenger exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts with motor in opposite direction, 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 34-AD11 (BU/OG) and ground.
21	35-AD11 (VT/WH) Ground or power to passenger exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater with motor in opposite direction, 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 35-AD11 (VT/WH) and ground.
22	9-AD19 (BN/RD) Signal return for passenger exterior mirror position sensors	5 ohms or less between connectors (both disconnected), 10,000 ohms or greater between circuit 9-AD19 (BN/RD) and ground.

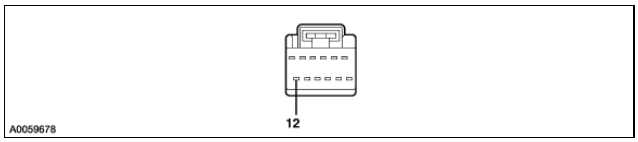
23	32-AD10 (WH/BK) Power or ground for passenger exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts with motor in opposite direction, 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 32-AD10 (WH/BK) and ground.
24	33-AD10 (YE/BK) Ground or power for passenger exterior mirror left/right motor	0 volts with motor in one direction and 10 volts or greater with motor in opposite direction, 5 ohms or less between the FEM and the passenger exterior mirror, 10,000 ohms or greater between circuit 33-AD10 (YE/BK) and ground.

Rear Electronic Module (REM) C420b



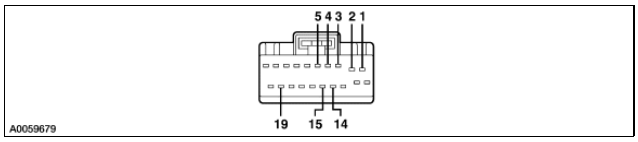
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
4	8-AD15 (WH/BU) Auto-dimming mirror sensor signal	5 ohms or less between the auto-dimming mirror and the REM connectors (both disconnected), 10,000 ohms or greater between circuit 8-AD15 (WH/BU) and ground.

Driver Door Module (DDM) C501a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
12	29S-AJ86 (OG/BU) VPWR from CJB Fuse 22 (10A)	10 volts or greater with key ON.

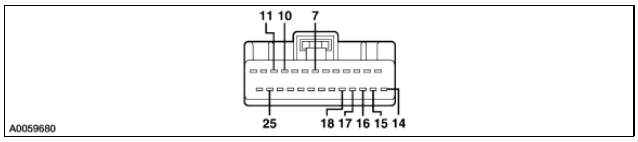
Driver Door Module (DDM) C501c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	32-AD7 (WH/RD) Power or ground for left exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts with motor in opposite direction, 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 32-AD7 (WH/RD) and ground.
2	33-AD7 (YE/RD)	0 volts with motor in one direction and 10 volts or greater with motor in opposite direction, 5 ohms or less between

		the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 33-AD7 (YE/RD) and ground.
3	34-AD8 (BU/WH) Power or ground for left exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts with motor in opposite direction, 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 34-AD8 (BU/WH) and ground..
4	35-AD8 (VT) Ground or power for left exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater with motor in opposite direction, 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 35-AD8 (VT) and ground..
5	7-AD18 (YE/BK) VREF to left exterior mirror position sensors	5 ohms or less between connectors (both disconnected), 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 7-AD18 (YE/BK) and ground..
14	8-AD18 (WH/BK) Left/right sensor signal from left exterior mirror	5 ohms or less between connectors (both disconnected), 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 8-AD18 (WH/BK) and ground..
15	10-AD18 (GY/BK) Up/down sensor signal from left exterior mirror	5 ohms or less between connectors (both disconnected), 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 10-AD18 (GY/BK) and ground..
19	9-AD18 (BN/YE) Left/right and up/down position sensors signal return from left exterior mirror	5 ohms or less between connectors (both disconnected), 5 ohms or less between the DDM and the driver exterior mirror, 10,000 ohms or greater between circuit 9-AD18 (BN/YE) and ground..

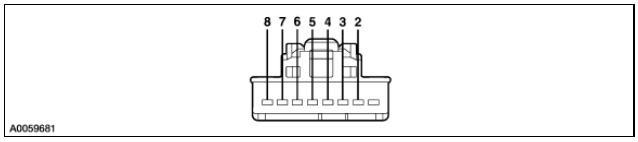
Driver Door Module (DDM) C501d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	7S-AH27 (YE) LED power for memory set switch	5 ohms or less between connectors (both disconnected), 10,000 ohms or greater between circuit 7S-AH27 (YE) and ground.
10	8-AH31 (WH/RD) Input from memory set switch set 1	5 ohms or less between connectors (both disconnected), 10,000 ohms or greater between circuit 8-AH31 (WH/RD) and ground.
11	8-AH32 (WH/BU) Input from memory set switch set 2	5 ohms or less between connectors (both disconnected), 10,000 ohms or greater between circuit 8-AH32 (WH/BU) and ground.
14	34-AD29 (BU/OG) Right exterior mirror up/down command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected), 10,000 ohms or greater between circuit 34-AD29 (BU/OG) and ground.
15		

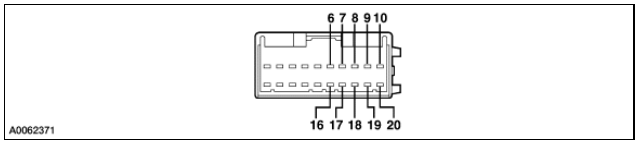
	32-AD30 (WH/BK) Right exterior mirror left/right command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected), 10,000 ohms or greater between circuit 32-AD30 (WH/BK) and ground.
16	34-AD31 (BU/WH) Left exterior mirror Up/Down command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected), 10,000 ohms or greater between circuit 34-AD31 (BU/WH) and ground.
17	32-AD32 (WH/RD) Left exterior mirror left/right command input	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected), 10,000 ohms or greater between circuit 32-AD32 (WH/RD) and ground.
18	33-AD12 (YE) Exterior mirror switch common	5 ohms or less between the DDM and the exterior mirror control switch connectors (both disconnected), 10,000 ohms or greater between circuit 33-AD12 (YE) and ground.
25	8-AH27 (WH) Input from memory set switch set 3	5 ohms or less between connectors (both disconnected), 10,000 ohms or greater between circuit 8-AH27 (WH) and ground.

Memory Set Switch C503



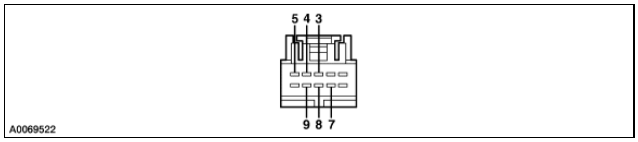
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-AH27A (BK/YE) Chassis ground for memory set switch	5 ohms or less to chassis ground.
3	8-AH32 (WH/BU) Memory set switch set 2	5 ohms or less between connectors (both disconnected).
4	8-AH27 (WH) Memory set switch set 3	5 ohms or less between connectors (both disconnected).
5	31-AH27 (BK) Chassis ground for memory set switch	5 ohms or greater between connectors (both disconnected).
7	8-AH31 (WH/RD) Memory set switch set 1	5 ohms or less between connectors (both disconnected).
8	7S-AH27 (YE) LED power for memory set switch	5 ohms or less between connectors (both disconnected).

LH Exterior Mirror C520



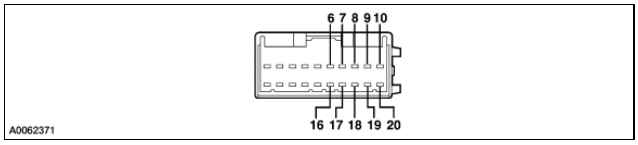
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	29-HB35 (OG/BK) VBATT to left exterior mirror heater grid	10 volts or greater with heated rear window ON.
7	7-AD18 (YE/BK) VREF to left exterior mirror position sensors	5 ohms or less between connectors (both disconnected).
8	10-AD18 (GY/BK) Left exterior mirror up/down position sensor signal	5 ohms or less between connectors (both disconnected).
9	9-AD18 (BN/YE) Left/right and up/down position sensors signal return from left exterior mirror	5 ohms or less between connectors (both disconnected).
10	8-AD18 (WH/BK) Left exterior mirror left/right position sensor signal	5 ohms or less between connectors (both disconnected).
16	31-HB35 (BK/GN) Left exterior mirror heated grid ground	5 ohms or less to chassis ground.
17	34-AD8 (BU/WH) Power or ground for left exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts when in opposite direction.
18	35-AD8 (VT) Ground or power for left exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater in opposite direction.
19	33-AD7 (YE/RD) Ground or power for left exterior mirror left/right motor	0 volts with motor in one direction and 10 volts or greater in opposite direction.
20	32-AD7 (WH/RD) Power or ground for left exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts in opposite direction.

Exterior Mirror Control Switch C527



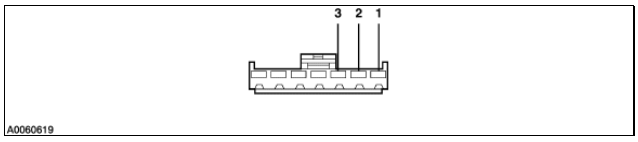
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	31-AD12 (BK/YE) Exterior mirror switch ground	5 ohms or less to chassis ground.
4	34-AD31 (BU/WH) Left mirror sense for up/down command	5 ohms or less between connectors (both disconnected).
5	32-AD30 (WH/BK) Left mirror sense for left/right command	5 ohms or less between connectors (both disconnected).
7	33-AD12 (YE) Mirror common	5 ohms or less between connectors (both disconnected).
8	34-AD29 (BU/OG) Right mirror sense for up/down command	5 ohms or less between connectors (both disconnected).
9	32-AD32 (WH/RD) Left mirror sense for left/right command	5 ohms or less between connectors (both disconnected).

RH Exterior Mirror C601



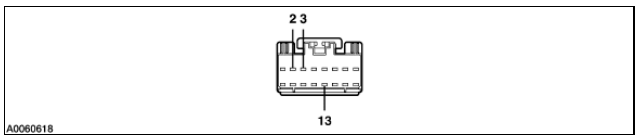
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
6	29-HB36 (OG/GN) VBATT to left exterior mirror heater grid	10 volts or greater with heated rear window ON.
7	7-AD19 (YE/RD) VREF to left exterior mirror position sensors	5 ohms or less between connectors (both disconnected).
8	10-AD19 (GY/RD) Left exterior mirror up/down position sensor signal	5 ohms or less between connectors (both disconnected).
9	9-AD19 (BN/RD) Left/right and up/down position sensors signal return from left exterior mirror	5 ohms or less between connectors (both disconnected).
10	8-AD19 (WH/RD) Left exterior mirror left/right position sensor signal	5 ohms or less between connectors (both disconnected).
16	31-HB36 (BK/RD) Right exterior mirror heated grid ground	5 ohms or less to chassis ground.
17	34-AD11 (BU/OG) Power or ground for left exterior mirror up/down motor	10 volts or greater with motor in one direction and 0 volts when in opposite direction.
18	35-AD11 (VT/WH) Ground or power for left exterior mirror up/down motor	0 volts with motor in one direction and 10 volts or greater in opposite direction.
19	33-AD10 (YE/BK) Ground or power for left exterior mirror left/right motor	0 volts with motor in one direction and 10 volts or greater in opposite direction.
20	32-AD10 (WH/BK) Power or ground for left exterior mirror left/right motor	10 volts or greater with motor in one direction and 0 volts in opposite direction.

Auto-Dimming Mirror C9012 (without Navigation)



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	75-AD15 (YE/BU) VBATT to mirror	10 volts or greater with key ON.
2	31-AD15 (BK/OG) Chassis ground	5 ohms or less to chassis ground.
3	8-AD15 (WH/BU) Signal from REM	10 volts or greater with key ON and the transmission in REVERSE.

Auto-Dimming Mirror C911 (with Navigation)



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	31-AD15 (BK/OG) Chassis ground	5 ohms or less to chassis ground.
3	8-AD15 (WH/BU) Signal from REM	10 volts or greater with key ON and the transmission in REVERSE.
13	75-AD15 (YE/BU) VBATT to mirror	10 volts or greater with key ON.

Pinpoint Test A: The Mirrors Are Inoperative

Normal Operation

The exterior mirror control switch receives power from circuit 29-AD12 (OG/YE) and ground from circuit 31-AD12 (BK/YE). The exterior mirror control switch sends input to the driver door module (DDM) for the LH exterior mirror by switching power and ground to circuits 32-AD32 (WH/RD), 34-AD31 (BU/WH) and 33-AD12 (YE) and for the RH exterior mirror by switching power and ground to circuits 32-AD30 (WH/BK), 34-AD29 (BU/OG) and 33-AD12 (YE). The DDM then sends the appropriate power and ground for the LH exterior mirror motor up/down circuits 34-AD8 (BU/WH), 35-AD8 (VT) and left/right circuits 32-AD7 (WH/RD) and 33-AD7 (YE/RD). The DDM sends a message to the front electronic module (FEM) over the SCP communication link for the FEM to send the appropriate power and ground for the RH exterior mirror motor up/down circuits 34-AD11 (BU/OG), 35-AD11 (VT/WH) and left/right circuits 32-AD10 (WH/BK), 33-AD10 (YE/BK).

Possible Causes

- circuit 29-AD12 (OG/YE) open or shorted to ground
- circuit 33-AD12 (YE) open, shorted to ground or power
- circuit 31-AD12 (BK/YE) open or shorted to power
- DDM
- exterior mirror control switch
- exterior mirrors

PINPOINT TEST A: THE MIRRORS ARE INOPERATIVE

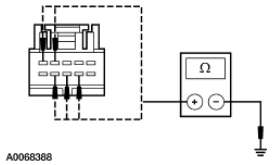
Test Step	Result / Action to Take
A1 RETRIEVE THE DTCS FROM THE DRIVER DOOR MODULE (DDM) AND THE FRONT ELECTRONIC MODULE (FEM)	
• Use the recorded results from the DDM and FEM continuous and on-demand self-tests.	**Yes** For DTC B2336, GO to A9 .

• **Are any DTCs recorded?**	**No** GO to A2 .
A2 CHECK CIRCUIT 33-AD12 (YE) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Exterior Mirror Control Switch C527. • Key in ON position. • Measure the voltage between the exterior mirror control switch C527-7, circuit 33-AD12 (YE), harness side and ground.  • **Is the voltage greater than 5 volts?**	**Yes** GO to A4 . **No** GO to A3 .
A3 CHECK CIRCUIT 33-AD12 (YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: DDM C501d. • Key in ON position. • Measure the resistance between the DDM C501d-18, circuit 33-AD12 (YE), harness side and the exterior mirror control switch C527-7, circuit 33-AD12 (YE), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to A13 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A4 CHECK CIRCUIT 31-AD12 (BK/YE) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the exterior mirror control switch C527-3, circuit 31-AD12 (BK/YE), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to A5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A5 CHECK CIRCUIT 33-AD12 (YE) FOR A SHORT TO GROUND	

• Measure the resistance between the exterior mirror control switch C527-7, circuit 33-AD12 (YE), harness side and ground.  A0068386 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A7 . **No** GO to A6 .
A6 CHECK DDM FOR AN INTERNAL SHORT TO GROUND	
• Key in OFF position. • Disconnect: DDM C501d. • Key in ON position. • Measure the resistance between the exterior mirror control switch C527-7, circuit 33-AD12 (YE), harness side and ground.  A0068386 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A13 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A7 CHECK CIRCUIT 33-AD12 (YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: DDM 501d. • Key in ON position. • Measure the resistance between DDM C501d-18, circuit 33-AD12 (YE), harness side and the exterior mirror control switch C527-7, circuit 33-AD12 (YE), harness side.  A0068385 • **Is the resistance less than 5 ohms?**	**Yes** GO to A8 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
A8 CHECK THE EXTERIOR MIRROR CONTROL SWITCH	
• Carry out the exterior mirror control switch component test.	**Yes** GO to A13 . **No** INSTALL a new exterior mirror

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the exterior mirror control switch pass the component test?**	control switch. REFER to Exterior Mirror Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
A9 CHECK THE EXTERIOR MIRROR CONTROL SWITCH INTEGRITY	
• Key in OFF position. • Disconnect: Exterior Mirror Control Switch C527. • Carry out the exterior mirror control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the exterior mirror control switch pass the component test?**	**Yes** GO to A10 . **No** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
A10 CHECK EXTERIOR MIRROR CONTROL SWITCH CIRCUITS FOR VOLTAGE	
• Key in ON position. • Using the following table, measure the voltage between the exterior mirror control switch C527 pins, harness side and ground: **Pin / Circuit** 4 / 34-AD31 (BU/WH) 5 / 32-AD30 (WH/BK) 7 / 33-AD12 (YE) 8 / 34-AD29 (BU/OG) 9 / 32-AD32 (WH/RD)  • **Is the voltage greater than 10 volts for any measurement?**	**Yes** GO to A12 . **No** GO to A11 .
A11 CHECK EXTERIOR MIRROR CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DDM C501d. • Using the following table, measure the resistance between the exterior mirror control switch C527 pins, harness side and ground:	**Yes** GO to A13 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

Pin	Circuit
4	34-AD31 (BU/WH)
5	32-AD30 (WH/BK)
7	33-AD12 (YE)
8	34-AD29 (BU/OG)
9	32-AD32 (WH/RD)

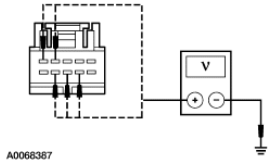


- **Is the resistance less than 5 ohms for any measurement?**

A12 CHECK EXTERIOR MIRROR CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: DDM C501d.
- Key in ON position.
- Measure the voltage between the exterior mirror control switch C527 pins, harness side and ground:

Pin	Circuit
4	34-AD31 (BU/WH)
5	32-AD30 (WH/BK)
7	33-AD12 (YE)
8	34-AD29 (BU/OG)
9	32-AD32 (WH/RD)



- **Is voltage present for any measurement?**

Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

No
GO to A13 .

A13 CHECK FOR CORRECT DDM OPERATION

- Disconnect all DDM connectors.
- Check for:
  - corrosion
  - pushed-out pins

Yes
INSTALL a new DDM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.

• Connect all DDM connectors and make sure they seat correctly. • Operate the system and verify if the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test B: A Single Mirror Is Inoperative

Normal Operation

The exterior mirror control switch receives power from circuit 29-AD12 (OG/YE) and ground from circuit 31-AD12 (BK/YE). The exterior mirror control switch sends input to the driver door module (DDM) for the LH exterior mirror by switching power and ground to circuits 32-AD32 (WH/RD), 34-AD31 (BU/WH) and 33-AD12 (YE) and for the RH exterior mirror by switching power and ground to circuits 32-AD30 (WH/BK), 34-AD29 (BU/OG) and 33-AD12 (YE). The DDM then sends the appropriate power and ground for the LH exterior mirror motor up/down circuits 34-AD8 (BU/WH), 35-AD8 (VT) and left/right circuits 32-AD7 (WH/RD) and 33-AD7 (YE/RD). The DDM sends a message to the front electronic module (FEM) over the SCP communication link for the FEM to send the appropriate power and ground for the RH exterior mirror motor up/down circuits 34-AD11 (BU/OG), 35-AD11 (VT/WH) and left/right circuits 32-AD10 (WH/BK), 33-AD10 (YE/BK).

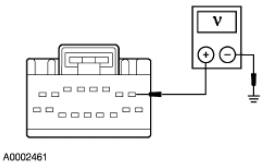
Possible Causes

- Circuits 32-AD7 (WH/RD), 32-AD10 (WH/BK), 32-AD30 (WH/BK), 32-AD32 (WH/RD), 33-AD7 (YE/RD), 33-AD10 (YE/BK), 33-AD12 (YE), 34-AD8 (BU/WH), 34-AD11 (BU/OG), 34-AD29 (BU/OG), 34-AD31 (BU/WH), 35-AD8 (VT) or 35-AD11 (VT/WH) open.
- Exterior mirror control switch
- Exterior mirror
- DDM
- FEM

PINPOINT TEST B: A SINGLE MIRROR IS INOPERATIVE

Test Step	Result / Action to Take
B1 CHECK THE DDM DTCS	
• Use the recorded results from the DDM self-test. • **Are any DTCs retrieved?**	**Yes** For DTC B2336, GO to B30 . For DTC B2320 or B2324, GO to B20 . For all other DDM DTCs, REFER to Section 418-00 for specific diagnostic direction. **No** GO to B2 .
B2 CHECK THE FEM DTCS	
• Use the recorded results from the FEM self-test. • **Are any DTCs recorded?**	**Yes** For DTC B2312 or B2316, GO to B5 . For all other FEM DTCs, REFER to Section 418-00 for specific diagnostic direction. **No**

	GO to B3 .
B3 CHECK THE EXTERIOR MIRROR CONTROL PIDS	
• Key in OFF position. • Key in ON position. • Enter the following mode on the diagnostic tool: Monitor PIDs. Monitor the DDM PIDs MIRH_SW, MIRV_SW and MIR_SEL, while operating the exterior mirror control switch in each direction. • **Did the DDM PID values agree with the exterior mirror control switch positions?**	**Yes** GO to B4 . **No** GO to B18 .
B4 IDENTIFY THE INOPERATIVE MIRROR	
• Operate the LH and RH exterior mirrors. • **Is the RH exterior mirror inoperative?**	**Yes** GO to B5 . **No** GO to B20 .
B5 CHECK BJB FUSE 6 (10A) FOR VOLTAGE	
• Disconnect: BJB Fuse 6 (10A). • Measure the voltage between the BJB Fuse 6 (10A) input side, circuit 30S-DB15 (RD/OG), harness side and ground.  A0002460 • **Is the voltage greater than 10 volts?**	**Yes** GO to B6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B6 CHECK CIRCUIT 29S-DK21 (OG/WH) AND 29S-LG1 (OG/YE) FOR AN OPEN	
• Connect: BJB Fuse 6 (10A). • Key in OFF position. • Disconnect: FEM C201a. • Key in ON position. • Measure the voltage between the FEM C201a-1, circuit 29S-DK21 (OG/WH), harness side and ground.	**Yes** GO to B7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.



- **Is the voltage greater than 10 volts?**

B7 CHECK THE RH EXTERIOR MIRROR ACTIVE COMMAND

- Enter the following diagnostic mode on the diagnostic tool: Active Commands; FEM, POWER MIRROR CONTROL.
- Trigger the FEM active commands PR UP, PR DOWN, PR LEFT and PR RIGHT ON and OFF.
- **Did the RH exterior mirror function correctly?**

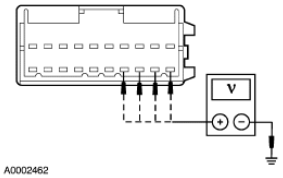
Yes
GO to B14 .

No
GO to B8 .

B8 CHECK FOR VOLTAGE AT THE RH EXTERIOR MIRROR MOTOR

- Key in OFF position.
- Disconnect: RH Exterior Mirror C601.
- Key in ON position.
- Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground:

C601 Pin	Circuit
17	34-AD11 (BU/OG)
18	35-AD11 (VT/WH)
19	33-AD10 (YE/BK)
20	32-AD10 (WH/BK)



- **Is the voltage greater than 10 volts for any measurement?**

Yes
GO to B12 .

No
GO to B9 .

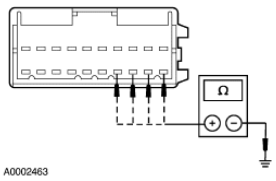
B9 CHECK FOR RESISTANCE AT THE RH EXTERIOR MIRROR

- Using the following table, measure the resistance between the RH exterior mirror C601 pins, harness side and ground:

Yes
GO to B13 .

No
GO to B10 .

C601 Pin	Circuit
17	34-AD11 (BU/OG)
18	35-AD11 (VT/WH)
19	33-AD10 (YE/BK)
20	32-AD10 (WH/BK)

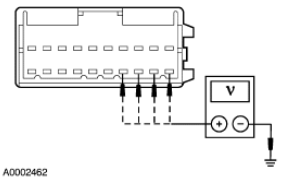


- **Are the resistances less than 5 ohms?**

B10 CHECK FOR AN OPEN AT THE RH EXTERIOR MIRROR ASSEMBLY

- Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground, while moving the exterior mirror control to the listed positions:

C601 Pin	Circuit	Mirror Position
17	34-AD11 (BU/OG)	UP
18	35-AD11 (VT/WH)	DOWN
19	33-AD10 (YE/BK)	RIGHT
20	32-AD10 (WH/BK)	LEFT



- **Are the voltages greater than 10 volts for all measurements?**

Yes
INSTALL a new RH exterior mirror motor. REFER to Exterior Mirror in this section. CLEAR the DTCs. REPEAT the self-test.

No
GO to B11 .

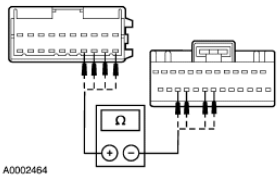
B11 CHECK CIRCUITS 33-AD10 (YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR AN OPEN

- Key in OFF position.
- Disconnect: FEM 201e.
- Key in ON position.
- Using the following table, measure the resistance betweem the FEM C201e pins, harness side and the RH exterior mirror C601 pins, harness side:

Yes
GO to B32 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

C601 Pin	Circuit	FEM C201e Pin
17	34-AD11 (BU/OG)	20
18	35-AD11 (VT/WH)	21
19	33-AD10 (YE/BK)	24
20	32-AD10 (WH/BK)	23

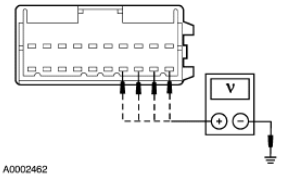


- **Are the resistances less than 5 ohms?**

B12 CHECK CIRCUITS 33-AD10(YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: FEM C201e.
- Key in ON position.
- Using the following table, measure the voltage between the RH exterior mirror C601 pins, harness side and ground:

C601 Pin	Circuit
17	34-AD11 (BU/OG)
18	35-AD11 (VT/WH)
19	33-AD10 (YE/BK)
20	32-AD10 (WH/BK)



- **Is voltage present for any measurement?**

Yes
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

No
GO to B32 .

B13 CHECK CIRCUITS 33-AD10(YE/BK), 32-AD10 (WH/BK), 35-AD11 (VT/WH) AND 34-AD11 (BU/OG) FOR CONTINUITY

<table>
<tr><td>

- **Are the resistances less than 5 ohms?**

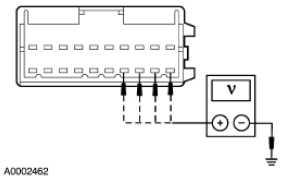
B20 CHECK CJB FUSE 22 (10A) FOR VOLTAGE	
• Disconnect: CJB Fuse 22 (10A). • Measure the voltage between the CJB Fuse 22 (10A) input side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B21 . **No** REPAIR the power source to CJB Fuse 22 (10A). CLEAR the DTCs. REPEAT the self-test.
B21 CHECK CIRCUIT 29S-AJ86 (OG/BU) FOR AN OPEN	
• Connect: CJB Fuse 22 (10A). • Key in OFF position. • Disconnect: DDM C501a. • Key in ON position. • Measure the voltage between the DDM C501a-12, circuit 29S-AJ86 (OG/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B22 CHECK THE LH EXTERIOR MIRROR ACTIVE COMMANDS	
• Key in OFF position. • Connect: DDM C501a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands.	**Yes** GO to B27 . **No** GO to B23 .

• Select DDM active command menu POWER MIRROR CONTROL. • Trigger the DDM active command DR UP, DR DOWN, DR LEFT and DR RIGHT. • **Did the driver exterior mirror operate correctly?**	
B23 CHECK FOR VOLTAGE AT THE LH MIRROR MOTORS	
• Key in OFF position. • Disconnect: LH Exterior Mirror C520. • Key in ON position. • Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground: **C520 Pin** / **Circuit** 17 / 34-AD8 (BU/WH) 18 / 35-AD8 (VT) 19 / 33-AD7 (YE/RD) 20 / 32-AD7 (WH/RD)  A0002462 • **Is any voltage greater than 10 volts?**	**Yes** GO to B31 . **No** GO to B24 .
B24 CHECK FOR OPENS AT THE LH MIRROR ASSEMBLY	
• Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground; while moving the exterior mirror control switch through the listed positions: **C520 Pin** / **Circuit** / **Mirror Position** 17 / 34-AD8 (BU/WH) / UP 18 / 35-AD8 (VT) / DOWN 19 / 33-AD7 (YE/RD) / RIGHT 20 / 32-AD7 (WH/RD) / LEFT	**Yes** INSTALL a new LH mirror motor. REFER to Exterior Mirror in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to B25 .

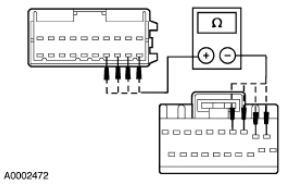


- **Are the voltages greater than 10 volts?**

B25 CHECK FOR RESISTANCE AT THE LH EXTERIOR MIRROR

- Key in OFF position.
- Disconnect: DDM C501c.
- Key in ON position.
- Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and the DDM C501c pins, harness side.

LH Exterior Mirror Pin	Circuit	DDM Pin
17	34-AD8 (BU/WH)	3
18	35-AD8 (VT)	4
19	33-AD7 (YE/RD)	2
20	32-AD7 (WH/RD)	1



- **Are the resistances less than 5 ohms?**

Yes
GO to B26 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

B26 CHECK CIRCUITS 32-AD7 (WH/RD), 33-AD7 (YE/RD), 34-AD8 (BU/WH) AND 35-AD8 (VT) FOR A SHORT TO GROUND

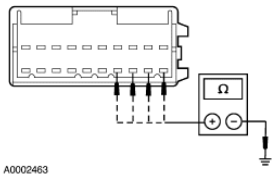
- Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and ground:

C520 Pin	Circuit
17	34-AD8 (BU/WH)
18	35-AD8 (VT)

Yes
GO to B33 .

No
REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

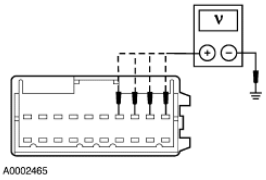
19	33-AD7 (YE/RD)
20	32-AD7 (WH/RD)



- **Are the resistances greater than 10,000 ohms?**

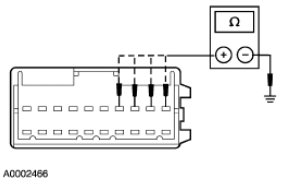
B27 CHECK THE DDM FOR THE CORRECT OUTPUTS	
• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Active Commands. • Select the DDM active command menu POWER MIRROR CONTROL. • Trigger the DDM active command DR UP, DR DOWN, DR LEFT and DR RIGHT; ON and OFF while monitoring the DDM PIDs MIRH_SW and MIRV_SW. • **Do the PID values agree with the LH exterior mirror commanded positions?**	**Yes** GO to B33 . **No** GO to B28 .
B28 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: LH Exterior Mirror C520. • Disconnect: DDM C501c. • Key in ON position. • Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground:	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. **No** GO to B29 .

C520 Pin	Circuit
7	7-AD18 (YE/BK)
8	10-AD18 (GY/BK)
9	9-AD18 (BN/YE)
10	8-AD18 (WH/BK)



• **Is voltage present for any measurement?**	
B29 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR A SHORT TO GROUND	
• Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and ground. • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to B30 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
B30 CHECK CIRCUITS 8-AD18 (WH/BK), 7-AD18 (YE/BK), 9-AD18 (BN/YE) AND 10-AD18 (GY/BK) FOR AN OPEN	
• Key in OFF position. • Disconnect: LH Exterior Mirror C520. • Disconnect: DDM C501c. • Using the following table, measure the resistance between the LH exterior mirror C520 pins, harness side and the DDM C501c pins, harness side.	**Yes** INSTALL a new LH exterior mirror. REFER to Exterior Mirror in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

C520 Pin	Circuit
7	7-AD18 (YE/BK)
8	10-AD18 (GY/BK)
9	9-AD18 (BN/YE)
10	8-AD18 (WH/BK)



LH Exterior Mirror Pin	Circuit	DDM Pin
7	7-AD18 (YE/BK)	5
8	10-AD18 (GY/BK)	15
9	9-AD18 (BN/YE)	19
10	8-AD18 (WH/BK)	14

 A0002473 • **Are the resistances less than 5 ohms?**	
B31 CHECK FOR VOLTAGE AT THE LH EXTERIOR MIRROR ASSEMBLY	
• Key in OFF position. • Disconnect: LH Exterior Mirror C520. • Disconnect: DDM C501c. • Key in ON position. • Using the following table, measure the voltage between the LH exterior mirror C520 pins, harness side and ground: **C520 Pin** / **Circuit** 17 / 34-AD8 (BU/WH) 18 / 35-AD8 (VT) 19 / 33-AD7 (YE/RD) 20 / 32-AD7 (WH/RD)  A0002462 • **Are any of the voltages greater than 10 volts?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test. **No** GO to B33 .
B32 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

B33 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new DDM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.

• Connect all DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: The Auto-Dimming Mirror Does Not Operate Correctly

Normal Operation

The auto-dimming mirror receives power from circuit 75-AD15 (YE/BU) and ground from circuit 31-AD15 (BK/OG). When the transmission is in REVERSE, the digital transmission range (TR) sensor signals the powertrain control module (PCM) the transmission range. The PCM sends a signal to the rear electronic module (REM) over the standard corporate protocol (SCP) communication link, at which time the REM sends a voltage through circuit 8-AD15 (WH/BU) to the auto-dimming mirror, which turns the dimming feature off.

Possible Causes

- circuit 75-AD15 (YE/BU) open
- circuit 31-AD15 (BK/OG) open
- circuit 8-AD15 (WH/BU) open, shorted to ground or power
- auto-dimming interior mirror
- REM

PINPOINT TEST C: THE AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
C1 CHECK FOR REM RETRIEVED DIAGNOSTIC TROUBLE CODES	
• Use the recorded results from the REM self-test. • **Are any DTCs retrieved?**	**Yes** REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to C2 .
C2 CHECK POWER TO CJB FUSE 16 (5A)	
• Disconnect: CJB Fuse 16 (5A). • Key in ON position. • Measure the voltage between the CJB Fuse 16 (5A) input terminal and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C3 . **No** REPAIR the power supply to the fuse. CLEAR the DTCs. REPEAT the self-test.
C3 CHECK CIRCUIT 75-AD15 (YE/BU) FOR AN OPEN	

• Key in OFF position. • Connect: CJB Fuse 16 (5A). • Disconnect: Auto-Dimming Interior Mirror C911. • Key in ON position. • Measure the voltage between the auto-dimming interior mirror C9012-1 (without navigation), C911-13 (with navigation), circuit 75-AD15 (YE/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C4 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C4 CHECK CIRCUIT 31-AD15 (BK/OG) FOR AN OPEN	
• Measure the resistance between the auto-dimming interior mirror C9012-2 (without navigation), C911-2 (with navigation), circuit 31-AD15 (BK/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C5 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C5 CHECK THE REM OUTPUT	
• Key in ON position. • Select REVERSE. • ⚠ **CAUTION: Make sure the engine is not running. The ignition switch should be in the RUN position with the engine OFF.** • Engage the parking brake and shift the transmission to the REVERSE position. • Measure the voltage between the auto-dimming interior mirror C9012-3 (without navigation), C911-3 (with navigation), circuit 8-AD15 (WH/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C8 . **No** GO to C6 .

C6 CHECK CIRCUIT 8-AD15 (WH/BU) FOR AN OPEN	
• Select PARK. • Key in OFF position. • Disconnect: REM C420b. • Measure the resistance between the auto-dimming interior mirror C9012-3 (without navigation), C911-3 (with navigation), circuit 8-AD15 (WH/BU), harness side and the REM C420b-4, circuit 8-AD15 (WH/BU), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C7 CHECK CIRCUIT 8-AD15 (WH/BU) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420b-4, circuit 8-AD15 (WH/BU), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to C10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C8 CHECK FOR THE CORRECT OUTPUT TO THE MIRROR	
• Select PARK. • Measure the voltage between the auto-dimming interior mirror C9012-3 (without navigation), C911-3 (with navigation), circuit 8-AD15 (WH/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C9 . **No** INSTALL a new auto-dimming interior mirror. REFER to Interior Mirror in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. If the auto-dimming feature continues to function incorrectly, GO to C10 .
C9 CHECK CIRCUIT 8-AD15 (WH/BU) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: REM C420b. • Key in ON position. • Measure the voltage between the REM C420b-4, circuit 8-AD15 (WH/BU), harness side and ground.  A0002479 • **Is voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** GO to C10 .
C10 CHECK FOR CORRECT REM OPERATION	

• Disconnect all REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Memory Mirror Is Inoperative

Normal Operation

The driver door module (DDM) sends voltage reference (VREF) to the memory set switch on circuits 8-AH32 (WH/BU), 8-AH31 (WH/RD) and 8-AH27 (WH). When memory set switch button 1 or 2 is pressed (within 5 seconds of pressing memory set button 3), the VREF on the circuits to the pressed buttons will be grounded and will drop to zero, providing inputs to the DDM. Once the DDM receives the inputs from memory set button 3; then 1 (or 2), the DDM will save current mirror settings using the inputs from the exterior mirror position sensors. When the DDM receives an input from the memory set switch button 1, circuit 8-AH31 (WH/RD) or button 2, circuit 8-AH32 (WH/BU) the DDM will adjust the driver mirror accordingly and will send a signal to the FEM over the SCP communication link to adjust the passenger mirror as per the memory set switch button.

The DDM receives inputs on the position of the LH exterior mirror from circuits 8-AD18 (WH/BK), 7-AD18 (YE/BK), 10-AD18 (GY/BK) and 9-AD18 (BN/YE) while the FEM receives inputs on the RH exterior mirror from circuits 8-AD19 (WH/RD), 7-AD19 (YE/RD), 10-AD19 (GY/RD) and 9-AD19 (BN/RD).

Possible Causes

- circuit 31-AH27 (BK) open
- circuits 8-AH32 (WH/BU), 8-AH31 (WH/RD), 8-AH27 (WH) open or shorted to ground
- DDM
- memory set switch

PINPOINT TEST D: THE MEMORY MIRROR IS INOPERATIVE

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>D1 CHECK FOR DDM DTCS</td><td></td></tr>
<tr><td>• Use the recorded DDM results from the DDM self-test.
• Was DTC B1534, B1538 or B1530 retrieved?</td><td>Yes
GO to D2 .

No
GO to D4 .</td></tr>

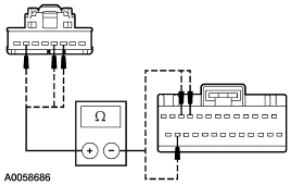
No
GO to D3 .</td></tr>
<tr><td>D3 CHECK CIRCUITS 8-AH32 (WH/BU), 8-AH31 (WH/RD) AND 8-AH27 (WH) FOR A SHORT TO GROUND</td><td></td></tr>
<tr><td>• Disconnect: DDM C501d.
• Using the following table, measure the resistance between the memory set switch C503 pins, harness side and ground:

<table><tr><th>C503 Pin</th><th>Circuit</th></tr><tr><td>3</td><td>8-AH32 (WH/BU)</td></tr><tr><td>4</td><td>8-AH27 (WH)</td></tr><tr><td>7</td><td>8-AH31 (WH/RD)</td></tr></table></td><td>Yes
GO to D8 .

No
REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.</td></tr>
</table>

 A0058684 • **Are the resistances greater than 10,000 ohms?**	
D4 CHECK THE MEMORY SET SWITCH USING DDM PIDS	
• Enter the following mode on the diagnostic tool: Monitor PIDs. • Monitor the DDM PIDs MEMS_SW, MEM1_SW and MEM2_SW; while actuating the memory set switch buttons. • **Did the DDM PID values agree with the memory set switch positions?**	**Yes** GO to D8 . **No** GO to D5 .
D5 CHECK CIRCUIT 31-AH27 (BK) FOR AN OPEN	
• Disconnect: Memory Set Switch C503. • Measure the resistance between the memory set switch C503-5, circuit 31-AH27 (BK), harness side and ground.  A0058685 • **Is the resistance less than 5 ohms?**	**Yes** GO to D6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D6 CHECK FOR AN OPEN CIRCUIT BETWEEN THE DDM AND MEMORY SET SWITCH	
• Disconnect: DDM C501d. • Using the following table, measure the resistance between the memory set switch C503 pins, harness side and the DDM C501d pins, harness side:	**Yes** GO to D7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

DDM Pin	Circuit	Memory Set Switch Pin
10	8-AH31 (WH/RD)	7
11	8-AH32 (WH/BU)	3
25	8-AH27 (WH)	4

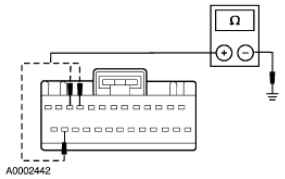


- **Are the resistances less than 5 ohms?**

D7 CHECK THE MEMORY SET SWITCH FOR AN OPEN

- Connect: Memory Set Switch C503.
- Using the following table, measure the resistance between the DDM C501d pins, harness side and ground; while activating the indicated memory set switch button:

DDM Pin	Circuit	Memory Set Switch Button
10	8-AH31 (WH/RD)	MEMORY 1
11	8-AH32 (WH/BU)	MEMORY 2
25	8-AH27 (WH)	SET



- **Is the resistance less than 5 ohms when each button is pressed?**

Yes
GO to D8 .

No
INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test.

D8 CHECK FOR CORRECT DDM OPERATION

- Disconnect all DDM connectors.
- Check for:
  - corrosion
  - pushed-out pins
- Connect all DDM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

Yes
INSTALL a new DDM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: The Memory Mirror Is Inoperative Memory Set Switch LED

Normal Operation

The driver door module (DDM) sends vehicle power (VPWR) to the memory set switch LED on circuit 7S-AH27 (YE) whenever the SET or memory buttons 1 or 2 are pressed. The memory set switch LED is grounded at all times by circuit 31-AH27 (BK). When the DDM sends VPWR to the memory set switch LED, it will illuminate.

Possible Causes

- circuits 7S-AH27 (YE) open, shorted to ground or power
- memory set switch
- DDM

PINPOINT TEST E: THE MEMORY MIRROR IS INOPERATIVE MEMORY SET SWITCH LED

Test Step	Result / Action to Take
E1 CHECK THE MEMORY SET SWITCH LED	
• Operate the memory set switch. • **Is the memory set switch LED always on?**	**Yes** GO to E6 . **No** GO to E2 .
E2 CHECK CIRCUIT 7S-AH27 (YE) FOR RESISTANCE	
• Disconnect: DDM C501d. • Measure the resistance between the DDM C501d-7, circuit 7S-AH27 (YE), harness side and ground.  A0002483 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to E4 . **No** GO to E3 .
E3 CHECK CIRCUIT 7S-AH27 (YE) FOR A SHORT TO GROUND	
• Disconnect: Memory Set Switch C503. • Measure the resistance between the DDM C501d-7, circuit 7S-AH27 (YE), harness side and ground.  A0002483 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

E4 CHECK THE DDM	
• Connect a fused (5A) jumper wire between the DDM C501d-7, circuit 7S-AH27 (YE), harness side and battery voltage.  A0058687 • **Did the memory set switch LED illuminate?**	**Yes** GO to E8 . **No** GO to E5 .
E5 CHECK CIRCUIT 7S-AH27 (YE) FOR AN OPEN	
• Disconnect: Memory Set Switch C503. • Measure the resistance between the memory set switch C503-8, circuit 7S-AH27 (YE), harness side and DDM C501d-7, circuit 7S-AH27 (YE), harness side.  A0058688 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E6 CHECK THE DDM FOR AN INTERNAL SHORT TO VOLTAGE	
• Disconnect: DDM C501d. • **Did the memory set switch LED turn OFF?**	**Yes** GO to E8 . **No** GO to E7 .
E7 CHECK CIRCUIT 7S-AH27 (YE) FOR A SHORT TO VOLTAGE	
• Disconnect: Memory Set Switch C503. • Measure the voltage between the memory set switch C503-8, circuit 7S-AH27 (YE), harness side and ground.  A0058689 • **Is voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. **No** INSTALL a new memory set switch. CLEAR the DTCs. REPEAT the self-test.
E8 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test F: The Heated Exterior Mirror(s) Does Not Defrost

Normal Operation

When the heated rear window is ON, the heated exterior mirrors receive power from the heated rear window relay through circuit 15S-DA13 (GN/YE) to circuit 15S-DC1 (GN/YE) through BJB fuse 9 (5A) to circuit 29S-HB1 (OG/YE) and are grounded through circuit 31-HB35 (BK/GN)(Left) and 31-HB36 (BK/RD)(Right).

Possible Causes

- circuits 15S-DA13 (GN/YE), 15S-DC1 (GN/YE), 29-HB35 (OG/BK), 29-HB36 (OG/GN), 29S-HB1 (OG/YE), 31-HB35 (BK/GN) or 31-HB36 (BK/RD) open
- heated exterior mirror(s)
- BJB Fuse 9 (5A)

PINPOINT TEST F: THE HEATED EXTERIOR MIRROR DOES NOT DEFROST

Test Step	Result / Action to Take
F1 CHECK THE HEATED REAR WINDOW OPERATION	
• Select PARK. • Key in ON position. • Press the heated rear window switch to ON. • **Does the heated rear window defrost or warm up?**	**Yes** GO to F2 . **No** REFER to Glass, Frames and Mechanisms in this section to diagnose the heated rear window system.
F2 CHECK THE HEATED FUNCTION OF THE EXTERIOR MIRRORS	
• Check the heated function of the exterior mirrors. • **Is the heated function of both exterior mirrors inoperative?**	**Yes** GO to F3 . **No** For the driver exterior mirror, GO to F4 . For the passenger exterior mirror, GO to F6 .
F3 CHECK CIRCUIT 15S-DC1 (GN/YE) FOR VOLTAGE	

• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Key in ON position. • Press the heated rear window switch to ON. • Measure the voltage between the BJB fuse 9 (5A) input pin, circuit 15S-DC1 (GN/YE), and ground.  A0002487 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 29S-HB1 (OG/YE). TEST the system for normal operation. **No** REPAIR circuit 15S-DC1 (GN/YE). TEST the system for normal operation.
F4 CHECK CIRCUIT 29S-HB1 (OG/YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Disconnect: Driver Exterior Mirror C520. • Measure the resistance between the driver exterior mirror C520-6, circuit 29-HB35 (OG/BK), harness side and the BJB fuse 9 (5A) output terminal, circuit 29S-HB1 (OG/YE).  A0002488 • **Is the resistance less than 5 ohms?**	**Yes** GO to F5 . **No** REPAIR circuit 29-HB35 (OG/BK). TEST the system for normal operation.
F5 CHECK CIRCUIT 31-HB35 (BK/GN) FOR AN OPEN	
• Measure the resistance between the driver exterior mirror C520-16, circuit 31-HB35 (BK/GN), harness side and ground.	**Yes** INSTALL a new driver exterior mirror. REFER to Exterior Mirror in this section. TEST the system for normal operation. **No**

 A0002489 • **Is the resistance less than 5 ohms?**	REPAIR the circuit. TEST the system for normal operation.
F6 CHECK CIRCUIT 29-HB36 (OG/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Disconnect: Passenger Exterior Mirror C601. • Measure the resistance between the passenger exterior mirror C601-6, circuit 29-HB36 (OG/GN), harness side and the BJB fuse 9 (5A) output terminal, circuit 29S-HB1 (OG/YE) .  A0002488 • **Is the resistance less than 5 ohms?**	**Yes** GO to F7 . **No** REPAIR circuit 29-HB36 (OG/GN). TEST the system for normal operation.
F7 CHECK CIRCUIT 31-HB36 (BK/RD) FOR AN OPEN	
• Measure the resistance between the passenger exterior mirror C601-16, circuit 31-HB36 (BK/RD), harness side and ground.  A0002489 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger exterior mirror. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation. **No** REPAIR circuit 31-HB36 (BK/RD). TEST the system for normal operation.

Glass, Frames and Mechanisms

Refer to Wiring Diagrams Cell 56 for schematic and connector information.

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation STAR (NGS) Tester 418-F052, or equivalent diagnostic tool with appropriate adapter cable

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage; refer to the following chart:

Visual Inspection Chart

Mechanical	Electrical
• Window regulator • Window run weatherstrip • Door window glass	• Battery junction box (BJB) fuse: ♦ 9 (5A) ♦ 19 (30A) ♦ 20 (20A) ♦ 22 (30A) ♦ 25 (40A) ♦ 26 (20A) ♦ 27 (30A) ♦ 29 (30A) ♦ 30 (20A) • Central junction box (CJB) fuse 7 (5A) • Underhood auxiliary junction box (AJB) fuse 13 (30A) • LH front window control switch • RH front, LH rear or RH rear window control switch(es) • Window motor(s)

	• DATC module • DDM • FEM • REM • Heated rear window grid • Heated wiper park grid • Circuitry

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP-, UBP or ISO circuit fault, all electronic control units no response/not equipped, refer to Section 418-00 .
   - No response/not equipped for the DDM, DATC, FEM or REM; refer to Section 418-00 .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self-test diagnostics for the DDM, DATC, FEM or REM.

7. If the DTCs retrieved are related to the concern, go to the DDM, FEM or REM Diagnostic Trouble Code (DTC) Index(es) to continue diagnostics.

8. If DTCs are retrieved that are not found in the following DDM, FEM or REM Diagnostic Trouble Code (DTC) Indexes, refer to the master DDM, FEM or REM Diagnostic Trouble Code (DTC) Indexes in Section 418-00 .

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

FEM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	FEM	CLEAR the DTC. REPEAT the FEM self-test. If DTC B1342 is retrieved, INSTALL a new FEM. REFER to Section 418-00 . REPEAT the self-test.
B1676	Battery Pack Voltage Out of Range	FEM	REFER to Section 414-00 .
B2214	Window Passenger Front Up Switch Short to Battery	FEM	Go To Pinpoint Test I .
B2215	Window Passenger Front Down Switch Circuit Short to Battery	FEM	Go To Pinpoint Test I .

B2477	Module Configuration Failure	FEM	REFER to Section 418-00 .

REM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	REM	CLEAR the DTC. REPEAT the REM self-test. If DTC B1342 is retrieved, INSTALL a new REM. REFER to Section 418-00 . REPEAT the self-test.
B1676	Battery Pack Voltage Out of Range	REM	REFER to Section 414-00 .
B2174	Window Driver Rear Remote Up Switch Short to Battery	REM	Go To Pinpoint Test J .
B2178	Window Driver Rear Remote Down Switch Short to Battery	REM	Go To Pinpoint Test J .
B2190	Window Passenger Rear Remote Up Switch Short to Battery	REM	Go To Pinpoint Test J .
B2194	Window Passenger Rear Remote Down Switch Short to Battery	REM	Go To Pinpoint Test J .
B2477	Module Configuration Failure	REM	REFER to Section 418-00 .

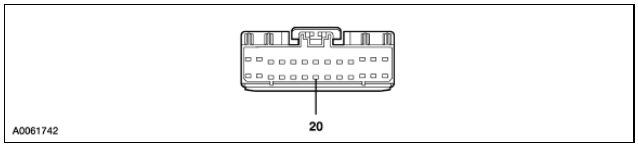
DDM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU is Defective	DDM	CLEAR the DTC. REPEAT the self-test. If DTC B1342 is retrieved, INSTALL a new DDM. REFER to Section 418-00 . REPEAT the self-test.
B1416	Power Window LR Motor Circuit Short to Battery	DDM	Go To Pinpoint Test J .
B1424	Power Window RR Motor Circuit Short to Battery	DDM	Go To Pinpoint Test J .
B2477	Module Configuration Failure	DDM	REFER to Section 418-00 .

Symptom Chart

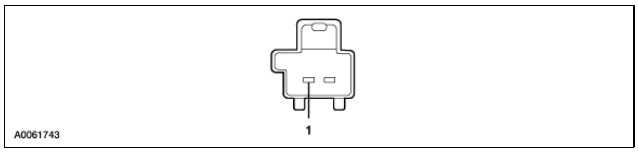
Symptom Chart
Connector Circuit Reference

Dual Automatic Temperature Control (DATC) Module C228b



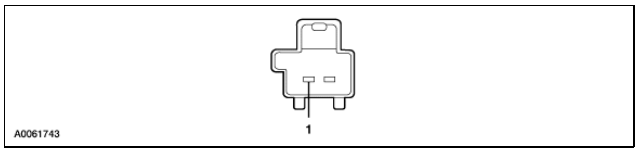
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
20	91S-HB7 (BN/RD) heated wiper park relay solenoid coil ground	10 volts or greater with heated wiper park OFF.

Heated Wiper Park C246



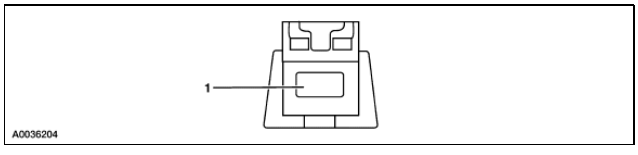
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-HB42 (BK/YE) heated wiper park grids ground	5 ohms or less to chassis ground.

Heated Wiper Park C247



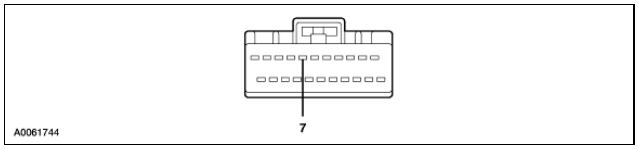
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30S-HB42 (RD/YE) heated wiper park grids power feed	10 volts or greater with heated wiper park ON (C247 disconnected), 5 ohms or less between pin 87 of the heated wiper park relay and C247 (heated wiper park relay removed).

Heated Rear Window Power C402a



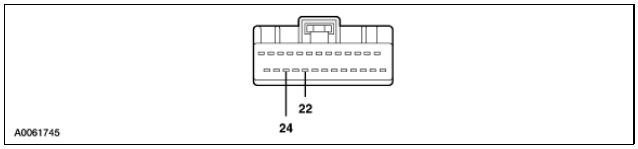
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	15S-HB19 (GN/BU) power to the heated rear window grid	10 volts or greater with key ON and heated rear window ON, 5 ohms or less between the heated rear window and relay (relay removed).

Rear Electronic Module (REM) C420b



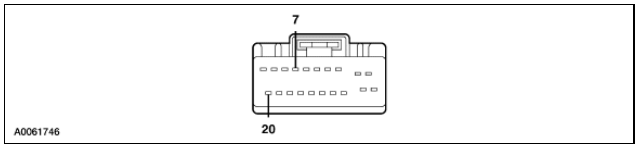
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	91S-HB23 (BN/WH) heated rear window relay solenoid ground	10 volts or greater with the heated rear window OFF, 5 ohms or less between connectors (both disconnected).

Rear Electronic Module (REM) C420c



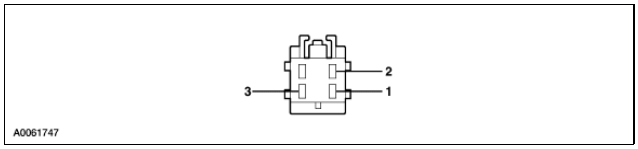
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
22	10-AJ14 (GY/VT) LH Rear window control switch DOWN command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 10-AJ14 (GY/VT) and ground.
24	8-AJ14 (WH/BU) LH rear window control switch UP command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ14 (WH/BU) and ground.

Rear Electronic Module (REM) C420d



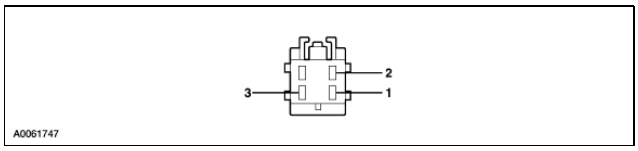
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	8-AJ24 (WH) RH rear window control switch UP command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ24 (WH) and ground.
20	10-AJ24 (GY) RH rear window control switch DOWN command input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 10-AJ24 (GY) and ground.

Rear Electronic Module (REM) C420f



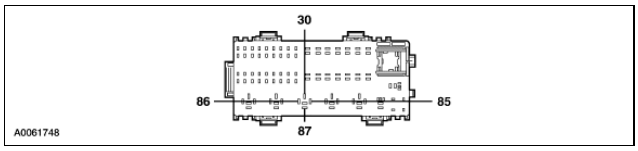
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	35-AJ13 (VT/BU) switched power/ground to LH rear window motor	10 volts or greater with LR window motor in one direction and 0 volts with window motor in opposite direction, 5 ohms or less between connectors, 10,000 ohms or greater between circuit 35-AJ13 (VT/BU) and ground.
2	34-AJ13 (BU/RD) switched ground/power to LH rear window motor	0 volts with window motor in one direction and 10 volts or greater in opposite direction, 5 ohms or less between connectors, 10,000 ohms or greater between circuit 34-AJ13 (BU/RD) and ground.
3	31-DK30 (BK/OG) dedicated ground for LH rear window motor	5 ohms or less to chassis ground.

Rear Electronic Module (REM) C420g



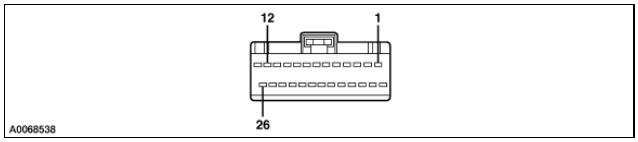
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	34-AJ23 (BU/OG) switched power/ground to RH rear window motor	10 volts or greater with RH rear window motor in one direction and 0 volts with window motor in opposite direction, 5 ohms or less between connectors, 10,000 ohms or greater between circuit 34-AJ23 (BU/OG) and ground.
2	31-DK30B (BK/OG) dedicated ground for RH rear window motor	5 ohms or less to chassis ground.
3	35-AJ23 (VT/WH) switched ground/power to RH rear window motor	0 volts with window motor in one direction and 10 volts or greater with window motor in opposite direction, 5 ohms or less between connectors, 10,000 ohms or greater between circuit 35-AJ23 (VT/WH) and ground.

Heated Rear Window Relay C443



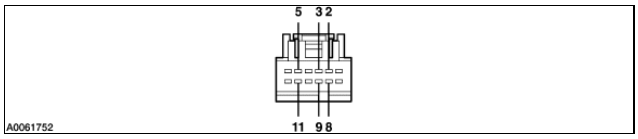
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
30	30-HB23B (RD/WH) heated rear window relay power input	10 volts or greater at all times, 5 ohms or less between BJB fuse 29 (30A) output cavity and heated rear window relay (BJB fuse 29 {30A} removed).
85	91S-HB23 (BN/WH) heated rear window relay solenoid ground	10 volts or greater between pin 85 and ground, 5 ohms or less between connectors (heated rear window relay removed).
86	30-HB23A (RD/WH) heated rear window relay solenoid power	10 volts or greater at all times, 5 ohms or less between heated rear window relay and BJB fuse 29 (30A) output cavity (BJB fuse 29 {30A} removed).
87	15S-DA13 (GN/YE) heated rear window relay power feed to heated rear window	10 volts or greater with key ON and heated rear window switch ON. 5 ohms or less between the heated rear window relay and the heated rear window grid (heated rear window relay removed).

Driver Door Module (DDM) 501d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	10-AJ43 (GY/VT) DDM accessory delay circuit to LH and RH front window motor.	5 ohms or less between connectors, 10,000 ohms or greater between circuit 10-AJ43 (GY/VT) and ground.
12	7-AJ7 (YE/RD) power output to LH front window control switch	5 ohms or less between connectors, 10,000 ohms or greater between circuit 7-AJ7 (YE/RD) and ground.
26	8-AJ43 (WH/BU) DDM global open/close circuit to LH and RH front window motor.	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ43 (WH/BU) and ground.

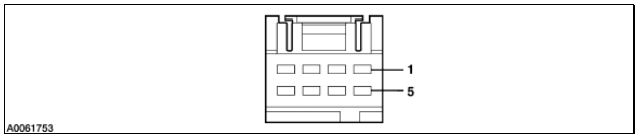
LH Front Window Control Switch C504a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	8-AJ56 (WH/GN) LH front window control switch AUTO input to RH front window motor	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ56 (WH/GN) and ground.
3		

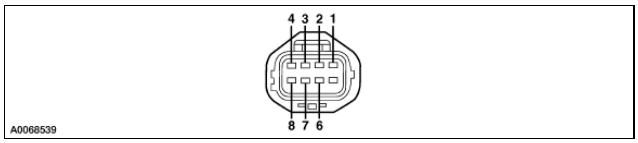
	7S-AJ47 (YE/BK) LH front window control switch UP input to the RH front window motor	5 ohms or less between connectors, 10,000 ohms or greater between circuit 7S-AJ47 (YE/BK) and ground.
5	7S-AJ40 (YE/GN) LH front window control switch DOWN input to the LH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ40 (YE/GN) and ground.
8	31-AJ7 (BK/BU) LH front window control switch ground	5 ohms or less between chassis ground, 10,000 ohms or greater between circuit 31-AJ7 (BK/BU) and ground.
9	7S-AJ48 (YE/VT) LH front window control switch DOWN input to the RH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ48 (YE/GN) and ground.
11	8-AJ42 (WH/GN) LH front window control switch AUTO input to the LH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ42 (WH/GN) and ground.

LH Front Window Control Switch C504b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	7-AJ7 (YE/RD) LH front window control switch power input	5 ohms or less between connectors, 10,000 ohms or greater between circuit 7-AJ7 (YE/RD) and ground.
5	7S-AJ41 (YE/BK) LH front window control switch UP input to the LH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ41 (YE/BK) and ground.

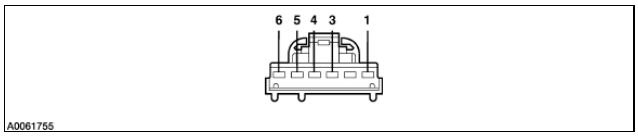
LH Front Window Motor C524



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AJ42 (WH/GN) AUTO input from the LH front window control swuitch	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ42 (WH/GN) and ground.
2	10-AJ43 (GY/VT) delayed accessory input to the LH front window motor	10 volts or greater with key ON, 5 ohms or less between the LH front window motor and the DDM (both connectors disconnected).
3	7S-AJ41 (YE/BK) UP command input from the LH front window control	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ41 (YE/BK) and ground.

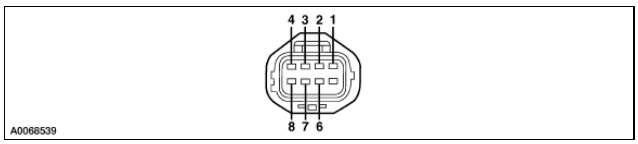
	switch	
4	7S-AJ40 (YE/GN) DOWN command input from the LH front window control switch	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ40 (YE/GN) and ground.
6	8-AJ43B (WH/BU) Global open/close input to LH front window motor	5 ohms or less between connectors, 10,000 ohms or greater between circuit 8-AJ43B (WH/BU) and ground.
7	30-AJ80 (RD) B+ power to LH front window motor	10 volts or greater at all times, 5 ohms or less between the LH front window motor and the BJB fuse 20 (20A) output cavity (BJB fuse 20 {20A} removed).
8	31-AJ80 (BK) LH front window motor ground	5 ohms or less to chassis ground.

RH Front Window Control Switch C604



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	7S-AJ47B (YE/BK) UP command output from the RH front window control switch	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ47 (YE/BK) and ground.
3	31-LH31 (BK) RH front window control switch ground	5 ohms or less to chassis ground.
4	8-AJ56B (WH/GN) RH front window control switch AUTO output	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ56 (WH/GN) and ground.
5	7-AJ18 (YE/VT) power feed to RH front window control switch from the REM	5 ohms or less between the connectors (both disconnected), 10,000 ohms or greater between circuit 7-AJ18 (YE/VT) and ground.
6	7S-AJ48B (YE/VT) DOWN command from the RH front window control switch to the RH front window motor	5 ohms or less between the connectors (both disconnected), 10,000 ohms or greater between circuit 7S-AJ48 (YE/VT) and ground.

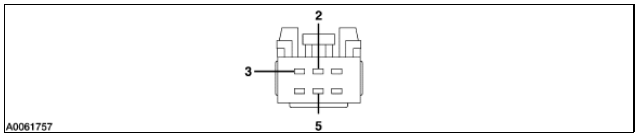
RH Front Window Motor C608



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AJ56A (WH/GN) AUTO input to the RH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ56 (WH/GN) and ground.

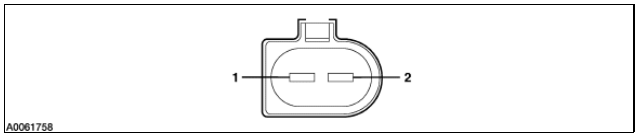
2	10-AJ43A (GY/YE) delayed accessory input to the RH front window motor	10 volts or greater with the key ON, 5 ohms or less between the RH front window motor and the DDM (both connectors disconnected).
3	7S-AJ47A (YE/BK) UP command input to the RH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ47 (YE/BK) and ground.
4	7S-AJ48A (YE/VT) DOWN command input to the RH front window motor	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7S-AJ48 (YE/VT) and ground.
6	8-AJ43A (WH/BU) global open/close input	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ43A (WH/BU) and ground.
7	30-AJ71 (RD/YE) B+ power input to RH front window motor	10 volts or greater at all times, 5 ohms or less between the RH front window motor and the BJB fuse 26 (20A) output cavity, BJB fuse 26 (20A) removed.
8	31-AJ71 (BK/YE) RH front window motor ground	5 ohms or less to the chassis ground.

LH Rear Window Control Switch C701



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	10-AJ14 (GY/VT) DOWN command from the LH rear window control switch	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 10-AJ14 (GY/VT) and ground.
3	7-AJ14A (YE/BU) power input to LH rear window control switch from the REM	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7-AJ14A (YE/BU) and ground.
5	8-AJ14A (WH/BU) UP command from the LH rear window control switch	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ14A (WH/BU) and ground.

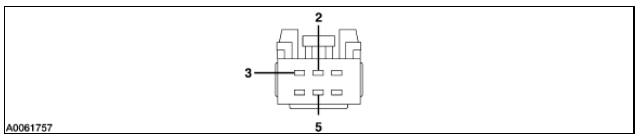
LH Rear Window Motor C703



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	35-AJ13 (VT/BU) switched power/ground to LH rear window motor	10 volts or greater with window motor in one direction and 0 volts with motor in opposite direction, 5 ohms or less between connectors, 10,000 ohms or greater between circuit 35-AJ13 (VT/BU) and ground (both connectors

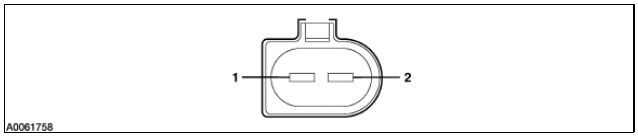
		disconnected).
2	34-AJ13 (BU/RD) switched ground/power to LH rear window motor	0 volts with window motor in one direction and 10 volts or greater with motor in opposite direction, 5 ohms or less between connectors, 10,000 ohms or greater between circuit 34-AJ13 (BU/RD) and ground (both connectors disconnected).

RH Rear Window Control Switch C801



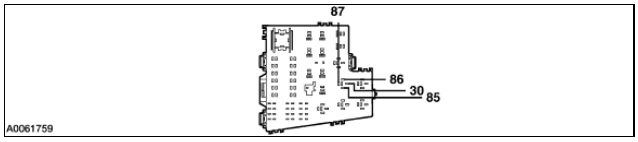
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	10-AJ24 (GY) RH rear window control switch DOWN command	5 ohms or less between connectors, 10,000 ohms or greater between circuit 10-AJ24 (GY) and ground.
3	7-AJ24 (YE) power input to the RH rear window control switch from the REM	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 7-AJ24 (YE) and ground (both connectors disconnected),
5	8-AJ24 (WH) UP command from the RH rear window control switch	5 ohms or less between the connectors, 10,000 ohms or greater between circuit 8-AJ24 (WH) and ground.

RH Rear Window Motor C803



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	35-AJ23 (VT/WH) switched power/ground to the RH rear window motor	10 volts or greater with the window motor in one direction and 0 volts with the motor in the opposite direction, 5 ohms or less between the REM and the RH rear window motor, 10,000 ohms or greater between circuit 35-AJ23 (VT/WH) and ground (both connectors disconnected).
2	34-AJ23 (BU/OG) switched ground/power to the RH rear window motor	0 volts with the window motor in one direction and 10 volts or greater with the motor in the opposite direction, 5 ohms or less between the REM and the RH rear window motor, 10,000 ohms or greater between circuit 34-AJ23 (BU/OG) and ground (both connecters disconnected).

Heated Wiper Park Relay C1014



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
30	30-HB8 (RD/OG) power input to the heated wiper park relay	10 volts or greater at all times, 5 ohms or less between the heated wiper park relay and the AJB fuse 13 (30A) output cavity (AJB fuse 13 {30A} removed).
85	91S-HB7 (BN/RD) heated wiper park relay solenoid ground	10 volts or greater with the heated wiper park OFF, 0 volts with the heated wiper park ON, 5 ohms or less between the connectors.
86	30-HB8A (RD/OG) power input to the heated wiper park relay solenoid	10 volts or greater at all times, 5 ohms or less between the heated wiper park relay and the AJB fuse 13 (30A) output cavity (AJB fuse 13 {30A} removed).
87	30S-HB42 (RD/YE) power output from the heated wiper park relay to the grids	10 volts or greater with the key ON and the heated wiper park relay ON, 5 ohms or less between the heated wiper park relay and the heated wiper park grids (heated wiper park relay removed).

Pinpoint Test G: All Power Windows Are Inoperative

Normal Operation

The LH front smart window motor receives power from the battery junction box (BJB) through circuit 30-AJ80 (RD) while the RH front smart window motor receives power from the BJB through circuit 30-AJ71 (RD/YE). The driver door module (DDM) provides a delayed accessory power to both smart motors through circuits 10-AJ43B and 10-AJ43A (GY/VT). This is only used by the smart motors as input logic. The LH front window control switch receives power from the driver door module (DDM) on circuit 7-AJ7 (YE/RD) and ground on circuit 31-AJ7 (BK/BU). When either of the smart motors receives an input from their respective window control switches, they operate in the commanded direction. Power from the BJB at all times is necessary for the global open/close feature to operate. The rear window motors are not smart motors, so they receive power from the REM, as per the command from their respective window control switches to the rear electronic module (REM). If the command originates from the LH front window control switch, the DDM will send a message over the standard corporate protocol (SCP) bus to the REM, which will command the correct window motor in the desired direction.

Possible Causes

- circuit 7-AJ7 (YE/RD) open
- circuit 31-AJ7 (BK/BU) open
- LH front window control switch
- DDM

PINPOINT TEST G: ALL POWER WINDOWS ARE INOPERATIVE

Test Step	Result / Action to Take

G1 CHECK CIRCUIT 7-AJ7 (YE/RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: LH Front Window Control Switch C504b. • Key in ON position. • Measure the voltage between the LH front window control switch C504b-1, circuit 7-AJ7 (YE/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to G3 . **No** GO to G2 .
G2 CHECK CIRCUIT 7-AJ7 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: DDM C501d. • Measure the resistance between the LH front window control switch C504b-1, circuit 7-AJ7 (YE/RD), harness side and the DDM C501d-12, circuit 7-AJ7 (YE/RD), harness side  • **Is the resistance less than 5 ohms?**	**Yes** GO to G4 . **No** REPAIR the circuit. TEST the system for normal operation.
G3 CHECK CIRCUIT 31-AJ7 (BK/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: LH Front Window Control Switch C504a. • Measure the resistance between the LH front window control switch C504a-8, circuit 31-AJ7 (BK/BU), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new LH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

G4 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify if the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test.
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test H: A Single Power Window Is Inoperative LH Front

Normal Operation

The LH front window smart motor receives power from the battery junction box (BJB) on circuit 30-AJ80 (RD) and ground from circuit 31-AJ80 (BK). A delayed accessory input is sent from the driver door module (DDM) to the LH front window smart motor on circuit 10-AJ43B (GY/VT) so the LH front window smart motor microprocessor can determine whether or not to allow window motor operation. The LH front window control switch sends a command over circuits 7S-AJ41 (YE/BK), 8-AJ42 (WH/GN) or 7S-AJ40 (YE/GN) to the LH front smart window motor to initiate operation.

Possible Causes

- circuit 10-AJ43 (GY/VT) open or shorted to ground
- circuit 30-AJ80 (RD) open
- circuits 7S-AJ41 (YE/BK), 8-AJ42 (WH/GN) or 7S-AJ40 (YE/GN) open or shorted to ground
- circuit 31-AJ80 (BK) open
- battery junction box (BJB)
- LH front control switch
- LH front window motor
- DDM

PINPOINT TEST H: A SINGLE POWER WINDOW IS INOPERATIVE LH FRONT

Test Step	Result / Action to Take
H1 CHECK THE POWER TO THE WINDOW MOTOR	
NOTE: The LH front window motor is not on the mulitplex link. **NOTE:** A new LH front window motor will be in the proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section. **NOTE:** The LH front window motor must be initialized whenever: the motor is removed from the window regulator, a new window motor is installed, a new window regulator is installed, a new window glass is installed, a new top run is installed and any operation in which grease or lubricants are applied to the window system. • Key in OFF position. • Disconnect: LH Front Window Motor C524. • Measure the voltage between the LH front window motor C524-7, circuit 30-AJ80 (RD), harness side and ground.	**Yes** GO to H2 . **No** REPAIR the circuit. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

 A0061052 • **Is the voltage greater than 10 volts?**	
H2 CHECK THE LH FRONT WINDOW MOTOR DELAYED ACCESSORY POWER	
• Key in ON position. • Measure the voltage between the LH front window motor C524-2, circuit 10-AJ43B (GY/VT), harness side and ground.  A0061053 • **Is the voltage greater than 10 volts?**	**Yes** GO to H3 . **No** REPAIR the circuit. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
H3 CHECK THE LH FRONT WINDOW MOTOR GROUND	
• Key in OFF position. • Measure the resistance between the LH front window motor C524-8, circuit 31-AJ80 (BK), harness side and ground.  A0061054 • **Is the resistance less than 5 ohms?**	**Yes** GO to H4 . **No** REPAIR the circuit. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
H4 CHECK CIRCUITS 7S-AJ41 (YE/BK), 8-AJ42 (WH/GN) AND 7S-AJ40 (YE/GN) FOR AN OPEN	
• Disconnect: LH Front Window Control Switch C504a, C504b. • Measure the resistance between the LH front window control switch C504a-5, circuit 7S-AJ40 (YE/GN), harness side and the LH front window motor C524-4, circuit 7S-AJ40 (YE/GN), harness side; and between LH front window control switch C504a-11, 8-AJ42 (WH/GN), harness side and the LH front window motor C524-1, circuit 8-AJ42 (WH/GN), harness side; and between the LH front window control switch C504b-5, circuit 7S-AJ41 (YE/BK), harness side and the LH front window motor C524-3, circuit 7S-AJ41 (YE/BK), harness side.	**Yes** GO to H5 . **No** REPAIR the circuit(s) as necessary. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	
H5 CHECK THE LH FRONT WINDOW CONTROL SWITCH	
• Carry out the window control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the LH front window control switch pass the component test?**	**Yes** INSTALL a new LH front window motor. REFER to Door Window Glass Front in this section. INITIALIZE the LH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation. **No** INSTALL a new LH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

Pinpoint Test I: A Single Power Window Is Inoperative RH Front

Normal Operation

The RH front window smart motor receives power from the battery junction box (BJB) on circuit 30-AJ71 (RD/YE) and ground from circuit 31-AJ71 (BK/YE). A delayed accessory input is sent from the driver door module (DDM) to the RH front smart motor on circuit 10-AJ43A (GY/VT) so the RH front smart window motor microprocessor can determine whether or not to allow window motor operation. The RH front window control switch sends a command over circuits 7S-AJ47B (YE/BK), 8-AJ56B (WH/GN) or 7S-AJ48B (YE/VT) to the RH front smart window motor to initiate operation.

Possible Causes

- circuit 30-AJ71 (RD/YE) open
- circuits 7S-AJ47B (YE/BK), 8-AJ56B (WH/GN) or 7S-AJ48B (YE/VT) open or shorted to ground
- circuit 31-AJ71 (BK/YE) open
- battery junction box (BJB)
- LH front window control switch
- RH front window control switch
- LH front window motor
- DDM

PINPOINT TEST I: A SINGLE POWER WINDOW IS INOPERATIVE RH FRONT

Test Step	Result / Action to Take

I1 CHECK THE POWER TO THE WINDOW MOTOR	
NOTE: The RH front window motor is not on the multiplex link. **NOTE:** A new RH front window motor will be in the proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section. **NOTE:** The RH front window motor must be initialized whenever: the motor is removed from the window regulator, a new window motor is installed, a new window regulator is installed, a new window glass is installed, a new top run is installed and any operation in which grease or lubricants are applied to the window system. • Key in OFF position. • Disconnect: RH Front Window Motor C608. • Measure the voltage between the RH front window motor C608-7, circuit 30-AJ71 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to I2 . **No** REPAIR the circuit. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
I2 CHECK THE RH FRONT WINDOW MOTOR DELAYED ACCESSORY POWER	
• Key in ON position. • Measure the voltage between the RH front window motor C608-2, circuit 10-AJ43A (GY/VT), harness side and ground.  • **Is the voltage greter than 10 volts?**	**Yes** GO to I3 . **No** REPAIR the circuit. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
I3 CHECK THE RH FRONT WINDOW MOTOR GROUND	
• Key in OFF position. • Measure the resistance between the RH front window motor C608-8, circuit 31-AJ71 (BK/YE), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to I4 . **No** REPAIR the circuit. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.
I4 CHECK THE RH FRONT WINDOW MOTOR	

• Key in OFF position. • Disconnect: RH Front Window Control Switch C604. • Key in ON position. • Connect a fused (5A) jumper wire between the RH front window control switch C604-1, circuit 7S-AJ47B (YE/BK), harness side and the RH front window control switch C604-5, circuit 7-AJ18 (YE/VT), harness side. The window should operate in the UP direction.  A0068542 • Connect a fused (5A) jumper wire between the RH front window control switch C604-6, circuit 7S-AJ48B (YE/VT), harness side and the RH front window control switch C604-5, circuit 7-AJ18 (YE/VT), harness side. The window should operate in the DOWN direction.  A0068543 • **Does the window operate correctly?**	**Yes** INSTALL a new RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** GO to I5 .
I5 CHECK CIRCUITS 7S-AJ47B (YE/BK), 8-AJ56B (WH/GN) AND 7S-AJ48B (YE/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: RH Front Window Motor C608. • Measure the resistance between the RH front window control switch C604-1, circuit 7S-AJ47B (YE/BK), harness side and the RH front window motor C608-3, circuit 7S-AJ47A (YE/BK), harness side; and between the RH front window control switch C604-4, circuit 8-AJ56B (WH/GN), harness side and the RH front window motor C608-1, circuit 8-AJ56 (WH/GN), harness side; and between the RH front window control switch C604-6, circuit 7S-AJ48B (YE/VT), harness side and the RH front window motor C608-4, circuit 7S-AJ48A (YE/VT), harness side.  A0061058 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new RH front window motor. REFER to Door Window Glass Front in this section. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit(s) as necessary. INITIALIZE the RH front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test J: A Single Power Window Is Inoperative LH Rear or RH Rear

Normal Operation

The LH rear and RH rear window control switches receive a power input from the rear electronic module (REM) on circuit 7-AJ14A (YE/BU) (LH rear) and circuit 7-AJ24 (YE) (RH rear). The LH rear window control switch sends a passenger input command to the REM over circuits 8-AJ14 (WH/BU) (UP) and 10-AJ14 (GY/VT) (DOWN) while the RH rear window control switch sends a passenger input command to the REM over circuits 8-AJ24 (WH) (UP) and 10-AJ24 (GY) (DOWN). The REM appropriately applies power and ground over the LH rear window motor circuits 35-AJ13 (VT/BU) and 34-AJ13 (BU/RD) and over the RH rear window motor circuits 35-AJ23 (VT/WH) and 34-AJ23 (BU/OG) in order to operate the correct window motor in the commanded direction. These window motors are not smart motors and therefore have only proportional up/down operation with no one-touch feature.

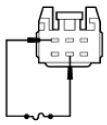
Possible Causes

- Circuits 7-AJ14 (YE/BU), 7-AJ24 (YE), 8-AJ14A (WH/BU), 8-AJ24 (WH), 10-AJ14A (GY/VT), 10-AJ24 (GY), 31-DK30 (BK/OG), 34-AJ13 (BU/RD), 34-AJ23 (BU/OG), 35-AJ13 (VT/BU) or 35-AJ23 (VT/WH) open
- LH rear or RH rear window control switch
- LH rear or RH rear window motor
- REM

PINPOINT TEST J: A SINGLE POWER WINDOW IS INOPERATIVE LH REAR OR RH REAR

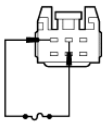
Test Step	Result / Action to Take
J1 CHECK THE VOLTAGE TO THE LR OR RR WINDOW CONTROL SWITCH	
• Key in OFF position. • Disconnect: Inoperative Rear Window Control Switch C701/C801. • Key in ON position. • **NOTE:** Make certain the window lock-out switch is in the UNLOCK position. • Measure the voltage between the inoperative rear window control switch C701-3, circuit 7-AJ14 (YE/BU) (LH rear), harness side and ground or C801-3, circuit 7-AJ24 (YE) (RH rear), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to J2 . **No** REPAIR the circuit. TEST the system for normal operation.
J2 CHECK THE GROUNDS TO THE REM	
• Key in OFF position. • Disconnect: REM C420f, C420g. • Measure the resistance between the REM C420f-3, circuit 31-DK30 (BK/OG), harness side and ground; and between the REM C420g-2,	**Yes** GO to J3 . **No** REPAIR the circuit(s)

circuit 31-DK30 (BK/OG), harness side and ground.  • **Are the resistances less than 5 ohms?**	as necessary. TEST the system for normal operation.
J3 CHECK CIRCUITS 8-AJ14A (WH/BU), 10-AJ14A (GY/VT), 8-AJ24 (WH) AND 10-AJ24 (GY) FOR AN OPEN	
• Disconnect: REM C420c, C420d. • **NOTE:** If the LH rear window motor is inoperative, follow Step 2. If the RH rear window motor is inoperative, follow Step 3. • Measure the resistance (if the LH rear window motor is inoperative) between the LH rear window control switch C701-5, circuit 8-AJ14A (WH/BU), harness side and the REM C420c-24, circuit 8-AJ14A (WH/BU), harness side; and between the LH rear window control switch C701-2, circuit 10-AJ14 (GY/VT), harness side and the REM C420c-22, circuit 10-AJ14A (GY/VT), harness side.  • Measure the resistance (if the RH rear window motor is inoperative) between the RH rear window control switch C801-5, circuit 8-AJ24 (WH), harness side and the REM C420d-7, circuit 8-AJ24 (WH), harness side and between the RH rear window control switch C801-2, circuit 10-AJ24 (GY), harness side and the REM C420d-20, circuit 10-AJ24 (GY), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to J4 . **No** REPAIR the circuit(s) as necessary. TEST the system for normal operation.
J4 CHECK THE INOPERATIVE WINDOW CONTROL SWITCH	
• Connect: REM C420c, C420d, C420f, C420g. • Key in ON position. • Connect a fused (5A) jumper wire between the inoperative window control switch C701/C801-3, circuit 7-AJ14 (YE/BU) (LH rear), harness side or circuit 7-AJ24 (YE) (RH rear), harness side and C701/C801-5, circuit 8-AJ14 (WH/BU) (LH rear), harness side or circuit 8-AJ24 (WH) (RH rear), harness side. The window motor should operate in the UP direction.	**Yes** INSTALL a new rear window control switch. TEST the system for normal operation. **No** GO to J5 .



A0061733

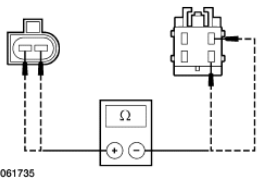
- Connect a fused (5A) jumper wire between the inoperative window control switch C701/C801-3, circuit 7-AJ14 (YE/BU) (LH rear), harness side or circuit 7-AJ24 (YE) (RH rear), harness side and C701/C801-2, circuit 10-AJ14 (GY/VT) (LH rear), harness side or circuit 10-AJ24 (GY) (RH rear), harness side. The window motor should operate in the DOWN direction.



A0061734

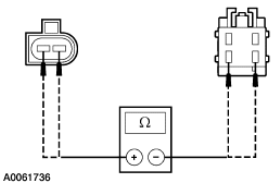
- **Does the window operate correctly?**

J5 CHECK THE INOPERATIVE WINDOW MOTOR CIRCUITS	
• Key in OFF position. • Disconnect: REM C420f, C420g. • Disconnect: Inoperative Window Motor C703/C803. • **NOTE:** If the LH rear window motor is inoperative, follow Step 4. If the RH rear window motor is inoperative, follow Step 5. • Measure the resistance between the LH rear window motor C703-1, circuit 35-AJ13A (VT/BU), harness side and the REM C420f-1, circuit 35-AJ13 (VT/BU), harness side and between C703-2, circuit 34-AJ13A (BU/RD), harness side and the REM C420f-2, circuit 34-AJ13 (BU/RD), harness side.	**Yes** INSTALL a new window motor. REFER to Door Window Glass Rear in this section. **No** REPAIR the circuit(s) as necessary. TEST the system for normal operation.



A0061735

- Measure the resistance between the RH rear window motor C803-1, circuit 35-AJ23 (VT/WH), harness side and the REM C420g-3, circuit 35-AJ23 (VT/WH), harness side and between C803-2, circuit 34-AJ23 (BU/OG), harness side and the REM C420g-1, circuit 34-AJ23 (BU/OG), harness side.



A0061736

- **Are the resistances less than 5 ohms?**

Pinpoint Test K: The One-Touch Up/Down Feature Is Inoperative

Normal Operation

NOTE: Excessive bounce-back (bounce/back that occurs with no obstructions present) may indicate a non-initialized window motor.

NOTE: The front window motors must be initialized whenever: the motor is removed from the window regulator, a new motor is installed, a new window regulator is installed, a new window glass is installed, a glass top run removal and installation and when carrying out any operation in which grease or lubricants are applied to the window system. A new front window motor will be in a proportional up/down mode until initialized.

NOTE: If this procedure is only partially completed, the front window motor will remain non-initialized and only the proportional up/down functions will operate. A non-initialized window motor may allow one-touch down operation, but will NOT allow one-touch up operation.

If the front window control switch is pressed (key ON) to the second detent, one-touch operation will occur in the commanded direction when power is sent from the front window control switch to the front window motor over circuit 8-AJ42 (WH/GN) (LF) or circuit 8-AJ56 (WH/GN) (RF).

Possible Causes

- loss of B+ power (30-AJ80 {RD/OG} {LH front}, 30-AJ71 {RD/YE} {RH front}) to the smart window motor
- new smart window motor that has not been initialized
- new components that may affect the window travel
- window motor
- front window control switch

PINPOINT TEST K: THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

Test Step	Result / Action to Take
K1 CHECK FOR POWER (B+) LOSS DURING FRONT WINDOW OPERATION	
NOTE: If window motor has one-touch-down operation with no one-touch-up operation and has been initialized, the smart window motor will need to be replaced and initialized. **NOTE:** The smart window motors are not on the multiplex link. **NOTE:** A new smart window motor will be in proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section. **NOTE:** The smart window motor must be initialized whenever: the motor has been removed, a new motor is installed, a new window regulator is installed, a new window glass is installed, a new top run is installed and when carrying out any operation in which grease or lubricants are applied to the window system. • Verify if power (B+) (circuit 30-AJ80 {RD/OG} {LH front}, circuit 30-AJ71 {RD/YE} (RH front})was lost during front window operation. • **Was power (B+) lost during front window operation?**	**Yes** RAISE the front window to the fully closed position. MAKE SURE the window glass stalls into the upper header seal. Normal functionality should resume. TEST the system for normal operation. **No** GO to K2 .
K2 INITIALIZE THE FRONT WINDOW MOTOR	
	Yes

• Key in ON position. • Carry out the front window motor initialization procedure. Refer to Door Window Motor Initialization in this section. • **Are the one-touch up/down functions operating correctly?**	Repair is complete. TEST the system for normal operation. **No** GO to K3 .
K3 CHECK THE FRONT WINDOW CONTROL SWITCH	
• Key in OFF position. • Disconnect: Front Window Control Switch. • Carry out the front window switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the front window control switch pass the component test?**	**Yes** GO to K4 . **No** INSTALL a new front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.
K4 CHECK THE FRONT WINDOW SWITCH TO FRONT WINDOW MOTOR CIRCUITS	
• Disconnect: Front Window Motor C524/C608. • **NOTE:** For the LH Front window motor, follow Step 2 and for the RH Front window motor, follow Step 3. • Measure the resistance between the LH front window motor C524-3, circuit 7S-AJ41 (YE/BK), harness side and the LH front window control switch C504b-5, circuit 7S-AJ41 (YE/BK), harness side; and between the LH front window motor C524-1, circuit 8-AJ42 (WH/GN), harness side and the LH front window control switch C504a-11, circuit 8-AJ42 (WH/GN), harness side; and between the LH front window motor C524-4, circuit 7S-AJ40 (YE/GN), harness side and the LH front window control switch C504a-5, circuit 7S-AJ40 (YE/GN), harness side.  • Measure the resistance between the RH front window motor C608-3, circuit 7S-AJ47 (YE/BK), harness side and the RH front window control switch C504a-3, circuit 7S-AJ47 (YE/BK), harness side; and between the RH front window motor C608-1, circuit 8-AJ56 (WH/GN), harness side and the RH front window control switch C504a-2, circuit 8-AJ56 (WH/GN), harness side; and between the RH front window motor C608-4, circuit 7S-AJ48 (YE/VT), harness side and the RH front window control switch C504a-9, circuit 7S-AJ48 (YE/VT), harness side.	**Yes** INSTALL a new front window motor. REFER to Door Window Glass Front in this section. INITIALIZE the window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit(s) as necessary. INITIALIZE the front window motor. REFER to Door Window Motor Initialization in this section. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	

Pinpoint Test L: The Global Open/Close Feature Does Not Operate Correctly

Normal Operation

The LH and RH front window motors are energized by voltage on circuits 30-AJ80 (RD) and 31-AJ71 (RD/YE). The LH and RH front window motors are grounded through circuits 31-AJ80 (BK) and 31-AJ71 (BK/YE). When the global open/close feature is activated the DDM sends a signal via circuit 8-AJ43 (GY/VT) to the LH and RH front window motors. The global open/close feature will not function when the delayed accessory is active. The roof opening panel will perform global open/close with the windows (if equipped). A failure in the central locking system could cause the global open/close feature to be inoperative.

Possible Causes

- circuit 8-AJ43 (WH/BU) open
- circuit 8-AJ43A (WH/BU) open
- circuit 8-AJ43B (WH/BU) open
- driver door module (DDM)
- driver door lock cylinder switch

PINPOINT TEST L: THE GLOBAL OPEN/CLOSE FEATURE DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
L1 VERIFY ALL POWER DOOR LOCKS ARE OPERATIONAL	
• Operate all of the door locks with the door key. • **Do all of the door locks operate with the door key?**	**Yes** GO to L2 . **No** REFER to Section 501-14 to diagnose all door locks are inoperative from the driver door lock cylinder.
L2 CHECK CIRCUITS 8-AJ43 (WH/BU), 8-AJ43A (WH/BU) AND 8-AJ43B (WH/BU) FOR AN OPEN	
• **LH Front** • Disconnect: LH Front Window Motor C524. • Disconnect: RH Front Window Motor C608. • Disconnect: DDM C501d. • Measure the resistance between the LH front window motor C524-6, circuit 8-AJ43B (WH/BU), harness side and the DDM C501d-26, circuit 8-AJ43 (WH/BU), harness side and between the RH front window motor C608-6, circuit 8-AJ43A (WH/BU), harness side and the DDM C501d-26, circuit 8-AJ43 (WH/BU), harness side.	**Yes** INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 • **Is the resistance less than 5 ohms on all circuits?**	

Pinpoint Test M: The Defrost System Is Inoperative

Normal Operation

The heated rear window relay coil is grounded by the rear electronic module (REM) when the module receives an SCP bus signal from the (dual automatic temperature control (DATC) module to turn on the heated rear window. Since the heated rear window relay has battery power to it at all times on circuits 30-HB23A (RD/WH) and 30-HB23B (RD/WH), when the REM grounds the relay coil and closes the relay, it supplies power to the heated rear window over circuit 15S-DA13 (GN/YE) to circuit 15S-HB19 (GN/BU).

Possible Causes

- circuit 15S-DA13 (GN/YE), 15S-HB19 (GN/BU) open
- heated rear window relay
- battery junction box (BJB)
- DATC module
- REM

PINPOINT TEST M: THE DEFROST SYSTEM IS INOPERATIVE

Test Step	Result / Action to Take
M1 CHECK THE REM DTCS	
• Retrieve the recorded results from the REM self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to M2 .
M2 CHECK THE REM OUTPUT	
• Connect the diagnostic tool. • Key in ON position. • Trigger the REM active command R DEF RLY to ON then OFF while listening for the heated rear window relay to click. • **Did the heated rear window relay click when activated ON and OFF?**	**Yes** GO to M3 . **No** GO to M6 .
M3 CHECK THE HEATED REAR WINDOW POWER	

• Key in OFF position. • Disconnect: Heated Rear Window C402a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: • Trigger the REM active command R DEF RLY to ON. • Measure the voltage between the heated rear window C402a, circuit 15S-HB19 (GN/BU), harness side and ground.  A0003178 • **Is the voltage greater than 10 volts?**	**Yes** GO to M4 . **No** GO to M10 .
M4 CHECK THE HEATED REAR WINDOW GROUND	
• Key in OFF position. • Disconnect: Heated Rear Window Ground Connector. • Measure the resistance between the heated rear window ground connector, circuit (BK) harness side and ground.  A0003179 • **Is the resistance less than 5 ohms?**	**Yes** GO to M5 . **No** REPAIR the circuit. TEST the system for normal operation.
M5 CHECK THE HEATED REAR WINDOW GRID	
• Carry out the grid wire component test. Refer to Component Tests in this section. • **Did the heated rear window grid pass the component test?**	**Yes** INSTALL a new DATC module, REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test. If the heated rear window is still inoperative, INSTALL a new REM, REFER to Section 418-00 for the installation and removal procedure. REPEAT the self-test. TEST the system for normal operation. **No** REPAIR the heated rear window grid, REFER to Lead Terminal Repair in this section. TEST the system for normal operation.
M6 CHECK THE POWER SUPPLY TO THE HEATED REAR WINDOW RELAY	

• Key in OFF position. • Disconnect: Heated Rear Window Relay C443. • Key in ON position. • Measure the voltage between the heated rear window relay C443-86, circuit 30-HB23A (RD/WH), harness side and ground; and between the heated rear window relay C443-30, circuit 30-HB23B (RD/WH), harness side and ground.  A0062373 • **Are the voltages greater than 10 volts?**	**Yes** GO to M7 . **No** GO to M9 .
M7 CHECK THE HEATED REAR WINDOW RELAY	
• Check the heated rear window relay. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the heated rear window relay pass the component test?**	**Yes** GO to M8 . **No** INSTALL a new heated rear window relay. TEST the system for normal operation.
M8 CHECK CIRCUIT 91S-HB23 (BN/WH) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420b. • Measure the resistance between the REM C420b-7, circuit 91S-HB23 (BN/WH), harness side and the heated rear window relay C443-85, circuit 91S-HB23 (BN/WH), harness side.	**Yes** INSTALL a new DATC module, REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test. If the heated rear window is still inoperative, INSTALL a new REM, REFER to Section 418-00 for the removal and installation procedure. REPEAT the self-test. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 A0003177 • **Is the resistance less than 5 ohms?**	
M9 CHECK CIRCUIT 30-HB23 (RD/WH) FOR AN OPEN	
• Key in OFF position. • Disconnect: BJB Fuse 29 (30A). • Measure the voltage between the BJB fuse 29 (30A) input cavity and ground.  A0005750 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 30-HB23 (RD/WH). TEST the system for normal operation. **No** REPAIR the BJB input circuit. TEST the system for normal operation.
M10 CHECK CIRCUIT 15S-HB19 (GN/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: Heated Rear Window Relay C443. • Measure the resistance between the heated rear window C402a, circuit 15S-HB19 (GN/BU) harness side and the heated rear window relay C443-87, circuit 15S-DA13 (GN/YE), harness side.	**Yes** GO to M11 . **No** REPAIR the circuit. TEST the system for normal operation.

 A0003180 • **Is the resistance less than 5 ohms?**	
M11 CHECK THE HEATED REAR WINDOW RELAY	
• Check the heated rear window relay. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the heated rear window relay pass the component test?**	**Yes** REPAIR circuit 30-HB23 (RD/WH). TEST the system for normal operation. **No** INSTALL a new heated rear window relay. TEST the system for normal operation.

Pinpoint Test N: The Defrost System Will Not Shut Off Automatically

Normal Operation

The heated rear window relay coil stays grounded by the rear electronic module (REM) for approximately ten minutes, after which the REM will remove the ground to circuit 91S-HB23 (BN/WH), thereby opening the heated rear window relay. This will disconnect the power from circuits 15S-DA13 (GN/YE) / 15S-HB19 (GN/BU), which power the heated rear window.

Possible Causes

- circuit 91S-HB23 (BN/WH) short to ground
- circuits 15S-DA13 (GN/YE), 15S-HB19 (GN/BU) short to voltage
- heated rear window relay
- REM
- DATC module

PINPOINT TEST N: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY

Test Step	Result / Action to Take
N1 CHECK THE REM DTCS	
• Retrieve the recorded results from the REM self-test. • **Are any REM DTCs recorded?**	**Yes** REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to N2 .
N2 CHECK FOR A STICKING HEATED REAR WINDOW RELAY	

• Key in OFF position. • Disconnect: Heated Rear Window Relay C443. • Key in ON position. • **Is the heated rear window off?**	**Yes** GO to N3 . **No** GO to N5 .
N3 CHECK THE HEATED REAR WINDOW RELAY	
• Key in OFF position. • Check the heated rear window relay. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the heated rear window relay pass the component test?**	**Yes** GO to N4 . **No** INSTALL a new heated rear window relay. TEST the system for normal operation.
N4 CHECK CIRCUIT 91S-HB23 (BN/WH) FOR A SHORT TO GROUND	
• Disconnect: REM C420b. • Measure the resistance between the REM C420b-7, circuit 91S-HB23 (BN/WH), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new REM. REFER to Section 418-00 for the removal and installation procedure. TEST the system for normal operation. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
N5 CHECK CIRCUITS 15S-DC1 (GN/YE), 29S-HB1 (OG/YE) FOR A SHORT TO POWER	
• Key in OFF position. • Disconnect: BJB Fuse 9 (5A). • Key in ON position. • Measure the voltage between the BJB fuse 9 (5A) input cavity, circuit 15S-DC1 (GN/YE) and ground; and between the BJB fuse 9 (5A) output cavity, circuit 29S-HB1 (OG/YE) and ground.  	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** REPAIR circuit 29S-HB1 (OG/YE). TEST the system for normal operation.

• **Does circuit 15S-DC1 (GN/YE) have greater than 10 volts?**	

Pinpoint Test O: The Defrost System Is Inoperative Heated Wiper Park

Normal Operation

The heated wiper park relay is powered by the auxiliary junction box (AJB) fuse 13 (30A) through circuits 30-HB8 (RD/OG) and 30-HB8A (RD/OG). When the heated wiper park button on the DATC module is pressed (or when the ambient temperature falls below 3° Celsius {38° Fahrenheit}), the module will ground circuit 91S-HB7 (BK/BU), closing the heated wiper park relay. This will allow power to flow through circuit 30S-HB42 (RD/YE) to the heated wiper park grids in the windshield.

Possible Causes

- circuits 30S-HB42 (RD/YE), 91S-HB7 (BK/BU), 30-HB8 (RD/OG), 31-HB42 (BK/YE) open
- heated wiper park relay
- DATC module
- heated wiper park grids
- DATC module

PINPOINT TEST O: THE DEFROST SYSTEM IS INOPERATIVE HEATED WIPER PARK

Test Step	Result / Action to Take
O1 CHECK THE POWER TO THE HEATED WIPER PARK RELAY	
• Key in OFF position. • Disconnect: Heated Wiper Park Relay C1014. • Measure the voltage between the heated wiper park relay C1014-86, circuit 30-HB8A (RD/OG), harness side and ground; and between the heated wiper park relay C1014-30, circuit 30-HB8 (RD/OG), harness side and ground.  • **Are both voltages greater than 10 volts?**	**Yes** GO to O2 . **No** GO to O6 .
O2 CHECK THE SWITCHED GROUND FROM THE DATC MODULE	

• Key in ON position. • Press the heated wiper park switch to the ON position. • Measure the voltage between the heated wiper park relay C1014-85, circuit 91S-HB7 (BK/BU), harness side and the heated wiper park relay C1014-86, circuit 30-HB8A (RD/OG), harness side.  • **Is the voltage greater than 10 volts?**	**Yes** GO to O3 . **No** GO to O7 .
O3 CHECK THE HEATED WIPER PARK RELAY OUTPUT	
• Key in OFF position. • Connect: Heated Wiper Park Relay C1014. • Disconnect: Heated Wiper Park C247. • Key in ON position. • Operate the heated wiper park switch to the ON position. • Measure the voltage between the heated wiper park C247-1, circuit 30S-HB42 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to O5 . **No** GO to O4 .
O4 CHECK CIRCUIT 30S-HB42 (RD/YE) FOR AN OPEN	
• Key in OFF position. • Disconnect: Heated Wiper Park Relay C1014. • Measure the resistance between the heated wiper park relay C1014-87, circuit 30S-HB42 (RD/YE), harness side and the heated wiper park C247-1, circuit 30S-HB42 (RD/YE), harness side.	**Yes** INSTALL a new heated wiper park relay. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 A0005162 • **Is the resistance less than 5 ohms?**	
O5 CHECK THE HEATED WIPER PARK GROUND	
• Key in OFF position. • Disconnect: Heated Wiper Park C246. • Key in ON position. • Operate the heated wiper park switch to the ON position. • Measure the voltage between the heated wiper park C247-1, circuit 30S-HB42 (RD/YE), harness side the heated wiper park C246-1, circuit 31-HB42 (BK/YE), harness side.  A0005752 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new windshield. REFER to Windshield Glass in this section. TEST the system for normal operation. **No** REPAIR circuit 31-HB42 (BK/YE). TEST the system for normal operation.
O6 CHECK THE UNDERHOOD AJB FOR POWER	
• Disconnect: Underhood AJB Fuse 13 (30A). • Measure the voltage between the underhood AJB fuse 13 (30A) input cavity, and ground.  A0005753 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR circuit 30-HB8 (RD/OG). TEST the system for normal operation. **No** REPAIR the underhood AJB input circuit. TEST the system for normal operation.
O7 CHECK CIRCUIT 91S-HB7 (BN/RD) FOR AN OPEN	

• Key in OFF position. • Disconnect: DATC Module C228b. • Measure the resistance between the heated wiper park relay C1014-85, circuit 91S-HB7 (BN/RD), harness side and the DATC module C228b-20, circuit 91S-HB7 (BN/RD), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DATC module. REFER to Section 418-00 for the removal and installation procedure. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test P: The Defrost System Will Not Shut Off Automatically Heated Wiper Park

Normal Operation

The heated wiper park relay is powered by the auxiliary junction box (AJB) fuse 13 (30A) through circuit 30-HB8 (RD/OG). When the heated wiper park button on the DATC module is pressed (or when the ambient temperature falls below 3° Celsius {38° Fahrenheit}), the module will ground circuit 91S-HB7 (BN/RD), closing the heated wiper park relay. This will allow power to flow through circuit 30S-HB42 (RD/YE) to the heated wiper park grids in the windshield. The system can be manually switched off, or it will automatically switch off when the ambient temperature rises above 3° Celsius (38° Fahrenheit).

Possible Causes

- circuit 91S-HB7 (BN/RD) shorted to ground
- circuit 30S-HB42 (RD/YE) shorted to voltage
- heated wiper park relay
- DATC module

PINPOINT TEST P: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY HEATED WIPER PARK

Test Step	Result / Action to Take
P1 CHECK FOR A SHORTED CONTROL CIRCUIT	
• Key in OFF position. • Disconnect: Heated Wiper Park Relay C1014. • Measure the resistance between the heated wiper park relay C1014-85, circuit 91S-HB7 (BN/RD), harness side and ground.	**Yes** GO to P3 . **No** GO to P2 .

 A0005157 • **Is the resistance greater than 10,000 ohms?**	
P2 CHECK CIRCUIT 91S-HB7 (BN/RD) FOR A SHORT TO GROUND	
• Disconnect: DATC Module C228b. • Measure the resistance between the heated wiper park relay C1014-85, circuit 91S-HB7 (BN/RD), harness side and ground.  A0005157 • **Is the resistance greater 10,000 ohms?**	**Yes** INSTALL a new DATC module. REFER to Section 418-00 for the removal and installation procedure. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal oepration.
P3 CHECK CIRCUIT 30S-HB42 (RD/YE) FOR A SHORT TO BATTERY	
• Key in ON position. • Measure the voltage between the heated wiper park relay C1014-87, circuit 30S-HB42 (RD/YE), harness side and ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** INSTALL a new heated wiper park relay. TEST the system for normal operation.

 • **Is the voltage greater than 10 volts?**	

Wipers and Washers

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent
ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool with appropriate adapter cable
ST1138-A	Flex Probe Kit 105-R025B or equivalent
ST1453-A	SABRE Premium Battery and Electrical System Tester 010-00736 or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Hoses to windshield washer pump • Wiper linkage	• Auxiliary junction box (AJB) fuse 20 (30A) • Central junction box (CJB) fuse(s): ♦ 12 (5A) ♦ 26 (5A) • Circuitry • Front electronic module (FEM) • Multifunction switch • Rain sensor module • Wiper motor • Washer pump

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, connect the diagnostic tool to the data link connector and select the vehicle to be tested from the tool menu. If the diagnostic does not communicate with the vehicle.
   - check that the program card is correctly installed.
   - check the connections to the vehicle.
   - check the ignition switch position.

5. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool operating manual.

6. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
   - SCP+, SCP- , UBP or ISO circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 to continue module communication diagnosis
   - No response/not equipped for front electronic module (FEM), refer to section Section 418-00 to continue module communication diagnosis.
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out the self test for the FEM.

7. If the DTCs retrieved are related to the concern, go to the FEM Diagnostic Trouble Code (DTC) Index.

8. If no DTCs related to the concern are retrieved, proceed to the GO to Symptom Chart .

Symptom Chart

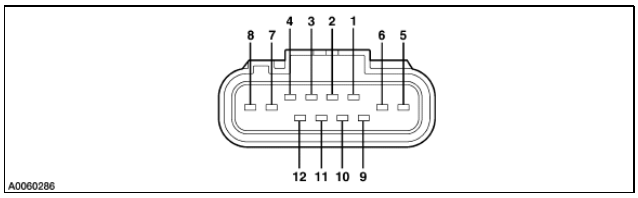
Connector Circuit Reference

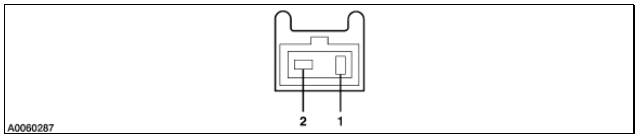
Windshield Wiper Motor C125



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-KA11 (WH/BK) high speed wiper command input	10,000 ohms or greater to chassis ground or 0 volts.
2	8-KA5 (WH/BK) wiper motor headlamp command output ground signal	10,000 ohms or greater to chassis ground or 0 volts.
3	91-KA8 (BN/RD) logic ground	5 ohms or less to chassis ground.
4	8-KA41 (WH/GN) wiper motor rain sensor input V+BATT	10,000 ohms or greater to chassis ground or 10 volts.
5	30-KA8 (RD/BU) V+ BATT	10,000 ohms or greater to chassis ground or 10 volts.

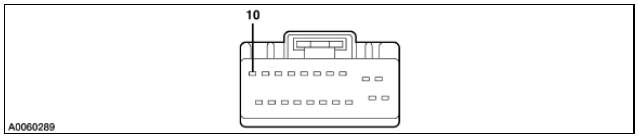
6	31-KA8 (BK/BU) wiper motor ground	5 ohms or less to chassis ground or 0 volts.
7	75S-KA7 (YE/VT) washer pump output	10,000 ohms or greater to chassis ground or 0 volts.
8	75-KA8 (YE/RD) ignition switch V+ BATT	10,000 ohms or greater to chassis ground or 10 volts.
9	8-KA10 (WH/GN) digital code input A	10,000 ohms or greater to chassis ground or 0 volts.
10	8-KA8 (WH/RD) digital code input C	10,000 ohms or greater to chassis ground or 0 volts.
11	10-KA8 (GY/RD) digital code input B	10,000 ohms or greater to chassis ground or 0 volts.
12	8-KA7 (WH/VT) wash command input	10,000 ohms or greater to chassis ground or 0 volts.

Washer Pump Motor C137



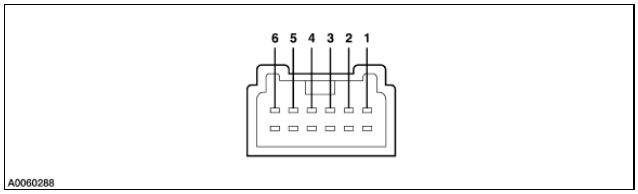
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	31-KA7 (BK) ground	5 ohms or less to chassis ground.
2	75S-KA7 (YE/VT) power	10 volts or greater with washer switch activated and key ON.

Front Electronic Module (FEM) C201f



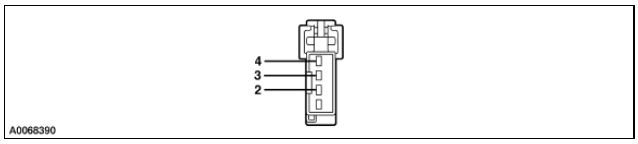
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
10	8-KA5 (WH/BK) headlamp command FEM input	ground signal when wiper motor is activated.

Multifunction Switch C202



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-KA8 (WH/RD) digital code output C	10,000 ohms or greater to chassis ground or 0 volts.
2	31-KA19 (BK/RD) ground	5 ohms or less to chassis ground and 0 volts.
3	8-KA10 (WH/GN) digital code output "A"	10,000 ohms or greater to chassis ground or 0 volts.
4	10-KA8 (GY/RD) digital code output B	10,000 ohms or greater to chassis ground or 0 volts.
5	8-KA7 (WH/VT) wash command output	10,000 ohms or greater to chassis ground or 0 volts.
6	8-KA11 (WH/BK) high speed wiper command output	10,000 ohms or greater to chassis ground or 0 volts.

Rain Sensor C914



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	75-KA41 (YE/GN) V+BATT	10 volts or greater.
3	31-KA41 (BK/GN) ground	5 ohms or less to chassis ground.
4	8-KA41 (WH/GN) rain sensor	10,000 ohms or greater to chassis ground or 0 volts.

Pinpoint Test Q: The Wipers Are Inoperative

Normal Operation

The wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) and 8-KA10 (WH/GN). The wiper motor module (internal) will then control the wiper run/park relay (internal) using internal circuitry to control the wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 8-KA8 (WH/RD) open
- circuit 8-KA10 (WH/GN) open
- circuit 8-KA11 (WH/BK) open
- circuit 10-KA8 (GY/RD) open
- circuit 30-KA8 (RD/BU) open

- circuit 31-KA8 (BK/BU) open
- circuit 31-KA19 (BK/RD) open
- circuit 75-KA8 (YE/RD) open
- circuit 91-KA8 (BN/RD) open
- multifunction switch
- windshield wiper motor

PINPOINT TEST Q: THE WIPERS ARE INOPERATIVE

Test Step	Result / Action to Take
Q1 CHECK CIRCUITS 75-KA8 (YE/RD) AND 30-KA8 (RD/BU) FOR VOLTAGE	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Key in ON position. • Measure the voltage between windshield wiper C125-5, circuit 30-KA8 (RD/BU), harness side and ground; and between windshield wiper motor C125-8, circuit 75-KA8 (YE/RD), harness side and ground.  A0045928 • **Are the voltages greater than 10 volts?**	**Yes** GO to Q2 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
Q2 CHECK CIRCUITS 31-KA8 (BK/BU) AND 91-KA8 (BN/RD) FOR OPENS	
• Key in OFF position. • Measure the resistance between windshield wiper C125-6, circuit 31-KA8 (BK/BU), harness side and ground; and between windshield wiper motor C125-3, circuit 91-KA8 (BK/BU), harness side and ground.  A0037610 • **Are the resistances less than 5 ohms?**	**Yes** GO to Q3 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
Q3 CHECK THE MULTIFUNCTION SWITCH	
• Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test.	**Yes** GO to Q4 . **No** INSTALL a new multifunction switch.

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the multifunction switch pass the component test?**	REFER to Section 211-00 for the removal and installation procedure.
Q4 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to Q5 . **No** REPAIR the circuit. TEST the system for normal operation.
Q5 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) AND 8-KA10 (WH/GN) FOR OPENS	
• Using the following table, measure the resistance between the multifunction switch C202, harness side and the windshield wiper motor C125, harness side: **Multifunction Switch C202** / **Windshield Wiper Motor C125** pin 1, circuit 8-KA8 (WH/RD) / pin 10, circuit 8-KA8 (WH/RD) pin 3, circuit 8-KA10 (WH/GN) / pin 9, circuit 8-KA10 (WH/GN) pin 4, circuit 10-KA8 (GY/RD) / pin 11, circuit 10-KA8 (GY/RD) pin 6, circuit 8-KA11 (WH/BK) / pin 1, circuit 8-KA11 (WH/BK)  • **Are the resistances less than 5 ohms?**	**Yes** GO to Q6 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
Q6 CHECK FOR CORRECT WIPER MOTOR OPERATION	
• Disconnect all wiper motor connectors. • Check for:	**Yes** GO to Q7 .

• corrosion • pushed-out pins • Connect all wiper motor connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.
Q7 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by binding or incorrect pivot arm adjustment. REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section.

Pinpoint Test R: The Wipers Stay On Continuously

Normal Operation

The wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) and 8-KA10 (WH/GN). The wiper motor module (internal) controls the wiper run/park relay (internal) using internal circuitry to control the wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA8 (WH/RD) shorted to ground
- circuit 10-KA8 (GY/RD) shorted to ground
- circuit 8-KA11 (WH/BK) shorted to ground
- circuit 8-KA10 (WH/GN) shorted to ground
- windshield wiper motor
- multifunction switch.

PINPOINT TEST R: THE WIPERS STAY ON CONTINUOUSLY

Test Step	Result / Action to Take
R1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test.	**Yes** GO to R2 . **No** INSTALL a new multifunction switch. REFER to Section 211-00 for the removal and installation procedure.

Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the multifunction switch pass the component test?**	
R2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  A0060291 • **Is the resistance less than 5 ohms?**	**Yes** GO to R3 . **No** REPAIR the circuit. TEST the system for normal operation.
R3 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) AND 8-KA10 (WH/GN) FOR SHORTS TO GROUND	
• Disconnect: Windshield Wiper Motor C125. • Using the following table, measure the resistance between the windshield wiper motor C125, harness side and ground: **Windshield Wiper Motor C125** / **Ground** pin 1, circuit 8-KA11 (WH/BK) — ground pin 9, circuit 8-KA10 (WH/GN) — ground pin 10, circuit 8-KA8 (WH/RD) — ground pin 11, circuit 10-KA8 (GY/RD) — ground  A0062375 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to R4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.

R4 CHECK FOR CORRECT WIPER MOTOR OPERATION	

• Disconnect all wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to R5 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

R5 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or incorrect pivot arm adjustment. REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section.

Pinpoint Test S: The High/Low Wiper Speeds Do Not Operate Correctly (Intermittent Wiper Mode OK)

Normal Operation

The wiper motor receives inputs form the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) and 8-KA10 (WH/GN). The wiper motor module (internal) will then control the wiper run/park relay (internal) using internal circuitry to control the wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA8 (WH/RD) open
- circuit 10-KA8 (GY/RD) open
- circuit 8-KA11 (WH/BK) open
- circuit 8-KA10 (WH/GN) open
- multifunction switch
- windshield wiper motor

PINPOINT TEST S: THE HIGH/LOW WIPER SPEEDS DO NOT OPERATE CORRECTLY (INTERMITTENT WIPER MODE OK)

Test Step	Result / Action to Take
S1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position.	**Yes** GO to S2 .

• Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the multifunction switch pass the component test?**	**No** INSTALL a new multifunction switch. REFER to Section 211-00 for the removal and installation procedure.
S2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to S3 . **No** REPAIR the circuit. TEST the system for normal operation.
S3 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) AND 8-KA10 (WH/GN) FOR OPENS	
• Disconnect: Windshield Wiper Motor C125. • Using the following table, measure the resistance between the multifunction switch C202, harness side, and the windshield wiper motor C125, harness side: **Multifunction Switch C202** / **Windshield Wiper Motor C125** pin 1, circuit 8-KA8 (WH/RD) / pin 10, circuit 8-KA8 (WH/RD) pin 3, circuit 8-KA10 (WH/GN) / pin 9, circuit 8-KA10 (WH/GN) pin 4, circuit 10-KA8 (GY/RD) / pin 11, circuit 10-KA8 (GY/RD) pin 6, circuit 8-KA11 (WH/BK) / pin 1, circuit 8-KA11 (WH/BK)  	**Yes** GO to S4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.

• **Are the resistances less than 5 ohms?**	
S4 CHECK FOR CORRECT WIPER MOTOR OPERATION	

• Disconnect all wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to S5 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

S5 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. Concern may have been caused by a binding or incorrect pivot arm adjustment. REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section. TEST the system for normal operation.

Pinpoint Test T: The Intermittent Wiper Speed Does Not Operate Correctly (High/Low Speeds OK)

Normal Operation

The wiper motor receives inputs from the multifunction switch circuits 8-KA8 (WH/RD), 10-KA8 (GY/RD), 8-KA11 (WH/BK) and 8-KA10 (WH/GN). The wiper motor module (internal) will then control the wiper run/park relay (internal) using internal circuitry to control the wiper motor in conjunction with the wiper HI/LO relay (internal).

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA8 (WH/RD) open
- circuit 10-KA8 (GY/RD) open
- circuit 8-KA10 (WH/GN) open
- multifunction switch
- wiper motor

PINPOINT TEST T: THE INTERMITTENT WIPER SPEED DOES NOT OPERATE CORRECTLY (HIGH/LOW SPEEDS OK)

Test Step	Result / Action to Take
T1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202.	**Yes** GO to T2 .

• Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the multifunction switch pass the component test?**	**No** INSTALL a new multifunction switch. REFER to Section 211-00 for the removal and installation procedure.
T2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to T3 . **No** REPAIR the circuit. TEST the system for normal operation.
T3 CHECK CIRCUITS 8-KA8 (WH/RD), 10-KA8 (GY/RD) AND 8-KA10 (WH/GN) FOR OPENS	
• Disconnect: Windshield Wiper Motor C125. • Using the following table, measure the resistance between the multifunction switch C202 harness side and the windshield wiper motor C125 harness side: **Multifunction Switch C202** / **Windshield Wiper Motor C125** pin 1, circuit 8-KA8 (WH/RD) — pin 10, circuit 8-KA8 (WH/RD) pin 3, circuit 8-KA10 (WH/GN) — pin 9, circuit 8-KA10 (WH/GN) pin 4, circuit 10-KA8 (GY/RD) — pin 11, circuit 10-KA8 (GY/RD)  • **Are the resistances less than 5 ohms?**	**Yes** GO to T4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
T4 CHECK FOR CORRECT WIPER MOTOR OPERATION	
	Yes

• Disconnect all wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	GO to T5 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

T5 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or incorrect pivot arm adjustment. REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section.

Pinpoint Test U: The Wash And Wipe Functions Are Inoperative

Normal Operation

The wash/wipe function is activated when the wiper motor module (internal) receives a reference signal through circuit 8-KA7 (WH/VT). When the multifunction switch wash button is pressed for longer than 0.25 seconds, the wiper motor cycles, sending battery voltage through circuit 75S-KA7 (YE/VT) to the washer pump motor. When the wash button is pressed for less than 0.25 seconds the wiper motor will cycle only once, which is considered the mist position.

Possible Causes

- circuit 31-KA19 (BK/RD) open
- circuit 8-KA7 (WH/VT) open
- circuit 31-KA7 (BK) open or short to ground
- multifunction switch
- washer pump relay
- washer pump motor

PINPOINT TEST U: THE WASH AND WIPE FUNCTION ARE INOPERATIVE

Test Step	Result / Action to Take
U1 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information.	**Yes** GO to U2 . **No** INSTALL a new multifunction switch. REFER to Section 211-00 for the removal and installation procedure.

• **Did the multifunction switch pass the component test?**	
U2 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to U3 . **No** REPAIR the circuit. TEST the system for normal operation.
U3 CHECK CIRCUIT 8-KA7 (WH/VT) FOR AN OPEN	
• Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the multifunction switch C202-5, circuit 8-KA7 (WH/VT), harness side and the windshield wiper motor C125-12, circuit 8-KA7 (WH/VT), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** Go To Pinpoint Test V to diagnose the washer pump. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test V: The Washer Pump Is Inoperative

Normal Operation

The multifunction switch sends a reference signal through circuit 8-KA7 (WH/VT) to the wiper motor module (internal), the wiper motor will in turn send battery voltage through circuit 75S-KA7 (YE/VT) to activate the washer pump motor.

Possible Causes

- circuit 8-KA7 (WH/VT) open
- circuit 31-KA7 (BK) open
- circuit 31-KA19 (/RD open
- circuit 75S-KA7 (YE/VT) open
- wiper motor
- multifunction switch
- washer pump motor

PINPOINT TEST V: THE WASHER PUMP IS INOPERATIVE

Test Step	Result / Action to Take
V1 CHECK THE WASHER PUMP MOTOR FOR VOLTAGE	
• Key in OFF position. • Disconnect: Washer Pump Motor C137. • Key in ON position. • Measure the voltage between the washer pump motor C137-2, circuit 75S-KA7 (YE/VT) harness side and ground while pressing the multifunction switch to the wash position.  A0060294 • **Is the voltage greater than 10 volts?**	**Yes** GO to V2 . **No** GO to V3 .
V2 CHECK CIRCUIT 31-KA7 (BK) FOR GROUND	
• Measure the resistance between the washer pump motor C137-1, circuit 31-KA7 (BK) harness side and ground.  A0060295 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new washer pump. REFER to Windshield Washer Pump and Reservoir in this section. **No** REPAIR the circuit. TEST the system for normal operation.
V3 CHECK CIRCUIT 75S-KA7 (YE/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Measure the resistance between C125-7, circuit 75S-KA7 (YE/VT), harness side and C137-2, circuit 75S-KA7 (YE/VT), harness side.  A0060296 • **Is the resistance less than 5 ohms?**	**Yes** GO to V4 . **No** REPAIR the circuit. TEST the system for normal operation.
V4 CHECK THE MULTIFUNCTION SWITCH	

• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the multifunction switch pass the component test?**	**Yes** GO to V5 . **No** INSTALL a new multifunction switch. REFER to Section 211-00 for the removal and installation procedure.
V5 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to V6 . **No** REPAIR the circuit. TEST the system for normal operation.
V6 CHECK CIRCUIT 8-KA7 (WH/VT) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-5, circuit 8-KA7 (WH/VT), harness side and the windshield wiper motor C125-12, circuit 8-KA7 (WH/VT), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to V7 . **No** REPAIR the circuit. TEST the system for normal operation.
V7 CHECK FOR CORRECT WIPER MOTOR OPERATION	

• Disconnect all wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to V8 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

V8 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position.	**Yes** The system is operating correctly at this

• Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	time. The concern may have been caused by binding or incorrect pivot arm adjustment. REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section.

Pinpoint Test W: The Headlamps Do Not Illuminate When The Wipers Are On

Normal Operation

The windshield wipers are activated by a ground signal sent from the wiper motor through circuit 8-KA5 (WH/BK) to the front electronic module (FEM). After ten seconds of a continuous ground signal from the wiper motor on circuit 8-KA5 (WH/BK), the front electronic module (FEM) illuminates the headlamps.

Possible Causes

- circuit 8-KA5 (WH/BK) open
- FEM
- wiper motor

PINPOINT TEST W: THE HEADLAMPS DO NOT ILLUMINATE WHEN THE WIPERS ARE ON

Test Step	Result / Action to Take
W1 CHECK THE HEADLAMPS FOR NORMAL OPERATION	
• Turn the headlamp switch to the ON position. • **Do the headlamps illuminate?**	**Yes** GO to W2 . **No** REFER to Section 417-01 to correctly diagnose the headlamps.
W2 CHECK CIRCUIT 8-KA5 (WH/BK) FOR A GROUND SIGNAL	
• Disconnect: FEM C201f. • Key in ON position. • Turn the multifunction switch to the LO position • **NOTE:** Wait a minimum of 10 seconds before performing this step. • Measure the resistance between the FEM C201f-10, circuit 8-KA5 (WH/BK), harness side and ground.	**Yes** GO to W4 . **No** GO to W3 .

 A0060297 • **Is the resistance less than 5 ohms?**	
W3 CHECK CIRCUIT 8-KA5 (WH/BK) FOR AN OPEN	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the FEM C201f-10, circuit 8-KA5 (WH/BK), harness side and the windshield wiper motor C125-2, circuit 8-KA5 (WH/BK), harness side.  A0060298 • **Is the resistance less than 5 ohms?**	**Yes** GO to W5 . **No** REPAIR the circuit. TEST the system for normal operation.
W4 CHECK FOR CORRECT FEM OPERATION	

• Disconnect all FEM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all FEM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new FEM. REFER to Section 418-00 for the removal and installation procedure. TEST the system for normal operation
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

W5 CHECK FOR CORRECT WIPER MOTOR OPERATION	

• Disconnect all wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to W6 .
	
	No
	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

W6 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125.	**Yes** The system is operating correctly at this time. The concern may have been caused by a binding or incorrect pivot arm adjustment.

• Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section. TEST the system for normal operation.

Pinpoint Test X: The Moisture-Sensitive Wipers Do Not Operate Correctly

Normal Operation

With the multifunction switch in the AUTO position, a ground signal is sent to the wiper motor through circuit 8-KA10 (WH/GN). When the rain sensor module senses moisture on the windshield, it sends a V+BATT signal through circuit 8-KA41 (WH/GN) to the wiper motor, which activates the windshield wipers.

Possible Causes

- circuit 8-KA10 (WH/GN) open
- circuit 8-KA41 (WH/GN) open
- circuit 31-KA19 (BK/RD) open
- circuit 31-KA41 (BK/OG) open
- circuit 75-KA41 (YE/GN) open
- multifunction switch
- rain sensor module
- wiper motor

PINPOINT TEST X: THE MOISTURE-SENSITIVE WIPERS DO NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
X1 CHECK THE WIPERS FOR NORMAL OPERATION	
• Key in ON position. • Turn the multifunction switch to the LO position. • **Do the windshield wipers operate correctly?**	**Yes** GO to X2 . **No** Go To Pinpoint Test Q .
X2 CHECK THE RAIN SENSOR MODULE	
• Turn the multifunction switch to the AUTO position. • Pour water on the windshield over the rain sensor module. • **Do the windshield wipers operate correctly?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. Test the system for normal operation. **No** GO to X3 .
X3 CHECK CIRCUIT 75-KA41 (YE/GN) FOR VOLTAGE	

• Key in OFF position. • Disconnect: Rain Sensor Module C914. • Key in ON position. • Measure the voltage between the rain sensor module C914-2, circuit 75-KA41 (YE/GN), harness side and ground.  A0068382 • **Is the voltage greater than 10 volts?**	**Yes** GO to X4 . **No** REPAIR the circuit. TEST the system for normal operation.
X4 CHECK CIRCUIT 31-KA41 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the rain sensor module C914-3, circuit 31-KA41 (BK/GN), harness side and ground.  A0068536 • **Is the resistance less than 5 ohms?**	**Yes** GO to X5 . **No** REPAIR the circuit. TEST the system for normal operation.
X5 CHECK CIRCUIT 8-KA41 (WH/GN) FOR AN OPEN	
• Disconnect: Windshield Wiper Motor C125. • Measure the resistance between the rain sensor module C914-4, circuit 8-KA41 (WH/GN), harness side and the windshield wiper motor C125-4, circuit 8-KA41 (WH/GN) harness side.  A0068537 • **Is the resistance less than 5 ohms?**	**Yes** GO to X6 . **No** REPAIR the circuit. TEST the system for normal operation.
X6 CHECK CIRCUIT 8-KA10 (WH/GN) FOR AN OPEN	

• Key in OFF position. • Disconnect: Multifunction Switch C202. • Measure the resistance between the multifunction switch C202-3, circuit 8-KA10 (WH/GN), harness side and the windshield wiper motor C125-9, circuit 8-KA10 (WH/GN), harness side.  A0060299 • **Is the resistance less than 5 ohms?**	**Yes** GO to X7 . **No** REPAIR the circuit. TEST the system for normal operation.
X7 CHECK CIRCUIT 31-KA19 (BK/RD) FOR AN OPEN	
• Measure the resistance between the multifunction switch C202-2, circuit 31-KA19 (BK/RD), harness side and ground.  A0060291 • **Is the resistance less than 5 ohms?**	**Yes** GO to X8 . **No** REPAIR the circuit. TEST the system for normal operation.
X8 CHECK THE MULTIFUNCTION SWITCH	
• Key in OFF position. • Disconnect: Multifunction Switch C202. • Carry out the multifunction switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Did the multifunction switch pass the component test?**	**Yes** GO to X9 . **No** INSTALL a new multifunction switch. REFER to Section 211-00 for the removal and installation procedure. TEST the system for normal operation.
X9 CHECK FOR CORRECT RAIN SENSOR MODULE OPERATION	

• Disconnect all rain sensor module connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all rain sensor module connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to X10 .
	
	No
	INSTALL a new multifunction switch. REFER to Section 211-00 .

X10 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION	

• Disconnect all windshield wiper motor connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all windshield wiper motor connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	GO to X11 .
	
	No
	INSTALL a new rain sensor module. REFER to Rain Sensor Module in this section. TEST the system for normal operation.

X11 CHECK THE WINDSHIELD WIPER MOTOR	
• Key in OFF position. • Disconnect: Windshield Wiper Motor C125. • Carry out the windshield wiper motor component test as described in this section. • **Did the windshield wiper motor pass the component test?**	**Yes** The system is operating correctly at this time. Concern may have been caused by a binding or incorrect pivot arm adjustment. REFER to Windshield Wiper in this section. TEST the system for normal operation. **No** INSTALL a new windshield wiper motor. REFER to Windshield Wiper in this section. TEST the system for normal operation.

Component Test Windshield Wiper Motor

⚠ **CAUTION: Do not handle the windshield wiper motor abusively when diagnosing the wiper operations. Failure to follow this caution may result in damage to the motor magnets and will make the windshield wiper motor inoperative. Rough handling of new windshield wiper motors may also damage the motor magnets.**

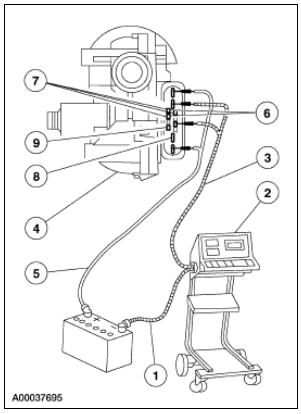
NOTE: The windshield wiper motor component test is carried out to determine if the windshield wiper motor and module are functional and not in a software safe mode. Refer to Principles of Operation in this section for software safe mode parameters.

NOTE: Battery voltage must remain within 10 to 15 VDC to carry out test and keep windshield wiper motor from entering its software safe mode.

NOTE: When connecting the power and ground test leads to the windshield wiper motor terminals, care must be taken to not short terminals between power and ground, as well as making sure the logic ground, pin 3, is always securely connected to prevent permanent windshield wiper motor module damage.

If the windshield wiper motor does not pass any of the following tests, install a new windshield wiper motor. Refer to Windshield Wiper in this section.

Use the SABRE Premium Battery and Electrical System Tester to test the windshield wiper motor.



To test the windshield wiper motor, remove the windshield wiper mounting arm and pivot shaft from the windshield wiper motor. Refer to Windshield Wiper in this section.

Disconnect the wiper motor. Connect the (1) green lead from the (2) SABRE to the battery negative (-) post. Connect the red lead (3) from the SABRE to the wiper motor (4) component side connector ground and logic ground pins 6 and 3 (3). Connect battery positive cable (5) to windshield wiper motor (4) component side connector battery and logic positive pins 5 and 8 (5).

Low Speed

Test the low speed mode by connecting a separate set of test leads from battery ground (-) post to windshield wiper motor (4) component side pins 9 and 10 (6). When these pins are grounded, the windshield wiper motor operation should now be in low speed mode.

High Speed

Test the high speed mode by connecting a separate set of test leads from battery ground (-) post to windshield wiper motor (4) component side pins 1, 9, and 10 (7). When these pins are grounded, the windshield wiper motor operation should now be in high speed mode.

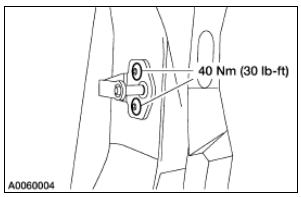
Washer Pump Relay (Integral)

Test the windshield wiper motor internal washer relay function by measuring the voltage between windshield wiper motor (4) component side pin 7 (8), and ground while grounding the windshield wiper motor (4) component side pin 12 (9). When wash command input pin 12 is grounded, measured voltage should read 10 volts or greater.

Door Alignment Printable View (343 KB)

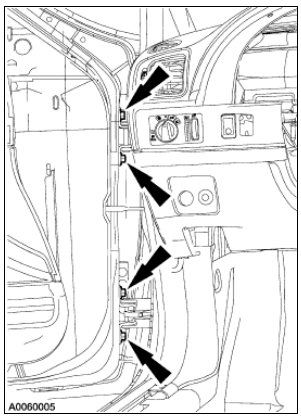
Front and Rear Door

1. Loosen the door latch striker plate.



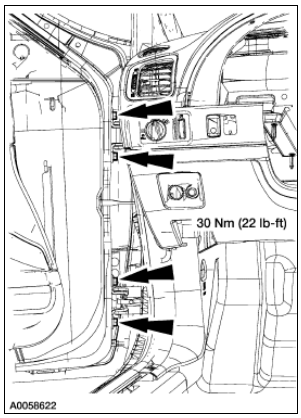
Front Door Horizontal and Vertical Adjustment

2. Loosen the front door hinge-to-front door bolts.



3. Adjust the front door.

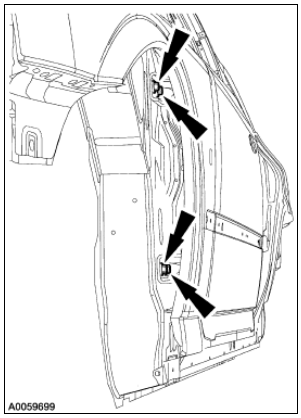
4. Tighten the front door hinge-to-front door bolts.



Front Door Fore and Aft Adjustment

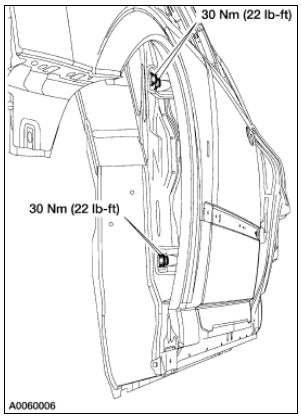
5. Remove the insulator panel. For additional information, refer to Fender in this section.

6. Loosen the door hinge-to-body bolts.



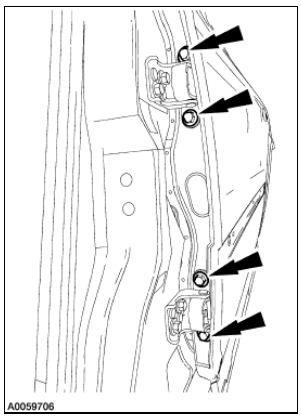
7. Adjust the front door.

8. Tighten the front door hinge-to-body bolts.



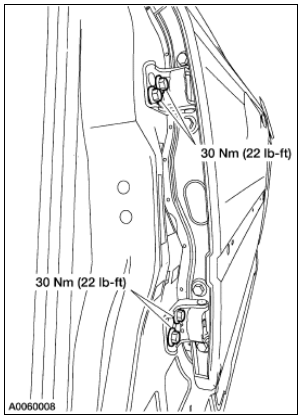
Rear Door Horizontal and Vertical Adjustment

9. Loosen the rear door hinge to rear door bolts.



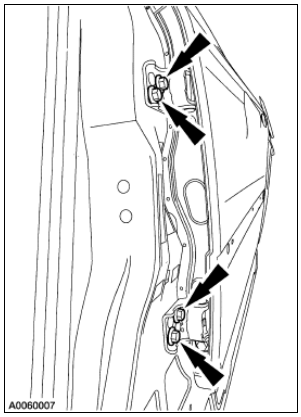
10. Adjust the rear door.

11. Tighten the rear door hinge-to-rear door bolts.



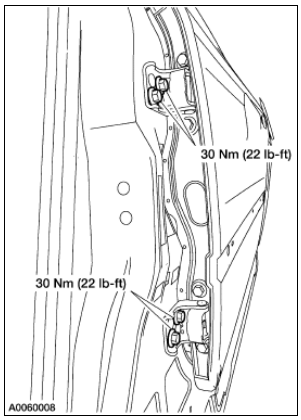
Rear Door Fore and Aft Adjustment

12. Loosen the rear door hinge-to-body bolts.



13. Adjust the rear door.

14. Tighten the rear door hinge-to-body bolts.



Front and Rear Door

15. Tighten the door latch striker plate.

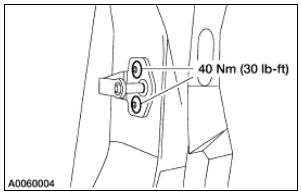
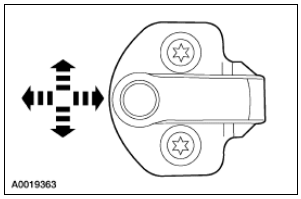
Striker Adjustment

Printable View (30 KB)

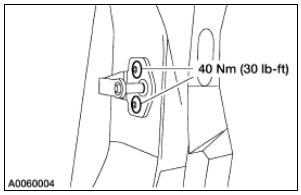
1. Loosen the door latch striker bolts.



2. Adjust the door latch striker plate from side to side or up and down as necessary.



3. Tighten the door latch striker plate bolts.



Heated Window Grid Wire Repair

Printable View (32 KB)

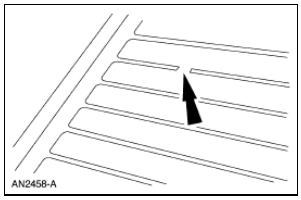
Material

Item	Specification
Dark Walnut Metallic Acrylic Lacquer Touch-up Paint ALBZ-19500-5858A or equivalent	ESR-M2-P100-C
Rear Window Defroster Repair D8AZ-19562-AA or equivalent	WSB-M4J58-B

1. **NOTE:** A single break or any breaks which exceed 25 mm (1 inch) in one grid cannot be repaired. Install a new rear window glass.

   NOTE: If the first layer of the heated rear window grid (brown) is damaged or missing, it will be necessary to apply touch-up paint on the glass prior to applying the silver rear window defroster repair.

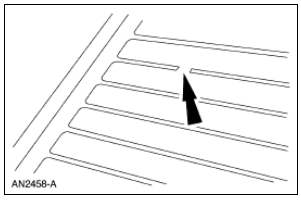
   Repair any inoperative grid wires using rear window defroster repair.



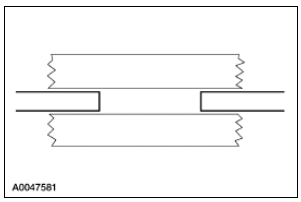
2. Bring the vehicle up to room temperature of at least 16° C (60° F) or above.

3. Clean the entire grid line repair area with a non-alcohol based window cleaner and 0000 steel wool.

4. Mark the location of the grid break on the exterior of the rear window glass.



5. Using cellulose tape, mask the area directly above and below the grid break. The break area should be at the center of the mask.



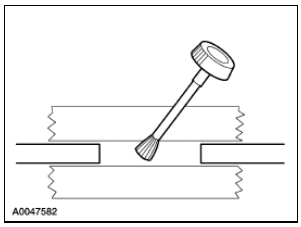
6. **NOTE:** If the brown layer is not broken or missing, apply only the silver grid repair compound to the break.

   NOTE: If both the brown and silver layers of the grid are broken or missing, apply a coating of the brown touch-up paint across the break in the grid line first. Do not overlap the silver grid line with the brown paint . Several applications may be necessary to achieve a color match.

   NOTE: Extend the silver repair coating at least 6.35 mm (0.25 inch) on both sides of the break area.

   NOTE: Allow at least five minutes of drying time between applications.

   Apply the repair coating to the grid break area in several smooth, continuous strokes.
   Apply three applications of the grid repair compound.



7. After five minutes or after the repair area has dried completely, remove the mask.

8. ⚠ **CAUTION: Be careful not to damage the grid line with the razor blade. If this occurs, additional repair may be necessary.**

   Remove any excess repair compound above or below the grid line with a razor blade.

9. **NOTE:** The repair coating will air-dry in approximately one minute and can be energized within three minutes.

   NOTE: Optimum adhesion occurs after approximately 24 hours.

   After optimum hardness is achieved, clean the repaired area with a non-alcohol based window cleaner.

Lead Terminal Repair

Special Tool(s)

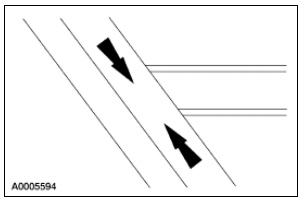
ST1110-A	Heat Gun 107-R0300 or equivalent

Material

Item	Specification
Rear Window Defroster Repair D8AZ-19562-AA	WSB-M4J58-B

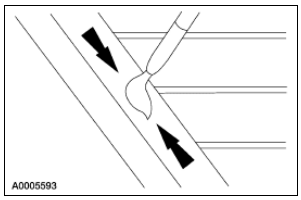
1. **NOTE:** The rear window glass must be at room temperature at the time of the repair.

   Clean the bus bar in the area to be repaired with steel wool (3/0 to 4/0 grade).



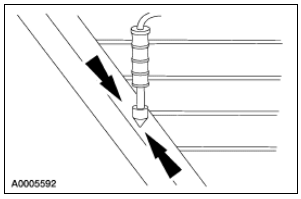
2. **NOTE:** Allow 10 minutes of drying time between the coats.

   Apply three coats of rear window defroster repair to the surface.



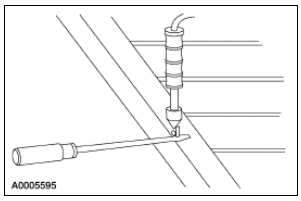
3. **⚠ CAUTION: Do not overheat the rear window glass or damage to the rear window glass may occur.**

   Tin the bus bar repair area with solder.



4. **⚠ CAUTION: To prevent overheating the rear window glass, remove the soldering gun as soon as the solder flows.**

Preheat the rear window glass in the area to be repaired using the special tool and solder the terminal to the bus bar.



5. **NOTE:** Turn the heated rear window switch ON for five minutes prior to the final inspection of the repair.

   Apply rear window defroster repair to the area as needed.

Door Window Motor Initialization

Printable View (10 KB)

⚠ CAUTION: Make sure no obstructions are present in the window system when carrying out this procedure.

NOTE: A battery disconnect will not require this procedure to be carried out.

NOTE: Excessive bounce-back (bounce-back that occurs with no obstructions present) may indicate a non-initialized window motor.

NOTE: The front window motors must be initialized whenever: the motor is removed from the window regulator, a new motor is installed, a new window regulator is installed, a new window glass is installed, a glass top run removal and installation and when carrying out any operation in which grease or lubricants are applied to the window system. A new front window motor will be in a proportional up/down mode until initialized.

NOTE: All front window components (window glass, window regulator, window motor and glass top run) must be installed and tightened to specification before carrying out this procedure.

NOTE: If this procedure is only partially completed, the front window motor will remain non-initialized and only the proportional up/down functions will operate. A non-initialized window motor may allow one-touch down operation, but will NOT allow one-touch up operation.

NOTE: If the one touch up does not function after three attempts using the window control switch initialization method, especially if false bounce back occurs, perform the Door Window Motor Initialization using the diagnostic tool.

Using the window control switch

⚠ CAUTION: Make sure there are no obstructions present in the window system when carrying out this procedure.

1. Press and hold the window control switch in the UP position at the second detent until the window glass stalls into the glass top run. Once the top run is reached, hold the window control switch in the UP position at the second detent for an additional 2 seconds.

2. Test for correct window operation by performing the one touch down and the one touch up features.

Using the diagnostic tool

⚠ CAUTION: Make sure there are no obstructions present in the window system whem carrying out this procedure.

⚠ CAUTION: Bounce back is disabled during this procedure.

NOTE: This procedure will terminate without initialization if a corresponding window switch is pressed before stall is reached.

3. Carry out the window calibration self-test using the diagnostic tool.

4. After stalling into the header seals, the front windows will move to the full open position.

5. Test for correct window operation by attempting the one touch down and the one touch up features.

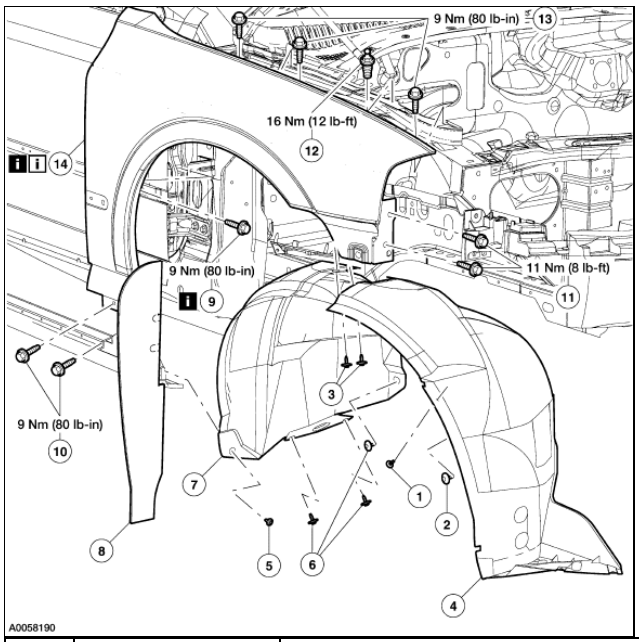
Fender

Printable View (208 KB)

1. Remove the headlamp assembly. For additional information, refer to Section 417-01 .
2. Remove the wheel and tire. For additional information, refer to Section 204-00 .
3. Remove the bumper cover. For additional information, refer to Front Bumper in this section.
4. Position the rocker moulding aside. For additional information, refer to Mouldings in this section.
5. To remove individual components, only carry out the following steps.

Component	Steps
Front fender front splash shield	1-4
Front fender rear splash shield	3,5-7
Fender insulator	3,5-8
Fender	1-14

6. Remove the components in the order listed in the following illustration and table.



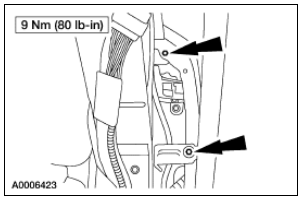
Item	Part Number	Description
1	N801169-S	Screw
2	N802781	Pin-type retainer
3	388930	Pin-type retainers (two required)
4	16034/16035	Front fender front splash shield
5	56913-S	Screw
6	N802781	Pin-type retainers (three required)
7	16B568/16B569	Front fender rear splash shield
8	16E560/16E561	Fender insulator

9		Front fender bolt (two required) Removal Note
10		Front fender bolt (two required)
11		Radiator grille opening panel bolt (two required)
12		Hood assist strut ball stud
13		Front fender bolt (three required)
14	16005/16006	Fender Removal Note
14	16005/16006	Fender Installation Note

7. To install, reverse the removal procedure.

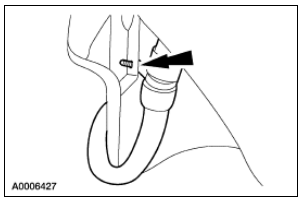
Item 9: Front Fender Bolt Removal Note

1. Remove the inner fender bolts.



Item 14: Fender Removal Note

1. Release the harness locator from the fender.



Item 14: Fender Installation Note

1. Adjust the fender as needed.

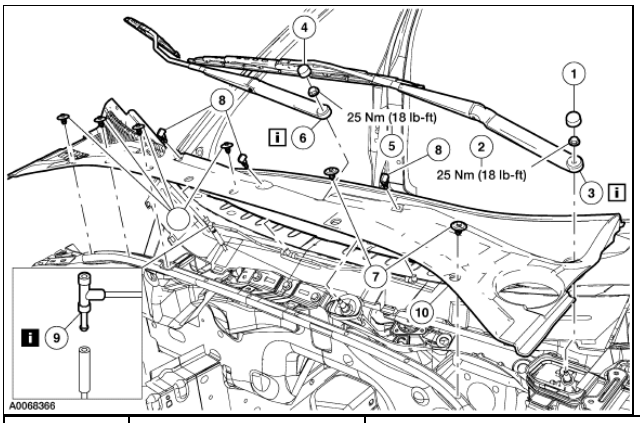
Cowl Panel Grille

Printable View (153 KB)

1. To remove individual components, only carry out the listed steps.

Component	Steps
LH pivot arm	1-3
RH pivot arm	4-6
Cowl vent screen assembly	1-7, 9-10

2. Remove the components in the order listed in the following illustration and table.



Item	Part Number	Description
1	17D515	Pivot arm cap
2		Pivot arm nut
3	17527	Windshield wiper pivot arm Installation Note
4	17D515	Pivot arm cap
5		Pivot arm nut
6	17526	Windshield wiper pivot arm Installation Note
7	W705956	Pin-type retainers (seven required)
8		Washer jets (part of 018A14)
9		Washer hose (part of 018A14) Removal Note
10	018A14	Cowl panel grille

3. To install, reverse the removal procedure.

Item 9: Washer Hose Removal Note

1. Disconnect the washer hose for cowl vent panel removal.

Item 3: Windshield Wiper Pivot Arm Installation Note

1. Cycle and park the windshield wipers.

2. Install the windshield wiper pivot arm onto the pivot shaft and align the blade to the silver dots in the windshield.

Item 6: Windshield Wiper Pivot Arm Installation Note

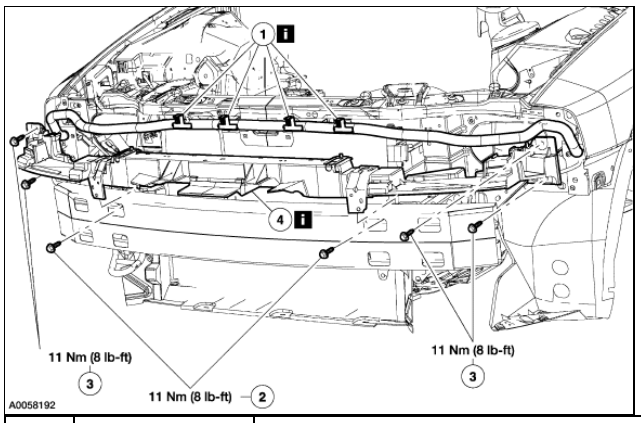
1. Cycle and park the windshield wipers.

2. Install the wiper blade and pivot arm onto the pivot shaft and align the blade to the silver dots in the windshield.

Radiator Grille Opening Panel

Printable View (154 KB)

1. Remove the front bumper cover. For additional information, refer to Front Bumper in this section.
2. Remove the components in the order listed in the following illustration and table.



Item	Part Number	Description
1		Wiring harness locators Removal Note
2		Radiator grille opening panel bolt (two required)
3		Radiator grille opening panel bolt (four required)
4		Radiator grille opening panel Removal Note

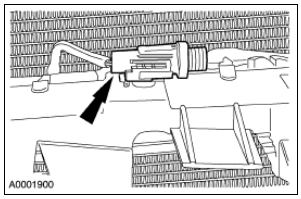
3. To install, reverse the removal procedure.

Item 1: Wiring Harness Removal Note

1. Release the wiring harness locators and position the harness aside.

Item 4: Radiator Grille Opening Panel Removal Note

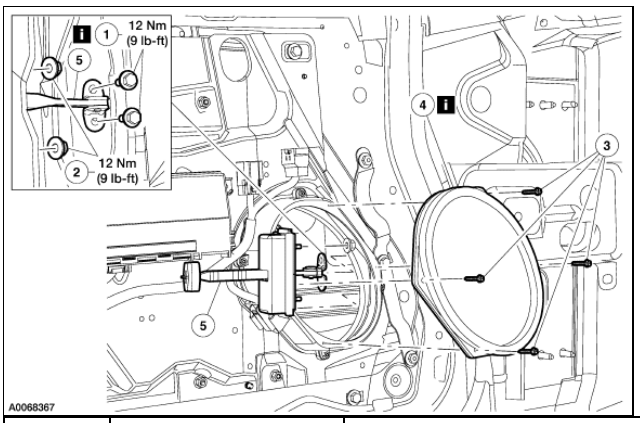
1. Release the ambient air temperature sensor.



Door Check Arm

Printable View (125 KB)

1. Remove the door trim panel. For additional information, refer to Section 501-01 .
2. Remove the components in the order listed in the following illustration and table.



Item	Part Number	Description
1	W707426-S900	Door check arm screw (two required) Removal Note
2	W704723-S301	Door check arm nuts (two required)
3		Speaker screws (four required)
4		Speaker Removal Note
5	23553	Door check arm

3. Install in the reverse order of removal.

Item 1: Door Check Arm Screw Removal Note

1. Do not close the door after the door check screws have been removed.

Item 4: Speaker Removal Note

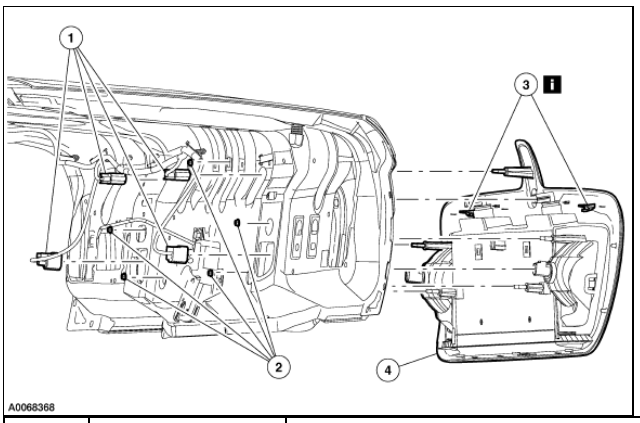
1. Position the speaker aside.
2. Through the speaker opening remove the door check assembly.

License Plate Housing

Printable View (102 KB)

1. Position the deck lid trim panel aside.

2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Electrical connectors (four required)
2		License plate housing nuts (part of 17B389)
3		Retaining tabs (part of 17B389) Removal Note
4	17B389	License plate housing

3. Install in the reverse order of removal.

Item 3: Retaining Tabs Removal Note

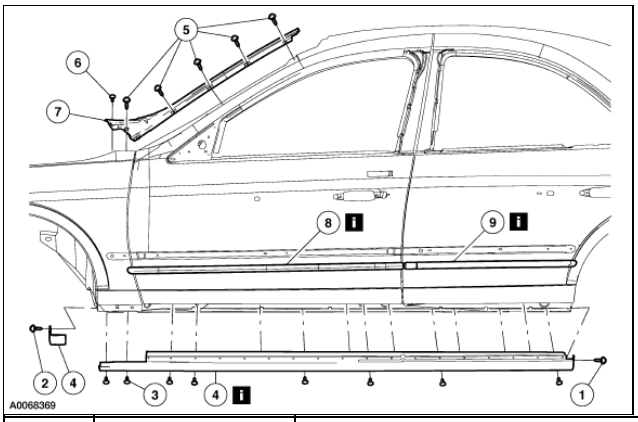
1. Release the two retaining tabs.

Mouldings Printable View (199 KB)

1. To remove individual components, only carry out the following steps.

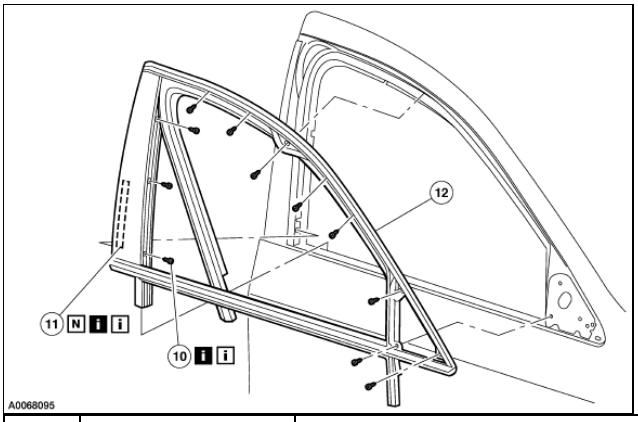
Component	Steps
Rocker moulding	1-4
Windshield moulding	5-7
Front door moulding	8
Rear door moulding	9
Front door window trim moulding module	10-12
Rear door window trim moulding module	13-15

2. View 1 of 3. Remove the components in the order indicated in the following illustration and table.



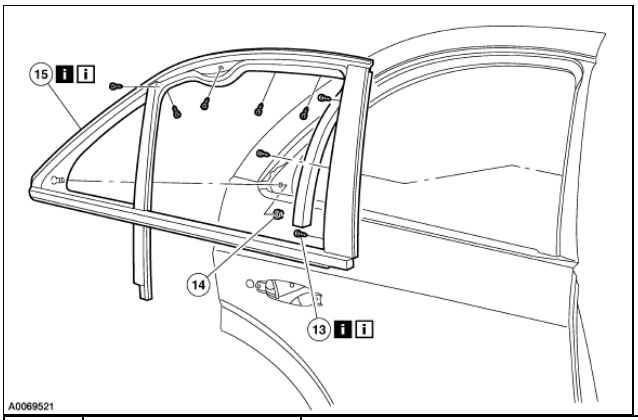
Item	Part Number	Description
1		Rocker moulding screw (one required)
2		Rocker moulding screw (one required)
3		Pin-type retainers (eight required)
4	10154/10155	Rocker moulding (two required) Removal Note
5		Windshield moulding screw (five required)
6		Pin-type retainer
7	03682/03683	Windshield moulding
8	20780/20781	Front door moulding Removal Note
9	25334/25335	Rear door moulding Removal Note

3. View 2 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
10	384439-S61	Screws (11 required) Removal Note
10	384439-S61	Screws (11 required) Installation Note
11		Double sided foam tape Removal Note
11		Double sided foam tape Installation Note
12	214A90/214A91	Front door window trim moulding assembly

4. View 3 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
13	384439-S61	Screws (eight required) Removal Note
13	384439-S61	Screws (eight required) Installation Note
14	N621900-S36	Nut
15	246A26/246A27	Rear door window trim moulding assembly Removal Note
15	246A26/246A27	Rear door window trim moulding assembly Installation Note

5. To install, reverse the removal procedure.

Item 4: Rocker Moulding Removal Note

1. Discard the retaining cups and install new cups during installation.

Item 8: Front Door Moulding Removal Note

1. The moulding is held in place with double sided foam tape.

Item 9: Rear Door Moulding Removal Note

1. The moulding is held in place with double sided foam tape.

Item 10: Screws Removal Note

1. Remove the front door window glass. For additional information, refer to Door Window Glass Front in this section.
2. Remove the exterior mirror. For additional information, refer to Exterior Mirror in this section
3. Position the glass run seal aside to access the retaining screws.

Item 11: Double Sided Foam Tape Removal Note

1. Use a suitable tool to cut the double sided foam tape.

Item 13: Screws Removal Note

1. Remove the front door window glass. For additional information, refer to Door Window Glass Rear in this section.
2. Position the glass run seal aside to access the retaining screws.

Item 15: Rear Door Window Trim Moulding Assembly Removal Note

1. Release the trim moulding assembly at the upper front to clear the door frame, rotating the assembly rearward and remove it from the door.

Item 10: Screws Installation Note

1. Make sure the glass run seal is fully seated after the screws are installed.

Item 11: Double Sided Foam Tape Installation Note

1. Make sure to clean the surface properly prior to applying the double sided foam tape.

Item 13: Screws Installation Note

1. Make sure the glass run seal is fully seated after the screws are installed.

Item 15: Rear Door Window Trim Moulding Assembly Installation Note

1. Remove the tab and liner from the module after the assembly has been positioned in the door.

Exterior Mirror

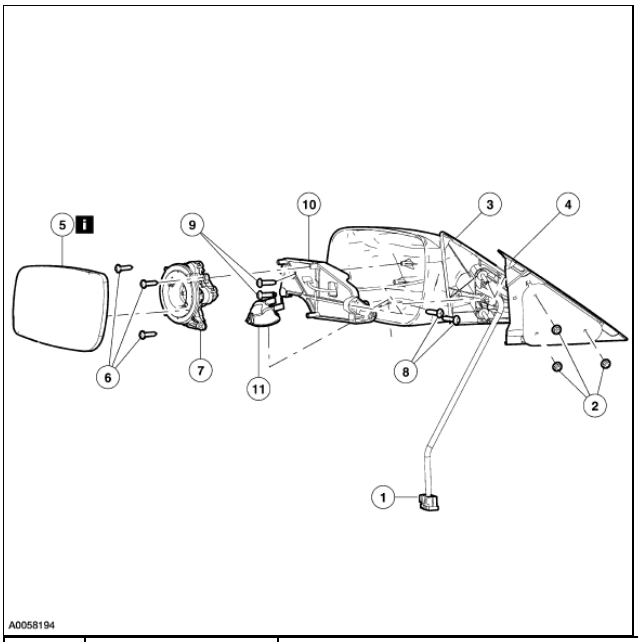
Printable View (64 KB)

1. Remove the front door trim panel. For additional information, refer to Section 501-01 .

2. To remove individual components, only carry out the following steps.

Component	Steps
Mirror glass	5
Mirror motor	5-7
Exterior mirror assembly	1-3

3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Electrical connector (part of 17683)
2		Exterior mirror nuts (three required)
3	17682/17683	Exterior mirror housing
4		Gasket (part of 17683)
5	17682/17683	Exterior mirror glass Removal Note
6		Exterior mirror motor screws (part of 17683)
7		Exterior mirror motor (part of 17683)
8		Exterior mirror frame screws (part of 17683)
9		Exterior mirror frame screws (part of 17683)
10		Exterior mirror frame (part of 17683)
11		Puddle lamp (part of 17683)

4. To install, reverse the removal procedure.

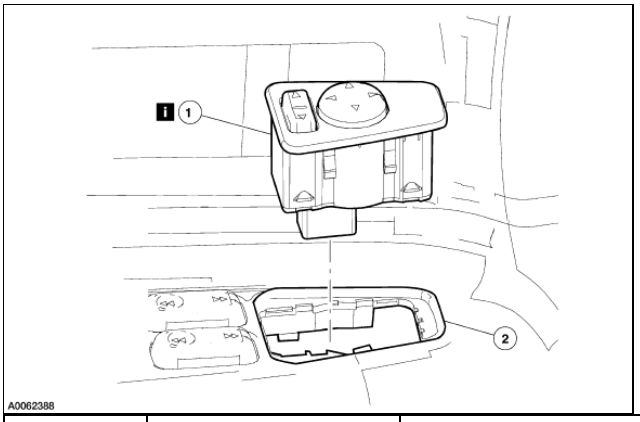
Item 5: Mirror Glass Removal Note

1. If equipped, disconnect the heated mirror electrical connectors.

Exterior Mirror Control Switch

Printable View (44 KB)

1. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	17B676	Exterior mirror control switch Removal Note
2		Door trim panel switch bezel

2. To install, reverse the removal procedure.

Item 1: Exterior Mirror Control Switch Removal Note

1. Lift up on the front of the door trim panel switch bezel and press the retaining tabs to remove the exterior mirror control switch.

2. Disconnect the electrical connector.

Interior Mirror

Printable View (70 KB)

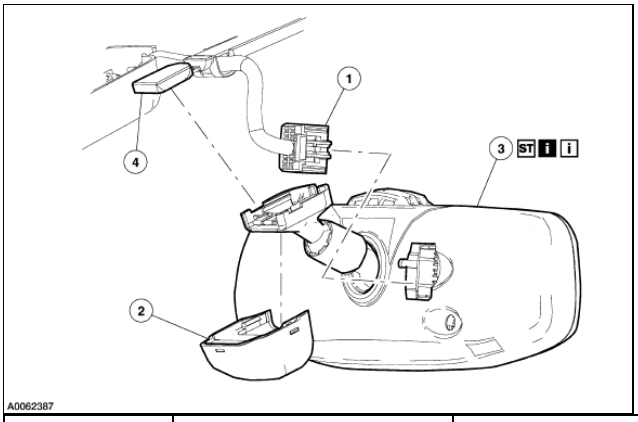
Special Tool(s)

ST1793-A	Installer, Rear View Mirror 501-025 (T94P-17700-AH)

Material

Item	Specification
Rearview Mirror Adhesive D9AZ-19554-CA	WSB-M2G176-B

1. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A464	Electrical connector
2		Cover (part of 17E678)
3	17E678	Interior mirror Removal Note
3	17E678	Interior mirror Installation Note
4	17684	Rearview mirror button

2. To install, reverse the removal procedure.

Item 3: Interior Mirror Removal Note

1. Place the interior mirror in the full DOWN position. Pull downward until released.

Item 3: Interior Mirror Installation Note

1. Place the interior mirror on the windshield bracket. Using the special tool, press the mirror in place until fully seated.

Door Window Glass Front

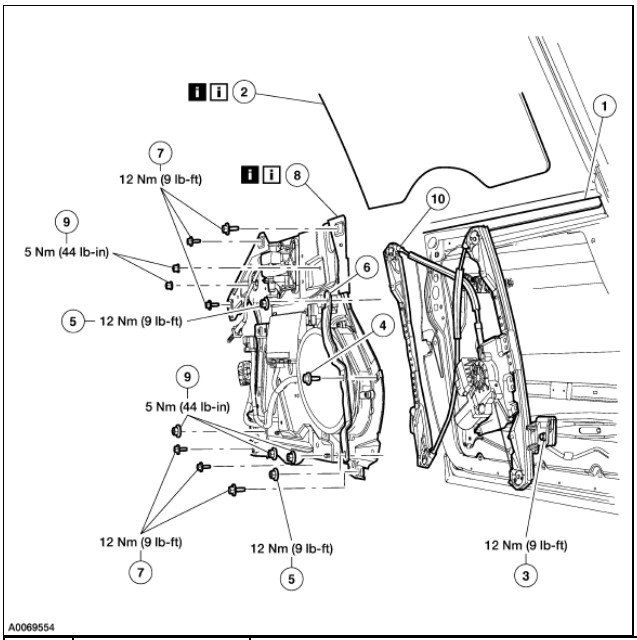
Printable View (148 KB)

NOTE: The front window motors must be initialized whenever: the motor is removed from the window regulator, a new motor is installed, a new window regulator is installed, a new window glass is installed, a glass top run removal and installation has been carried out or when carrying out any operation in which grease or lubricants are applied to the window system. A new front window motor will be in a proportional up/down mode until initialized. Refer to Door Window Motor Initialization in this section.

1. Remove the front door trim panel. For additional information, refer to Section 501-01 .
2. Remove the water shield.
3. Position the front door latch assembly aside. For additional information, refer to Section 501-14 .
4. To remove individual components, only carry out the following steps.

Component	Steps
Door window glass	1-3
Door window glass regulator	2-10

5. Remove the components in the order indicated in the following illustration and table.



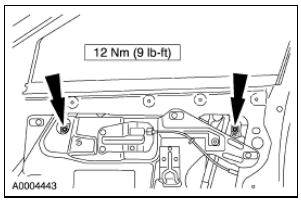
Item	Part Number	Description
1		Interior weatherstrip
2	21410/21411	Door window glass Removal Note
2	21410/21411	Door window glass Installation Note
3		Door regulator clamp bolts (two required) (part of 23210/23211)

4		Door inner support bracket bolt
5		Door inner support bracket nut (two required)
6		Door inner support bracket
7		Door inner module assembly bolts (six required)
8		Door inner module assembly Removal Note
8		Door inner module assembly Installation Note
9		Door window glass regulator nuts (five required)
10	23200/23201	Door window glass regulator

6. To install, reverse the removal procedure.

Item 2: Door Window Glass Removal Note

1. Position the front window regulator-to-glass clamp bolts to align with the access holes.



2. Loosen the bolts allowing the window glass to move from the clamp but do not remove the bolts.

3. Hold the glass in place and lower the window regulator to the full down position remove the front door window glass.

Item 8: Door Inner Module Assembly Removal Note

1. If equipped, disconnect the remote keyless entry key pad connector.

2. Disconnect the mirror electrical connector and release the locators from the inner door module assembly.

3. Disconnect the door module electrical connector, main wiring harness electrical connector and release the locators from the inner door module assembly.

Item 2: Front Door Window Glass Installation Note

1. Position the front door window glass against the B-pillar.

2. Make sure the front door window glass correctly seats in the glass mounting brackets as the front door window glass is raised.

3. Support the front door window glass and raise the window regulator to the full upright position.

4. Tighten the door regulator clamp bolts after the glass is fully seated in the clamp.

Item 8: Door Inner Module Assembly Installation Note

1. Make sure the alignment dowels are seated before installing the inner door module bolts

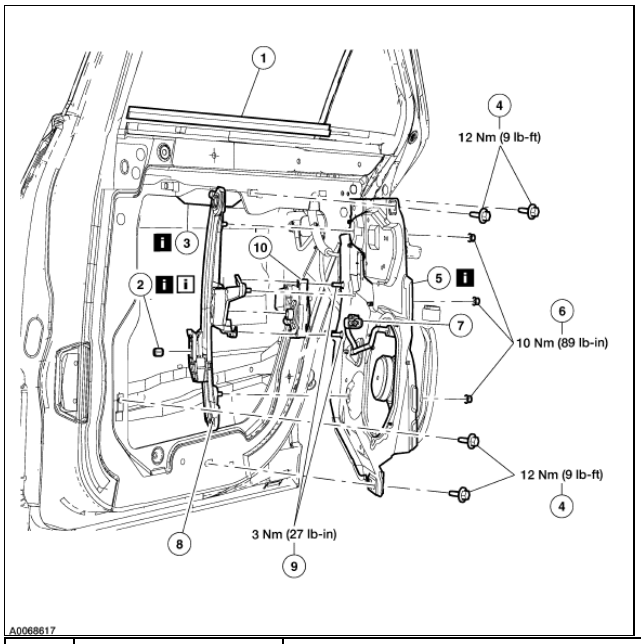
2. Tighten the inner door module bolts next to the alignment dowels first.

Door Window Glass Rear Printable View (163 KB)

1. Remove the rear door trim panel. For additional information, refer to Section 501-01 .
2. Remove the water shield.
3. To remove individual components, only carry out the following steps.

Component	Steps
Rear door window glass	1-3
Window glass regulator	2-8
Window glass regulator motor	2-10

4. Remove the components in the order indicated in the following illustration and table.



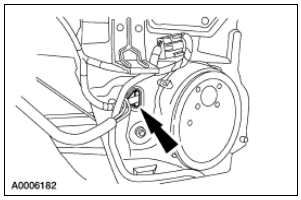
Item	Part Number	Description
1		Interior weather strip
2	263A82	Retainer pin Removal Note
2	263A82	Retainer pin Installation Note
3	260A10/260A11	Rear door window glass Removal Note
4	W707795-S	Door inner module assembly bolts (four required)
5	235A88/235A89	Rear door inner module assembly Removal Note
6	N620480-S	Window glass regulator nuts (three required)
7	14A464	Rear door regulator motor connector

8	27000/27001	Rear door regulator
9		Door window glass regulator motor screws (three required)
10	14A366/14A367	Rear door regulator motor

5. To install, reverse the removal procedure.

Item 2: Retainer Pin Removal Note

1. Position the glass to access the rear glass two-part retainer.



2. Using a suitable tool, remove the center portion of the retainer pin and then the outer portion of the retainer pin.

Item 3: Rear Door Window Glass Removal Note

1. If the glass is to be removed, remove the interior and exterior weatherstrips.

Item 5: Rear Door Inner Module Assembly Removal Note

1. Disconnect the electrical connector.

2. Position the module aside to access the rear window regulator.

Item 2: Retainer Pin Installation Note

1. **NOTE:** Prior to attaching the window to the regulator, reinstall the outer and center portions of the retainer pin into the rear door window glass. The retainer pin should protrude an equal distance on both sides of the window glass.

   Install the retainer pin into the rear door window glass.

2. Operate the rear door window regulator to the full up position until an audible click is heard when the retaining pin is engaged with the regulator.

3. Operate the rear door window glass and regulator for correct operation.

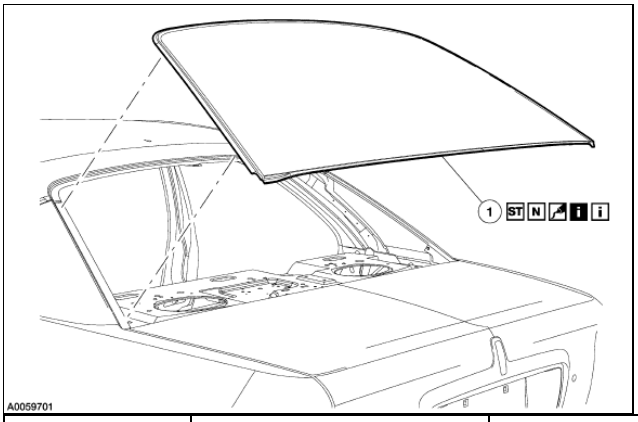
Material

Item	Specification
Urethane Metal Primer Essex U-413	WSB-M2G234-C
Urethane Glass Prep Essex U-401	WSB-M2G314-B
Urethane Glass Primer Essex U-402	WSB-M5B280-C
Urethane Adhesive Essex U-216	WSB-M2G316-B
Urethane Adhesive Essex 400-HV	WSB-M2G316-B

⚠ WARNING: To prevent glass splinters from entering the eyes or cutting the hands, wear safety glasses and heavy gloves when cutting the glass from the vehicle.

⚠ CAUTION: Care must be taken to avoid scratching the pinch weld.

1. Remove the interior trim panels surrounding the rear window glass. For additional information, refer to Section 501-01 .
2. Lower the rear portion of the headliner.
3. Remove the rear window glass.



Item	Part Number	Description
1	422A12	Rear window glass Removal Note
1	422A12	Rear window glass Installation Note

4. To install, reverse the removal procedure.

Item 1: Rear Window Glass Removal Note

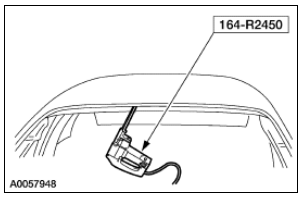
1. Disconnect the three rear window glass electrical connectors.
   - Two rear defrost electrical connectors.
   - FM antenna electrical connector.

2. Lower the rear portion of the headliner.

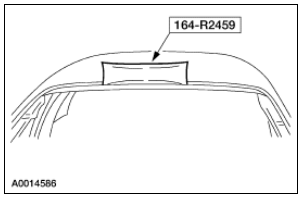
3. Using a soft brush or vacuum, remove the dirt and foreign material from the pinch weld.

4. **NOTE:** Lubricate the existing urethane adhesive with water to aid the special tool while cutting

   Using the special tool, starting at the top center of the rear window glass, cut the adhesive away from the glass and work down the sides.



5. Using the special tool, distance the rear window glass from the body.



6. Using the special tool, cut the remaining urethane adhesive and remove the rear window glass.

7. Using a soft brush or vacuum, remove the dirt and foreign material from the pinch weld.

Item 1: Rear Window Glass Installation Note

⚠ CAUTION: After installing the new urethane-installed rear window glass, the vehicle should not be driven until the urethane adhesive has cured. The curing time at temperatures above 13° C (55° F) and relative humidity above 50% is 12-24 hours. (Refer to the Essex drive away chart for the cure times as the temperatures and humidity vary). Inadequate curing of the urethane adhesive may adversely affect the strength of the urethane adhesive bond.

1. Dry fit the rear window glass to the existing urethane bed on the body pinch weld. Align the rear window glass in the opening for a uniform fit.

2. Use tape or non-permanent marking pencil to make alignment marks on the rear window glass (preferably at the setting blocks), and the body to aid in the installation alignment of the rear window glass.

3. After alignment, remove the rear window glass and molding assemblies from the vehicle and place on a stable work surface.

4. Trim the remaining urethane adhesive on the pinch weld using only the full-cut method. In this method, most of the existing urethane adhesive is removed leaving a level bead around the entire pinch weld.

5. **⚠ WARNING: All rust found on the pinch weld must be removed and the pinch weld restored to OEM specifications. If surface rust is found, remove completely down to clean, bare metal. Prime pinch weld metal with an OEM recommended curing automotive paint primer and allow to cure correctly. If rust has penetrated through the pinch weld metal, repair the pinch weld sheet metal at a body shop before proceeding.**

   Check the pinch weld for damaged sheet metal, raised sheet metal at the spot welds, rust or foreign material that may cause glass breakage. Clean or repair surface as necessary.

6. Use a wool applicator to apply urethane metal primer to any exposed metal on the pinch weld. Allow six to ten minutes to dry.

7. If reinstalling the original rear window glass, remove any excess urethane adhesive.

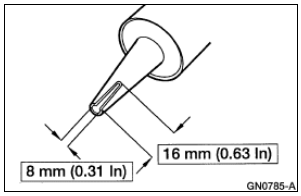
8. Clean the inside of the glass surface with an alcohol-free cleaner to make sure the ceramic-coated area is clean.

9. **⚠ CAUTION: Wipe off the urethane glass prep immediately after each application because it flash dries. Apply deliberate strokes, making sure not to overlap the applied area**

   If installing a new rear window glass, apply urethane glass prep twice around the glass surface to be prepped.

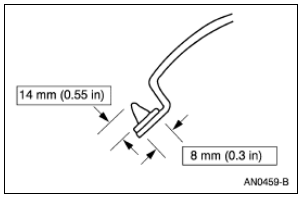
10. If installing a new rear window glass, apply urethane glass primer to the same area that was prepped in the previous step. Allow five minutes to dry.

11. Cut the urethane adhesive applicator tip to specification.



12. ⚠ **CAUTION: If the vehicle is to be driven within 24 hours of urethane adhesive application, urethane adhesive must be used due to its one-hour cure time.**

    Apply a bead of urethane adhesive to the pinch weld.



13. ⚠ **CAUTION: Open the windows to prevent the rear window glass from being pushed out by air pressure if a door is closed.**

    Install the rear window glass on the pinch weld. Align the rear window glass to the body using the alignment marks while pushing downward to set the stops.

14. Inspect the rear window glass for air or water leaks and add urethane adhesive where needed.

15. Connect the three rear window glass electrical connectors.
    - Two rear defrost electrical connectors.
    - FM antenna electrical connector.

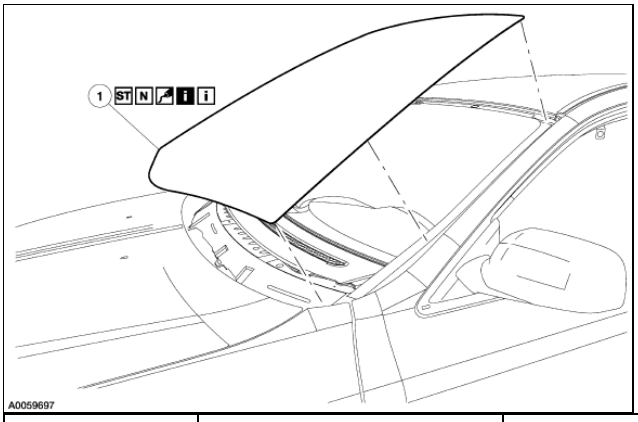
1. Remove the cowl panel grille. For additional information, refer to Cowl Panel Grille in this section.
2. Remove the windshield side exterior moulding. For additional information, refer to Mouldings in this section.
3. Remove the interior mirror. For additional information, refer to Interior Mirror in this section.
4. Remove the rain sensor module (if equipped). For additional information, refer to Windshield Wiper in this section.
5. Remove the windshield interior trim as necessary. For additional information, refer to Section 501-01 .
6. Lower the front portion of the headliner.
7. Remove the windshield.



Item	Part Number	Description
1	03100	Windshiel Removal Note
1	03100	Windshield Installation Note

8. To install, reverse the removal procedure.

Item 1: Windshield Glass Removal Note

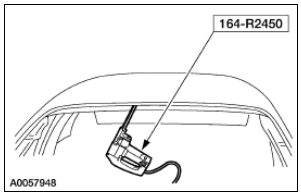
1. Using a soft brush or vacuum, remove dirt and foreign material from the pinch weld.
2. ⚠ **CAUTION: Cover the instrument panel in order to prevent possible damage.**

   ⚠ **CAUTION: Care must be used to avoid scratching the pinch weld.**

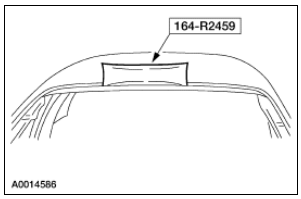
   NOTE: Lubricate the existing urethane adhesive with water to aid the special tool while cutting

   NOTE: When cutting foam inside, first cut foam dam to access urethane adhesive

   Using the special tool, starting at the top center of the windshield glass, cut the urethane adhesive away from the glass and work down the sides.



3. Using the special tool, distance the windshield from the body.



4. Remove the dual lock windshield glass stops from the sheet metal frame.
5. Using the special tool, cut the remaining urethane adhesive and remove the windshield.

6. Using a soft brush or vacuum, remove dirt and foreign material from the pinch weld.

Item 1: Windshield Glass Installation Note

⚠ CAUTION: After installing the new windshield glass, the vehicle should not be driven until the urethane adhesive has cured. The curing time at temperatures above 13° C (55° F) and relative humidity above 50% is 12-24 hours. (Refer to the Essex drive away chart for the cure times as the temperatures and humidity vary). Inadequate curing of the urethane adhesive may adversely affect the strength of the urethane adhesive bond.

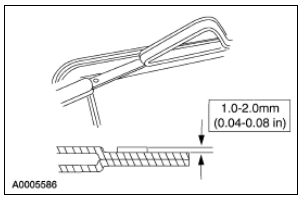
1. Dry fit the new windshield glass to the existing urethane bed on the body pinch weld. Align the windshield in the opening for uniform fit and adjust setting blocks as needed for the best fit.

2. Use tape or non-permanent marking pencil to make alignment marks on the windshield (preferably at the setting blocks), and the body to aid in the installation alignment of the new windshield.

3. After alignment, remove the windshield glass and molding assemblies from the vehicle and place on a stable work surface.

4. **⚠ CAUTION: Care must be taken to avoid scratching the pinch weld.**

   Trim the remaining urethane adhesive on the pinch weld. The urethane must be smooth and free of cuts and contamination after trimming. Avoid touching the urethane surface after preparation.



5. **⚠ CAUTION: All rust found on the pinch weld must be removed and the pinch weld restored to OEM specifications. If surface rust is found, remove completely down to clean, bare metal. Prime pinch weld metal with an OEM recommended curing automotive paint primer and allow to cure. If rust has penetrated through the pinch weld metal, repair the pinch weld sheet metal at a body shop before proceeding.**

   Check the pinch weld for damaged sheet metal, raised sheet metal at the spot welds, rust or foreign material that may cause glass breakage. Clean or repair surface as necessary.

6. Use a wool applicator to apply urethane metal primer to any exposed metal on the pinch weld. Allow six to ten minutes to dry.

7. Clean the inside of the glass surface with an alcohol-free cleaner to make sure the ceramic-coated area is clean.

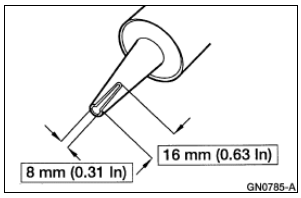
8. **NOTE:** If the moulding is already on the windshield glass, proceed to the next step.

   Align the "V" notch in the ceramic paint and windshield outside molding at top center. Fully seat the windshield outside molding along the top edge of the windshield glass and along the sides and bottom edges of the windshield glass.

9. Remove the dual lock windshield glass stop adhesive backing.

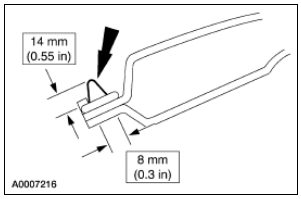
10. Apply urethane glass primer to the same area that was prepped in the previous step. Allow five minutes to dry.

11. Cut the urethane adhesive applicator tip to specification.



12. ⚠ **CAUTION: If the vehicle is to be driven within 24 hours of urethane adhesive application, urethane adhesive must be used due to its one-hour cure time.**

    Apply a bead of urethane adhesive to the pinch weld.



13. ⚠ **CAUTION: Open the windows to prevent the windshield glass from being pushed out by air pressure if a door is closed.**

    Install the windshield glass on the pinch weld. Align the windshield glass to the body using the alignment marks while pushing downward to set the stops.

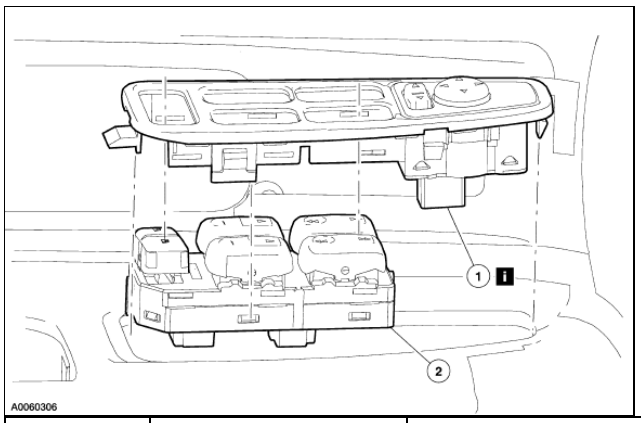
14. Inspect the windshield glass installation for air or water leaks and add urethane adhesive where needed.

15. Place two strips of duct tape onto the windshield glass and secure it to the roof panel. This will help avoid misalignment while the urethane cures.

Window Control Switch

Printable View (67 KB)

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the components in the order listed in the following illustration and table.

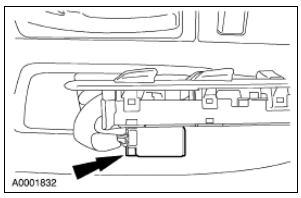


Item	Part Number	Description
1	14A564	Window control switch bezel Removal Note
2	14540	Window control switch

3. To install, reverse the removal procedure.

Item 1: Window Control Switch Bezel Removal Note

1. Carefully lift out the master window control switch and bezel from the front of the door panel to avoid breaking the tab.
2. Disconnect the electrical connector.



Windshield Wiper

Printable View (176 KB)

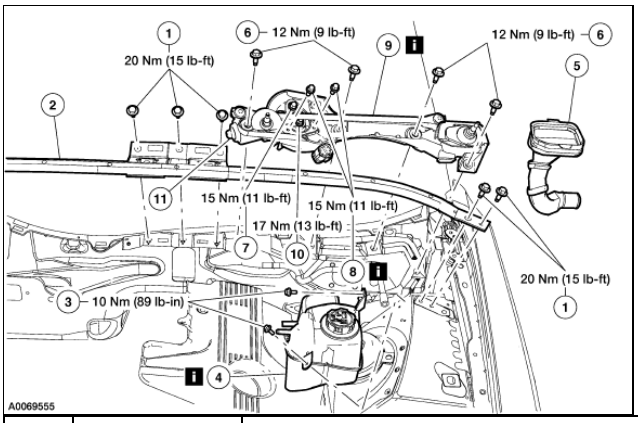
1. **CAUTION: The windshield wiper system has an auto park feature. It is necessary to disconnect the battery.**

   Disconnect the battery ground cable. For additional information, refer to Section 414-00 .

2. Partially drain the engine cooling system. For additional information, refer to Section 303-03 .

3. Remove the cowl panel grille. For additional information, refer to Cowl Panel Grille in this section.

4. Remove in the order indicated in the following table.

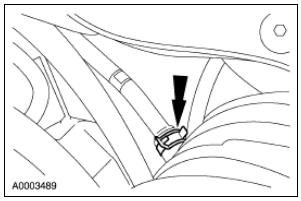


Item	Part Number	Description
1	708009-S	Strut tower support brace bolts (seven required)
2	3B336	Strut tower support brace
3		Degas bottle bolts (two required)
4	8A080	Degas bottle Removal Note
5		Drain boot (part of 17500)
6		Mounting arm and pivot shaft assembly bolts (five required)
7		Wiper motor bolt
8		Wiper motor bolts (two required) Removal Note
9	17500	Mounting arm and pivot shaft assembly Removal Note
10		Wiper motor crank bolt
11	17508	Windshield wiper motor assembly

5. To install, reverse the removal procedure.

Item 4: Degas Bottle Removal Note

1. Disconnect the degas return hose from the degas return tube.

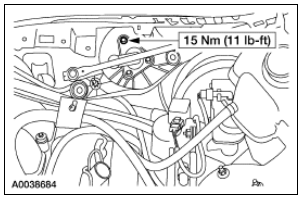


2. **NOTE:** When positioning the degas bottle aside it will be necessary to reroute the degas bottle lower hose in front of the brake booster.

   Position the degas bottle aside.

Item 8: Wiper Motor Bolts Removal Note

1. Position the windshield wiper mounting arm and pivot shaft assembly aside, and loosen the upper windshield wiper motor bolt.



2. Remove the windshield wiper mounting arm and pivot shaft assembly.

3. Rotate wiper output arm to the six o'clock position.

4. **NOTE:** To remove the lower wiper motor bolts it is necessary to rotate the bottom of the windshield wiper mounting arm and pivot shaft assembly upward.

   Remove the two lower wiper motor bolts.

Item 9: Mounting Arm And Pivot Shaft Assembly Removal Note

1. Remove the mounting arm and pivot shaft assembly.
   - Disconnect the electrical connector.

Windshield Washer Pump and Reservoir

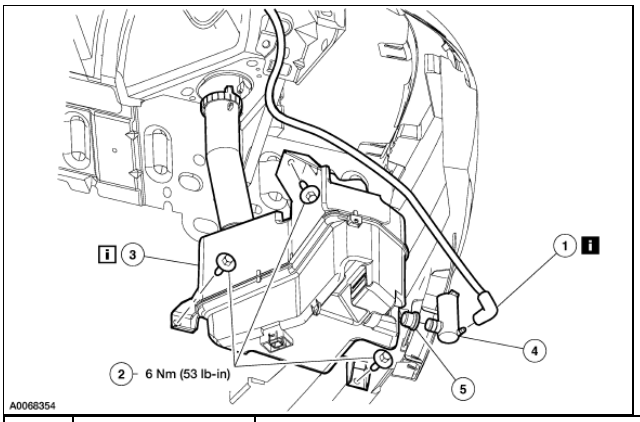
Printable View (105 KB)

1. **CAUTION: Do not make electrical connections prior to filling the windshield washer reservoir. Do not operate the windshield washer pump prior to filling the windshield washer reservoir.**

   Disconnect the battery ground cable. For additional information, refer to Section 414-00 .

2. Position the RF splash shield aside. For additional information, refer to Fender in this section.

3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	17A605	Windshield washer hose Removal Note
2	N806702-S55	Windshield washer reservoir screws (3 required)
3	17618	Windshield washer reservoir Installation Note
4	17K624	Washer motor and pump assembly
5	17B618	Pump seal

4. To install, reverse the removal procedure.

Item 1: Windshield Washer Hose Removal Note

1. Windshield washer fluid should be collected in a container after the windshield washer hose is disconnected.

Item 3: Windshield Washer Reservoir Installation Note

1. Do not make electrical connections prior to filling the windshield washer reservoir.

2. Do not operate the windshield washer pump prior to filling the windshield washer reservoir.

Front Bumper

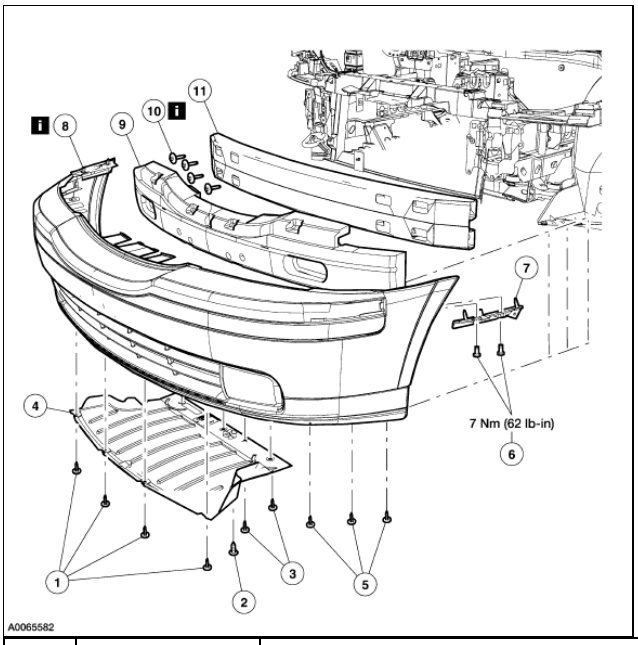
Printable View (165 KB)

1. Remove the headlamps. For additional information, refer to Section 417-01 .

2. To remove individual components, only carry out the listed steps.

Component	Steps
Front valance panel	1-4
Bumper cover	1-8
Bumper beam	1-11

3. Remove the components in the order listed in the following illustration and table.



Item	Part Number	Description
1	N801169-S	Front valance panel screw (four required)
2		Pin-type retainer
3		Front valance panel screws (two required)
4	17B635	Front valance panel
5		Inner fender splash shield screws (six required)
6		Bumper cover bracket bolts (four required)
7	17D959	Bumper cover brackets (two required)
8	17D957	Bumper cover Removal Note
9	17E898	Bumper insulator
10	W705319-S	Bumper beam bolts (eight required) Removal Note
11	17720	Bumper beam

4. To install, reverse the removal procedure.

Item 8: Bumper Cover Removal Note

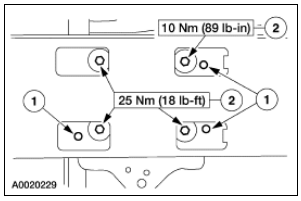
1. Disconnect the two fog lamp electrical connectors

2. Disconnect the two side marker lamp electrical connectors.

3. Remove the front bumper cover by pulling the center tabs downward and the outboard tabs on each side outward.

Item 10: Bumper Beam Bolts Removal Note

1. Remove the front bumper.
    1. Drill out the six spot welds.
    2. Remove the eight bolts.



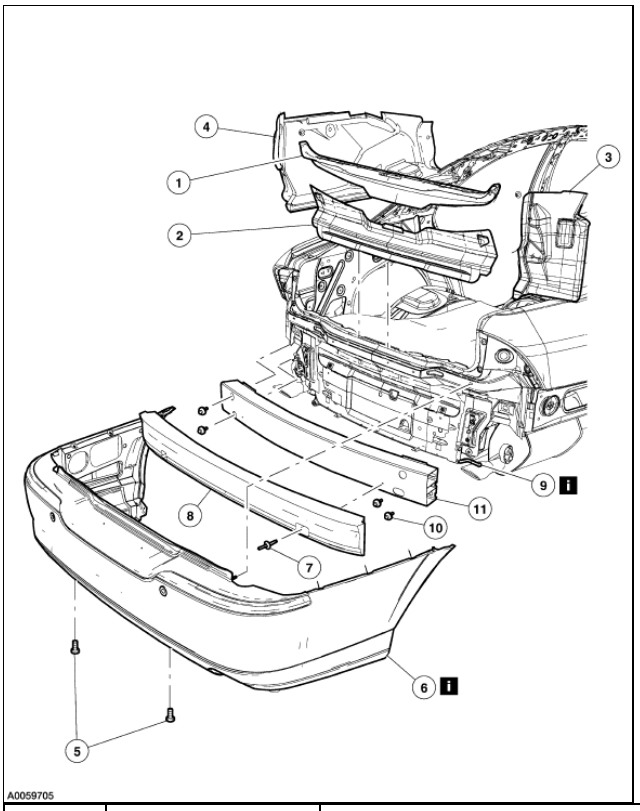
Rear Bumper

Printable View (270 KB)

1. To remove individual components, only carry out the listed steps.

Component	Steps
Rear bumper cover	1-6
Rear bumper insulator	1-8
Rear bumper beam	1-11

2. Remove the components in the order listed in the following illustration and table.



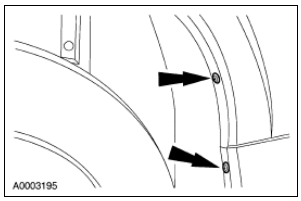
Item	Part Number	Description
1		Luggage compartment scuff plate
2		Back trim panel
3		RH trim panel
4		LH trim panel
5		Bumper cover screws (two required)
6	17K835	Rear bumper cover Removal Note
7	N807168-S	Rivet
8	17C899	Rear bumper insulator
9		Rear exhaust hanger Removal Note
10	N808081-S	Rear bumper beam bolts (four required)

11		Rear bumper beam

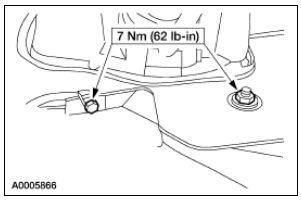
3. To install, reverse the removal procedure.
    - Transfer components as necessary.

Item 6: Rear Bumper Cover Removal Note

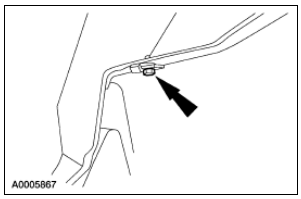
1. Remove the four inner fender screws.



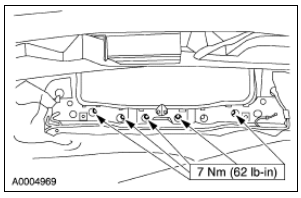
2. RH side only, remove the rear bumper cover bolt and the nut located in the wheel well area.



3. LH side only, remove the rear bumper cover bolt.



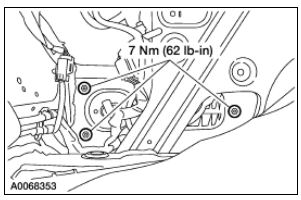
4. From the luggage compartment, remove the rear bumper cover nuts.



5. From inside the luggage compartment, remove the five rear bumper cover nuts.

6. **NOTE:** LH shown, RH similar.

   From inside the luggage compartment, remove the six rear bumper cover nuts (three on each side).



7. Disconnect the electrical connector.

Item 9: Rear Bumper Beam Removal Note

1. Remove the exhaust hanger bracket.
    1. Remove the bolt.
    2. Remove the bracket.

Body System Interior Printable View (9 KB)

Interior Trim

The interior trim panels provide insulation from noise and exterior temperatures. It covers the interior of the vehicle sheet metal, covering the many modules, latches, handles, cables and wiring. It also provides a mounting location for the window control and door lock switches.

Console

The floor console houses the electronic parking brake, traction/advance trac switch, auxiliary power point, two cup holders and extra storage space in the rear of the passenger compartment. The overhead console incorporates two interior lights with switches, roof opening panel switch and the parking aid switch.

Roof Opening Panel

The roof opening panel is an electronically operated panel that can be opened, closed or vented (tilted) by the roof opening panel switch. The switch has two detents for opening, two detents for closing and a center position for venting operations. Manual open and close are provided by the motor as long as the switch is held in the first detent. Express open or express close will occur if the switch is moved to the second detent, at which time it may be released. Proportional tilt-up occurs when the vent/tilt switch is pressed while the roof opening panel is in the fully closed or tilt range. Proportional tilt-up stops when the vent/tilt switch is released. One-touch tilt occurs when the vent/tilt switch is pressed and released while the moonroof is in fully open or slide. When commanded, the roof opening panel will express close then move to the full vent position.

Principles of Operation

Voltage is supplied to the roof opening panel motor at all times through circuit 30-AG12 (RD/GN) with the motor being grounded by circuit 31-AG12 (BK/GN). The driver door module (DDM) provides the delayed accessory power on circuit 10-AJ43B (GY/VT) and also the global open/close signal on circuit 8-AJ43B (WH/BU). Since the roof opening panel motor is always powered, the delayed accessory circuit is actually used by the smart motor to determine key position (key OFF, key ON).

With the delayed accessory circuit powered, the roof opening panel smart motor will operate as per the command supplied by the voltage input from the roof opening panel control switch on circuits 32-AG10 (WH/BU) (OPEN), 9-AG7 (BN/RD) common, 32-AG12 (WH/GN) (TILT UP), 33-AG10 (YE/BU) (CLOSE). The commands may include either a one-touch (express) open or close, proportional open or close, vent open or close.

The global open function will occur if the unlock button is pressed and held for two seconds. The driver door module (DDM) will receive the input from the transmitter and will transmit a signal over the global open/close circuit 8-AJ43 (WH/BU) to the roof opening panel smart motor. The microprocessor (which makes it a "smart" motor) in the smart motor will determine which global function to carry out and will then do so. If the key is turned in the driver door lock cylinder to the unlock position and held for two seconds (for global open) or to the lock position and held for two seconds (for global close), the DDM will process these inputs and send the appropriate global open/close signal to the roof opening panel smart motor.

Roof Opening Panel Printable View (140 KB)

Refer to Wiring Diagrams Cell 101 , Roof Opening Panel for schematic and connector information.

Special Tool(s)

ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Roof opening panel glass • Roof opening panel • Roof opening panel drain hoses • Roof opening panel lifter assemblies • Roof opening panel water trough • Roof opening panel seal	• Rear battery junction box (BJB) fuse 16 (20A) • Circuitry • Driver door module (DDM) • Loose or corroded connections • Roof opening panel motor • Roof opening panel control switch

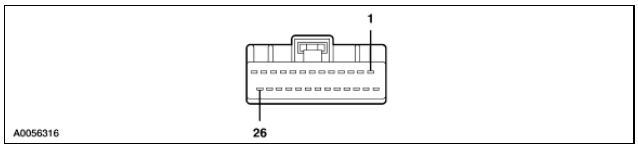
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. Any disassembly of the roof opening panel requires reinitialization. Refer to Roof Opening Panel Motor Initialization in this section.
5. If the concern is not visually evident, verify the symptom and GO to Symptom Chart .

Symptom Chart

Symptom Chart

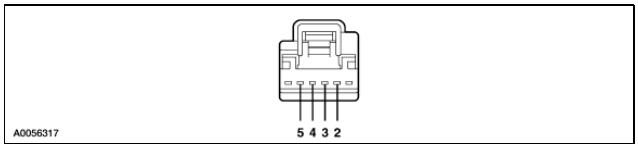
Connector Circuit Reference

DDM C501d



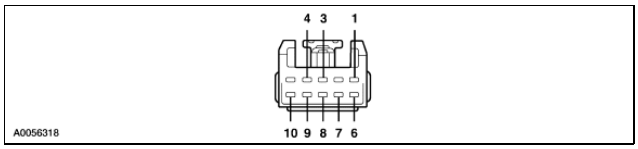
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	10-AJ43B (GY/VT) DDM delayed accessory circuit	Less than 5 ohms resistance between the DDM and the roof opening panel motor.
26	8-AJ43B (WH/BU) DDM global open/close circuit	Less than 5 ohms resistance between the DDM and the roof opening panel motor, greater than 10,000 ohms between the DDM and ground.

Roof Opening Panel Control Switch C912



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	32-AG10 (WH/BU) roof opening panel open/express close circuit	Less than 5 ohms resistance between the roof opening panel control switch and the roof opening panel motor, greater than 10,000 ohms between the roof opening panel control switch and ground.
3	9-AG7 (BN/RD) roof opening panel ground circuit	Less than 5 ohms resistance between the roof opening panel control switch and the roof opening panel motor, greater than 10,000 ohms between the roof opening panel control switch and ground.
4	32-AG12 (WH/GN) roof opening panel auto open/tilt up circuit	Less than 5 ohms resistance between the roof opening panel control switch and the roof opening panel motor, greater than 10,000 ohms between the roof opening panel control switch and ground.
5	33-AG10 (YE/BU) roof opening panel motor close/tilt down circuit	Less than 5 ohms resistance between the roof opening panel control switch and the roof opening panel motor, greater than 10,000 ohms between the roof opening panel control switch and ground.

Roof Opening Panel Motor C920



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	30-AG12 (RD/GN) roof opening panel motor power supply circuit	Greater than 10 volts between the roof opening panel motor and ground.
3	10-AJ43B (GY/VT) delayed accessory circuit	Less than 5 ohms resistance between the roof opening panel motor and the DDM, greater than 10,000 ohms between the roof opening panel motor and ground.
4	32-AG12 (WH/GN) roof opening panel motor auto open/tilt up circuit	Less than 5 ohms resistance between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
6	8-AJ43B (WH/BU) roof opening panel motor global open/close circuit	Less than 5 ohms resistance between the roof opening panel motor and the DDM. Greater than 10,000 ohms between the roof opening panel motor and ground.
7	9-AG7 (BN/RD) roof opening panel motor ground circuit	Less than 5 ohms resistance between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
8	33-AG10 (YE/BU) roof opening panel motor close/tilt down circuit	Less than 5 ohms resistance between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
9	32-AG10 (WH/BU) roof opening panel motor open/express close circuit	Less than 5 ohms resistance between the roof opening panel motor and the roof opening panel control switch. Greater than 10,000 ohms between the roof opening panel motor and ground.
10	31-AG12 (BK/GN) roof opening panel motor ground circuit	0 voltage between roof opening panel motor and ground. Less than 5 ohms resistance between the roof opening panel motor and ground.

Pinpoint Test A: The Roof Opening Panel Has Excessive Wind Noise

Normal Operation

When the roof opening panel glass is completely closed, it should be flush with the roof panel.

Possible Causes

- roof opening panel adjustment
- roof opening panel seal

PINPOINT TEST A: THE ROOF OPENING PANEL HAS EXCESSIVE WIND NOISE

Test Step	Result / Action to Take
A1 CHECK THE ROOF OPENING PANEL SEALS	
• **NOTE:** Make sure the seals are not loose, cracked, pinched or obstructed. • Check the roof opening panel seals. • **Are the seals OK?**	**Yes** GO to A2 . **No** INSTALL a new roof opening panel. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section.
A2 CHECK THE ROOF OPENING PANEL ADJUSTMENT	
• Key in ON position. • Open and close the roof opening panel glass. • Check the adjustment when the roof opening panel glass closes. • **Is the adjustment OK?**	**Yes** CHECK for correct installation of the roof opening panel motor. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section.TEST the system for normal operation. **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test B: The Roof Opening Panel Leaks

Normal Operation

When the roof opening panel glass is completely closed, it should be flush with the roof panel.

Possible Causes

- roof opening panel adjustments
- roof opening panel drain hoses
- roof opening panel seal
- roof opening panel
- roof opening panel assembly

PINPOINT TEST B: THE ROOF OPENING PANEL LEAKS

Test Step	Result / Action to Take
B1 CHECK THE ADJUSTMENT OF THE ROOF OPENING PANEL	
• **NOTE:** Make sure the roof opening panel seals are not cracked or loose. • Check the roof opening panel seals.	**Yes** GO to B2 . **No**

• **Does the roof opening panel seal seat correctly?**	ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
B2 CHECK THE ROOF OPENING PANEL DRAIN HOSES	
• **NOTE:** Make sure the roof opening panel drain hoses are not cracked, slit, pinched or obstructed. • Check the four roof opening panel drain hoses for correct operation. • **Are the roof opening panel drain hoses OK?**	**Yes** GO to B3 . **No** REPAIR the roof opening panel drain hose(s). TEST the system for normal operation.
B3 CHECK THE ROOF OPENING PANEL DRAIN HOSE ATTACHMENT POINTS	
• **NOTE:** Make sure the roof opening panel drain hose attachment points are not damaged or obstructed. • Check the roof opening panel drain hose attachment points for correct attachment. • **Are the attachment points OK?**	**Yes** GO to B4 . **No** REPAIR or INSTALL a new roof opening panel. REFER to Roof Opening Panel in this section. TEST the system for normal operation.
B4 CHECK THE ROOF OPENING PANEL WATER TROUGH CONDITION	
• Check the roof opening panel water trough and the water trough seal for damage. • **Are the roof opening panel water trough and seal OK?**	**Yes** GO to B5 . **No** REPAIR the roof opening panel water trough and seal. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
B5 CHECK THE CONDITION OF THE ROOF OPENING PANEL	
• Check the roof opening panel assembly for damage that may cause the roof opening panel seal to seat incorrectly. • **Is the roof opening panel assembly OK?**	**Yes** INSTALL a new roof opening panel assembly. REFER to Roof Opening Panel in this section. TEST the system for normal operation. **No** REPAIR or INSTALL a new roof opening panel assembly. REFER to Roof Opening Panel in this section. TEST the system for normal operation.

Pinpoint Test C: The Roof Opening Panel Rattles

Normal Operation

When the roof opening panel glass is completely closed, it should be flush with the roof panel. All components should be secured correctly.

Possible Causes

- roof opening panel operation
- roof opening panel tracks
- roof opening panel water trough
- roof opening panel lifter assemblies
- headliner
- roof opening panel motor pad

PINPOINT TEST C: THE ROOF OPENING PANEL RATTLES

Test Step	Result / Action to Take
C1 CHECK THE ROOF OPENING PANEL OPERATION	
• Check the roof opening panel during operation. • **Is the roof opening panel loose?**	**Yes** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** GO to C2 .
C2 CHECK THE ROOF OPENING PANEL TRACKS	
• Open the roof opening panel. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to C3 . **No** REMOVE all the roof opening panel track obstructions and REPAIR the roof opening panel tracks. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
C3 CHECK THE ROOF OPENING PANEL WATER TROUGH AND TROUGH GUIDES	
• Check the roof opening panel water trough and trough guides for any loose fasteners or obstructions. • **Are the roof opening panel trough and trough guides installed securely and free from obstructions?**	**Yes** GO to C4 . **No** REMOVE all obstructions from the roof opening panel trough and install securely. SECURE the trough guides or INSTALL new roof opening panel assembly if damaged. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

C4 CHECK THE ROOF OPENING PANEL MOTOR PAD	
• Check the motor pad for correct installation and damage. • **Is the motor pad installed correctly and not damaged?**	**Yes** GO to C5 . **No** INSTALL the motor pad correctly or INSTALL a new motor pad. TEST the system for normal operation.
C5 CHECK THE ROOF OPENING PANEL AIR DEFLECTOR ASSEMBLY	
• Check the roof opening panel air deflector for obstructions and damage. • **Is the roof opening panel air deflector OK?**	**Yes** GO to C6 . **No** REMOVE all obstructions and REPAIR as necessary. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
C6 CHECK THE ROOF OPENING PANEL	
• Verify the roof opening panel is free from obstruction and damage, and is securely fastened. • **Is the roof opening panel assembly OK?**	**Yes** GO to C7 . **No** REPAIR or INSTALL a new roof opening panel assembly. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
C7 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Verify the roof opening panel lifter assemblies are free from obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** INSTALL a new roof opening panel assembly. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REMOVE all obstructions from the roof opening panel lifter assemblies and REPAIR any damage. TEST the system for normal operation.

Pinpoint Test D: The Roof Opening Panel Is Noisy During Operation

Normal Operation

The roof opening panel should operate smoothly while opening and closing.

Possible Causes

- roof opening panel
- roof opening panel lifter assemblies

- roof opening panel adjustment
- roof opening panel motor

PINPOINT TEST D: THE ROOF OPENING PANEL IS NOISY DURING OPERATION

Test Step	Result / Action to Take
D1 CHECK THE ROOF OPENING PANEL FOR OBSTRUCTIONS OR DAMAGE	
• Check the roof opening panel for any obstructions and damage. • **Are there any obstructions or damage?**	**Yes** REMOVE all obstructions. REPAIR any damage or INSTALL a new roof opening panel. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** GO to D2 .
D2 CHECK THE ROOF OPENING PANEL OPERATION	
• Check the roof opening panel during operation. • **Is the roof opening panel loose or incorrectly adjusted?**	**Yes** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** GO to D3 .
D3 CHECK THE ROOF OPENING PANEL TRACKS	
• Open the roof opening panel. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to D4 . **No** REMOVE all obstructions and REPAIR any damage. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
D4 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to D5 . **No** REMOVE all obstructions and REPAIR any damage. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for

	normal operation.
D5 CHECK THE ROOF OPENING PANEL MOTOR	
• Gain access to the roof opening panel motor. • Open the roof opening panel. • **Does the roof opening panel motor make excessive noise?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** ADJUST the roof opening panel. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test E: The Roof Opening Panel Is Inoperative

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the roof opening panel control switch is pressed it connects circuit 32-AG12 (WH/GN) to circuit 9-AG7 (BR/RD) for tilt up. When the roof opening panel control switch is slid to the open position and released it will connect circuit 32-AG10 (WH/BU) to circuit 9-AG7 (BN/RD) for open. When the roof opening panel control switch is slid to the close position and released it will connect circuit 33-AG10 (YE/BU) to circuit 9-AG7 (BN/RD) for close.

Possible Causes

- circuit 9-AG7 (BN/RD) shorted to ground or open
- circuit 30-AG12 (RD/GN) open
- circuit 31-AG12 (BK/GN) open
- circuit 10-AJ43B (GY/VT) open
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor
- roof opening panel control switch
- rear battery junction box (BJB) fuse 16 (20A) open

PINPOINT TEST E: THE ROOF OPENING PANEL IS INOPERATIVE

Test Step	Result / Action to Take
E1 VERIFY POWER WINDOWS ARE OPERATIONAL	
• Operate the power windows. • **Do the power windows operate?**	**Yes** GO to E2 . **No** REFER to Section 501-00 to diagnose the inoperative windows.
E2 VERIFY THE ROOF OPENING PANEL ADJUSTMENT	
• Verify the roof opening panel is adjusted correctly. • **Is the roof opening panel adjusted correctly?**	**Yes** GO to E3 .

	No ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E3 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES FOR OBSTRUCTIONS AND DAMAGE	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to E4 . **No** REMOVE all obstructions and REPAIR any damage. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E4 CHECK CIRCUIT 30-AG12 (RD/GN) FOR VOLTAGE	
• Disconnect: Roof Opening Panel Motor C920. • Measure the voltage between the roof opening panel motor C920-1, circuit 30-AG12 (RD/GN), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to E5 . **No** REPAIR the circuit. TEST the system for normal operation.
E5 CHECK CIRCUIT 31-AG12 (BK/GN) FOR AN OPEN	
• Measure the resistance between the roof opening panel motor C920-10, circuit 31-AG12 (BK/GN), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to E6 . **No** REPAIR the circuit. TEST the system for normal operation.
E6 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	

• Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. Refer to Component Test in this section. • **Is the roof opening panel control switch ok?**	**Yes** GO to E7 . **No** INSTALL a new roof opening panel control switch. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E7 CHECK CIRCUIT 9-AG7 (BN/RD) FOR A SHORT TO GROUND OR AN OPEN	
• Measure the resistance between the roof opening panel motor C920-7, circuit 9-AG7 (BN/RD), harness side and ground; and between the roof opening panel motor C920-7, circuit 9-AG7 (BN/RD), harness side and the roof opening panel control switch C912-3, circuit 9-AG7 (BN/RD), harness side.  A0061760 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** GO to E8 . **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
E8 CHECK CIRCUIT 10-AJ43B (GY/VT) FOR AN OPEN	
• Disconnect: DDM C501d. • Measure the resistance between the roof opening panel motor C920-3, circuit 10-AJ43B (GY/VT), harness side and the DDM C501d-1, circuit 10-AJ43B (GY/VT), harness side.  A0056604 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test F: The Roof Opening Panel Does Not Open Or Close

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the roof opening panel control switch is slid to the open position and released it will connect circuit 32-AG10 (WH/BU) to circuit 9-AG7 (BN/RD) for open. When the roof opening panel control switch is slid to the close position and released it will connect circuit 33-AG10 (YE/BU) to circuit 9-AG7 (BN/RD) for close.

Possible Causes

- circuit 32-AG10 (WH/BU) shorted to ground or open
- circuit 33-AG10 (YE/BU) shorted to ground or open
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor
- roof opening panel control switch

PINPOINT TEST F: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE

Test Step	Result / Action to Take
F1 VERIFY THE ROOF OPENING PANEL ADJUSTMENT	
• Verify the roof opening panel is adjusted correctly. • **Is the roof opening panel adjusted correctly?**	**Yes** GO to F2 . **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F2 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES FOR OBSTRUCTIONS AND DAMAGE	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to F3 . **No** REMOVE all obstructions and REPAIR any damage. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F3 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Key in OFF position. • Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. REFER to Component Test in this section.	**Yes** If the open function is inoperative, GO to F4 . If the close function is inoperative, GO to F5 . **No** INSTALL a new roof opening panel control

• **Is the roof opening panel control switch OK?**	switch. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F4 CHECK CIRCUIT 32-AG10 (WH/BU) FOR A SHORT TO GROUND OR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Measure the resistance between the roof opening panel motor C920-9, circuit 32-AG10 (WH/BU), harness side and ground; and between the roof opening panel motor C920-9, circuit 32-AG10 (WH/BU), harness side and the roof opening panel control switch C912-2, circuit 32-AG10 (WH/BU), harness side.  • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** INSTALL a new roof opening panel motor. Refer to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
F5 CHECK CIRCUIT 33-AG10 (YE/BU) FOR A SHORT TO GROUND AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Measure the resistance between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and ground; and between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and the roof opening panel control switch C912-5, circuit 33-AG10 (YE/BU), harness side.  • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** INSTALL a new roof opening panel motor. Refer to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test G: The Roof Opening Panel Does Not Open Or Close In Vent Position

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the roof opening panel control switch is pressed, it connects circuit 32-AG12 (WH/GN) to circuit 9-AG7 (BR/RD) for tilt up. When the roof opening panel control switch is slid to the close position and released it will connect circuit 33-AG10 (YE/BU) to circuit 9-AG7 (BN/RD) for close.

Possible Causes

- circuit 32-AG12 (WH/GN) shorted to ground or open
- circuit 33-AG10 (YE/BU) shorted to ground or open
- roof opening panel lifter assemblies
- roof opening panel adjustment
- roof opening panel motor
- roof opening panel control switch

PINPOINT TEST G: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE IN VENT POSITION

Test Step	Result / Action to Take
G1 VERIFY THE ROOF OPENING PANEL ADJUSTMENT	
• Verify the roof opening panel is adjusted correctly. • **Is the roof opening panel adjusted correctly?**	**Yes** GO to G2 . **No** ADJUST the roof opening panel. REFER to Roof Opening Panel Alignment in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G2 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES FOR OBSTRUCTIONS AND DAMAGE	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to G3 . **No** REMOVE all obstructions and REPAIR any damage. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G3 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Key in OFF position. • Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. REFER to Component Test in this section.	**Yes** GO to G4 . **No** INSTALL a new roof opening panel control switch. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel

• **Is the roof opening panel control switch OK?**	Motor Initialization in this section. TEST the system for normal operation.
G4 CHECK CIRCUIT 32-AG12 (WH/GN) FOR A SHORT TO GROUND OR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Measure the resistance between the roof opening panel motor C920-4, circuit 32-AG12 (WH/GN), harness side and ground; and between the roof opening panel motor C920-4, circuit 32-AG12 (WH/GN), harness side and the roof opening panel control switch C912-4, circuit 32-AG12 (WH/GN), harness side.  A0056603 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground and less than 5 ohms between the roof opening panel control switch and the roof opening panel motor?**	**Yes** GO to G5 . **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.
G5 CHECK CIRCUIT 33-AG10 (YE/BU) FOR A SHORT TO GROUND OR AN OPEN	
• Measure the resistance between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and ground; and between the roof opening panel motor C920-8, circuit 33-AG10 (YE/BU), harness side and the roof opening panel control switch C912-5, circuit 33-AG10 (YE/BU), harness side.  A0062046 • **Is the resistance greater than 10,000 ohms between the roof opening panel motor and ground and less than 5 ohms between the roof opening panel motor and the roof opening panel control switch?**	**Yes** INSTALL a new roof opening panel motor. Refer to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test H: The Global Open/Close Is Inoperative

Normal Operation

The roof opening panel motor is energized by voltage on circuit 30-AG12 (RD/GN). The roof opening panel motor is grounded through circuit 31-AG12 (BK/GN). When the global open or close feature is activated the

DDM sends a signal via circuit 8-AJ43 (WH/BU) to the roof opening panel motor. The global open/close will not function when the delayed accessory is active.

Possible Causes

- circuit 8-AJ43 (WH/BU) open
- roof opening panel motor
- driver door module (DDM)

PINPOINT TEST H: THE GLOBAL OPEN/CLOSE IS INOPERATIVE

Test Step	Result / Action to Take
H1 VERIFY POWER WINDOWS ARE OPERATIONAL	
• Operate the power windows, using the global open/close procedure. • **Do the power windows operate correctly?**	**Yes** GO to H2 . **No** REFER to Section 501-00 to diagnose the inoperative windows.
H2 CHECK CIRCUIT 8-AJ43 (WH/BU) FOR AN OPEN	
• Disconnect: Roof Opening Panel Motor C920. • Disconnect: DDM C501d. • Measure the resistance between the roof opening panel motor C920-6, circuit 8-AJ43B (WH/BU), harness side and the DDM C501d-26, circuit 8-AJ43 (WH/BU), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new roof opening panel motor. Refer to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test I: The Express Open/Close Is Inoperative

Normal Operation

When the roof opening panel control switch is placed in the second detent of the open position the roof opening panel opens automatically to the full-open position. When the roof opening panel control switch is placed in the second detent of the close position, the roof opening panel closes automatically to the full-close position.

Possible Causes

- roof opening panel control switch

- roof opening panel motor

PINPOINT TEST I: THE EXPRESS OPEN/CLOSE IS INOPERATIVE

Test Step	Result / Action to Take
I1 CHECK THE ROOF OPENING PANEL CONTROL SWITCH	
• Key in OFF position. • Disconnect: Roof Opening Panel Control Switch C912. • Carry out the roof opening panel control switch component test. REFER to Component Test in this section. • **Is the roof opening panel control switch OK?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel in this section. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** INSTALL a new roof opening panel control switch. REINITIALIZE the roof opening panel. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

Component Test

Roof Opening Panel Control Switch

1. Measure the resistance between the following roof opening panel control switch C912 pins (component side) as follows:

Switch Position	Pin	Resistance Value
Off	Between All Pins	Greater than 10,000 ohms
Tilt Up	3 and 4	Less than 5 ohms
Open	2 and 3	Less than 5 ohms
One Touch Open	2, 3 and 4	Less than 5 ohms
Close/Tilt Down	3 and 5	Less than 5 ohms
One Touch Close	2, 3 and 5	Less than 5 ohms

Water Drainage System Check and Water Leak Corrections

Printable View (9 KB)

NOTE: One drain hose is attached at each corner of the roof panel. The two front drain hoses are routed down the windshield pillars and into the cowl sides exiting at the rocker panel drain holes. The two rear drain hoses are routed down the rear pillars, along the inside rear quarter panel and through the rear of the vehicle.

1. Pour water into the drain trough and inspect the front and rear of the vehicle to make sure the water drains from the rocker panels and rear quarter panels.

2. If the water flow is restricted, remove any material in the drain hose system. Test by pouring water slowly into the system.

3. Verify the roof opening panel seal is not damaged. If the seal is damaged, a new roof opening panel glass must be installed. For additional information, refer to Roof Opening Panel in this section. Reinitialize the roof opening panel. Refer to Roof Opening Panel Motor Initialization in this section.

4. Check the roof opening panel alignment. For additional information, refer to Roof Opening Panel Alignment in this section. Reinitialize the roof opening panel. Refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Motor Initialization

Printable View (9 KB)

NOTE: This procedure must be carried out when repairs (including lubrication) are performed on any part of the roof opening panel system.

Vehicles with Existing Roof Opening Panel: with the glass in the sliding range fore/aft

1. Turn the key on, then begin moving the glass panel using express open or express close.
2. While the glass panel is moving, press and hold the tilt switch for ten seconds.
3. The glass will stop as soon as the switch is pressed.
4. After ten seconds, release the tilt switch. (Continue to step 9).

Vehicles with Existing Roof Opening Panel: with the glass in the closed or vent range

5. Press and hold the tilt switch.
6. The glass will move to full tilt position and stop, but do not release the tilt switch.
7. Continue holding the tilt switch for an additional ten seconds
8. After ten seconds, release the tilt switch. (Continue to step 9).

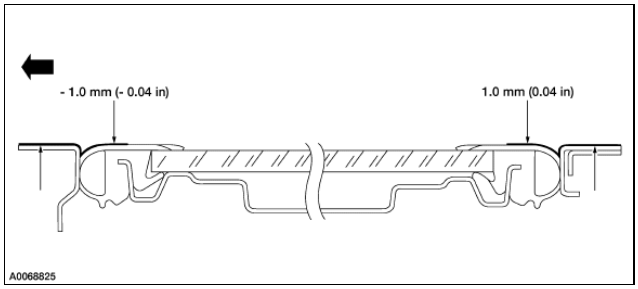
Vehicles with New or Existing Roof Opening Panel: with the glass in the sliding, closed or vent range

9. Press and hold the tilt switch.
10. The glass panel is driven in the tilt up direction to the tilt up hard stop.
11. The drive recognizes a hard stop has occurred.
12. The drive reverses the glass panel to the normal tilt up soft stop position.
13. After the glass stops, release the tilt switch.
14. Within five seconds of releasing the tilt switch, press and hold the switch.
15. The drive will move through the flush position to the full open position and back to flush.
16. Test the express open and express close using the switch.

Roof Opening Panel Alignment

Printable View (23 KB)

1. Cycle the roof opening panel through the fully open to the fully closed position.
2. Loosen the roof opening panel screws.
3. Adjust the roof opening panel to specification.



4. Tighten the roof opening panel screws.
5. Reinitialize the roof opening panel. Refer to Roof Opening Panel Motor Initialization in this section.

Interior Trim Panels

Printable View (162 KB)

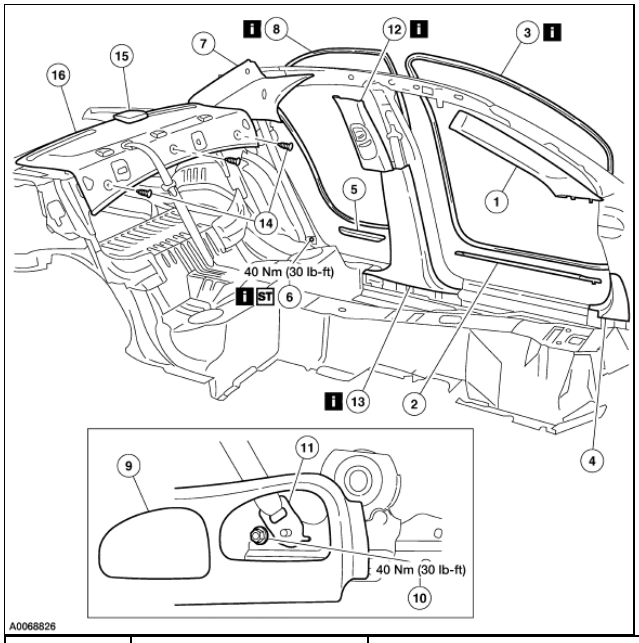
Special Tool(s)

 ST1181-A	Torx Bit, Safety Belt Bolt 501-010 (T77L-2100A)

1. To remove individual components only, carry out the listed steps.

Component	Steps
Windshield side garnish mouldings	1
A-pillar lower trim panel	2-4
Upper B-pillar trim panel	9-12
Lower B-pillar trim panel	9-13
Quarter trim panel	6, 7
Front door scuff plate	2
Rear door scuff plate	5
Package tray	6, 7, 14-16

2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	03598	Windshield side garnish moulding
2	13208	Front door scuff plate
3	20709	Front door weatherstrip Removal Note

4	02345	A-pillar lower trim panel
5	13228	Rear door scuff plate
6		Rear safety belt anchor bolt Removal Note
7		Quarter trim panel
8	253A10	Rear door weatherstrip Removal Note
9		Front seat cover
10		Front seat safety belt nut
11	M7H57	Front seat safety belt
12	24346	Upper B-pillar trim panel Removal Note
13	24346	Lower B-pillar trim panel Removal Note
14	391039-S	Package tray pin-type retainer
15	611C04	Rear center safety belt cover
16	4998	Package tray trim panel

3. To install, reverse the removal procedure.

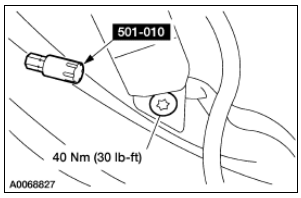
Item 3: Front Door Weatherstrip Removal Note

1. Position the weatherstrip aside.

Item 6: Rear Safety Belt Anchor Bolt Removal Note

1. Remove the seat bolster. Refer to Section 501-10 for additional information.

2. Using the special tool, remove the rear safety belt anchor bolt.



Item 8: Rear Door Weatherstrip Removal Note

1. Position the weatherstrip aside.

Item 12: Upper B-pillar Trim Panel Removal Note

1. If the supplemental restraint system (side air curtains) has deployed, check the upper B-pillar trim panel for damage.

Item 13: Lower B-pillar Trim Panel Removal Note

1. If the supplemental restraint system (side air curtains) has deployed, check the lower B-pillar trim panel for damage.

Front Door Trim Panel

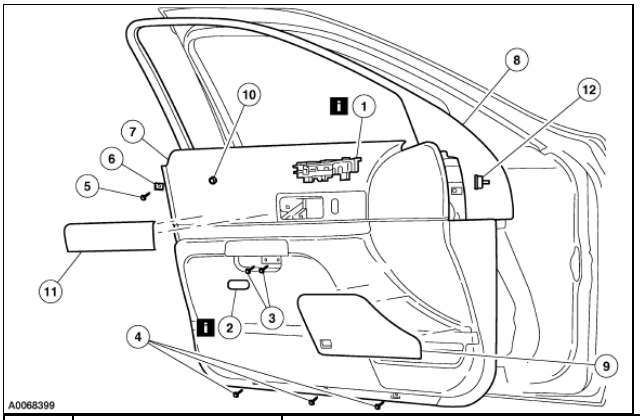
Printable View (76 KB)

1. Disconnect the battery. For additional information, refer to Section 414-00 .

2. To remove individual components only, carry out the listed steps.

Component	Steps
Door trim panel	1-7
Garnish molding	1-8
Speaker cover	1-9
Applique	1-11

3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	23942	Window regulator control switch panel asembly Removal Note
2	23A742	Screw cover Removal Note
3	56914-5424	Screws (2 required)
4	N806555-S424	Screws (3 required)
5	W504246-S424	Screw
6	239A04	Screw grommet
7	23942/23943	Front door trim panel
8	20890/20891	Front door window garnish moulding
9	601B48/601B49	Speaker grille
10		Nuts
11	238A70/238A71	Door trim panel applique
12	W708599-S	Push pin (9 required)

4. To install, reverse the removal procedure.

Item 1: Window Regulator Control Switch Panel Removal Note

1. Disconnect the electrical connectors.

Item 2: Screw Cover Removal Note

1. From the top of the cover on center, use a suitable tool, insert 2-3 mm and rotate to disengage the snap feature.

Rear Door Trim Panel

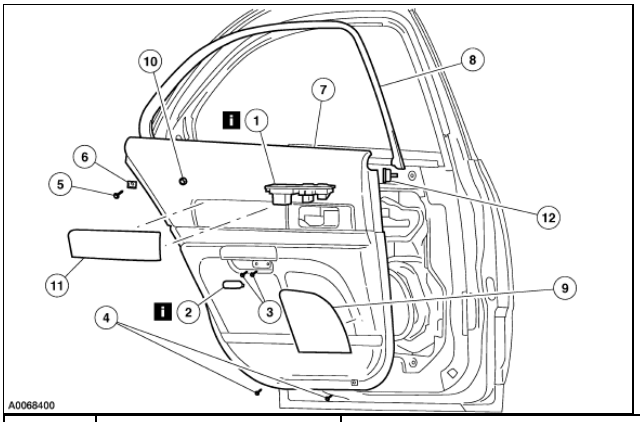
Printable View (79 KB)

1. Disconnect the battery. For additional information, refer to Section 414-00 .

2. To remove individual components only, carry out the listed steps.

Component	Steps
Door trim panel	1-7
Garnish molding	1-8
Speaker cover	1-7, 9
Applique	1-7, 10, 11

3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	23942	Window regulator control switch panel Removal Note
2	23A742	Screw cover Removal Note
3	56914-S424	Screws (2 required)

6	239A04	Screw grommet
7	27406/27407	Rear door trim panel
8	03598/03599	Rear door window garnish moulding
9	601B50/601B51	Speaker grille
10		Nuts
11	274W24/274W25	Door trim panel applique
12	W708599-S	Push pins (9 required)

4. To install, reverse the removal procedure.

Item 1: Window Regulator Control Switch Panel Removal Note

1. Disconnect the electrical connectors.

Item 2: Screw Cover Removal Note

1. From the top of the cover on center, use a suitable tool, insert 2-3 mm and rotate to disengage the snap feature.

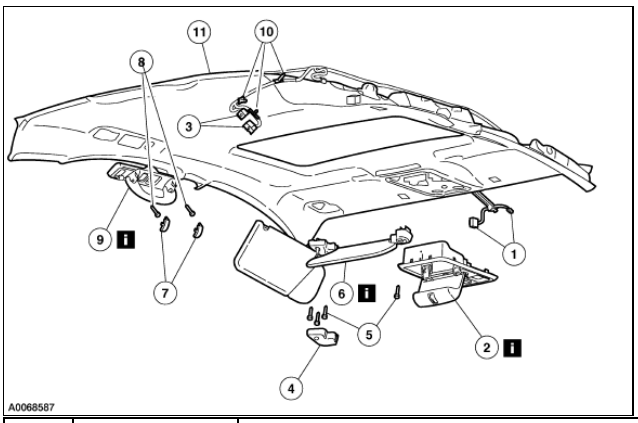
Headliner

Printable View (69 KB)

1. Remove both front seats. For additional information, refer to Section 501-10
2. Remove the interior mirror. For additional information, refer to Section 501-00 .
3. Remove the windshield side garnish panel. For additional information, refer to Interior Trim Panels in this section.
4. Remove the upper B-pillar trim panel. For additional information, refer to Interior Trim Panels in this section.
5. Remove the quarter trim panel. For additional information, refer to Interior Trim Panels in this section.
6. To remove the individual components only, carry out the listed steps.

Component	Steps
Overhead console	2
Sun visor	4-6
Passenger assist handle	7-9

7. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Interior mirror and rain sensor module electrical connector(s) (part of 51916)
2		Overhead console Removal Note
3		Headliner electrical connector(s) (part of 51916)
4	54041A38	Sun visor screw cover(s)
5	W5042455	Sun visor screws (4 required each side)
6	54040A04	Sun visor Removal Note
7		

		Passenger assist handle screw covers (8 required) (part of 5431406)
8	W5044435	Passenger assist handle screws (8 required)
9		Passenger assist handle(s) (4 required) (part of 5431406) Removal Note
10		Headliner wiring harness locators (part of 51916)
11	51916	Headliner

8. To install, reverse the removal procedure.

Item 2: Overhead Console Removal Note

1. Disconnect the electrical connectors.

Item 6: Sun Visor Removal Note

1. Disconnect the electrical connectors.

Item 9: Passenger Assist Handle Removal Note

1. If required, disconnect the electrical connector(s).

Roof Opening Panel

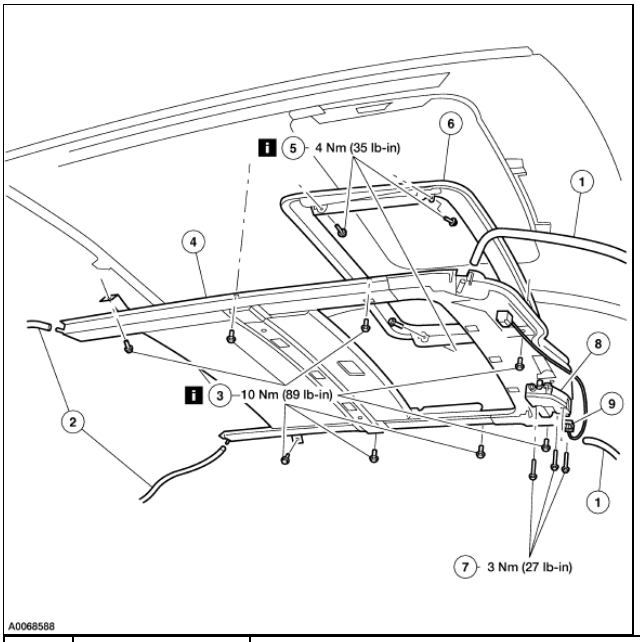
Printable View (100 KB)

1. Remove the headliner. For additional information, refer to Headliner in this section.

2. To remove individual components only, carry out the listed steps.

Component	Steps
Roof opening panel assembly	1-4
Roof opening panel	5, 6
Roof opening panel wiring harness	9
Roof opening panel motor and module	7-9

3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	502C52	Front drain hose(s)
2	502C53	Rear drain hose(s)
3		Roof opening panel bolts (8 required) Removal Note
4	51070	Roof opening panel assembly
5	500B02	Roof opening panel glass panel screws (4 required) Removal Note
6	500A18	Roof opening panel
7		Roof opening panel motor screws (3 required)
8	15790	Roof opening panel motor and module
9	16575	Roof opening panel motor wiring harness

4. To install, reverse the removal procedure.

Item 3: Roof Opening Panel Bolts Removal Note

1. An assistant is required to carry out this procedure.

Item 5: Roof Opening Panel Glass Panel Screws Removal Note

1. Move the roof opening panel to the vent position to access the screws.

Instrument Panel

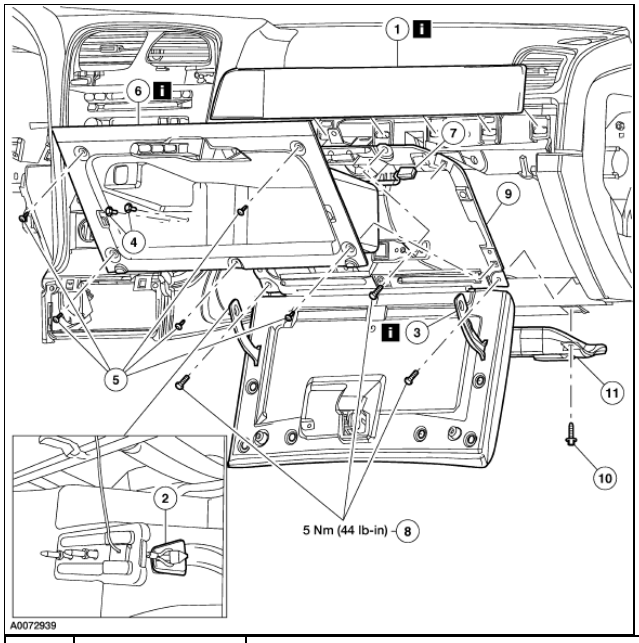
Printable View (437 KB)

⚠ CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.

1. Remove the front floor console. For additional information, refer to Floor Console in this section.
2. Remove the transmission range selector lever. For additional information, refer to Section 307-01 .
3. Remove the LH and RH A-pillar lower trim panels. For additional information, refer to Interior Trim Panels in this section.
4. Remove the LH and RH windshield side garnish mouldings. For additional information, refer to Interior Trim Panels in this section.
5. To remove individual components only, carry out the following steps.

Component	Steps
Glove Compartment	1-9
Instrument panel reinforcement panel cover panel	14-15
Instrument panel reinforcement panel	12-18
Instrument panel cluster finish panel	14-15, 23-26
Instrument panel	1-22, 27-38

6. View 1 of 3. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	04338C	Instrument panel trim panel

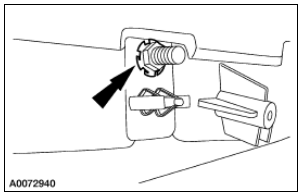
35		Instrument panel cowl side bolts (2 required)
36		Instrument panel cowl side nuts (LH side only)
37		Instrument panel cowl side bolt (2 required)
38		Instrument panel Removal Note

9. To install, reverse the removal procedure.

Item 1: Instrument Panel Trum Panel Removal Note

1. If equipped, remove the instrument panel trim panel nut.



Item 3: Assist Arm Removal Note

1. Lift up on the arms when lowering the glove compartment door.

Item 6: Glove Compartment Bin Removal Note

1. Disconnect the electrical connector.

Item 27: Defroster Grille Removal Note

1. Disconnect the electrical connector.

Item 38: Instrument Panel Removal Note

1. An assistant is required to carry out this procedure.

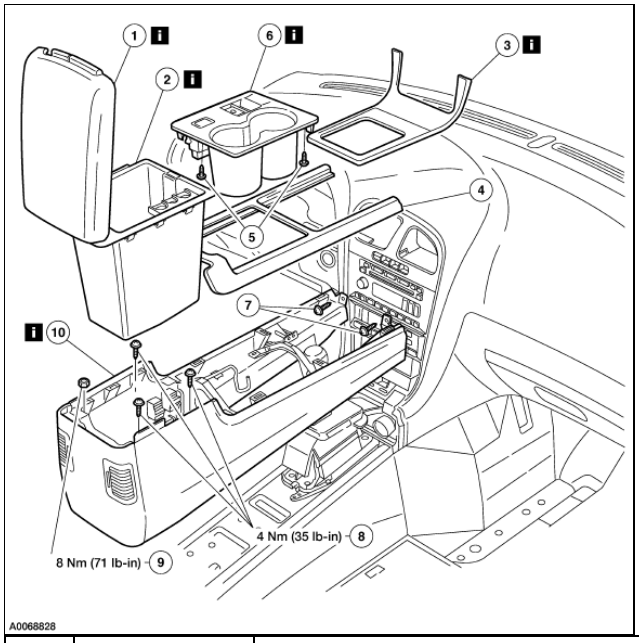
Floor Console

Printable View (180 KB)

1. Position the seats as needed to remove the console.
2. Disconnect the battery. For additional information, refer to Section 414-00 .
3. To remove individual components only, carry out the following steps.

Component	Steps
Floor console	1-7
Console arm rest	1
Storage bin	1, 2
Finish panel (front)	3
Finish panel (center)	1, 2, 4
Cup holder	1-6
Floor console	1-3, 7-10

4. Remove the components in the order indicated in the following illustration and table.



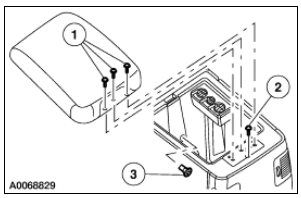
Item	Part Number	Description
1	060A74	Armrest Removal Note
2		Console storage bin Removal Note
3	044D90	Finish panel (front) Removal Note
4		Finish panel (center) (part of 044D90)
5		Screws (2 required)
6		

		Cup holder Removal Note
7		Floor console assembly front screws (2 required)
8		Floor console assembly rear screws (3 required)
9		Nut (1 required)
10	045E24	Floor console assembly Removal Note

5. To install, reverse the removal procedure.

Item 1: Armrest Removal Note

1. Remove the armrest hinge screws.



2. Remove the screw.

3. Remove the rivet.

Item 2: Console Storage Bin Removal Note

1. Pull upward to release the retainers.

2. Disconnect the electrical connectors.

Item 3: Lower Instrument Panel Finish Panel Removal Note

1. Pull upward from the front of the trim panel to release the retainers.

2. Disconnect the electrical connectors.

Item 6: Cup Holder Removal Note

1. Disconnect the electrical connectors.

Item 10: Floor Console Assembly Removal Note

1. Disconnect the electrical connectors.

2. Lift the console from the rear and slide it rearward to release the rear seat heater ducts from the instrument panel.

Roof Opening Panel Drive Cables and Guide Rails

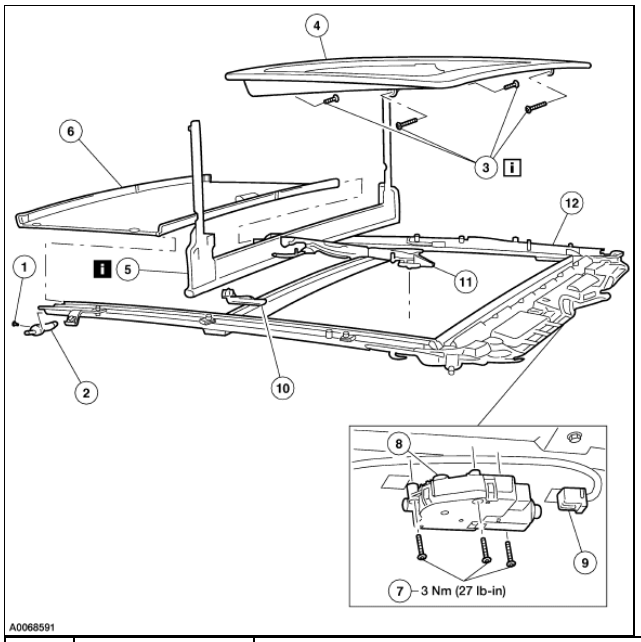
Printable View (88 KB)

1. Remove the roof opening panel. Refer to Roof Opening Panel in this section for additional information.

2. To disassemble individual components only, carry out the following steps.

Component	Steps
Roof opening panel shield	1-6
Roof opening panel	3, 4
Roof opening panel trough	3-5
Lifting arm	1-11

3. Disassemble the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Roof opening panel track drain valve screw(s) (2 required)
2	54503A20	Roof opening panel track drain valve(s) (2 required)
3		Roof opening panel screws (4 required) Assembly Note
4	500A18	Roof opening panel
5	54022	Roof opening panel trough Disassembly Note
6	502A82	Roof opening panel shield
7		Roof opening panel motor screws (3 required)
8	15790	Roof opening panel motor
9	16575	Roof opening panel motor wiring harness

10		Roof opening panel trough guide(s) (part of 51070)
11	3001A/51070	Lifting arm(s)
12		Roof opening panel track assembly (part of 51070)

4. To assemble, reverse the disassembly procedure.

Item 5: Roof Opening Panel Trough Disassembly Note

1. Unsnap the trough arms.

2. Rotate the trough 90° and lift it from its guide.

Item 3: Roof Opening Panel Screws Assembly Note

1. The glass panel will be adjusted during the roof opening panel installation. Do not tighten the screws to allow for movement of the glass panel during the adjustment procedure. After the adjustment procedure has been completed, tighten the screws to the specification provided.

Seats Printable View (28 KB)

Seats Front

The front seats have the following features:

- driver memory (optional)
- power lumbar (optional)
- manual lumbar
- horizontal, vertical front and rear tilt adjustments (driver)
- horizontal, vertical front tilt adjustment (passenger)
- power recline
- climate controlled (optional)

Adjustment of the seat may be accomplished with the seat control switch located on the side of the seat.

Seats Rear

The rear seat has the following features:

- fold down seat backrest
- removable cushion retained by two latches located at the front of the cushion
- two rear bolsters on each side of the rear seat backrest
- heated (optional)

Fold down the rear seat backrest by releasing the two levers in the luggage compartment.

Seats Power Recliner

The power recliner tilts the seat backrest rearward or forward and is controlled by the seat control switch.

The power recliner cannot be repaired separately. If the power recliner needs to be repaired, an entirely new front seat backrest frame must be installed.

Seats Power Lumbar Support

The seat has an electro-mechanical front seat backrest pad adjuster. The lumbar switch adjustment is on the side of the seat.

Seats Manual Lumbar Support

The manual front seat backrest lumbar is adjusted by a knob mounted on the front of the seat cushion.

Seats Memory

This system allows automatic positioning of the driver seat, outside rearview mirrors, and power adjusted tilt/telescope steering column to two programmable positions.

The memory seat control is located on the driver door.

Seats Climate Controlled

The climate controlled seat system is able to heat and cool the front seats. Each climate controlled front seat is controlled by a switch on the dual automatic temperature control unit (DATC). Perforated Nudo leather is the only material available for the heated/cooled seats.

Seat Side Air Bag or Seat Side Thorax Air Bag

Driver and passenger seat side air bags or seat side thorax air bag are attached to the seat backrest frame. For diagnostic information or if the seat side air bag or seat side thorax air bag has been deployed, refer to Section 501-20B .

The front seat backrest trim covers cannot be repaired. If the front seat backrest covers need to be repaired, an entirely new cover must be installed. Cleaning the front seat backrest cover is permissible.

If a seat side air bag or seat side thorax air bag deployment took place, a new seat back pad, trim cover and side air bag module must be installed. Install a new seat backrest frame if necessary.

Seats Driver Seat Module

The driver seat module is attached to the driver seat track. For additional information, refer to Section 418-00 for removal and installation procedures.

Principles of Operation

Driver Power Seat

The driver power seat motors are hardwired to the driver seat control switch. The circuits are normally at ground through the seat control switch. The individual circuit is switched to power when the specific adjustment position is selected.

Driver Power Seat Memory

NOTE: The memory power seat track may stall when operating at 0°C (32°F) or below. Once the vehicle's interior temperature rises above 0°C (32°F), normal operation should return.

The driver power seat is controlled by the driver seat module (DSM). The DSM does not need to be configured, however the driver seat does need to be calibrated when the DSM is installed. The driver seat control switch provides voltage to the DSM when activated. The neutral position of each driver seat control switch position is a ground state through the seat control switch contacts. A voltage input causes the DSM to power the appropriate motor until the input is removed. Ground is the normal state of the motor circuits through the DSM and is not switched to control the motors. The DSM internally switches the appropriate line from ground to power to adjust the motors.

As the seat is adjusted, the DSM constantly monitors the motor position sensors to record the current seat

position. The DSM will remove power from the motor upon termination of the seat control switch input or if the DSM does not see movement from the motor by monitoring the position sensor. The DSM must be calibrated to the seat track it is controlling. For additional information, refer to Seat Calibration. Once the DSM is calibrated to the seat track, it will only allow movement within the calibrated range.

Seat Calibration

The DSM is calibrated using a scan tool. The calibration procedure automatically powers the driver power seat through its full range of motion and records the full stop positions by monitoring the motor position sensors. Once the full stop positions or range of the seat have been recorded, the DSM will only operate within the calibrated range. Any input attempting to drive the seat beyond the calibrated range will be ignored. This calibration is used for all seat control functions including manual switch control and memory recall positioning. During the seat calibration, the DSM may identify a function that is inoperative, such as a position sensor not changing. If the DSM identifies a concern that has a related diagnostic trouble code (DTC), the DSM will set the related DTC at the end of the validation procedure.

The calibration procedure powers the seat track adjustments to the end of their travel, which is determined by the DSM sensing a change of state in the motor position sensors. If there is a concern with the seat track or motor position sensor that limits the travel, the DSM will interpret the stopping point as the end of travel and store the position. The DSM is not able to determine if the seat has moved to its full travel position. It is only capable of monitoring and storing the amount of travel seen by the position sensor changing states.

For additional information on carrying out the power seat calibration procedure, refer to the scan tool operating manual.

Memory Seat

Memory seat positioning can be recalled with the memory switches on the driver door panel or a programmed remote keyless entry transmitter. In either case, the DSM receives a memory recall 1 or 2 command from the driver door module (DDM) over the SCP communication network. The memory recall switches are a hardwired input to the DDM. The DDM also receives the remote keyless entry transmitter signals. Once a valid memory recall command is received from the DDM, the DSM moves the driver seat to the position stored in memory by powering the appropriate motors and monitoring the motor position sensors until the position is reached.

This system allows automatic positioning of the driver seat to two programmable positions.

- To program position one, move the driver seat to the desired position using the seat control switch. Depress the set button. Within five seconds, depress button one.
- To program position two, repeat the previous procedure using the set button and button two.
- To recall position one, depress button one. To recall position two, depress button two.

A position can only be recalled when the transmission selector is in PARK or NEUTRAL. A position may be programmed at any time.

Easy Exit/Easy Entry

The easy exit function moves the seat backwards about two inches when the ignition key is removed from the ignition switch. The DSM receives a key out command over the SCP communication network and powers the driver seat rearward. This function will not operate if the seat is less than the travel distance to the end of the track, or the function has been deactivated at the message center driver personality settings. The DSM will also cancel this operation if a valid input command is received, such as the seat control switch or memory recall request.

The DSM will record the current seat position before powering the seat for an easy exit function. This recorded position will be used to return the seat to this position on the easy entry operation. During easy entry operation, the seat is returned to the position previous to the easy exit operation. Easy entry operation will be cancelled if a valid input command is received by the DSM.

Passenger Power Seat

The passenger power seat motors are hardwired to the passenger seat control switch. The circuits are normally at ground through the seat control switch. The individual circuit is switched to power when the specific adjustment position is selected.

Climate Controlled Seat System

Both the driver and front passenger seat has an independent climate controlled seat system installed. A climate controlled seat module mounted to the bottom of the seat cushion electronically controls the climate controlled seat system. The climate controlled seat system receives power from both the battery power and vehicle run circuits. The vehicle must have ignition ON and the dual automatic temperature control unit (DATC) module switch set to HEAT or COOL 1, 2, 3 or AUTO for the climate controlled seat system to activate.

AUTO mode is achieved by pressing the HEAT and COOL settings simultaneously. The center LED will be illuminated when the CCSM is in AUTO mode.

Cabin air is drawn through the seat fan motor and distributed to each of the thermo-electric device (TED) modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad B-surface. Channels in the A-surface of the foam pad are used to distribute the air along the surface of the seat.

Once the system is activated, the climate controlled seat module uses a set of flexible algorithms to control the heating/cooling modes, and the fan motor speed based on the climate controlled seat switch settings. These algorithms are designed to protect the user from potentially harmful prolonged exposure to climate extremes.

The TED uses a "Peltier" circuit of P-type and N-type semiconductors connected in series using copper electrical conductors. The semiconductors are sandwiched between two insulating ceramic plates. When current is applied to the TED, one side releases energy as heat, while the opposite side absorbs energy and gets cold. By reversing the current flow, the hot and cold sides reverse.

The temperature differences between the individual HEAT and COOL settings is minimal. For example, it is difficult to distinguish between LOW COOL and MEDIUM COOL settings. Monitoring the seat temperature at different HEAT or COOL settings should not be done as it is ineffective in confirming climate controlled seat system operation.

Heating Characteristics

NOTE: The presence of over-temp faults (DTCs B2729 and B2730) can be induced by incorrect operation of the climate controlled seat system after an initial HEAT setting has been attained. If a HEAT setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an over-temp condition can result and the DTC(s) will be set.

- The climate controlled seat system draws approximately 7.5 amps until reaching the set point, and then the system draws approximately 2 amps to maintain the climate setting.
- In HEAT mode, the TED can add up to 40-60°C (72-108°F) to the ambient air temperature entering the system.
- There are three manual settings based on the position of the climate controlled seat switch on the

DATC module. Position one is the LOW setting and position three is the HIGH setting.
- There are five AUTO HEAT settings. The AUTO HEAT setting is determined by the temperature setting of the DATC module when the CCSM is in AUTO HEAT mode.
- In the LOW setting, the climate controlled seat module is set to maintain TED temperature at 37°C (99°F).
- In the HIGH setting, the climate controlled seat module is set to maintain TED temperature at 65°C (149°F).
- If the temperature at one of the TEDs rises above 85°C (185°F) in the HEAT mode or 70°C (149°F) in the COOL mode for more than four seconds, the CCSM will record an overtemp DTC, remove power from the TEDs and go into "Blower Only" mode in an attempt to cool down the TEDs. If the TEDs temperature has not dropped to 80°C (176°F) in the HEAT mode or 65°C (140°F) in the COOL mode after 30 seconds, the CCSM will shut down and remain off until the ignition is cycled. Also if the CCSM detects an overtemp twice during the same ignition cycle, it will also shut down.
- In HEAT mode, there is no linear correlation between the (DATC) module, the seat fan motor speed and the TED supply voltage. The CCSM will independently vary the fan speed and the TED supply voltage in order to reach and maintain the temperature determined by the (DATC) module setting.

Cooling Characteristics
- The climate controlled seat system draws approximately seven amps until reaching the set point, and then the system draws approximately two amps to maintain the temperature setting.
- In the COOL mode, the TED can remove up to 8-10°C (14-18°F) from the ambient air temperature entering the system.
- There are three manual settings based on the position of the climate controlled seat switch on the DATC module. Position one is the LOW setting and position three is the HIGH setting.
- If the temperature at one of the TEDs falls below 18°C (64°F), the climate controlled seat module will shut down the TEDs. If the temperature continues to drop below 12°C (54°F), the climate controlled seat module will shut down the fan motor.
- In COOL mode, there is a correlation between the DATC module, the seat fan motor speed and the TED supply voltage. Fan supply voltage is used in the following equation (seat fan motor supply voltage / 0.74 x ignition voltage) to determine the fan duty cycle. For additional information, refer to the following chart.

Climate Controlled Seat Switch Setting [a]	Seat Fan Motor Supply Voltage	Thermo-Electric Device Supply Duty Cycle
0	Off	Off
Manual 1 or Auto 1	8.7 volts	0%
Auto Mode 2	9 volts	32%
Manual 2 or Auto 3	9.1 volts	45%
Auto Mode 4	9.1 volts	45%
Manual 3 or Auto 5	9.5 volts	100%

[a] Auto settings are determined by the temperature settings of the DATC module and cannot be manually selected.

The climate controlled seat system is deactivated by one of the following actions:

- Setting the DATC module setting to manual OFF.
- Turning the vehicle off.

Rear Heated Seats

The left and right rear heated seats share a common battery and ignition feed. A separate shared ground source supplies the heated seat switches. When the heated seat switch is pressed with the ignition switch in RUN, a momentary ground signal is sent to the heated seat module. The heated seat module then supplies power to the heating element circuit. The cushion element and seat backrest element are wired in series and powered by the same output. The heated seat module will also provide voltage to the separate indicator circuit at the heated seat switch to indicate an ON state. The heated seat module will remain on until the heated seat switch is pressed and a momentary ground signal is received, or until 10 minutes expire. If the ignition source is removed from the module, the heated seat module will enter an OFF state and will not return to ON until the switch is once again pressed with the ignition switch in RUN. The heated seat module is designed to heat the seat to 37.5°C (99.5°F) and maintain the temperature until timed-out or switched off. This temperature is maintained by the heated seat module monitoring the temperature sensor located in the seat cushion element, and adjusting the current flow to the heating elements.

Occupant Classification Sensor

⚠ CAUTION: If installing only the front passenger seat cushion trim cover, the seat occupant classification sensor (OCS) must be rezeroed.

⚠ CAUTION: The following precautions must be taken before rezeroing of the OCS system.

- Make sure the OCS system components are connected and no faults are present.
- Make sure the vehicle has not been exposed to temperatures below 6°C (42° F) or above 36°C (97°F) within four hours prior to the rezeroing process. If the vehicle has been exposed to temperatures outside the temperature limits (6-36°C [42-97°F]), the vehicle must be exposed to and kept at a temperature within the limits for minimum of four hours.
- Make sure nothing is present on the passenger seat before rezeroing and nothing is placed on the seat during the rezeroing process.
- Make sure a minimum five second time period has passed after cycling the ignition switch ON before the rezeroing process.

NOTE: It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed, or an OCS service kit is installed. A scan tool is used to trigger the active command to carry out rezeroing of the OCS system.

NOTE: When using a New Generation Star (NGS) tester, the OCS system rezero function is on the Ford Service Function (red) card. To rezero the OCS system:

- select "SERVICE BAY FUNCTIONS"
- select "RCM"
- select "SYSTEM RESET"
- select the vehicle from the menu
- view the on-screen information then press "TRIGGER"

The NGS screen will then display "OCS RESET: REZERO." Press "DONE" (button 8) to rezero the OCS system. The NGS will return to the vehicle menu once rezeroing of the OCS system is complete.

NOTE: To rezero the OCS system using the Worldwide Diagnostic System (WDS):

- select the "Toolbox" icon
- select "Body" from the menu
- select "Restraints" from the menu
- select "Seat Weight Sensor ReZero"

After selecting "Seat Weight Sensor ReZero", follow the on-screen prompts to carry out rezeroing of the OCS system.

NOTE: If the first attempt to rezero the OCS system is unsuccessful, a second attempt must be made.

The seat occupant classification sensor system is found only on the front passenger seat. The OCS system components (seat cushion foam pad, bladder, bladder with pressure sensor and electronic control unit) are calibrated to each other and are serviced as an assembly. **OCS system components are not to be installed separately.** If installing a new OCS system, OCS system component or seat cushion foam pad, a new OCS system service kit (seat cushion foam pad, bladder, bladder with pressure sensor and electronic control unit) must be installed as an assembly. For additional information, refer to Section 501-20B .

Restraint System Diagnostic Tool Warning

⚠ WARNING: The Restraint System Diagnostic Tools are for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

Inspection and Verification

1. Verify the customer concern by operating the system.

2. Visually inspect for obvious signs of mechanical or electrical damage.

   Visual Inspection Chart

Mechanical	Electrical
• Front seat track motors. • Front seat track binding or obstructed. • Front seat backrest power recline. • Lumbar motor. • Climate controlled seat ducts.	• Fuse(s). • Seat control switch. • Memory set switch. • Lumbar seat control switch. • Seat fan motor. • Climate controlled seat module. • Climate controlled seat switch.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern remains after the inspection, connect the scan tool to the data link connector (DLC) located beneath the instrument panel. Then select the vehicle to be tested from the scan tool menu. If the scan tool does not communicate with the vehicle:
   - Check that the program card is correctly installed.
   - Check the connections to the vehicle.
   - Check the ignition switch position.

5. If the scan tool still does not communicate with the vehicle, refer to the scan tool manual.

6. Carry out the DATA LINK DIAGNOSTICS test. If the scan tool responds with:
   - SCP+, SCP-, or UBP circuit fault; ALL ECUS NO RESP/NOT EQUIP, refer to Section 418-00 .
   - NO RESP/NOT EQUIP for DSM, Go To Pinpoint Test A .
   - NO RESP/NOT EQUIP for DDM, Go To Pinpoint Test B .
   - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs and carry out self test diagnostics for the DSM and the DDM.

7. If the DTCs are retrieved go to the DSM Diagnostic Trouble Code (DTC) Index or the Climate Controlled Seat Module Diagnostic Trouble Code (DTC) Index.

8. If the DDM DTCs retrieved are related to the concern, go to the DDM Diagnostic Trouble Code (DTC) Index.

9. If no DTCs are retrieved, GO to Symptom Chart .

DSM Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Faulted	DSM	REPEAT the DSM self-test. If DTC B1342 is retrieved again, INSTALL a new DSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test.

B1676	Battery Pack Voltage Out of Range	DSM	Go To Pinpoint Test T .

Climate Controlled Seat Module (CCSM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1342	ECU Is Faulted	CCSM	INSTALL a new CCSM.
B1358	Ignition Switch or Blower Electronics Circuit Short to Ground	CCSM	Go To Pinpoint Test U .
B2477	Module Configuration Error	CCSM	CONFIGURE the CCSM. CLEAR the DTC. If the DTC does not clear, CONFIGURE the CCSM once again. CLEAR the DTC. If the DTC does not clear, INSTALL a new CCSM.
B2486	Climate Controlled Seat Module Voltage Out of Range	CCSM	CHECK circuit 10-FA18 (GY/BK) for a fault and REPAIR as needed. If okay, REFER to Section 414-00 .
B2488 [b]	Thumb-Wheel Switch Voltage Out of Range High	CCSM	**NOTE:** Make sure CCSM C3031b (driver) or CCSM C3036b (passenger) pins 7 and 15 are open (no connect). If circuits are present at either pin location, repair the wiring concern. CONFIGURE the CCSM. CLEAR the DTC. If the DTC does not clear, CONFIGURE the CCSM once again. CLEAR the DTC. If the DTC does not clear, INSTALL a new CCSM.
B2521	Tach Circuit Failure	CCSM	Go To Pinpoint Test U .
B2729	Cushion Over-Temp Detected	CCSM	For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
B2730	Back Over-Temp Detected	CCSM	For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
B2731	Differential Temperature Fault	CCSM	For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
B2792 [b]	Heat Switch Short to Ground	CCSM	**NOTE:** Make sure CCSM C3031b (driver) or CCSM C3036b (passenger) pin 6 are open (no connect). If circuits are present at either pin location, repair the wiring concern. CONFIGURE the CCSM. CLEAR the DTC. If the DTC does not clear, CONFIGURE the CCSM once again. CLEAR the DTC. If the DTC does not clear, INSTALL a new CCSM.

B2793 [b]	Cool Switch Short to Ground	CCSM	**NOTE:** Make sure CCSM C3031b (driver) or CCSM C3036b (passenger) pin 16 are open (no connect). If circuits are present at either pin location, repair the wiring concern. For driver CCSM, Go To Pinpoint Test V . For passenger CCSM, Go To Pinpoint Test W .
U2362	UBP Invalid Data Node ID	CCSM	REFER to Section 418-00 .

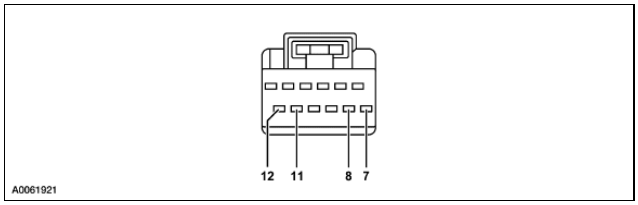
[b] The presence of this DTC indicates the module is not configured correctly.

Symptom Chart

Symptom Chart

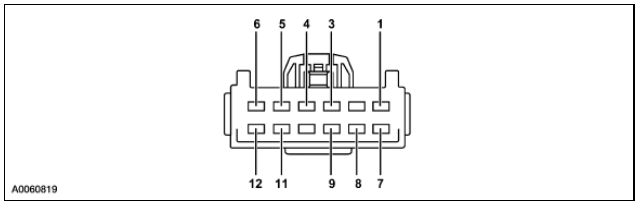
Connector Circuit Reference

Driver Door Module (DDM) C501a



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
7	CKT 91-AJ80 (BN/BU) Ground	Continuity to ground, less than 5 ohms.
8	CKT 31-AJ80B (BK/OG) Ground	Continuity to ground, less than 5 ohms.
11	CKT 29-AJ80 (OG) Battery voltage from rear RPDB	Greater than 10 volts at all times.
12	CKT 29S-AJ86 (OG/BU) Battery voltage from rear RPDB	Greater than 10 volts with switch on.

Driver Power Seat Control Switch C360



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-AH2 (BK) Ground	Continuity to power seat switch, less than 5 ohms.
3	CKT 32-AH37 (WH/GN) Forward output circuit from the power seat	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater

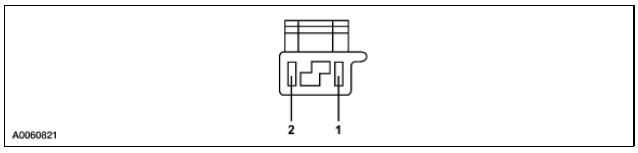
	switch to power seat motor	than 10 volts when connected and switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.
4	CKT 33-AH38 (YE/BK) Front down output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front down, less than 5 ohms to ground when connected and switch is in front up.
5	CKT 32-AH38 (WH/BK) Front up output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front up, less than 5 ohms to ground when connected and switch is in front down.
6	CKT 30-AH35 (RD) Battery voltage from rear RPDB	Greater than 10 volts at all times.
7	CKT 33-AH36 (YE/RD) Rearward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward recline, less than 5 ohms to ground when connected and switch is in forward recline.
8	CKT 32-AH41 (WH/VT) Rear up output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rear up, less than 5 ohms to ground when connected and switch is in rear down.
9	CKT 33-AH41 (YE/VT) Rear down output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rear down, less than 5 ohms to ground when connected and switch is in rear up.
11	CKT 33-AH37 (YE/GN) Rearward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
12	CKT 32-AH36 (WH/RD) Forward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in forward recline, less than 5 ohms to ground when connected and switch is in rearward recline.

Passenger Power Seat Control Switch C330

	Circuit Designation/Description	Normal Condition/Measurement

Pin Number(s)		
1	CKT 31-AH42 (BK) Ground	Continuity to power seat switch, less than 5 ohms.
3	CKT 32-AH44 (WH/GN) Forward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.
4	32-AH34 (WH/BK) Front up output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front up, less than 5 ohms to ground when connected and switch is in front down.
5	CKT 33-AH34 (YE/BK) Front down output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in front down, less than 5 ohms to ground when connected and switch is in front up.
6	CKT 30-AH42 (RD) Battery voltage from rear RPDB	Greater than 10 volts at all times.
7	CKT 33-AH43 (YE/RD) Forward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in forward recline, less than 5 ohms to ground when connected and switch is in rearward recline.
11	CKT 33-AH44 (YE/GN) Rearward output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
12	CKT 32-AH43 (WH/RD) Rearward recline output circuit from the power seat switch to power seat motor	Less than 5 ohms to the power seat motor and greater than 10,000 ohms to ground when disconnected. Greater than 10 volts when connected and switch is in rearward recline, less than 5 ohms to ground when connected and switch is in forward recline.

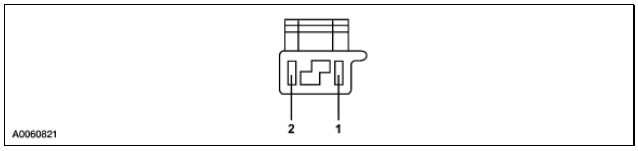
Driver Power Seat Motor C382



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH38 (WH/BK) Front up input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in front up, less than 5 ohms to ground when connected and switch is in front down.

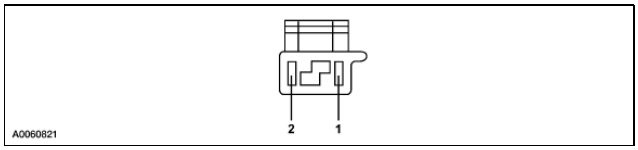
2	CKT 33-AH38 (YE/BK) Front down input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in front down, less than 5 ohms to ground when connected and switch is in front up.

Driver Power Seat Motor C362



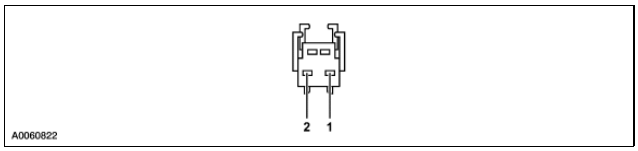
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH37 (YE/GN) Rearward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
2	CKT 32-AH37 (WH/GN) Forward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.

Driver Power Seat Motor C363



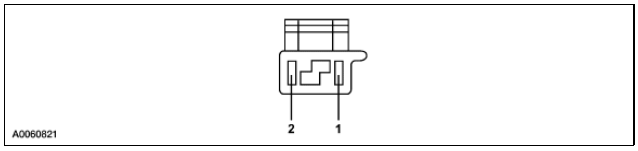
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH41 (YE/VT) Rear down input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rear down, less than 5 ohms to ground when connected and switch is in rear up.
2	CKT 32-AH41 (WH/VT) Rear up input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rear up, less than 5 ohms to ground when connected and switch is in rear down.

Driver Power Recline Seat Motor C368



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	32-AH36 (WH/RD) Forward recline input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in forward recline, less than 5 ohms to ground when connected and switch is in rearward recline.
2	CKT 33-AH36 (YE/RD) Rearward recline input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rearward recline, less than 5 ohms to ground when connected and switch is in forward recline.

Passenger Power Seat Motor C332



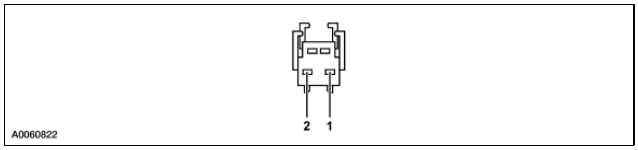
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH44 (YE/GN) Rearward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
2	CKT 32-AH44 (WH/GN) Forward input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.

Passenger Power Seat Motor C333

	Circuit Designation/Description	Normal Condition/Measurement

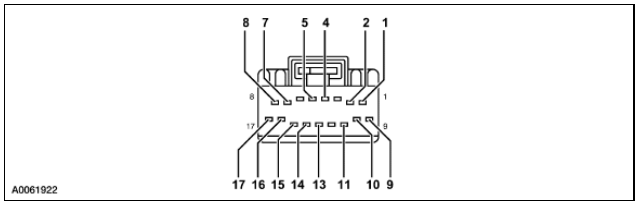
Pin Number(s)		
1	CKT 32-AH34 (WH/BK) Front up input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in front up, less than 5 ohms to ground when connected and switch is in front down.
2	CKT 33-AH34 (YE/BK) Front down input circuit from power seat switch to power seat motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in front down, less than 5 ohms to ground when connected and switch is in front up.

Passenger Power Recline Seat Motor C338



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH43 (WH/RD) Rearward recline input circuit from power seat switch to power recline motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rearward recline, less than 5 ohms to ground when connected and switch is in forward recline.
2	CKT 33-AH43 (YE/RD) Forward recline input circuit from power seat switch to power recline motor	Less than 5 ohms to the seat control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in forward recline, less than 5 ohms to ground when connected and switch is in rearward recline.

Driver Memory Seat Module C341a

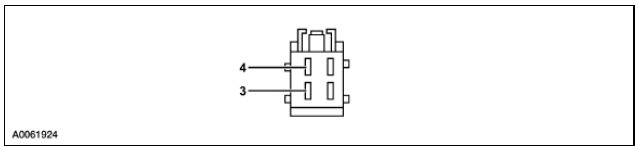


Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH37 (YE/GN) Rearward output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.

2	CKT 32-AH36 (WH/RD) Rearward recliner output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
4	CKT 8-AH26 (WH/RD) Horizontal sense signal circuit from power seat memory position sensor to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
5	CKT 8-AH24 (WH/BK) Front sense signal circuit from power seat memory position sensor to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
7	CKT 33-AH38 (YE/BK) Front down output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in front down, less than 5 ohms to ground when connected and switch is in front up.
8	CKT 33-AH41 (YE/VT) Rear down output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rear down, less than 5 ohms to ground when connected and switch is in rear up.
9	CKT 33-AH36 (YE/RD) Forward recliner output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.
10	CKT 32-AH37 (WH/GN) Forward output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.
11	CKT 9-AH80 (BN/WH) Driver seat sensor common circuit to power seat motor sensors	Continuity to DSM, less than 5 ohms.
13	CKT 8-AH30 (WH/BU) Recliner position sensor circuit to power seat recliner motor sensor from DSM	Continuity to DSM, less than 5 ohms.
14	CKT 8-AH25 (WH/GN) Rear position sensor circuit to power seat motor sensor from DSM	Continuity to DSM, less than 5 ohms.
15	CKT 7-AH80 (YE/VT) Feed circuit to power seat memory position sensor to DSM	Continuity to DSM, less than 5 ohms.
16	CKT 32-AH41 (WH/VT) Rear motor up output circuit from DSM to power seat motor	Less than 5 ohms to the seat control switch and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in rear up, less than 5 ohms to ground when connected and switch is in rear down.
17	CKT 32-AH38 (WH/BK) Front up output circuit from DSM to power seat motor	Less than 5 ohms to the power seat motor and less than 5 ohms to ground when disconnected. Greater than 10 volts when connected and the switch is in front up, less

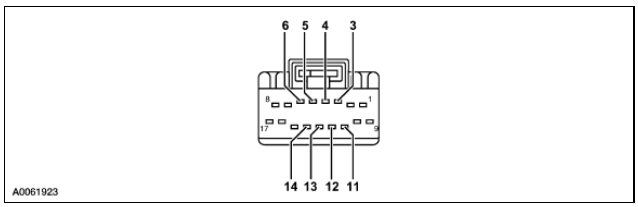
		than 5 ohms to ground when connected and switch is in front down.

Driver Memory Seat Module C341b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	CKT 31-AH80 (BK) Ground	Continuity to ground, less than 5 ohms.
4	CKT 30-AH80 (RD) Battery voltage from RPDB	Greater than 10 volts at all times.

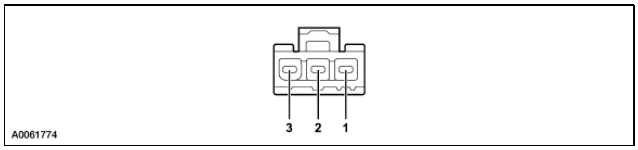
Driver Memory Seat Module C341c



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
3	CKT 10-AH83 (GY/OG) Rearward input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
4	CKT 10-AH82 (GY/RD) Rearward recliner input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rearward, less than 5 ohms to ground when connected and switch is in forward.
5	CKT 8-AH84 (WH/BK) Front down input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in front down, less than 5 ohms to ground when connected and switch is in front up.
6	CKT 10-AH85 (GY/WH) Rear down input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rear down, less than 5 ohms to ground when connected and switch is in rear up.
11	CKT 8-AH83 (WH/GN) Forward input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.
12		

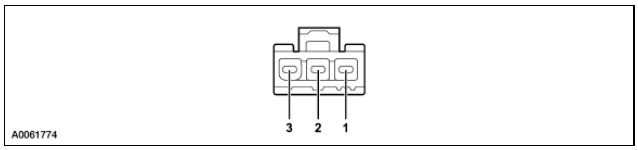
	CKT 8-AH82 (WH/RD) Forward recliner input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in forward, less than 5 ohms to ground when connected and switch is in rearward.
13	CKT 10-AH84 (GY/BK) Front up input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in front up, less than 5 ohms to ground when connected and switch is in front down.
14	CKT 8-AH85 (WH/VT) Rear up input circuit from power seat switch to DSM	Less than 5 ohms to the DSM. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in rear up, less than 5 ohms to ground when connected and switch is in rear down.

Driver Memory Front Height Power Seat Motor Position Sensor C383



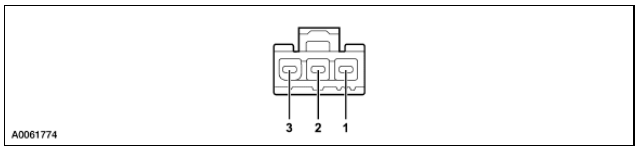
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 9-AH24 (BN/YE) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.
2	CKT 8-AH24 (WH/BK) Front vertical signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 7-AH24 (YE/BK) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.

Driver Memory Forward/Rearward Power Seat Motor Position Sensor C372



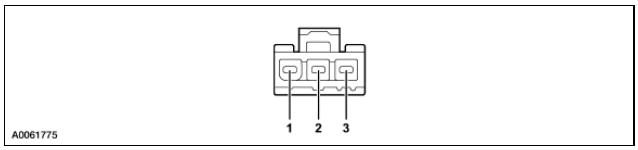
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-AH26 (YE/RD) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.
2	CKT 8-AH26 (WH/BK) Horizontal signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 9-AH26 (BN/RD) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.

Driver Memory Rear Height Power Seat Motor Position Sensor C373



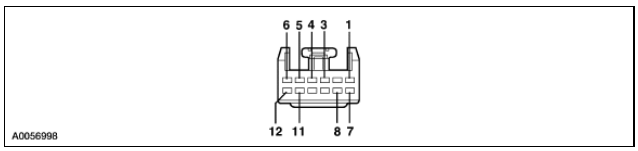
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-AH25 (YE/GN) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.
2	CKT 8-AH25 (WH/GN) Rear vertical signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 9-AH25 (BN/GN) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.

Driver Memory Power Recline Motor Position Sensor C376



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 7-AH30 (YE/BU) Voltage reference (feed) to seat position sensors to DSM	Approximately 4.5 volts at all times.
2	CKT 8-AH30 (WH/BU) Recliner signal circuit to DSM	Continuity to DSM, less than 5 ohms. Voltage varies based on seat position when connected.
3	CKT 9-AH30 (BN/BU) Return sensor common circuit from seat position sensors to DSM	Continuity to DSM, less than 5 ohms.

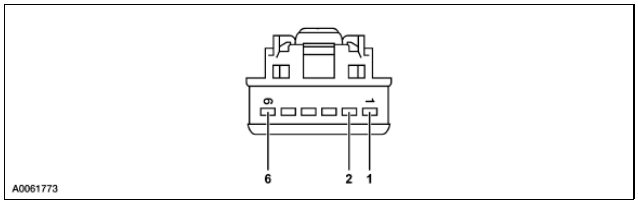
Driver/Passenger Rear Heated Seat Module C3162/C3163



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-HC21 (BK/GN) Ground	Continuity to ground, less than 5 ohms.
3	CKT 9-HC23 (BN/YE) Heated seat cushion	Continuity to seat cushion heater, less than 5

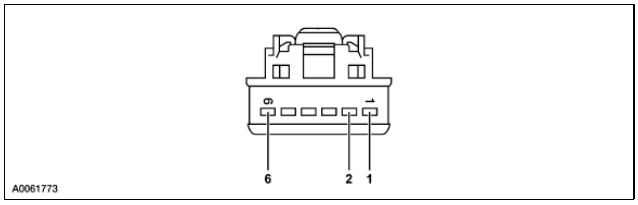
	temperature sensor return	ohms.
4	CKT 8-HC23 (WH/BK) Heated seat cushion temperature sensor feed	Continuity to seat cushion heater, less than 5 ohms.
5	CKT 20-HC21 (PK/BK) Ignition voltage from fuse box	Greater than 10 volts when ignition is ON.
6	CKT 20S-HC17 (PK) Heated seat cushion element feed	Continuity to seat cushion heater, less than 5 ohms.
7	CKT 31S-HC16 (BK/BU) Heated seat cushion element return	Continuity from backrest element to heated seat module, less than 5 ohms.
8	CKT 8-HC21 (WH/GN) High input circuit from heated seat switch to heated seat module	Continuity from heated seat switch, less than 5 ohms.
11	CKT 10-HC21 (GY/OG) Low input circuit from heated seat switch to heated seat module	Continuity from heated seat switch, less than 5 ohms.
12	CKT 30-HC21 (RD/GN) Battery voltage from fuse box	Greater than 10 volts at all times.

Left Rear Heated Seat Switch C722



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-HC15 (BK/YE) Ground	Continuity to ground, less than 5 ohms.
2	CKT 8-HC21 (WH/GN) High output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.
6	CKT 10-HC21 (GY/OG) Low output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.

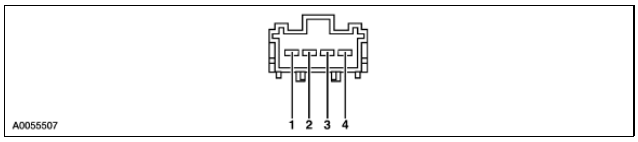
Right Rear Heated Seat Switch C822



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 31-HC18 (BK/GN) Ground	Continuity to ground, less than 5 ohms.
2		

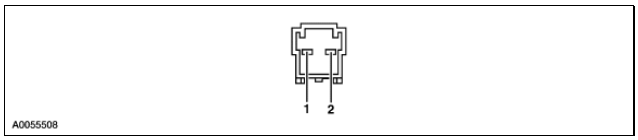
	CKT 8-HC21A (WH/GN) High output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.
6	CKT 10-HC21A (GY/OG) Low output circuit from heated seat switch to heated seat module	Continuity to heated seat module, less than 5 ohms.

Left/Right Rear Heated Seat Cushion Element C3167/C3169



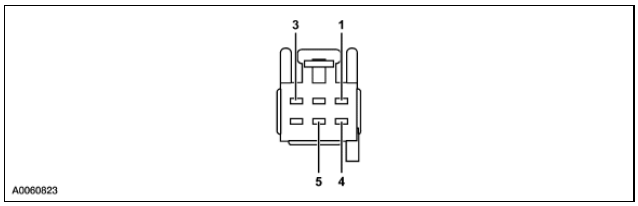
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC17 (PK) Heated seat cushion element feed	Continuity from heated seat module, less than 5 ohms.
2	CKT 8-HC23 (WH/BK) Heated seat cushion sensor feed	Continuity from heated seat module, less than 5 ohms.
3	CKT 9-HC23 (BN/YE) Heated seat cushion sensor return	Continuity to heated seat module, less than 5 ohms.
4	CKT 20S-HC16 (PK/BU) Heated seat backrest element feed	Continuity from cushion element to backrest element, less than 5 ohms.

Left/Right Rear Heated Seat Backrest Element C3168/C3170



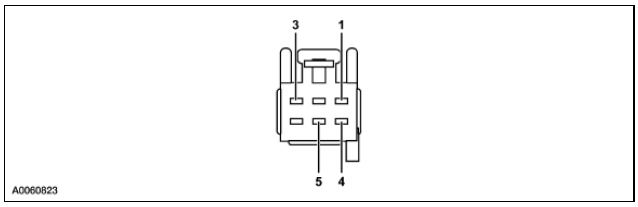
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC16 (PK/BU) Heated seat backrest element feed	Continuity from cushion element to backrest element, less than 5 ohms.
2	CKT 31S-HC16 (BK/BU) Heated seat cushion element return	Continuity from backrest element to heated seat module, less than 5 ohms.

Driver Power Lumbar Switch C361



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH39 (WH/BU) Inflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar control switch. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in inflate, less than 5 ohms to ground when connected and switch is in deflate.
3	CKT 31-AH40 (BK/GN) Ground	Continuity to lumbar seat switch, less than 5 ohms.
4	CKT 33-AH39 (YE/BU) Deflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar control switch. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in deflate, less than 5 ohms to ground when connected and switch is in inflate.
5	CKT 30-AH40 (RD/GN) Battery voltage from rear PDB	Greater than 10 volts at all times.

Passenger Power Lumbar Switch C331



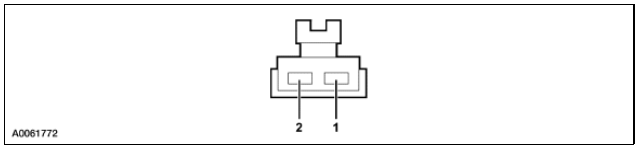
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 32-AH45 (WH/BU) Inflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar control switch. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in inflate, less than 5 ohms to ground when connected and switch is in deflate.
3	CKT 31-AH46 (BK) Ground	Continuity to lumbar seat switch, less than 5 ohms.
4	CKT 33-AH45 (YE/BU) Deflate output circuit from lumbar seat switch to power lumbar motor	Less than 5 ohms to the lumbar control switch. Greater than 10,000 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in deflate, less than 5 ohms to ground when connected and switch is in inflate.
5	CKT 30-AH46 (RD) Battery voltage from rear PDB	Greater than 10 volts at all times.

Driver Power Lumbar Motor C366

	Circuit Designation/Description	Normal Condition/Measurement

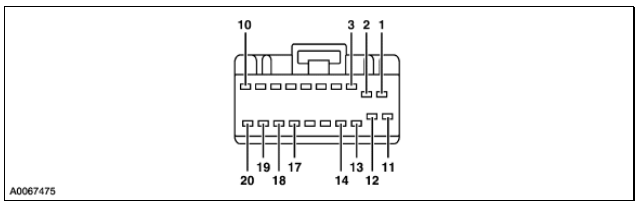
Pin Number(s)		
1	CKT 33-AH39 (YE/BU) Deflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in deflate, less than 5 ohms to ground when connected and switch is in inflate.
2	CKT 32-AH39 (WH/BU) Inflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in inflate, less than 5 ohms to ground when connected and switch is in deflate.

Passenger Power Lumbar Motor C336



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 33-AH45 (YE/BU) Deflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in deflate, less than 5 ohms to ground when connected and switch is in inflate.
2	CKT 32-AH45 (WH/BU) Inflate input circuit to power lumbar motor from power lumbar seat switch	Less than 5 ohms to the lumbar control switch. Less than 5 ohms to ground when switch is not pressed. Greater than 10 volts when connected and switch is in inflate, less than 5 ohms to ground when connected and switch is in deflate.

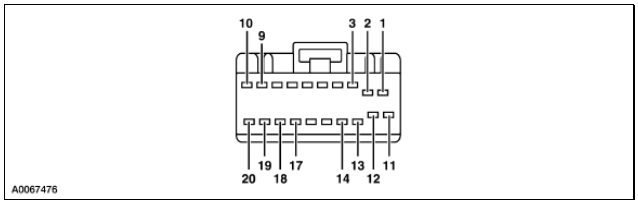
Driver Climate Controlled Seat Module (CCSM) C3031b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC17 (PK) Climate controlled seat cushion temperature sensor feed	Continuity to seat cushion thermal electric device (TED), less than 5 ohms.
2	CKT 31S-HC17 (BK/OG) Climate controlled seat cushion temperature sensor return	Continuity to seat cushion TED, less than 5 ohms.
3		

	CKT 31S-FA18 (BK/RD) Climate controlled seat fan control voltage return	Continuity to seat fan motor, less than 5 ohms.
10	CKT 20S-FA18 (PK/OG) Climate controlled seat fan, signal	Continuity to seat fan motor, less than 5 ohms.
11	CKT 20S-HC16 (PK/BU) Climate controlled seat backrest temperature sensor feed	Continuity to seat backrest TED, less than 5 ohms.
12	CKT 31S-HC16 (BK/BU) Climate controlled seat backrest temperature sensor return	Continuity to seat backrest TED, less than 5 ohms.
13	CKT 8-FA18 (WH/BK) Climate controlled seat fan voltage signal	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
14	CKT 10-FA18 (GY/BK) Climate controlled seat fan tachometer circuit	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
17	CKT 9-HC23 (BN/YE) Climate controlled seat cushion return signal	Continuity to CCSM from cushion TED, less than 5 ohms.
18	CKT 8-HC23 (WH/BK) Climate controlled seat cushion sensor signal	Continuity to CCSM from cushion TED, less than 5 ohms.
19	CKT 8-HC16 (WH/RD) Climate controlled seat backrest sensor signal	Continuity to CCSM from backrest TED, less than 5 ohms.
20	CKT 9-HC16 (BN/RD) Climate controlled seat backrest sensor return	Continuity to CCSM from backrest TED, less than 5 ohms.

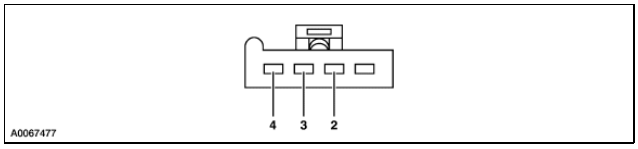
Passenger Climate Controlled Seat Module (CCSM) C3036b



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-HC20 (PK/WH) Climate controlled seat cushion temperature sensor feed	Continuity to seat cushion TED, less than 5 ohms.
2	CKT 31S-HC20 (BK/WH) Climate controlled seat cushion temperature sensor return	Continuity to seat cushion TED, less than 5 ohms.
3	CKT 31S-FA18 (BK/RD) Climate controlled seat fan control voltage return	Continuity to seat fan motor, less than 5 ohms.
9	CKT 31-HC22D (BK/YE) Passenger ID circuit	Continuity to ground, less than 5 ohms.
10	CKT 20S-FA18 (PK/OG) Climate controlled seat fan, signal	Continuity to seat fan motor, less than 5 ohms.
11	CKT 20S-HC19 (PK/OG) Climate controlled seat backrest temperature sensor feed	Continuity to seat backrest TED, less than 5 ohms.
12	CKT 31S-HC19 (BK/RD) Climate controlled seat backrest temperature sensor return	Continuity to seat backrest TED, less than 5 ohms.
13	CKT 8-FA18 (WH/BK) Climate controlled seat fan control voltage signal	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
14		

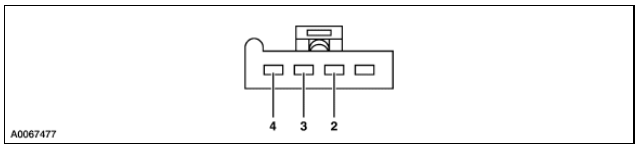
	CKT 10-FA18 (GY/BK) Temperature controlled seat fan tachometer circuit	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
17	CKT 9-HC24 (BN/RD) Climate controlled seat cushion sensor signal return	Continuity to CCSM from cushion TED, less than 5 ohms.
18	CKT 8-HC24 (WH/RD) Climate controlled seat cushion sensor signal	Continuity to CCSM from cushion TED, less than 5 ohms.
19	CKT 8-HC19 (WH/BK) Climate controlled seat backrest sensor signal	Continuity to CCSM from backrest TED, less than 5 ohms.
20	CKT 9-HC19 (BN/YE) Climate controlled seat backrest sensor signal return	Continuity to CCSM from backrest TED, less than 5 ohms.

Driver Climate Controlled Seat Module C3031a



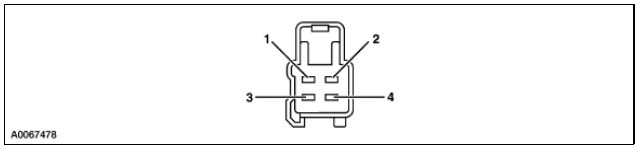
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 20-HC21 (PK/BK) Battery voltage from PJB	Greater than 10 volts when switch is in the run position.
3	CKT 31-HC21 (BK/GN) Ground	Continuity to ground, less than 5 ohms.
4	CKT 30-HC21 (RD/GN) Battery voltage from rear PDB	Greater than 10 volts at all times.

Passenger Climate Controlled Seat Module C3036a



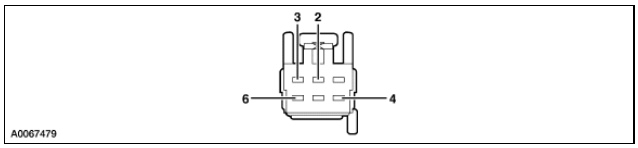
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 20-HC22 (PK/YE) Battery voltage from PJB	Greater than 10 volts when switch is in the run position.
3	CKT 31-HC22 (BK/YE) Ground	Continuity to ground, less than 5 ohms.
4	CKT 30-HC22 (RD/YE) Battery voltage from rear PDB	Greater than 10 volts at all times.

Driver and Passenger Climate Controlled Seat Fan C3033/C3038



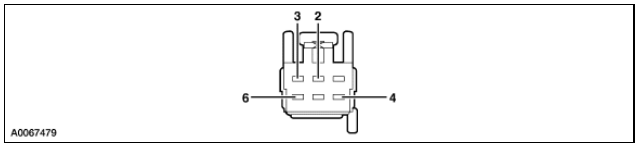
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	CKT 20S-FA18 (PK/OG) Climate controlled seat fan, signal	Continuity to seat fan motor, less than 5 ohms.
2	CKT 10-FA18 (GY/BK) Temperature controlled seat fan tachometer circuit	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
3	CKT 8-FA18 (WH/BK) Climate controlled seat fan voltage feed	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.
4	CKT 31S-FA18 (BK/RD) Climate controlled seat fan voltage return	Continuity to CCSM from climate controlled seat fan, less than 5 ohms.

Driver Climate Controlled Seat Cushion TED C3035



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 9-HC23 (BN/YE) Climate controlled seat cushion return signal	Continuity to CCSM from cushion TED, less than 5 ohms.
3	CKT 8-HC23 (WH/BK) Climate controlled seat cushion sensor signal	Continuity to CCSM from cushion TED, less than 5 ohms.
4	CKT 31S-HC17 (BK/OG) Climate controlled seat cushion temperature sensor return	Continuity to seat cushion TED, less than 5 ohms.
6	CKT 20S-HC17 (PK) Climate controlled seat cushion temperature sensor feed	Continuity to seat cushion TED, less than 5 ohms.

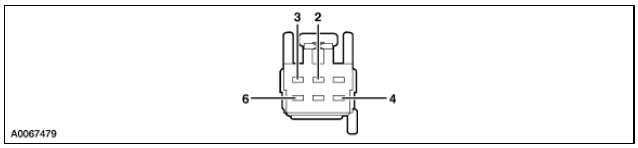
Passenger Climate Controlled Seat Cushion TED C3040



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 9-HC24 (BN/RD) Climate controlled seat cushion sensor signal return	Continuity to CCSM from cushion TED, less than 5 ohms.
3	CKT 8-HC24 (WH/RD) Climate controlled seat cushion sensor signal	Continuity to CCSM from cushion TED, less than 5 ohms.

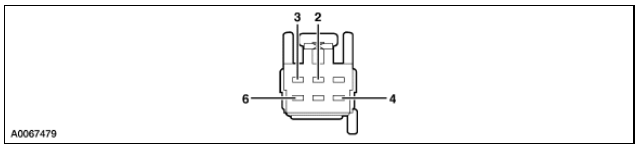
4	CKT 31S-HC20 (BK/WH) Climate controlled seat cushion temperature sensor return	Continuity to seat cushion TED, less than 5 ohms.
6	CKT 20S-HC20 (PK/WH) Climate controlled seat cushion temperature sensor feed	Continuity to seat cushion TED, less than 5 ohms.

Driver Climate Controlled Seat Backrest TED C3034



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 9-HC16 (BN/RD) Climate controlled seat backrest sensor return	Continuity to CCSM from backrest TED, less than 5 ohms.
3	CKT 8-HC16 (WH/RD) Climate controlled seat backrest sensor signal	Continuity to CCSM from backrest TED, less than 5 ohms.
4	CKT 31S-HC16 (BK/BU) Climate controlled seat backrest temperature sensor return	Continuity to seat backrest TED, less than 5 ohms.
6	CKT 20S-HC16 (PK/BU) Climate controlled seat backrest temperature sensor feed	Continuity to seat backrest TED, less than 5 ohms.

Passenger Climate Controlled Seat Backrest TED C3039



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	CKT 9-HC19 (BN/YE) Climate controlled seat backrest sensor signal return	Continuity to CCSM from backrest TED, less than 5 ohms.
3	CKT 8-HC19 (WH/BK) Climate controlled seat backrest sensor signal	Continuity to CCSM from backrest TED, less than 5 ohms.
4	CKT 31S-HC19 (BK/RD) Climate controlled seat backrest temperature sensor return	Continuity to seat backrest TED, less than 5 ohms.
6	CKT 20S-HC19 (PK/OG) Climate controlled seat backrest temperature sensor feed	Continuity to seat backrest TED, less than 5 ohms.

Pinpoint Test A: No Communication With The Driver Seat Module (DSM)

Normal Operation

The DSM is powered by battery voltage from circuit 29-AH80 (OG/WH) and 30-AH80 (RD) and is supplied ground on circuit 31-AH80 (BK) and 91-AH80 (BN/WH).

Possible Causes

No communication with the driver seat module can be caused by:

- fuse(s).
- wiring, terminals, or connectors.
- a faulty DSM.

PINPOINT TEST A: NO COMMUNICATION WITH THE DRIVER SEAT MODULE (DSM)

Test Step	Result / Action to Take
A1 CHECK NGS TESTER COMMUNICATION TO THE DDM	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Using the results from the DATA LINK DIAGNOSTICS test, check for communication to the DDM. • **Does the NGS Tester communicate with the DDM?**	**Yes** GO to A2 . **No** Go To Pinpoint Test B .
A2 CHECK CIRCUITS 29-AH80 (OG/WH) AND 30-AH80 (RD) FOR VOLTAGE	
• Key in OFF position. • Disconnect: DSM C341b. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.	**Yes** GO to A3 . **No** REPAIR the circuit in question. TEST the

• Disconnect: DSM C341c. • Measure the voltage between DSM C341c-10, circuit 29-AH80 (OG/WH), harness side and ground; and between DSM C341b-4, circuit 30-AH80 (RD), harness side and ground  • **Are the voltages greater than 10 volts?**	system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
A3 CHECK CIRCUIT 31-AH80 (BK) AND 91-AH80 (BN/WH) FOR AN OPEN	
• Measure the resistance between the DSM C341b-3, circuit 31-AH80 (BK), harness side and ground; and between DSM C341c-2, circuit 91-AH80 (BN/WH), harness side and ground.  • **Are the resistances less than 5 ohms?**	**Yes** REFER to Section 418-00 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test B: No Communication With The Driver Door Module (DDM)

Normal Operation

The DDM is power by battery voltage from circuits 29-AJ80 (OG) and ignition voltage circuit 29S-AJ86 (OG/BU) and is supplied ground on circuits 91-AJ80 (BN/BU) and 31-AJ80B (BK/OG).

Possible Causes

No communication with driver door module can be caused by:

- fuse(s).
- wiring, terminals, or connectors.
- a faulty DDM.

PINPOINT TEST B: NO COMMUNICATION WITH THE DRIVER DOOR MODULE (DDM)

Test Step	Result / Action to Take
B1 CHECK CIRCUITS 29-AJ80 (OG) AND 29S-AJ86 (OG/BU) FOR VOLTAGE	

⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: DDM C501a. • Key in ON position. • Measure the voltage between DDM C501a-11, circuit 29-AJ80 (OG), harness side and ground; and between DDM C501a-12, circuit 29S-AJ86 (OG/BU), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B2 . **No** REPAIR the circuit in question. Test the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
B2 CHECK CIRCUITS 31-AJ80B (BK/OG) AND 91-AJ80 (BN/BU) FOR OPENS	
• Key in OFF position. • Measure the resistance between DDM C501a-7, circuit 91-AJ80 (BN/BU), harness side and ground; and between DDM C501a-8, circuit 31-AJ80B (BK/OG), harness side and ground.	**Yes** REFER to Section 418-00 . **No** REPAIR the circuit(s) in question. Test the system for normal

 A0006302 • **Is the resistance less than 5 ohms?**	operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test C: The Power Seat Is Inoperative Driver

Normal Operation

The power seat switch is powered by battery voltage to driver seat control switch circuit 30-AH35 (RD/YE) and is supplied ground on driver circuit 31-AH35 (BK/YE).

Possible Causes

An inoperative driver power seat can be caused by:

- a fuse.
- wiring, terminals, or connectors.
- a faulty power seat switch.
- a faulty power seat motor.

PINPOINT TEST C: THE POWER SEAT IS INOPERATIVE DRIVER

Test Step	Result / Action to Take
C1 CHECK CIRCUIT 30-AH35 (RD/YE) FOR VOLTAGE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar,	**Yes** GO to C2 . **No** REPAIR the circuit. climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Driver Seat Control Switch C360. • Measure the voltage between driver seat control switch C360-6, circuit 30-AH35 (RD/YE), harness side and ground.  • **Is the voltage greater than 10 volts?**	
C2 CHECK CIRCUIT 31-AH35 (BK/YE) FOR AN OPEN	
• Measure the resistance between driver seat control switch C360-1, circuit 31-AH35 (BK/YE), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test D: The Power Seat Is Inoperative Passenger

Normal Operation

The power seat switch is powered by battery voltage to passenger seat control switch circuit 30-AH42 (RD)

and is supplied ground on passenger circuits 31-AH42 (BK).

Possible Causes

An inoperative passenger power seat can be caused by:

- a fuse.
- wiring, terminals, or connectors.
- a faulty power seat switch.
- a faulty power seat motor.

PINPOINT TEST D: THE POWER SEAT IS INOPERATIVE PASSENGER

Test Step	Result / Action to Take
D1 CHECK FOR POWER TO THE PASSENGER SEAT CONTROL SWITCH	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Passenger Seat Control Switch C330. • Measure the voltage between passenger seat control switch C330-6, circuit 30-AH42 (RD), harness side and ground.	**Yes** GO to D2 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

 A0003055 • **Is the voltage greater than 10 volts?**	
D2 CHECK CIRCUIT 31-AH42 (BK) FOR AN OPEN	
• Measure the resistance between passenger seat control switch C330-1, circuit 31-AH42 (BK), harness side and ground.  A0003056 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test E: The Power Seat Moves But Is Noisy

Normal Operation

The power seat should move quietly during operation. Some noise is acceptable.

Possible Causes

A noisy power seat can be caused by:

- a misaligned seat track.
- a faulty seat track component.
- an object obstructing seat movement.

PINPOINT TEST E: THE POWER SEAT MOVES BUT IS NOISY

Test Step	Result / Action to Take
E1 CHECK THE TRACK ALIGNMENT	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • Check the alignment of the track to the floor and the track to the seat. • **Is the track out of alignment?**	**Yes** ALIGN the track to the seat and the floor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat track part. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test F: The Power Seat Moves But Is Loose

Normal Operation

The power seat movement should be smooth and the seat cushion should not rock during or after operation.

Possible Causes

A loose power seat can be caused by:

- loose fastening hardware.
- a faulty seat track component.

PINPOINT TEST F: THE POWER SEAT MOVES BUT IS LOOSE

Test Step	Result / Action to Take
F1 CHECK THE FASTENING HARDWARE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • **Is the fastening hardware loose?**	**Yes** TIGHTEN all fastening hardware to specification. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** IDENTIFY the cause and INSTALL a new seat track component. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test G: The Power Seat Does Not Make Full Travel

Normal Operation

The driver power seat should travel fully horizontal (forward/rearward) and vertical (front up/down and rear up/down). The passenger power seat should travel fully horizontal (forward/rearward) and vertical (front up/down).

Possible Causes

A power seat that does not make full travel can be caused by:

- an obstruction.
- a faulty seat track component.

PINPOINT TEST G: THE POWER SEAT DOES NOT MAKE FULL TRAVEL

Test Step	Result / Action to Take
G1 CHECK FOR OBSTRUCTION IN THE SEAT TRACK	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • Remove the affected seat. Refer to Driver Seat in this section. • **Are there any obstructions in the track?**	**Yes** REMOVE the obstruction(s) and GREASE the track(s). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** IDENTIFY the cause and INSTALL a new seat track component. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test H: The Power Seat Does Not Move Horizontally/Vertically Driver

Normal Operation

The power seat switch is powered by battery voltage on driver circuit 30-AH35 (RD/YE) and is supplied ground on circuit 31-AH35 (BK/YE). When pressed, the power seat switch supplies that voltage and ground to a power seat track motor to move the seat. When pressed in the opposite direction, the power seat switch reverses the polarity to that same power seat track motor, which moves the seat in the opposite direction. There are three power seat track motors that combine to move the seat cushion horizontally (forward/reverse) and vertically (front up/down and rear up/down). The power recliner cannot be repaired separately. If the power recliner needs to be repaired, an entirely new front seat backrest frame must be installed.

Possible Causes

A driver power seat that does not move horizontally and/or vertically can be caused by:

- wiring, terminals, or connectors.
- a faulty seat control switch.
- a faulty seat track motor.
- a faulty backrest recline motor (part of backrest frame assembly).

PINPOINT TEST H: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY DRIVER

Test Step	Result / Action to Take
H1 CHECK HORIZONTAL DIRECTION MOTOR FOR CORRECT OPERATION	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in ON position. • Operate the driver power seat forward and rearward. • **Will the seat move horizontally?**	**Yes** GO to H2 . **No** GO to H3 .
H2 CHECK BACKREST MOTOR FOR CORRECT OPERATION	
• Operate the driver power seat backrest up and down. • **Will the seat backrest move up and down?**	**Yes** GO to H6 . **No** GO to H13 .

H3 CHECK THE VOLTAGE TO THE DRIVER SEAT FORWARD/REVERSE MOTOR	
• Disconnect: Driver Seat Forward/Reverse Motor C362. • Measure the voltage between driver seat forward/reverse motor C362-2, circuit 32-AH37 (WH/GN), harness side and C362-1, circuit 33-AH37 (YE/GN), harness side, while pushing the driver seat control switch forward and rearward.  A0003068 • **Is the voltage greater than 10 volts when the switch is pushed forward, greater than -10 volts when the switch is pushed rearward, and 0 volts when the switch is in a rest position?**	**Yes** INSTALL a new driver seat forward/reverse motor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS) REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to H4 .
H4 CHECK CIRCUIT 32-AH37 (WH/GN) FOR AN OPEN AND SHORT TO GROUND	
• Key in OFF position. • Disconnect: Driver Seat Forward/Reverse Motor C362. • Measure the resistance between driver seat control switch C360-3, circuit 32-AH37 (WH/GN), harness side and driver seat forward/reverse motor C362-2, circuit 32-AH37 (WH/GN), harness side; and between driver seat control switch C360-3, circuit 32-AH37 (WH/GN), harness side and ground.  A0061916 • **Is the resistance less than 5 ohms between the driver seat forward/reverse motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H5 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H5 CHECK CIRCUIT 33-AH37 (YE/GN) FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between driver seat control switch C360-11, circuit 33-AH37 (YE/GN), harness side and driver seat forward/reverse motor C362-1, circuit 33-AH37 (YE/GN), harness side; and between driver seat control switch C360-11, circuit 33-AH37 (YE/GN), harness side and ground.	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation

 A0005669 • **Is the resistance less than 5 ohms between the driver seat forward/reverse motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	and Reactivation in this section. **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H6 DETERMINE SEAT TILTING FAILURE	
• Determine seat tilting failure. • **Can the seat be tilted forward or backward?**	**Yes** If only forward tilting operates, GO to H7 . If only rear tilting operates, GO to H10 . **No** INSTALL a new driver seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H7 CHECK THE VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR	
• Disconnect: Driver Seat Rear Height Motor C363. • Measure the voltage between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and C363-1, circuit 33-AH41 (YE/VT), harness side, while depressing the rear tilt switch up and down.  A0003068 • **Is the voltage greater than +10 volts when the rear tilt switch is pressed down, greater than -10 volts when the rear tilt switch is**	**Yes** INSTALL a new the driver seat rear height motor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

pressed up and 0 volts when the switch is in the rest position?	**No** GO to H8 .
H8 CHECK CIRCUIT 32-AH41 (WH/VT) FOR OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between driver seat control switch C360-8, circuit 32-AH41 (WH/VT), harness side and driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side; and between driver seat control switch C360-8, circuit 32-AH41 (WH/VT), harness side and ground.  A0005701 • **Is the resistance less than 5 ohms between the driver seat rear height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H9 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H9 CHECK CIRCUIT 33-AH41 (YE/VT) FOR OPEN AND SHORT TO GROUND	
• Measure the resistance between driver seat control switch C360-9, circuit 33-AH41 (YE/VT), harness side and driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side; and between driver seat control switch C360-9, circuit 33-AH41 (YE/VT), harness side and ground.  A0005700 • **Is the resistance less than 5 ohms between the driver seat rear height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H10 CHECK THE VOLTAGE TO DRIVER SEAT FRONT HEIGHT MOTOR	

• Disconnect: Driver Seat Front Height Motor C382. • Measure the voltage between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and C382-1, circuit 32-AH38 (WH/BK), while pushing the rear tilting switch up and down.  A0003068 • **Is the voltage greater than +10 volts when the front tilt switch is pressed down, greater than -10 volts when the front tilt switch is pressed up and 0 volts when the switch is in the rest position?**	**Yes** INSTALL a new driver seat front height motor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to H11 .
H11 CHECK CIRCUIT 32-AH38 (WH/BK) FOR OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between driver seat control switch C360-5, circuit 32-AH38 (WH/BK), harness side and driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side; and between driver seat control switch C360-5, circuit 32-AH38 (WH/BK), harness side and ground.  A0005702 • **Is the resistance less than 5 ohms between the driver seat front height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H12 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H12 CHECK CIRCUIT 33-AH38 (YE/BK) FOR OPEN	
• Measure the resistance between driver seat control switch C360-4, circuit 33-AH38 (YE/BK) harness side, and driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side; and between driver seat control switch C360-4, circuit 33-AH38 (YE/BK), harness side and ground.  A0005703 • **Is the resistance less than 5 ohms between the driver seat front height motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. TEST the system for

	normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H13 CHECK THE VOLTAGE TO DRIVER SEAT BACKREST MOTOR	
• Disconnect: Driver Seat Backrest Motor C368. • Measure the voltage between driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side and C363-2, circuit 33-AH36 (YE/RD), while pushing the backrest switch forward and rearward.  • **Is the voltage greater than 10 volts when the switch is pushed forward, greater than -10 volts when the switch is pushed rearward, and 0 volts when the switch is in a rest position?**	**Yes** INSTALL a new driver seat backrest motor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to H14 .
H14 CHECK CIRCUIT 32-AH36 (WH/RD) FOR OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between driver seat control switch C360-12, circuit 32-AH36 (WH/RD), harness side and driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side; and between driver seat control switch C360-12, circuit 32-AH36 (WH/RD), harness side and ground.  • **Is the resistance less than 5 ohms between the driver seat backrest motor and the driver seat control switch, and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H15 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
H15 CHECK CIRCUIT 33-AH36 (YE/RD) FOR OPEN	
• Measure the resistance between driver seat control switch C360-7, circuit 33-AH36 (YE/RD) harness side, and driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side; and between driver seat control switch C360-7, circuit 33-AH36 (YE/RD), harness side and ground.	**Yes** INSTALL a new driver seat control switch. TEST the system for normal operation. REACTIVATE the

 • **Is the resistance less than 5 ohms between the driver seat backrest motor and the driver seat control switch, and greater than 10,000 ohms between the seat control switch and ground?**	supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test I: The Memory Seat Does Not Move Horizontally/Vertically Driver

Normal Operation

The power seat switch is powered by battery voltage to driver seat control switch circuit 29-AH35 (OG/YE) and is supplied ground on driver circuit 91-AH35 (BN). When pressed, the power seat switch supplies the voltage and ground to the driver seat module (DSM). The DSM then supplies voltage and ground to the appropriate power seat track motor based on the inputs received from the seat control switch. When pressed in the opposite direction, the power seat switch reverses the polarity to the DSM, which moves the seat in the opposite direction. There are three power seat track motors that combine to move the seat horizontally (forward/reverse) and vertically (front up/down and rear up/down). The power recliner cannot be repaired separately. If the power recliner needs to be repaired, an entirely new front seat backrest frame must be installed.

Possible Causes

A memory seat that does not move horizontally/vertically can be caused by:

- a fuse.
- wiring, terminals, or connectors.
- a faulty memory set switch.
- a faulty power seat track motor position sensor.
- a faulty DSM.

PINPOINT TEST I: THE MEMORY SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY DRIVER

Test Step	Result / Action to Take
I1 RETRIEVE THE RECORDED DSM DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS	
	Yes If DTC B1703,

⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Use the results recorded from the DSM continuous and on-demand self-tests. • **Are any DSM DTCs recorded?**	B1707, B1711, B1715, B1719, B1723, B1727 or B1731 was retrieved, GO to I2 . If any combination of DTC B1757, B1761, B1765, B1769, B2146, B2149, B2152, or B2155 are retrieved, GO to I4 . If only a combination of DTC B2146, B2149, B2152 or B2155 are retrieved, GO to I43 . **No** GO to I45 .
I2 CHECK FOR A SHORT TO BATTERY	
• Disconnect: DSM C341c. • Key in ON position. • Using the following table, measure the voltage between DSM C341c pins, harness side and ground. **DSM C341c Pin** / **Circuit** 3 / 10-AH83 (GY/OG) 4 / 10-AH82 (GY/RD) 5 / 8-AH84 (WH/BK) 6 / 10-AH85 (GY/WH) 11 / 8-AH83 (WH/GN) 12 / 8-AH82 (WH/RD) 13 / 10-AH84 (GY/BK) 14 / 8-AH85 (WH/VT)	**Yes** GO to I3 . **No** CLEAR the DSM DTCs. REPEAT the DSM self-test. If DTC B1703, B1707, B1711, B1715, B1719, B1723, B1727 or B1731 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation.

 • **Are any of the voltages greater than 10 volts?**	If any other DTCs are retrieved, refer to the DSM Diagnostic Trouble Code (DTC) Index. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I3 CHECK THE DRIVER SEAT CONTROL SWITCH FOR A SHORT TO BATTERY	
• Key in OFF position. • Disconnect: Driver Seat Control Switch C360. • Key in ON position. • Using the following table, measure the voltage between DSM C341c pins, harness side and ground. **DSM C341c Pin / Circuit** 3 / 10-AH83 (GY/OG) 4 / 10-AH82 (GY/RD) 5 / 8-AH84 (WH/BK) 6 / 10-AH85 (GY/WH) 11 / 8-AH83 (WH/GN) 12 / 8-AH82 (WH/RD) 13 / 10-AH84 (GY/BK) 14 / 8-AH85 (WH/VT)  • **Are any of the voltages greater than 10 volts?**	**Yes** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the DSM self-test. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new driver seat control switch. CLEAR the DTCs. REPEAT the DSM self-test. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I4 CHECK FOR MULTIPLE DSM DTCS	
	Yes GO to I5 .

• Use the results recorded from the DSM continuous and on-demand self-tests. • **Are the DSM DTCs B1757, B1761 and B1765 all retrieved?**	**No** GO to I10 .
I5 CHECK THE HORIZONTAL POSITION SENSOR COMMON RETURN	
• Key in OFF position. • Disconnect: Horizontal Position Sensor C372. • Measure the resistance between horizontal position sensor C372-3, circuit 9-AH26 (BN/RD), harness side and ground.  A0003063 • **Is the resistance less than 180 ohms?**	**Yes** GO to I7 . **No** GO to I6 .
I6 CHECK CIRCUIT 9-AH26 (BN/RD) FOR AN OPEN	
• Disconnect: DSM C341a. • Measure the resistance between horizontal position sensor C372-3, circuit 9-AH26 (BN/RD), harness side and DSM C341a-11, circuit 9-AH80 (BN/WH), harness side.  A0003064 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

I7 CHECK THE POSITION SENSOR COMMON FEED	
• Key in OFF position. • Key in ON position. • Measure the voltage between horizontal position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and ground.  A0003065 • **Is the voltage greater than 10 volts?**	**Yes** GO to I10 . **No** GO to I8 .
I8 CHECK CIRCUIT 7-AH26 (YE/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DSM C341a. • Measure the resistance between horizontal position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and ground.  A0003066 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I9 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I9 CHECK CIRCUIT 7-AH26 (YE/RD) OR 7-AH80 (YE/VT) FOR AN OPEN	
• Measure the resistance between horizontal position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and DSM C341a-15, circuit 7-AH80 (YE/VT), harness side.  A0003067 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

	No REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I10 CHECK FOR SINGLE DTCS	
• Using the recorded results from the DSM self-test. • **Was DTC B1757, B1761, B1765 or B1769 retrieved?**	**Yes** For DTC B1757 GO to I11 . For DTC B1761 GO to I19 . For DTC B1765 GO to I27 . For DTC B1769 GO to I35 . **No** GO to I43 .
I11 CHECK VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR	
• Disconnect: Driver Seat Rear Height Motor C363. • Measure the voltage between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side.  A0003068 • Operate the driver seat control switch to the rear up and rear down position. • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I15 . **No** GO to I12 .
I12 CHECK THE DSM DRIVER SIDE REAR HEIGHT MOTOR CONTROL	

• Measure the voltage between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and ground while operating the driver seat control switch to the rear down position; and between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and ground while operating the driver seat control switch to the rear up position.  A0003069 • **Is the voltage greater than 10 volts in both directions?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to I13 .
I13 CHECK CIRCUIT 33-AH41 (YE/VT) AND 32-AH41 (WH/VT) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DSM C341a. • Measure the resistance between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and ground; and between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and ground.  A0003070 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I14 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I14 CHECK CIRCUIT 33-AH41 (YE/VT) AND 32-AH41 (WH/VT) FOR AN OPEN	
• Measure the resistance between driver seat rear height motor C363-1, circuit 33-AH41 (YE/VT), harness side and DSM C341a-8, circuit 33-AH41 (YE/VT), harness side; and between driver seat rear height motor C363-2, circuit 32-AH41 (WH/VT), harness side and DSM C341a-16, circuit 32-AH41 (WH/VT), harness side.	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT

 A0003071 • **Are the resistances less than 5 ohms?**	the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the DSM self-test. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I15 CHECK CIRCUIT 9-AH25 (BN/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: Rear Height Motor Position Sensor C373. • Measure the resistance between rear height motor position sensor C373-3, circuit 9-AH25 (BN/GN), harness side and ground.  A0003063 • **Is the resistance less than 5 ohms?**	**Yes** GO to I16 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I16 CHECK CIRCUIT 7-AH25 (YE/GN) FOR AN OPEN	
• Key in ON position. • Measure the voltage between rear height motor position sensor C373-1, circuit 7-AH25 (YE/GN), harness side and ground.	**Yes** GO to I17 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint

 A0003065 • **Is the voltage approximately 5 volts?**	system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I17 CHECK CIRCUIT 8-AH25 (WH/GN) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DSM C341a. • Measure the resistance between rear height motor position sensor C373-2, circuit 8-AH25 (WH/GN), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I18 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I18 CHECK CIRCUIT 8-AH25 (WH/GN) FOR AN OPEN	
• Measure the resistance between rear height motor position sensor C373-2, circuit 8-AH25 (WH/GN), harness side and DSM C341a-14, circuit 8-AH25 (WH/GN), harness side.  A0003073 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1757 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

	No REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I19 CHECK THE DRIVER SEAT FRONT HEIGHT MOTOR SUPPLY	
• Disconnect: Driver Seat Front Height Motor C382. • Measure the voltage between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side.  A0003068 • Operate the driver seat control switch to the front up and front down position. • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I23 . **No** GO to I20 .
I20 CHECK THE DSM DRIVER SEAT FRONT HEIGHT MOTOR CONTROL	
• Measure the voltage between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and ground while operating the driver seat control switch to the front down position; and between driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side and ground, while operating the driver seat control switch to the front up position.  A0003069 • **Is the voltage greater than 10 volts in both directions?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No**

	GO to I21 .
I21 CHECK CIRCUIT 33-AH38 (YE/BK) AND 32-AH38 (WH/BK) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and ground; and between driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side and ground.  A0003070 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I22 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I22 CHECK CIRCUIT 33-AH38 (YE/BK) AND 32-AH38 (WH/BK) FOR AN OPEN	
• Measure the resistance between driver seat front height motor C382-2, circuit 33-AH38 (YE/BK), harness side and DSM C341a-7, circuit 33-AH38 (YE/BK), harness side; and between driver seat front height motor C382-1, circuit 32-AH38 (WH/BK), harness side and DSM C341a-17, circuit 32-AH38 (WH/BK), harness side.  A0003074 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation

	and Reactivation in this section.
I23 CHECK CIRCUIT 9-AH24 (BN/YE) FOR AN OPEN	
• Disconnect: Front Height Motor Position Sensor C383. • Measure the resistance between front height motor position sensor C383-1, circuit 9-AH24 (BN/YE), harness side and ground.  A0003066 • **Is the resistance less than 5 ohms?**	**Yes** GO to I24 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I24 CHECK CIRCUIT 7-AH24 (YE/BK) FOR AN OPEN	
• Measure the voltage between front height motor position sensor C383-3, circuit 7-AH24 (YE/BK), harness side and ground.  A0003075 • **Is the voltage approximately 5 volts?**	**Yes** GO to I25 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I25 CHECK CIRCUIT 8-AH24 (WH/BK) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between front height motor position sensor C383-2, circuit 8-AH24 (WH/BK), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I26 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

I26 CHECK CIRCUIT 8-AH24 (WH/BK) FOR AN OPEN	
• Measure the resistance between front height motor position sensor C383-2, circuit 8-AH24 (WH/BK), harness side and DSM C341a-5, circuit 8-AH24 (WH/BK), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1761 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the DSM self-test. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I27 CHECK THE VOLTAGE TO THE DRIVER SEAT FORWARD/REARWARD MOTOR	
• Disconnect: Driver Seat Forward/Rearward Motor C362. • Measure the voltage between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side.	**Yes** GO to I31 . **No** GO to I28 .

 A0003068 • Operate the driver seat control switch to the forward and rearward position. • **Is the voltage greater than 10 volts in both directions?**	
I28 CHECK THE DSM FORWARD/REARWARD MOTOR CONTROL	
• Measure the voltage between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and ground while operating the driver seat control switch to the rearward position; and between driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side and ground while operating the driver seat control switch to the forward position.  A0003069 • **Is the voltage greater than 10 volts in both directions?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to I29 .
I29 CHECK CIRCUIT 33-AH37 (WH/GN) AND 32-AH37 (YE/GN) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: DSM C341. • Measure the resistance between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and ground; and between driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side and ground.  A0003070 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I30 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I30 CHECK CIRCUIT 33-AH37 (YE/GN) AND 32-AH37 (WH/GN) FOR AN OPEN	

• Measure the resistance between driver side forward/rearward motor C362-1, circuit 33-AH37 (YE/GN), harness side and DSM C341a-1, circuit 33-AH37 (YE/GN), harness side; and between driver side forward/rearward motor C362-2, circuit 32-AH37 (WH/GN), harness side and DSM C341a-10, circuit 32-AH9 (WH/GN), harness side.  A0003077 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I31 CHECK CIRCUIT 9-AH26 (BN/RD) FOR AN OPEN	
• Disconnect: Forward/Rearward Motor Position Sensor C372. • Measure the resistance between forward/rearward motor position sensor C372-3, circuit 9-AH26 (BN/RD), harness side and ground.  A0003063 • **Is the resistance less than 5 ohms?**	**Yes** GO to I32 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I32 CHECK CIRCUIT 7-AH26 (YE/RD) FOR AN OPEN	

• Measure the voltage between forward/rearward motor position sensor C372-1, circuit 7-AH26 (YE/RD), harness side and ground.  A0003065 • **Is the voltage approximately 5 volts?**	**Yes** GO to I33 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the DSM self-test. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I33 CHECK CIRCUIT 8-AH26 (WH/RD) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between forward/rearward motor position sensor C372-2, circuit 8-AH26 (WH/RD), harness side and ground.  A0003072 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I34 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I34 CHECK CIRCUIT 8-AH26 (WH/RD) FOR AN OPEN	
• Measure the resistance between forward/rearward motor position sensor C372-2, circuit 8-AH26 (WH/RD), harness side and DSM C341a-4, circuit 8-AH26 (WH/RD), harness side.  A0003078 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1765 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT

	the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I35 CHECK THE DRIVER SEAT BACKREST MOTOR SUPPLY	
• Disconnect: Driver Seat Backrest Motor C368. • Measure the voltage between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side, while operating the driver seat control switch to the recline forward and recline rearward position.  A0003079 • **Is the voltage greater than 10 volts in both directions?**	**Yes** GO to I39 . **No** GO to I36 .
I36 CHECK THE DSM BACKREST MOTOR CONTROL	
• Measure the voltage between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and ground while operating the driver seat control switch to the backrest forward position; and between driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side and ground while operating the driver seat control switch to the backrest rearward position.	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint

 A0003080 • **Is the voltage greater than 10 volts in both directions?**	system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to I37 .
I37 CHECK CIRCUIT 33-AH36 (YE/RD) AND 32-AH36 (WH/RD) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and ground; and between driver seat backrest motor C368-1, circuit 32-AH34 (WH/RD), harness side and ground.  A0003081 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I38 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I38 CHECK CIRCUIT 33-AH36 (YE/RD) AND 32-AH36 (WH/RD) FOR AN OPEN	
• Measure the resistance between driver seat backrest motor C368-2, circuit 33-AH36 (YE/RD), harness side and DSM C341a-9, circuit 33-AH36 (YE/RD), harness side; and between driver seat backrest motor C368-1, circuit 32-AH36 (WH/RD), harness side and DSM C341a-2, circuit 32-AH36 (WH/RD), harness side.  A0003082 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit.

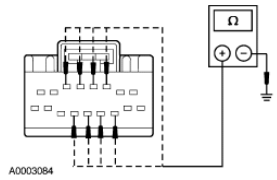
	CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I39 CHECK CIRCUIT 9-AH30 (BN/BU) FOR AN OPEN	
• Disconnect: Backrest Motor Position Sensor C376. • Measure the resistance between backrest motor position sensor C376-3, circuit 9-AH30 (BN/BU), harness side and ground.  A0003066 • **Is the resistance less than 5 ohms?**	**Yes** GO to I40 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I40 CHECK CIRCUIT 7-AH30 (YE/BU) FOR AN OPEN	
• Measure the voltage between backrest motor position sensor C376-1, circuit 7-AH30 (YE/BU), harness side and ground.  A0003075 • **Is the voltage approximately 5 volts?**	**Yes** GO to I41 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I41 CHECK CIRCUIT 8-AH30 (WH/BU) FOR A SHORT TO GROUND	
• Disconnect: DSM C341a. • Measure the resistance between backrest motor position sensor C376-2, circuit 8-AH30 (WH/BU), harness side and ground.	**Yes** GO to I42 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test.

 A0003072 • **Is the resistance greater than 10,000 ohms?**	REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I42 CHECK CIRCUIT 8-AH30 (WH/BU) FOR AN OPEN	
• Measure the resistance between backrest motor position sensor C376-2, circuit 8-AH30 (WH/BU), harness side and DSM C341a-13, circuit 8-AH30 (WH/BU), harness side.  A0003083 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new seat backrest frame assembly. CALIBRATE the driver seat. REFER to Principles of Operation. REPEAT the DSM self-test. If DTC B1769 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
I43 CHECK FOR HESITATION OR JOGGING	

• Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: • Clear all DSM DTCs. • Enter the following diagnostic mode on the diagnostic tool: • Operate the driver seat control switch through all positions while monitoring DSM PIDs SFNT_MT, SREARMT, SFWD_MT and SRCL_MT, and watching seat movement. • **Did the driver seat stop or hesitate, or did any of the DSM PIDs read inconsistently?**	**Yes** INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to I44 .
I44 CHECK FOR AN INTERMITTENT CONCERN	
• Enter the following diagnostic mode on the diagnostic tool: • Clear all DSM DTCs. • Operate the driver power seat. Wiggle the harness and connectors. Inspect for any visual concerns. • Enter the following diagnostic mode on the diagnostic tool: DSM Self-Test. • **Were any DTCs retrieved?**	**Yes** If DTC B2146, B2149, B2152 or B2155 is retrieved, INSTALL a new seat track. CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** CALIBRATE the driver seat. REFER to Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental

	Restraint System (SRS) Deactivation and Reactivation in this section.
I45 CHECK THE DRIVER SEAT CONTROL SWITCH PIDS	
• Enter the following diagnostic mode on the diagnostic tool: • Operate the driver seat control seat switch through all positions while monitoring the DSM PIDs SFNT_SW, SFWD_SW, SREARSW and SRCL_SW. • **Do the DSM PIDs accurately represent the seat control switch positions?**	**Yes** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to I46 .
I46 CHECK THE DRIVER SEAT CONTROL SWITCH CIRCUITS FOR AN OPEN	
• Disconnect: DSM C341c. • Using the following table, measure the resistance between DSM C341c pins, harness side and ground.	**Yes** GO to I47 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

DSM C341c Pin	Circuit
3	10-AH83 (GY/OG)
4	10-AH82 (GY/RD)
5	8-AH84 (WH/BK)
6	10-AH85 (GY/WH)
11	8-AH83 (WH/GN)
12	8-AH82 (WH/RD)
13	10-AH84 (GY/BK)
14	8-AH85 (WH/VT)



- **Are the resistances less than 5 ohms?**

I47 CHECK THE DRIVER SEAT CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Using the following table, measure the resistance between DSM C341c pins, harness side and ground. **DSM C341c Pin** / **Circuit** 3 / 10-AH83 (GY/OG) 4 / 10-AH82 (GY/RD) 5 / 8-AH84 (WH/BK) 6 / 10-AH85 (GY/WH) 11 / 8-AH83 (WH/GN) 12 / 8-AH82 (WH/RD) 13 / 10-AH84 (GY/BK) 14 / 8-AH85 (WH/VT)  • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new driver seat control switch. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS) REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test J: The Power Seat Does Not Move Horizontally/Vertically Passenger

Normal Operation

The power seat switch is powered by battery voltage on circuit 30-AH42 (RD) and is supplied ground on circuit 31-AH42 (BK). When pressed, the power seat switch supplies that voltage and ground to a power seat track motor to move the seat. When pressed in the opposite direction, the power seat switch reverses the polarity to that same power seat track motor, which moves the seat in the opposite direction. There are two power seat track motors that combine to move the seat horizontally (forward/reverse) and vertically (front up/down).

Possible Causes

A power seat that does not move horizontally and/or vertically can be caused by:

- wiring, terminals, or connectors.
- a faulty seat control switch.

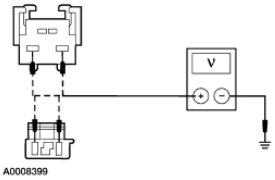
- a faulty seat track motor.

PINPOINT TEST J: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY PASSENGER

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>J1 CHECK THE PASSENGER SEAT MOTOR OPERATION</td><td></td></tr>
<tr><td>⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, the air bag system must be deactivated. Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. NOTE: Restraint system diagnostic tools MUST be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE: After diagnosing or repairing a seat system, the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE: Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.
• Key in OFF position.
• Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
• Disconnect:
• Disconnect the passenger seat motor connector in question: (forward/rearward motor C332, seat height motor C333, or seat backrest motor C338).
• Key in ON position.
• Using the following table, measure the voltage between the inoperative passenger seat motor connector, harness side and ground, while moving the seat control switch in the indicated direction:
<table>
<tr><th>Motor Connector</th><th>Pin</th><th>Circuit</th><th>Direction of Control Switch</th></tr>
<tr><td>Forward/</td><td>2</td><td>32-AH44</td><td>Forward</td></tr>
</table>
</td><td>Yes
INSTALL a new passenger seat track or the backrest frame assembly. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

No
GO to J2 .</td></tr>
</table>

Reverse Motor C332		(WH/GN)	
Forward/ Reverse Motor C332	1	33-AH44 (YE/GN)	Reverse
Height Motor C333	1	32-AH34 (WH/BK)	Up
Height Motor C333	2	33-AH34 (YE/BK)	Down
Backrest Motor C338	1	32-AH43 (WH/RD)	Tilt Up
Backrest Motor C338	2	33-AH43 (YE/RD)	Tilt Down

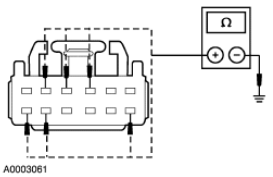


- **Are the voltages greater than 10 volts in the inoperative directions?**

J2 CHECK THE PASSENGER SEAT MOTOR CIRCUITS FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: Passenger Seat Control Switch C330.
- Using the following table, measure the resistance between passenger seat control switch C330 pins, harness side and ground:

Pin	Circuit	Inoperative Motor
12	32-AH43 (WH/RD)	Backrest
7	33-AH43 (YE/RD)	Backrest
4	32-AH34 (WH/BK)	Height
5	33-AH34 (YE/BK)	Height
3	32-AH44 (WH/GN)	Forward/ Rearward
11	33-AH44 (YE/GN)	Forward/ Rearward



- **Are the resistances greater than 10,000 ohms?**

Yes
GO to J3 .

No
REPAIR the circuit in question. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

J3 CHECK FOR AN OPEN CIRCUIT

• Key in OFF position. • Measure the resistance between the passenger seat control switch C330 pins, harness side and the inoperative motor connector, harness side: **C330 Pin / Circuit / Motor Connector** Height Motor 4 / 32-AH34 (WH/BK) / C333-1 5 / 33-AH34 (YE/BK) / C333-2 Forward/Reverse Motor 3 / 32-AH44 (WH/GN) / C332-2 11 / 33-AH44 (YE/GN) / C332-1 Backrest Motor 12 / 32-AH43 (WH/RD) / C338-1 7 / 33-AH43 (YE/RD) / C338-2  • **Are all resistance readings less than 5 ohms?**	**Yes** INSTALL a new passenger seat control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit in question. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test K: The Memory Seat Is Inoperative

Normal Operation

The power seat switch is powered by battery voltage to driver seat control switch circuit 29-AH35 (OG/YE) and is supplied ground on driver circuit 91-AH35 (BN). When pressed, the power seat switch supplies the voltage and ground to the driver seat module (DSM). The DSM then supplies voltage and ground to the appropriate power seat track motor based on the inputs received from the seat control switch. When pressed in the opposite direction, the power seat switch reverses the polarity to the DSM, which moves the seat in the opposite direction. There are three power seat track motors that combine to move the seat horizontally (forward/reverse) and vertically (front up/down and rear up/down).

Each power seat track motor includes a position sensor, which is a potentiometer. The DSM supplies a shared reference voltage and ground to each position sensor. This enables the position sensor to send a variable voltage back to the DSM to indicate the position of the power seat track motor. The DSM uses this information to return the seat to a stored preprogrammed position when pressing the memory set switch or a remote transmitter. Refer to Seats and the owner's literature for additional information on programming the DSM for storing memory seat and adjustable pedal positions.

Possible Causes

An inoperative memory seat can be caused by:

- a fuse.
- wiring, terminals, or connectors.
- a faulty seat control switch.
- a faulty power seat track motor.
- a faulty DSM.

PINPOINT TEST K: THE MEMORY SEAT IS INOPERATIVE

Test Step	Result / Action to Take
K1 CHECK THE MEMORY MIRROR OPERATION	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Carry out a memory recall for the exterior rear view mirrors. • **Did the memory mirrors operate correctly?**	**Yes** GO to K2 . **No** REFER to Section 501-00 .
K2 CHECK THE DTCS FROM THE DSM	
• Use the recorded results from DSM self-test. • **Was DSM DTC B1342 retrieved?**	**Yes** CLEAR the DSM DTCs. REPEAT the DSM self-test. If DTC B1342 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat

	Calibration in Principles of Operation. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to K3 .
K3 CHECK THE POWER SEAT CALIBRATION	
• Enter the following diagnostic mode on the diagnostic tool: CLEAR DSM DTCs. • Calibrate the driver seat. Refer to Seat Calibration in Principles of Operation. • **Were any DSM DTCs retrieved from calibration?**	**Yes** REFER to the DSM Diagnostic Trouble Code (DTC) Index. **No** GO to K4 .
K4 CHECK THE MEMORY RECALL OPERATION	
• Set a new memory seat position for driver 1 and driver 2. • Activate the memory recall for driver position 1 and driver position 2 from the memory set switch. • **Do the memory recall functions operate correctly?**	**Yes** The driver power seat is operating correctly. REVERIFY symptom. **No** INSTALL a new DSM. REFER to Section 418-00 . CALIBRATE the driver seat, REFER to Seat Calibration in Principles of Operation. GO to K5 .
K5 CHECK THE MEMORY RECALL OPERATION	
• Set a new memory seat position for driver 1 and driver 2. • Activate the memory recall for driver position 1 and driver position 2 from the memory set switch. • **Do the memory recall functions operate correctly?**	**Yes** The driver power seat is operating correctly. REVERIFY symptom. **No** CHECK the DDM for any memory function related DTCs. REPAIR as necessary. REFER to the DDM Diagnostic Trouble Code (DTC) Index. CHECK for any DSM DTCs. REPAIR as necessary. REFER to the DSM Diagnostic Trouble Code (DTC) Index.

	REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test L: The Left Rear Heated Seat Is Inoperative

Normal Operation

The left rear heated seat module is powered by battery voltage on circuit 30-HC21 (RD/GN) and by ignition voltage circuit 20-HC21D (PK/BK), and is supplied ground on circuit 31-HC21 (BK). The heated seat switch has a high and low setting depending on selection. The heated seat switch uses the ground on circuit 31-HC15 (BK/YE) to provide a ground input to the heated seat module on circuit 8-HC21 (WH/GN) (high setting) or 10-HC21 (GY/OG) (low setting). The heated seat module supplies voltage to the heated seat elements in the seat cushion and the seat back.

Possible Causes

An inoperative heated seat can be caused by:

- wiring, terminals, or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.
- a faulty heated seat element.
- a faulty heated seat temperature sensor.

PINPOINT TEST L: THE LEFT REAR HEATED SEAT IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**	**Yes** GO to L3 . **No** GO to L2 .

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • Disconnect: Left Rear Heated Seat Module C3162. • Measure the resistance between left rear heated seat module C3162-8, circuit 8-HC21 (WH/GN), harness side and ground and between C3162-11, circuit 10-HC21 (GY/OG), harness side and ground while pressing the heated seat switch.  A0049205 • **Are the resistances less than 50 ohms when the heated seat switch is pressed and greater than 10,000 ohms when the heated seat switch is not pressed?**	
L2 CHECK HEATED SEAT SWITCH GROUND CIRCUIT 31-HC15 (BK/YE)	
• Disconnect: Left Rear Heated Seat Switch C722. • Measure the resistance between left rear heated seat switch C722-1, circuit 31-HC15 (BK/YE), harness side and ground.  A0061877 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new heated seat switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR circuit 31-HC15 (BK/YE). TEST the system for normal operation. REACTIVATE the supplemental restraint

	system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
L3 CHECK CIRCUIT 30-HC21 (RD/GN) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Measure the voltage between left rear heated seat module C3162-12, circuit 30-HC21 (RD/GN), harness side and ground.  A0042223 • **Is the voltage greater than 10 volts?**	**Yes** GO to L4 . **No** REPAIR circuit 30-HC21 (RD/GN). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
L4 CHECK CIRCUIT 20-HC21D (PK/BK) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Key in ON position. • Measure the voltage between left rear heated seat module C3162-5, circuit 20-HC21D (PK/BK), harness side and ground.  A0042224 • **Is the voltage greater than 10 volts?**	**Yes** GO to L5 . **No** REPAIR circuit 20-HC21D (PK/BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
L5 CHECK HEATED SEAT MODULE GROUND CIRCUIT 31-HC15 (BK/YE)	
• Key in OFF position. • Measure the resistance between left rear heated seat module C3162-1, circuit 31-HC15 (BK/YE), harness side and ground.	**Yes** GO to L6 . **No** REPAIR circuit 31-HC15 (BK/YE). TEST the system for normal operation. REACTIVATE the

 A0042225 • **Is the resistance less than 5 ohms?**	supplemental restraint system (SRS) REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
L6 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS	
• Measure the resistance between the left rear heated seat module C3162-6, circuit 20-HC17 (PK), harness side and C3162-7, circuit 31S-HC16 (BK/BU), harness side; and between the left rear heated seat module C3162-6, circuit 20-HC17 (PK), harness side and ground.  A0050062 • **Is the resistance greater than 1.6 ohms and less than 10 ohms between C3162-6 and C3162-7 and greater than 10,000 ohms between C3162-6 and ground?**	**Yes** GO to L7 . **No** GO to L12 .
L7 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the left rear heated seat module C3162-6, circuit 20-HC17 (PK), harness side and ground and between C3162-7, circuit 31S-HC16 (BK/BU), harness side and ground.  A0050063 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit 20-HC17 (PK), 31S-HC16 (BK/BU) or 20S-HC16 (PK/BU). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to L8 .
L8 CHECK THE HEATED SEAT TEMPERATURE SENSOR AND CIRCUITS FOR A SHORT TO VOLTAGE	
• Measure the voltage between the left rear heated seat module C3162-3, circuit 9-HC23 (BN/YE), harness side and ground and between C3162-4, circuit 8-HC23 (WH/BK), harness side and ground.	**Yes** REPAIR the affected circuit. TEST the system for normal operation. REACTIVATE the

Pinpoint Test M: The Right Rear Heated Seat Is Inoperative

Normal Operation

The passenger rear heated seat module is powered by battery voltage on circuit 30-HC21 (RD/GN) and by ignition voltage circuit 20-HC21D (PK/YE), and is supplied ground on circuit 31-HC21 (BK/GN). The heated seat switch has a high and low setting depending on selection. The heated seat switch uses the ground on circuit 31-HC18 (BK/GN) to provide a ground input to the heated seat module on circuit 8-HC21A (WH/GN) (high setting) or 10-HC21A (GY/OG) (low setting). The heated seat module supplies voltage to the heated seat elements in the seat cushion and the seat back.

Possible Causes

An inoperative heated seat can be caused by:

- wiring, terminals, or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.
- a faulty heated seat element.
- a faulty heated seat temperature sensor.

PINPOINT TEST M: THE RIGHT REAR HEATED SEAT IS INOPERATIVE

Test Step	Result / Action to Take
M1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the**	**Yes** GO to M3 . **No** GO to M2 .

vehicle over the road. NOTE: Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • Disconnect: Right Rear Heated Seat Module C3163. • Measure the resistance between right rear heated seat module C3163-8, circuit 8-HC21 (WH/GN), and C3163-11, circuit 10-HC21A (GY/OG), harness side and ground while pressing the heated seat switch.  A0049205 • **Are the resistances less than 5 ohms when the heated seat switch is pressed?**	
M2 CHECK HEATED SEAT SWITCH GROUND CIRCUIT 31-HC21 (BK/GN)	
• Disconnect: Right Rear Heated Seat Switch C822. • Measure the resistance between right rear heated seat switch C822-1, circuit 31-HC21 (BK/GN), harness side and ground.  A0061877 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new heated seat switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR circuit 31-HC21 (BK/GN). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS) REFER to Supplemental Restraint System (SRS) Deactivation and

	Reactivation in this section.
M3 CHECK CIRCUIT 30-HC21 (RD/GN) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Measure the voltage between right rear heated seat module C3163-12, circuit 30-HC21 (RD/GN), harness side and ground.  A0042223 • **Is the voltage greater than 10 volts?**	**Yes** GO to M4 . **No** REPAIR circuit 30-HC21 (RD/GN). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
M4 CHECK CIRCUIT 20-HC21D (PK/BK) FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Key in ON position. • Measure the voltage between right rear heated seat module C3163-5, circuit 20-HC21D (PK/BK), harness side and ground.  A0042224 • **Is the voltage greater than 10 volts?**	**Yes** GO to M5 . **No** REPAIR circuit 20-HC21D (PK/BK). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
M5 CHECK HEATED SEAT MODULE GROUND CIRCUIT 31-HC21 (BK/GN)	
• Key in OFF position. • Measure the resistance between right rear heated seat module C3163-1, circuit 31-HC21 (BK/GN), harness side and ground.  A0042225 • **Is the resistance less than 5 ohms?**	**Yes** GO to M6 . **No** REPAIR circuit 31-HC21 (BK/GN). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS)

	Deactivation and Reactivation in this section.
M6 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS	
• Measure the resistance between the right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and C3163-7, circuit 31S-HC16 (BK/BU), harness side; and between the right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and ground.  A0050062 • **Is the resistance greater than 1.6 ohms and less than 10 ohms between C3163-6 and C3163-7 and greater than 10,000 ohms between C3163-6 and ground?**	**Yes** GO to M7 . **No** GO to M12 .
M7 CHECK THE SEAT CUSHION HEATER AND THE SEAT BACK HEATER CIRCUITS FOR A SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the right rear heated seat module C3163-6, circuit 20-HC17 (PK), harness side and ground and between C3163-7, circuit 31S-HC16 (BK/BU), harness side and ground.  A0050063 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit 20-HC17 (PK), 31S-HC16 (BK/BU) or 20S-HC16 (PK/BU). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to M8 .
M8 CHECK THE HEATED SEAT TEMPERATURE SENSOR AND CIRCUITS FOR A SHORT TO VOLTAGE	
• Measure the voltage between the right rear heated seat module C3163-3, circuit 9-HC23 (BN/YE), harness side and ground and between C3163-4, circuit 8-HC23 (WH/BK), harness side and ground.	**Yes** REPAIR the affected circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS)

	section.

Pinpoint Test N: The Left Rear Heated Seat Is Inoperative Does Not Operate In High

Normal Operation

The heated seat switch uses circuit 8-HC21A (WH/GN) for the high setting input to the heated seat module.

Possible Causes

A driver heated seat that does not operate in high can be caused by:

- wiring, terminals, or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.

PINPOINT TEST N: THE LEFT REAR HEATED SEAT IS INOPERATIVE DOES NOT OPERATE IN HIGH

Test Step	Result / Action to Take
N1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.	**Yes** INSTALL a new heated seat module. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to N2 .

• Key in OFF position. • Disconnect: Left Rear Heated Seat Module C3162. • Measure the resistance between left rear heated seat module C3162-8, circuit 8-HC21 (WH/GN), harness side and ground while pressing the heated seat switch. • Disconnect: Left Rear Heated Seat Switch C722. • Measure the resistance between left rear heated seat switch C722-6, circuit 10-HC21 (GY/OG), harness side and left rear heated seat module C3162-11, circuit 10-HC21 (GY/OG), harness side; and between left rear heated seat switch C722-6, circuit 10-HC21 (GY/OG), harness side and ground.  A0061882 • **Is the resistance less than 1 ohm between the heated seat switch and the heated seat module and greater than 10,000 ohms between the heated seat switch and ground?**	**Yes** GO to O3 . **No** REPAIR circuit 10-HC21 (GY/OG). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
O3 CHECK CIRCUIT 10-HC21 (GY/OG) FOR SHORT TO VOLTAGE	
• Key in ON position. • Measure the voltage between the left rear heated seat module C3162-11, circuit 10-HC21 (GY/OG), harness side and ground.	**Yes** REPAIR circuit 10-HC21 (GY/OG). TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System

 A0049213 • **Is voltage present?**	(SRS) Deactivation and Reactivation in this section. **No** INSTALL a new heated seat switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test P: The Right Rear Heated Seat Is Inoperative Does Not Operate In High

Normal Operation

The heated seat switch uses circuit 8-HC18 (WH/GN) for the high setting input to the heated seat module.

Possible Causes

A passenger heated seat that does not operate in high can be caused by:

- wiring, terminals, or connectors.
- a faulty heated seat switch.
- a faulty heated seat module.

PINPOINT TEST P: THE RIGHT REAR HEATED SEAT IS INOPERATIVE DOES NOT OPERATE IN HIGH

Test Step	Result / Action to Take
P1 CHECK THE HEATED SEAT SWITCH INPUT TO THE HEATED SEAT MODULE	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Pinpoint Test R: The Power Lumbar Is Inoperative Driver

Normal Operation

The power lumbar operation is incorporated into the power seat switch. The driver power seat switch is powered by battery voltage on circuit 30-AH40 (RD/GN) and is supplied ground on circuit 31-AH40 (BK/GN). When the lumbar knob of the power seat switch is pressed, voltage and ground are supplied to the power lumbar motor. When pressing the lumbar knob in the opposite direction, the power seat switch reverses the polarity to the power lumbar motor, which moves the lumbar mechanism in the opposite direction.

Possible Causes

An inoperative driver power lumbar can be caused by:

- wiring, terminals, or connectors.
- a faulty seat control switch.
- a faulty power lumbar motor assembly.

PINPOINT TEST R: THE POWER LUMBAR IS INOPERATIVE DRIVER

Test Step	Result / Action to Take
R1 CHECK CIRCUIT 30-AH40 (RD/GN) FOR AN OPEN	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • Disconnect: Driver Seat Lumbar Control Switch C361. • Key in ON position. • Measure the voltage between the driver seat lumbar control switch C361-5, circuit 30-AH40 (RD/GN), harness side and ground.  A0003120 • **Is the voltage greater than 10 volts?**	**Yes** GO to R2 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

R2 CHECK CIRCUIT 31-AH40 (BK/GN) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between driver seat lumbar control switch C361-3, circuit 31-AH40 (BK/GN), harness side and ground.  A0003121 • **Is the resistance less than 5 ohms?**	**Yes** GO to R3 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
R3 CHECK THE DRIVER SEAT LUMBAR MOTOR	
• Connect: Driver Seat Lumbar Control Switch C361. • Disconnect: Driver Seat Lumbar Motor C366. • Measure the voltage between driver seat lumbar motor C366-2, circuit 32-AH39 (WH/BU), harness side and driver seat lumbar motor C366-1, circuit 33-AH39 (YE/BU), harness side.  A0061766 • Operate the driver seat lumbar control switch in both directions. • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new driver seat lumbar motor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to R4 .
R4 CHECK CIRCUIT 32-AH39 (WH/BU) AND 33-AH39 (YE/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Driver Seat Lumbar Control Switch C361. • Measure the resistance between driver seat lumbar control switch C361-1, circuit 32-AH39 (WH/BU), harness side and ground; and between driver seat lumbar control switch C361-4, circuit 33-AH39 (YE/BU), harness side and ground.  A0003060 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to R5 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
R5 CHECK CIRCUIT 32-AH39 (WH/BU) FOR AN OPEN	

• Measure the resistance between driver seat lumbar control switch C361-1, circuit 32-AH39 (WH/BU), harness side and driver seat lumbar motor C366-2, circuit 32-AH39 (WH/BU), harness side.  A0061767 • **Is the resistance less than 5 ohms?**	**Yes** GO to R6 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
R6 CHECK CIRCUIT 33-AH39 (YE/BU) FOR AN OPEN	
• Measure the resistance between driver seat lumbar control switch C361-4, circuit 33-AH39 (YE/BU), harness side and driver seat lumbar motor C366-1, circuit 33-AH39 (YE/BU), harness side.  A0061768 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new driver seat lumbar control switch. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test S: The Power Lumbar Is Inoperative Passenger

Normal Operation

The power lumbar operation is incorporated into the power seat switch. The passenger power seat switch is powered by battery voltage on circuit 30-AH46 (RD) and is supplied ground on circuit 31-AH46 (BK). When the lumbar knob of the power seat switch is pressed, voltage and ground are supplied to the power lumbar motor. When pressing the lumbar knob in the opposite direction, the power seat switch reverses the polarity to the power lumbar motor, which moves the lumbar mechanism in the opposite direction.

Possible Causes

An inoperative passenger power lumbar can be caused by:

- wiring, terminals, or connectors.
- a faulty seat control switch.
- a faulty power lumbar motor assembly.

PINPOINT TEST S: THE POWER LUMBAR IS INOPERATIVE PASSENGER

Test Step	Result / Action to Take
S1 CHECK CIRCUIT 30-AH46 (RD) FOR AN OPEN	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in OFF position. • Disconnect: Passenger Seat Lumbar Control Switch C331. • Key in ON position. • Measure the voltage between the passenger seat lumbar control switch C331-5, circuit 30-AH46 (RD), harness side and ground.  A0003120 • **Is the voltage greater than 10 volts?**	**Yes** GO to S2 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

S2 CHECK CIRCUIT 31-AH46 (BK) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between passenger seat lumbar control switch C331-3, circuit 31-AH46 (BK), harness side and ground.  A0003121 • **Is the resistance less than 5 ohms?**	**Yes** GO to S3 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
S3 CHECK THE PASSENGER SEAT LUMBAR MOTOR	
• Connect: Passenger Seat Lumbar Control Switch C331. • Disconnect: Passenger Seat Lumbar Motor C336. • Measure the voltage between passenger seat lumbar motor C336-2, circuit 32-AH23 (WH/BU), harness side and passenger seat lumbar motor C336-1, circuit 33-AH23 (YE/BU), harness side.  A0061766 • Operate the passenger seat lumbar control switch in both directions. • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new driver seat lumbar motor. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to S4 .
S4 CHECK CIRCUIT 32-AH45 (WH/BU) AND 33-AH45 (YE/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Passenger Seat Lumbar Control Switch C331. • Measure the resistance between passenger seat lumbar control switch C331-1, circuit 32-AH45 (WH/BU), harness side and ground; and between passenger seat lumbar control switch C331-4, circuit 33-AH45 (YE/BU), harness side and ground.  A0003060	**Yes** GO to S5 . **No** REPAIR the circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System

• **Are the resistances greater than 10,000 ohms?**	(SRS) Deactivation and Reactivation in this section.
S5 CHECK CIRCUIT 32-AH45 (WH/BU) FOR AN OPEN	
• Measure the resistance between passenger seat lumbar control switch C331-1, circuit 32-AH45 (WH/BU), harness side and passenger seat lumbar motor C336-2, circuit 32-AH45 (WH/BU), harness side. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test T: DTC B1676 Battery Pack Voltage Out Of Range

Normal Operation

The DSM is powered by battery voltage from circuit 29-AH35 (OG/YE) and 30-AH80 (RD) and is supplied ground on circuit 31-AH80 (BK).

Possible Causes

DTC B1676 battery pack voltage out of range can be caused by:

- a faulty DSM.

PINPOINT TEST T: DTC B1676 BATTERY PACK VOLTAGE OUT OF RANGE

Test Step	Result / Action to Take
T1 CHECK FOR VOLTAGE AT THE DSM	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: DSM C341b. • Key in ON position.	**Yes** CLEAR the DTC. REPEAT the DSM self-test. If DTC B1676 is retrieved, INSTALL a new DSM. REFER to Section 418-00 . REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** REFER to Section 414-00 for battery and charging system repair.

• Measure the voltage between DSM C341b-4, circuit 30-AH80 (RD), harness side and ground.  • **Is the voltage between 11.5 and 16 volts?**	

Pinpoint Test U: DTC B1358 Ignition Switch Or Blower Electronics Circuit Short To Ground/DTC B2521 Tach Circuit Failure

Normal Operation

The climate controlled seat module (CCSM) provides voltage on circuit 8-FA18 (WH/BK) and ground on circuit 31S-FA18 (BK/RD) to operate the climate controlled seat blower fan. The CCSM also supplies voltage on circuit 20S-FA18 (PK/OG) that is used by the climate controlled seat blower fan to provide a feedback voltage to the CCSM indicating climate controlled seat blower fan speed.

Possible Causes

- wiring, terminals, or connectors.
- CCSM.
- climate controlled seat blower fan.

PINPOINT TEST U: DTC B1358 IGNITION SWITCH OR BLOWER ELECTRONICS CIRCUIT SHORT TO GROUND/DTC B2521 TACH CIRCUIT FAILURE

Test Step	Result / Action to Take
U1 CHECK CIRCUIT 30-HC21 (RD/GN) OR CIRCUIT 30-HC22 (RD/YE)	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:**	**Yes** GO to U2 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Disconnect: Driver CCSM C3031a or Passenger CCSM C3036a. • Key in ON position. • Measure the voltage between driver CCSM C3031a-4, circuit 30-HC21 (RD/GN) (or passenger CCSM C3036a-4, circuit 30-HC22 [RD/YE]), harness side and ground.  • **Is the voltage greater than 10 volts?**	
U2 CHECK THE FAN MOTOR RPM INPUT	
• Key in OFF position. • Connect: Driver CCSM C3031a or Passenger CCSM C3036a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TURN BLOWER FULL POWER. • **NOTE:** After the active command FULL BLOW is commanded to the ON state, the climate controlled seat blower fan will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor the PID BLWRRPM while commanding the FULL BLOW active command ON then OFF. • **Does the PID value change when the climate controlled seat blower fan was commanded ON and OFF?**	**Yes** CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS) REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to U3 .

U3 VERIFY THE CLIMATE CONTROLLED SEAT BLOWER FAN OPERATION	
• **NOTE:** After the active command FULL BLOW is commanded to the ON state, the climate controlled seat blower fan will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Command the FULL BLOW active command ON then OFF and note the climate controlled seat blower fan operation. • **Does the climate controlled seat blower fan operate?**	**Yes** GO to U4 . **No** GO to U8 .
U4 CHECK CIRCUIT 10-FA18 (GY/BK) AND CIRCUIT 20S-FA18 (PK/OG) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver CCSM C3031b or Passenger CCSM C3036b. • Disconnect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Key in ON position. • Measure the voltage between driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and ground; and between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and ground.  A0067434 • **Are the voltages less than 0.2 volt?**	**Yes** GO to U5 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
U5 CHECK CIRCUIT 10-FA18 (GY/BK) AND CIRCUIT 20S-FA18 (PK/OG) FOR SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and ground; and between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and ground.  A0067435 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to U6 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
U6 CHECK CIRCUIT 10-FA18 (GY/BK) AND CIRCUIT 20S-FA18 (PK/OG) FOR AN OPEN	

• Measure the resistance between driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and driver climate controlled seat blower fan C3033-1 (or passenger climate controlled seat blower fan C3038-1), circuit 20S-FA18 (PK/OG), harness side; and between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and driver climate controlled seat blower fan C3033-2 (or passenger climate controlled seat blower fan C3038-2), circuit 10-FA18 (GY/BK), harness side.  A0067436 • **Are the resistances less than 5 ohms?**	**Yes** GO to U7 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
U7 CHECK THE CLIMATE CONTROLLED SEAT BLOWER FAN OUTPUT	
• Connect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Connect fused (5A) jumper leads between driver CCSM C3031a (or passenger CCSM C3036a) as follows: ♦ Driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and battery positive. ♦ Driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and battery positive. ♦ Driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground.  A0055558 • Measure the voltage between driver CCSM C3031b-14 (or passenger CCSM C3036b-14), circuit 10-FA18 (GY/BK), harness side and ground.  A0055554 • **Is voltage present?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new climate controlled seat blower fan. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
U8 CHECK CIRCUIT 31S-FA18 (BK/RD) AND CIRCUIT 8-FA18 (WH/BK) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: Driver CCSM C3031b or Passenger CCSM C3036b. • Disconnect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Key in ON position. • Measure the voltage between driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground; and between driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and ground.  A0067437 • **Are the voltages less than 0.2 volt?**	**Yes** GO to U9 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
U9 CHECK CIRCUIT 31S-FA18 (BK/RD) AND CIRCUIT 8-FA18 (WH/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground; and between driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and ground.  A0067438 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to U10 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
U10 CHECK CIRCUIT 31S-FA18 (BK/RD) AND CIRCUIT 8-FA18 (WH/BK) FOR AN OPEN	
• Measure the resistance between driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and driver climate controlled seat blower fan C3033-4 (or passenger climate controlled seat blower fan C3038-4), circuit 31S-FA18 (RD/BK), harness side; and between driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and driver climate controlled seat blower fan C3033-3 (or passenger climate controlled seat blower fan C3038-3), circuit 8-FA18 (WH/BK), harness side.	**Yes** GO to U11 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation

 A0067439 • **Are the resistances less than 5 ohms?**	and Reactivation in this section.
U11 CHECK THE CLIMATE CONTROLLED BLOWER FAN OPERATION	
• Connect: Driver Climate Controlled Seat Blower Fan C3033 or Passenger Climate Controlled Seat Blower Fan C3038. • Connect fused (5A) jumper leads between driver CCSM C3031b (or passenger CCSM C3036b) as follows: ♦ Driver CCSM C3031b-10 (or passenger CCSM C3036b-10), circuit 20S-FA18 (PK/OG), harness side and battery positive. ♦ Driver CCSM C3031b-13 (or passenger CCSM C3036b-13), circuit 8-FA18 (WH/BK), harness side and battery positive. ♦ Driver CCSM C3031b-3 (or passenger CCSM C3036b-3), circuit 31S-FA18 (BK/RD), harness side and ground.  A0055558 • **Does the climate controlled seat blower fan operate?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new climate controlled seat blower fan. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test V: DTC B2729 Cushion Over-Temp Detected/DTC B2730 Back Over-Temp Detected/DTC B2731 Differential Temperature Fault Driver Seat

Normal Operation

Each thermo-electric device (TED) contains an internal temperature sensor (thermistor) that is used by the climate controlled seat module (CCSM) to monitor the temperature of each (TED). Based on the temperature of a TED, the internal sensor resistance will vary the voltage on circuit 8-HC23 (WH/BK) (seat cushion TED) and circuit 8-HC16 (WH/RD) (backrest TED).

Possible Causes

An over-temp or differential temperature fault can be caused by:

- wiring, terminals, or connectors.
- damaged, restricted, or disconnected air ducts.
- worn, damaged, or incorrectly installed foam wedge, cushion foam, or seat cushion trim cover.
- airflow leaks.
- collapsed airflow channels in the seat cushion foam.
- incorrect installation of a TED.
- TED.
- CCSM.

PINPOINT TEST V: DTC B2729 CUSHION OVER-TEMP DETECTED/DTC B2730 BACK OVER-TEMP DETECTED/DTC B2731 DIFFERENTIAL TEMPERATURE FAULT DRIVER SEAT

Test Step	Result / Action to Take
NOTE: The presence of over-temp faults (DTCs B2729 and B2730) can be induced by incorrect operation of the climate controlled seat system after an initial HEAT setting has been attained. If a HEAT setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an over-temp condition can result and the DTC(s) will be set.	
V1 CHECK THE SEAT CUSHION TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position.	**Yes** GO to V4 . **No** GO to V2 .

• Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in ON position. • Set both front seats to LOW COOL (one LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat cushion TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat cushion TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	
V2 INSPECT THE SEAT CUSHION DUCTS	
• Key in OFF position. • Inspect the seat cushion ducts for damaged, restricted, or disconnected ducts. • **Are any duct(s) damaged, restricted, or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to V3 .
V3 INSPECT THE SEAT CUSHION TED FOR CORRECT INSTALLATION	
• Inspect the TED for correct installation to the seat cushion. • **Is the seat cushion TED correctly installed?**	**Yes** REMOVE the seat and the seat cushion trim cover. INSPECT for a worn, damaged, or incorrectly installed foam wedge, cushion foam, or seat cushion trim cover. INSPECT for collapsed airflow channels in the seat cushion foam. REPAIR or INSTALL a new foam wedge, seat cushion foam, or seat cushion trim cover as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL the seat cushion TED correctly. CLEAR the

	DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V4 CHECK THE SEAT BACKREST TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
• Set both front seats to LOW COOL (one LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat backrest TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat backrest TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	**Yes** GO to V7 . **No** GO to V5 .
V5 INSPECT THE SEAT BACKREST DUCTS	
• Inspect the seat backrest ducts for damaged, restricted, or disconnected ducts. • **Are any duct(s) damaged, restricted, or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to V6 .
V6 INSPECT THE SEAT BACKREST TED FOR CORRECT INSTALLATION	
• Inspect the TED for correct installation to the seat cushion. • **Is the seat backrest TED correctly installed?**	**Yes** REMOVE the seat and the seat backrest trim cover. INSPECT for a worn, damaged, or incorrectly installed foam wedge, backrest foam, or seat backrest trim cover. INSPECT for collapsed airflow channels in the seat backrest foam. REPAIR or INSTALL a new foam wedge, seat backrest foam, or seat backrest trim cover as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to

	Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL the seat backrest TED correctly. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V7 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Is either PID greater than 185° F (85° C)?**	**Yes** If PID CSHTEMP is greater than 185° F (85° C), GO to V8 . If PID BK_TEMP is greater than 185° F (85° C), GO to V17 . **No** GO to V12 .
V8 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC23 (WH/BK) AND 9-HC23 (BN/YE) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Cushion TED C3035. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat cushion TED C3035-3, circuit 8-HC23 (WH/BK), harness side and ground; and between driver seat cushion TED C3035-2, circuit 9-HC23 (BN/YE), harness side and ground.  A0067444 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V9 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V9 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC23 (WH/BK) AND 9-HC23 (BN/YE) FOR A SHORT TO GROUND	

• Key in OFF position. • Measure the resistance between driver seat cushion TED C3035-3, circuit 8-HC23 (WH/BK), harness side and ground; and between driver seat cushion TED C3035-2, circuit 9-HC23 (BN/YE), harness side and ground.  A0067445 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to V10 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V10 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC23 (WH/BK) AND 9-HC23 (BN/YE) FOR AN OPEN	
• Measure the resistance between driver seat cushion TED C3035-3, circuit 8-HC23 (WH/BK), harness side and driver CCSM C3031b-18, circuit 8-HC23 (WH/BK), harness side; and between driver seat cushion TED C3035-2, circuit 9-HC23 (BN/YE), harness side and driver CCSM C3031b-17, circuit 9-HC23 (BN/YE), harness side.  A0067446 • **Are the resistances less than 5 ohms?**	**Yes** GO to V11 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V11 CHECK THE SEAT CUSHION TEMPERATURE SENSOR	
• Measure the resistance between the seat cushion TED pin 3 and pin 2, component side.  A0055562 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to

	Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V12 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Did the PID values change?**	**Yes** REPAIR the climate controlled seat for airflow leaks. INSPECT the fan, TEDs, ducts, foam wedges, foam pads, trim covers and their connection points and REPAIR as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** If PID CSHTEMP does not change, GO to V13 . If PID BK_TEMP does not change, GO to V21 .
V13 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC17 (BK/OG) AND 20S-HC17 (PK) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Cushion TED C3035. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat cushion TED C3035-4, circuit 31S-HC17 (BK/OG), harness side and ground; and between driver seat cushion TED C3035-6, circuit 20S-HC17 (PK), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V14 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V14 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC17 (BK/OG) AND 20S-HC17 (PK) FOR A SHORT TO GROUND	

• Key in OFF position. • Measure the resistance between driver seat cushion TED C3035-4, circuit 31S-HC17 (BK/OG), harness side and ground; and between driver seat cushion TED C3035-6, circuit 20S-HC17 (PK), harness side and ground.  A0067448 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to V15 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V15 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC17 (BK/OG) AND 20S-HC17 (PK) FOR AN OPEN	
• Measure the resistance between driver seat cushion TED C3035-4, circuit 31S-HC17 (BK/OG), harness side and driver CCSM C3031b-2, circuit 31S-HC17 (BK/OG), harness side; and between driver seat cushion TED C3035-6, circuit 20S-HC17 (PK), harness side and driver CCSM C3031b-1, circuit 20S-HC17 (PK), harness side.  A0067449 • **Are the resistances less than 5 ohms?**	**Yes** GO to V16 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V16 CHECK THE SEAT CUSHION TED	
• Measure the resistance between the seat cushion TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to

	Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V17 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC16 (WH/RD) AND 9-HC16 (BN/RD) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Backrest TED C3034. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat backrest TED C3034-3, circuit 8-HC16 (WH/RD), harness side and ground; and between driver seat backrest TED C3034-2, circuit 9-HC16 (BN/RD), harness side and ground.  A0067444 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V18 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V18 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC16 (WH/RD) AND 9-HC16 (BN/RD) FOR A SHORT TO GROUND	
• Measure the resistance between driver seat backrest TED C3034-3, circuit 8-HC16 (WH/RD), harness side and ground; and between driver seat backrest TED C3034-2, circuit 9-HC16 (BN/RD), harness side and ground.  A0067445 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to V19 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V19 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC16 (WH/RD) AND 9-HC16 (BN/RD) FOR AN OPEN	
• Measure the resistance between driver seat backrest TED C3034-3, circuit 8-HC16 (WH/RD), harness side and driver CCSM C3031b-19, circuit 8-HC16 (WH/RD), harness side; and between driver seat backrest TED C3034-2, circuit 9-HC16 (BN/RD), harness side and driver CCSM C3031b-20, circuit 9-HC16 (BN/RD), harness side.	**Yes** GO to V20 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint

 A0067450 • **Are the resistances less than 5 ohms?**	system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V20 CHECK THE SEAT BACKREST TEMPERATURE SENSOR	
• Measure the resistance between the seat backrest TED pin 2 and pin 3, component side.  A0055562 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V21 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC16 (BK/BU) AND 20S-HC16 (PK/BU) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Driver Seat Backrest TED C3034. • Disconnect: Driver CCSM C3031b. • Key in ON position. • Measure the voltage between driver seat backrest TED C3034-4, circuit 31S-HC16 (BK/BU), harness side and ground; and between driver seat backrest TED C3034-6, circuit 20S-HC16 (PK/BU), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V22 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

V22 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC16 (BK/BU) AND 20S-HC16 (PK/BU) FOR A SHORT TO GROUND	
• Measure the resistance between driver seat backrest TED C3034-4, circuit 31S-HC16 (BK/BU), harness side and ground; and between driver seat backrest TED C3034-6, circuit 20S-HC16 (PK/BU), harness side and ground.  A0067448 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to V23 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V23 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC16 (BK/BU) AND 20S-HC16 (PK/BU) FOR AN OPEN	
• Measure the resistance between driver seat backrest TED C3034-4, circuit 31S-HC16 (BK/BU), harness side and driver CCSM C3031b-12, circuit 31S-HC16 (BK/BU), harness side; and between driver seat backrest TED C3034-6, circuit 20S-HC16 (PK/BU), harness side and driver CCSM C3031b-11, circuit 20S-HC16 (PK/BU), harness side.  A0067451 • **Are the resistances less than 5 ohms?**	**Yes** GO to V24 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
V24 CHECK THE SEAT BACKREST TED	
• Measure the resistance between the seat backrest TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self test.

	REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test W: DTC B2729 Cushion Over-Temp Detected/DTC B2730 Back Over-Temp Detected/DTC B2731 Differential Temperature Fault Passenger Seat

Normal Operation

Each thermo-electric device (TED) contains an internal temperature sensor (thermistor) that is used by the climate controlled seat module (CCSM) to monitor the temperature of each (TED). Based on the temperature of a TED, the internal sensor resistance will vary the voltage on circuit 8-HC24 (WH/RD) (seat cushion TED) and circuit 8-HC19 (WH/BK) (backrest TED).

Possible Causes

An over-temp or differential temperature fault can be caused by:

- wiring, terminals, or connectors.
- damaged, restricted, or disconnected air ducts.
- worn, damaged, or incorrectly installed foam wedge, cushion foam, or seat cushion trim cover.
- airflow leaks.
- collapsed airflow channels in the seat cushion foam.
- incorrect installation of a TED.
- TED.
- CCSM.

PINPOINT TEST W: DTC B2729 CUSHION OVER-TEMP DETECTED/DTC B2730 BACK OVER-TEMP DETECTED/DTC B2731 DIFFERENTIAL TEMPERATURE FAULT PASSENGER SEAT

Test Step	Result / Action to Take
NOTE: The presence of over-temp faults (DTCs B2729 and B2730) can be induced by incorrect operation of the climate controlled seat system after an initial HEAT setting has been attained. If a HEAT setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an over-temp condition can result and the DTC(s) will be set.	
W1 CHECK THE SEAT CUSHION TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if	**Yes** GO to W4 . **No** GO to W2 .

equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Key in ON position. • Set both front seats to the LOW COOL (one LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat cushion TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat cushion TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	
W2 INSPECT THE SEAT CUSHION DUCTS	
• Key in OFF position. • Inspect the seat cushion ducts for damaged, restricted, or disconnected ducts. • **Are any duct(s) damaged, restricted, or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to W3 .
W3 INSPECT THE SEAT CUSHION TED FOR CORRECT INSTALLATION	
• Inspect the TED for correct installation to the seat cushion. • **Is the seat cushion TED correctly installed?**	**Yes** REMOVE the seat and the seat cushion trim cover. INSPECT for a worn, damaged, or incorrectly

	installed foam wedge, cushion foam, or seat cushion trim cover. INSPECT for collapsed airflow channels in the seat cushion foam. REPAIR or INSTALL a new foam wedge, seat cushion foam, or seat cushion trim cover as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL the seat cushion TED correctly. CLEAR the DTCs. REPEAT the self test. Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W4 CHECK THE SEAT BACKREST TED EXHAUST NOZZLE FOR WASTE AIRFLOW	
• Set both front seats to LOW COOL (one LED illuminated) at the dual automatic temperature control (DATC) module. • Check for air exhausting from the seat backrest TED exhaust nozzle and compare it to the air exhausting from the opposite seat. • **Is air exhausting from the seat backrest TED exhaust nozzle comparable to the air exhausting from the opposite seat?**	**Yes** GO to W7 . **No** GO to W5 .
W5 INSPECT THE SEAT BACKREST DUCTS	
• Inspect the seat backrest ducts for damaged, restricted, or disconnected ducts. • **Are any duct(s) damaged, restricted, or disconnected?**	**Yes** REPAIR or INSTALL new duct(s) as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** GO to W6 .
W6 INSPECT THE SEAT BACKREST TED FOR CORRECT INSTALLATION	

• Inspect the TED for correct installation to the seat cushion. • **Is the seat backrest TED correctly installed?**	**Yes** REMOVE the seat and the seat backrest trim cover. INSPECT for a worn, damaged, or incorrectly installed foam wedge, backrest foam, or seat backrest trim cover. INSPECT for collapsed airflow channels in the seat backrest foam. REPAIR or INSTALL a new foam wedge, seat backrest foam, or seat backrest trim cover as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL the seat backrest TED correctly. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W7 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Is either PID greater than 185° F (85° C)?**	**Yes** If PID CSHTEMP is greater than 185° F (85° C), GO to W8 . If PID BK_TEMP is greater than 185° F (85° C), GO to W17 . **No** GO to W12 .
W8 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC24 (WH/RD) AND 9-HC24 (BN/RD) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: Passenger Seat Cushion TED C3040. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat cushion TED C3040-3, circuit 8-HC24 (WH/RD), harness side and ground; and between passenger seat cushion TED C3040-2, circuit 9-HC24 (BN/RD), harness side and ground.  A0067444 • **Are the voltages less than 0.2 volt?**	**Yes** GO to W9 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W9 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC24 (WH/RD) AND 9-HC24 (BN/RD) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between passenger seat cushion TED C3040-3, circuit 8-HC24 (WH/RD), harness side and ground; and between passenger seat cushion TED C3040-2, circuit 9-HC24 (BN/RD), harness side and ground.  A0067445 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to W10 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W10 CHECK THE SEAT CUSHION TED TEMPERATURE SENSOR CIRCUITS 8-HC24 (WH/RD) AND 9-HC24 (BN/RD) FOR AN OPEN	
• Measure the resistance between passenger seat cushion TED C3040-3, circuit 8-HC24 (WH/RD), harness side and passenger CCSM C3036b-18, circuit 8-HC24 (WH/RD), harness side; and between passenger seat cushion TED C3040-2, circuit 9-HC24 (BN/RD), harness side and passenger CCSM C3036b-17, circuit 9-HC24 (BN/RD), harness side.  A0067446 • **Are the resistances less than 5 ohms?**	**Yes** GO to W11 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W11 CHECK THE SEAT CUSHION TEMPERATURE SENSOR	

• Measure the resistance between the seat cushion TED pin 3 and pin 2, component side.  A0055562 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W12 CHECK THE SEAT CUSHION AND SEAT BACKREST TEMPERATURE PIDS	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command Menu TED HEAT MODE. • **NOTE:** After the active command TED HEAT is commanded to the ON state, the climate controlled seat TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor PIDs CSHTEMP and BK_TEMP while commanding the TED HEAT active command ON. • **Did the PID values change?**	**Yes** REPAIR the climate controlled seat for airflow leaks. INSPECT the fan, TEDs, ducts, foam wedges, foam pads, trim covers and their connection points and REPAIR as needed. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** If PID CSHTEMP does not change, GO to W13 . If PID BK_TEMP does not change, GO to W21 .
W13 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC20 (BK/WH) AND 20S-HC20 (PK/WH) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: Passenger Seat Cushion TED C3040. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat cushion TED C3040-4, circuit 31S-HC20 (BK/WH), harness side and ground; and between passenger seat cushion TED C3040-6, circuit 20S-HC20 (PK/WH), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to W14 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W14 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC20 (BK/WH) AND 20S-HC20 (PK/WH) FOR A SHORT TO GROUND	
• Key in OFF position. • Measure the resistance between passenger seat cushion TED C3040-4, circuit 31S-HC20 (BK/WH), harness side and ground; and between passenger seat cushion TED C3040-6, circuit 20S-HC20 (PK/WH), harness side and ground.  A0067448 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to W15 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W15 CHECK THE SEAT CUSHION TED HEATING ELEMENT CIRCUITS 31S-HC20 (BK/WH) AND 20S-HC20 (PK/WH) FOR AN OPEN	
• Measure the resistance between passenger seat cushion TED C3040-4, circuit 31S-HC20 (BK/WH), harness side and passenger CCSM C3036b-2, circuit 31S-HC20 (BK/WH), harness side; and between passenger seat cushion TED C3040-6, circuit 20S-HC20 (PK/WH), harness side and passenger CCSM C3036b-1, circuit 20S-HC20 (PK/WH), harness side.  A0067449 • **Are the resistances less than 5 ohms?**	**Yes** GO to W16 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W16 CHECK THE SEAT CUSHION TED	

• Measure the resistance between the seat cushion TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat cushion TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W17 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC19 (WH/BK) AND 9-HC19 (BN/YE) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Passenger Seat Backrest TED C3039. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat backrest TED C3039-3, circuit 8-HC19 (WH/BK), harness side and ground; and between passenger seat backrest TED C3039-2, circuit 9-HC19 (BN/YE), harness side and ground.  A0067444 • **Are the voltages less than 0.2 volt?**	**Yes** GO to W18 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W18 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC19 (WH/BK) AND 9-HC19 (BN/YE) FOR A SHORT TO GROUND	
• Measure the resistance between passenger seat backrest TED C3039-3, circuit 8-HC19 (WH/BK), harness side and ground; and between passenger seat backrest TED C3039-2, circuit 9-HC19 (BN/YE), harness side and ground.	**Yes** GO to W19 . **No** REPAIR the affected circuit(s). CLEAR the DTCs.

 A0067445 • **Are the resistances greater than 10,000 ohms?**	REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W19 CHECK THE SEAT BACKREST TED TEMPERATURE SENSOR CIRCUITS 8-HC19 (WH/BK) AND 9-HC19 (BN/YE) FOR AN OPEN	
• Measure the resistance between passenger seat backrest TED C3039-3, circuit 8-HC19 (WH/BK), harness side and passenger CCSM C3036b-19, circuit 8-HC19 (WH/BK), harness side; and between passenger seat backrest TED C3039-2, circuit 9-HC19 (BN/YE), harness side and passenger CCSM C3036b-20, circuit 9-HC19 (BN/YE), harness side.  A0067450 • **Are the resistances less than 5 ohms?**	**Yes** GO to W20 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W20 CHECK THE SEAT BACKREST TEMPERATURE SENSOR	
• Measure the resistance between the seat backrest TED pin 2 and pin 3, component side.  A0055562 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

W21 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC19 (BK/RD) AND 20S-HC19 (PK/OG) FOR A SHORT TO VOLTAGE	
• Key in OFF position. • Disconnect: Passenger Seat Backrest TED C3039. • Disconnect: Passenger CCSM C3036b. • Key in ON position. • Measure the voltage between passenger seat backrest TED C3039-4, circuit 31S-HC19 (BK/RD), harness side and ground; and between passenger seat backrest TED C3039-6, circuit 20S-HC19 (PK/OG), harness side and ground.  A0067447 • **Are the voltages less than 0.2 volt?**	**Yes** GO to W22 . **No** REPAIR the affected circuits. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W22 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC19 (BK/RD) AND 20S-HC19 (PK/OG) FOR A SHORT TO GROUND	
• Measure the resistance between passenger seat backrest TED C3039-4, circuit 31S-HC19 (BK/RD), harness side and ground; and between passenger seat backrest TED C3039-6, circuit 20S-HC19 (PK/OG), harness side and ground.  A0067448 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to W23 . **No** REPAIR the affected circuit(s). CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
W23 CHECK THE SEAT BACKREST TED HEATING ELEMENT CIRCUITS 31S-HC19 (BK/RD) AND 20S-HC19 (PK/OG) FOR AN OPEN	
• Measure the resistance between passenger seat backrest TED C3039-4, circuit 31S-HC19 (BK/RD), harness side and passenger CCSM C3036b-12, circuit 31S-HC19 (BK/RD), harness side; and between passenger seat backrest TED C3039-6, circuit 20S-HC19 (PK/OG), harness side and passenger CCSM C3036b-11, circuit 20S-HC19 (PK/OG), harness side.	**Yes** GO to W24 . **No** REPAIR the affected circuit. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

 A0067451 • **Are the resistances less than 5 ohms?**	
W24 CHECK THE SEAT BACKREST TED	
• Measure the resistance between the seat backrest TED pin 4 and pin 6, component side.  A0055566 • **Is the resistance greater than 1,000 ohms?**	**Yes** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new seat backrest TED. CLEAR the DTCs. REPEAT the self test. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

Pinpoint Test X: A Single Climate Controlled Seat Does Not Operate/Does Not Operate Correctly

Normal Operation

The climate controlled seat module (CCSM) controls are incorporated into the dual automatic temperature control (DATC) module. The DATC module communicates with the CCSM via the UBP bus.

Possible Causes

A climate controlled seat that does not operate or does not operate correctly can be caused by:

- wiring, terminals, or connectors.
- UBP network communication fault.
- DATC module.
- CCSM.

PINPOINT TEST X: A SINGLE CLIMATE CONTROLLED SEAT DOES NOT OPERATE/DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take

X1 CHECK FOR CCSM DTCS	
⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards. NOTE:** If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.** Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section. **NOTE:** Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors. **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** Diagnostics may be carried out on seat systems other than the side air bag or the safety belt buckle pretensioner system (lumbar, climate controlled, heated, power seat track) with the seat installed in the vehicle as long as the restraint system diagnostic tools are installed under the seats in the side air bag and safety belt buckle pretensioner to floor connectors. **NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the supplemental restraint system (SRS). Refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Were any DTCs retrieved?**	**Yes** GO to the Climate Controlled Seat Module (CCSM) Diagnostic Trouble Code (DTC) Index. **No** If the scan tool communicates with the CCSM, GO to X2 . If the scan tool does not communicate with the CCSM, GO to X3 .
X2 CHECK FOR DATC MODULE DTCS	
• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Were any DTCs retrieved?**	**Yes** GO to Section 412-00 . **No** If the scan tool communicates with the DATC module, GO to X5 . If the scan tool does not communicate with the DATC module, GO to Section 418-00 to diagnose the module communications

	network concern.
X3 CHECK CIRCUIT 31-HC21 (BK/GN) OR CIRCUIT 31-HC22 (BK/YE)	
• Key in OFF position. • Disconnect: Driver CCSM C3031a or Passenger CCSM C3036a. • For a driver seat, measure the resistance between the driver CCSM C3031a-3, circuit 31-HC21 (BK/GN), harness side and ground.  A0067452 • **NOTE:** Passenger CCSM C3036b-9, circuit 31-HC22D (BK/YE) is used to identify the CCSM as the passenger side module. If a fault is present on circuit 31-HC22D (BK/YE), the passenger CCSM may operate when the driver CCSM operation is requested by the DATC module settings. • For a passenger seat, measure the resistance between the passenger CCSM C3036a-3, circuit 31-HC22 (BK/YE), harness side and ground; and between the passenger CCSM C3036b-9, circuit 31-HC22D (BK/YE), harness side and ground.  A0067464 • **Is the resistance less than 5 ohms?**	**Yes** GO to X4 . **No** REPAIR the affected circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
X4 CHECK THE CCSM VOLTAGE	
• Key in ON position. • For driver CCSM, measure the voltage between the driver CCSM C3031a-2, circuit 20-HC21 (PK/BK), harness side and ground; and between the driver CCSM C3031a-4, circuit 30-HC21 (RD/GN), harness side and ground.  A0067453 • For passenger CCSM, measure the voltage between the passenger CCSM C3036a-2, circuit 20S-HC22 (PK/YE), harness side and ground; and between the passenger CCSM C3036a-4, circuit 30-HC22 (RD/YE), harness side and ground.	**Yes** GO to Section 418-00 to diagnose the module communications network concern. **No** REPAIR the affected circuit. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

 • **Are the voltages greater than 10 volts?**	
X5 CHECK THE DATC MODULE-TO-CCSM COMMUNICATION	
• Key in OFF position. • Connect: Driver CCSM C3031a or Passenger CCSM C3036a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: CCSM PID DATC STATE ENCODED SEAT MODE. • Monitor the CCSM PID DATC STATE ENCODED SEAT MODE with the DATC module placed in the following climate controlled seat settings: ♦ high heat (press HEAT button, three LEDs illuminated). ♦ medium heat (press HEAT button, two LEDs illuminated). ♦ low heat (press HEAT button, one LED illuminated). ♦ high cool (press COOL button, three LEDs illuminated). ♦ medium cool (press COOL button, two LEDs illuminated). ♦ low cool (press COOL button, one LED illuminated). ♦ AUTO mode (press COOL and HEAT buttons simultaneously, center LED only illuminated). • **Does the CCSM PID match the DATC module setting?**	**Yes** The climate controlled seat system is operating correctly. **No** GO to X6 .
X6 CHECK THE CCSM	
• Enter the following diagnostic mode on the diagnostic tool: CCSM Active Command THERMAL ELECTRIC DEVICE HEAT MODE. • Enter the following diagnostic mode on the diagnostic tool: CCSM PID DATC STATE ENCODED SEAT MODE. • **NOTE:** • **NOTE:** After the active command THERMAL ELECTRIC DEVICE HEAT MODE is commanded to the ON state, the TED will operate for 15 seconds then turn off. • **NOTE:** The CCSM is not the source of the fault if the active command mode is operational. • Monitor the CCSM PID DATC STATE ENCODED SEAT MODE while commanding the THERMAL ELECTRIC DEVICE HEAT MODE active command ON then OFF. • **Does the CCSM go into HEAT mode?**	**Yes** INSTALL a new DATC module. TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section. **No** INSTALL a new CCSM. CONFIGURE the CCSM. REFER to Section 418-00 . TEST the system for normal operation. REACTIVATE the supplemental restraint system (SRS). REFER to Supplemental Restraint System (SRS)

	Deactivation and Reactivation in this section.

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

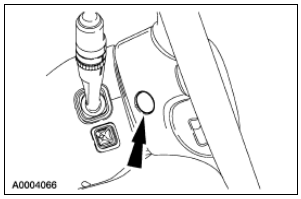
   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

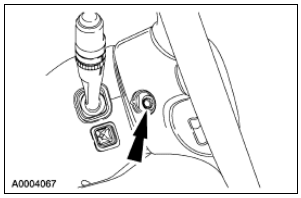
   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

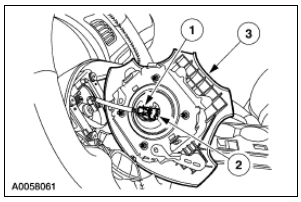
2. Remove the two steering wheel plugs (one shown).



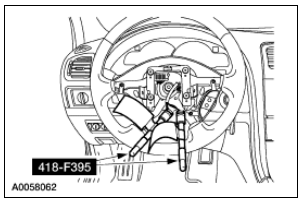
3. Remove the two driver air bag module bolts (one shown).



4. Disconnect and remove the driver air bag module.
    1. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    2. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    3. Remove the driver air bag module.



5. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.

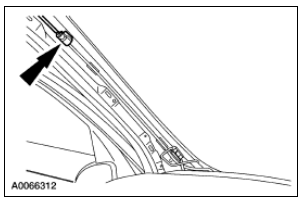


Vehicles with side air curtains

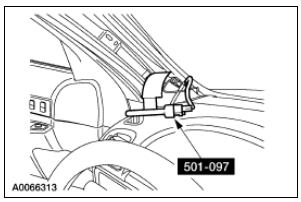
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

6. Remove the A-pillar trim panel. For additional information, refer to Section 501-01 .

7. Disconnect the driver side air curtain module electrical connector.



8. Attach the restraint system diagnostic tool to the vehicle harness side of the driver side air curtain module electrical connector.



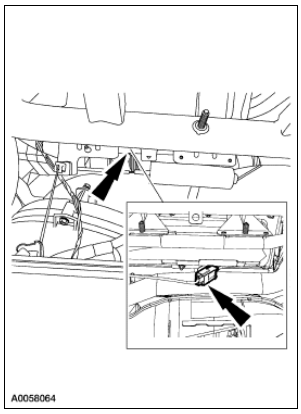
All vehicles

9. Remove the glove compartment. For additional information, refer to Section 501-01 .

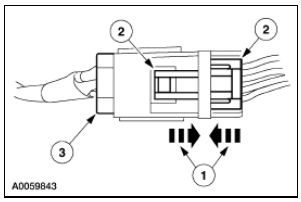
10. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

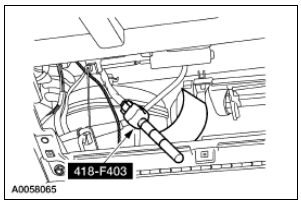
    Locate the passenger air bag module electrical connector.



11. Disconnect the passenger air bag module.
    1. Push the passenger air bag module electrical connector together.
    2. Push down, pivoting the electrical connector and release the electrical connector retainer.
    3. Pull out, disconnecting the vehicle harness end of the connector from the component end.



12. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag module electrical connector.

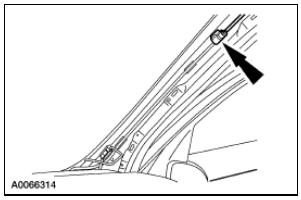


Vehicles with side air curtains

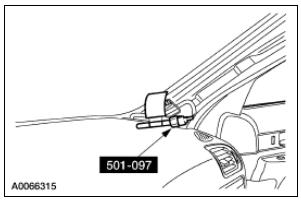
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

13. Remove the A-pillar trim panel. For additional information, refer to Section 501-01

14. Disconnect the passenger side air curtain module electrical connector.



15. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger side air curtain module electrical connector.



All vehicles

16. Connect the battery ground cable. For additional information, refer to Section 414-00 .

17. Move and tilt the front seats to their highest and most forward position.

18. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

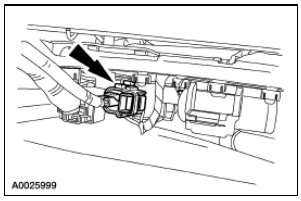
    The first row side impact sensors are located at or near the base of the B-pillars.

    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

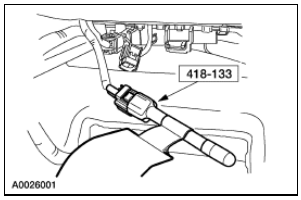
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

19. From under the passenger seat, release the tab and disconnect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



Vehicles without side air curtains

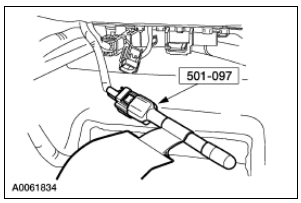
20. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side air bag electrical connector.



Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

21. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side thorax air bag electrical connector.

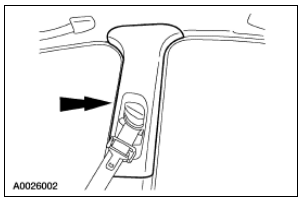


All vehicles

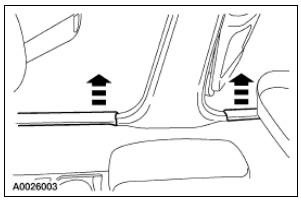
22. Remove the passenger side B-pillar weatherstripping.

23. Position the passenger side safety belt shoulder height adjuster to its highest point.

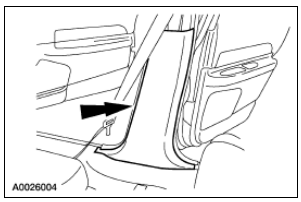
24. Detach the passenger side B-pillar trim panel.



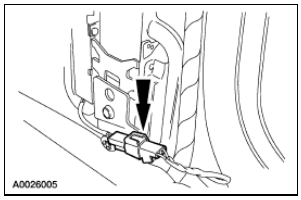
25. Remove the passenger side front and rear door scuff plates.



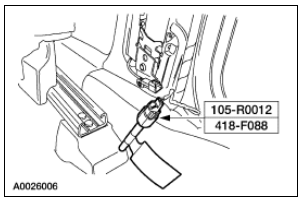
26. Remove the passenger side B-pillar lower trim panel.



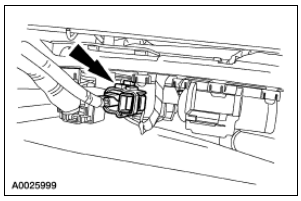
27. Disconnect the passenger side safety belt retractor pretensioner electrical connector.



28. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

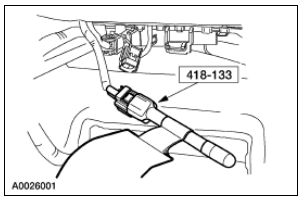


29. From under the driver seat, release the tab and disconnect the driver seat side air bag or driver seat side thorax air bag electrical connector.



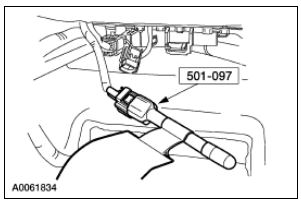
Vehicles without side air curtains

30. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side air bag electrical connector.



Vehicles with side air curtains

31. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side thorax air bag electrical connector.

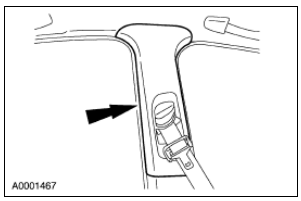


All vehicles

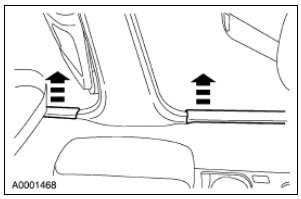
32. Remove the driver side B-pillar weatherstripping.

33. Position the driver side safety belt shoulder height adjuster to its highest point.

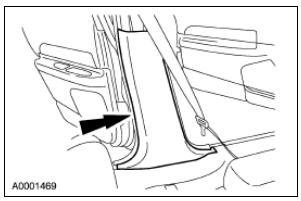
34. Detach the driver side B-pillar upper trim panel.



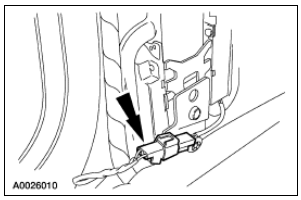
35. Remove the driver side front and rear door scuff plate.



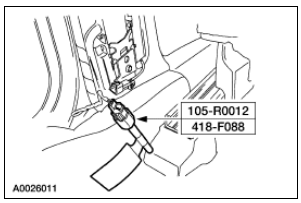
36. Remove the driver side B-pillar trim panel.



37. Disconnect the driver side safety belt retractor pretensioner electrical connector.



38. Attach the restraint system diagnostic tool to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



39. Connect the battery ground cable. For additional information, refer to Section 414-00 .

40. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

41. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Reactivation

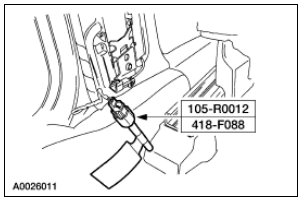
⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions,**

and notes at the beginning of the deactivation procedure.

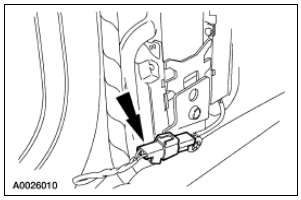
All vehicles

1. **NOTE:** Make sure the battery negative cable is still disconnected before proceeding with the reactivation procedure.

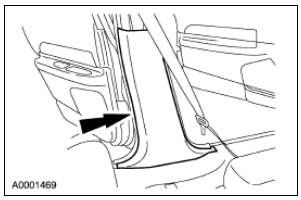
   Remove the restraint system diagnostic tool from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



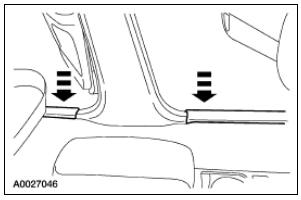
2. Connect the driver side safety belt retractor pretensioner electrical connector.



3. Install the driver side B-pillar lower trim panel.

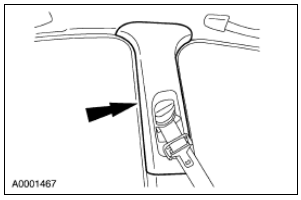


4. Install the driver side front and rear door scuff plates.



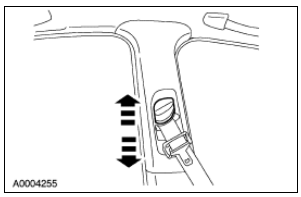
5. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

   Install the driver side B-pillar upper trim panel.



6. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks

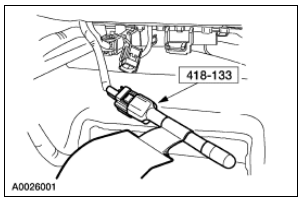
correctly in each position.



7. Install the driver side B-pillar weatherstripping.

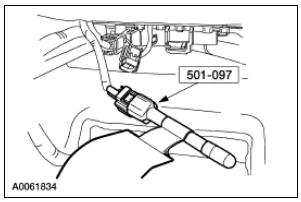
Vehicles without side air curtains

8. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side air bag electrical connector.



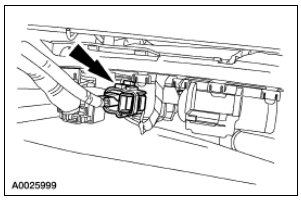
Vehicles with side air curtains

9. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side thorax air bag electrical connector.

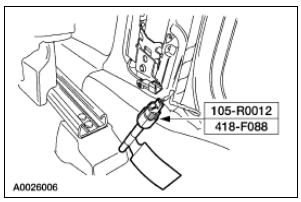


All vehicles

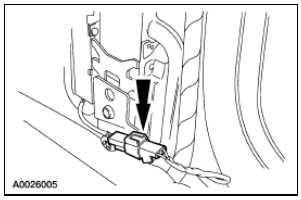
10. Connect the driver seat side air bag or driver seat side thorax air bag electrical connector.



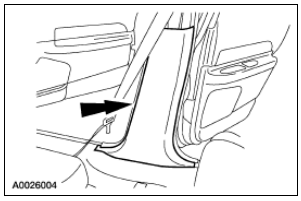
11. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.



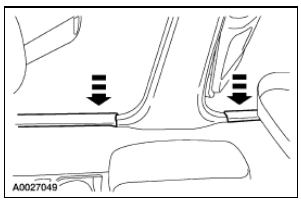
12. Connect the passenger side safety belt retractor pretensioner electrical connector.



13. Install the passenger side B-pillar lower trim panel.

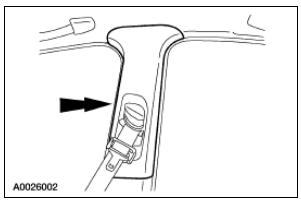


14. Install the passenger side front and rear door scuff plates.

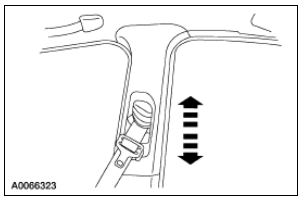


15. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

    Install the passenger side B-pillar upper trim panel.



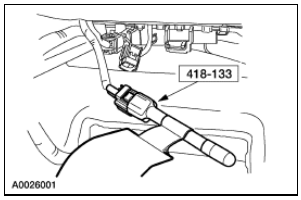
16. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.



17. Install the passenger side B-pillar weatherstripping.

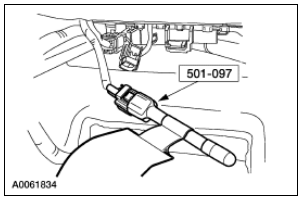
Vehicles without side air curtains

18. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side air bag electrical connector.



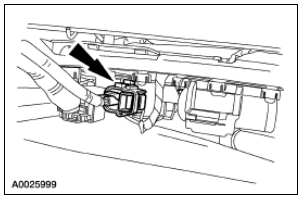
Vehicles with side air curtains

19. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side thorax air bag electrical connector.



All vehicles

20. Connect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



21. Connect the battery ground cable. For additional information, refer to Section 414-00 .

22. Position the front seats rearward.

23. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

    The first row side impact sensors are located at or near the base of the B-pillars.

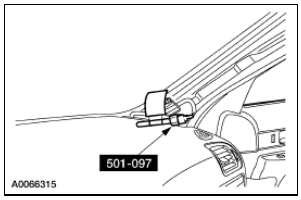
    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

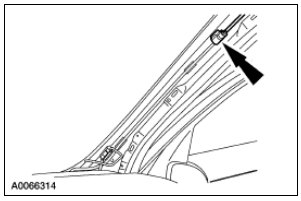
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Vehicles with side air curtains

24. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger side air curtain module electrical connector.



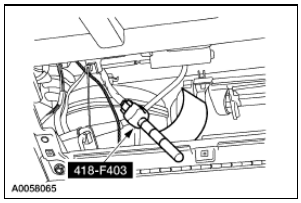
25. Connect the passenger side air curtain module electrical connector.



26. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .

All vehicles

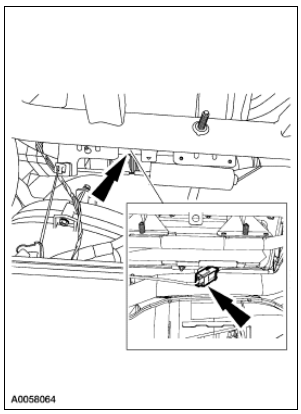
27. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.



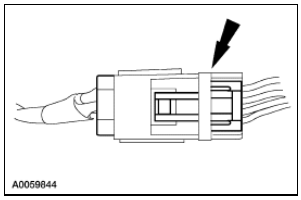
28. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

    Locate the passenger air bag module electrical connector.



29. Connect the passenger air bag module.

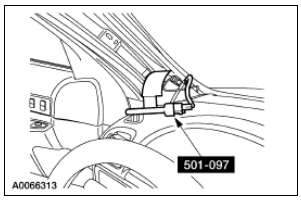


30. Install the glove compartment. For additional information, refer to Section 501-01 .

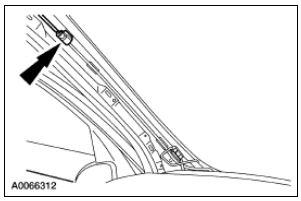
Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embosed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

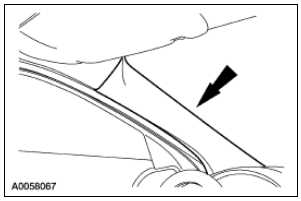
31. Remove the restraint system diagnostic tool from the vehicle harness side of the driver side air curtain module electrical connector.



32. Connect the driver side air curtain module electrical connector.

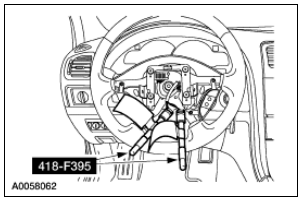


33. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .



All vehicles

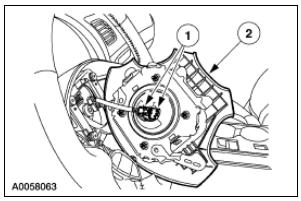
34. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



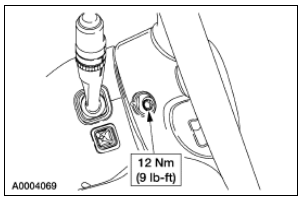
35. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

Connect and position the driver air bag module.

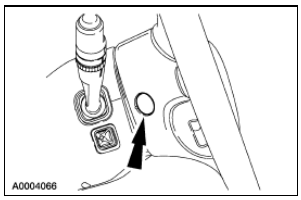
1. Connect the driver air bag module electrical connectors.
2. Position the driver air bag module to the steering wheel.



36. Install the two driver air bag module bolts (one shown).



37. Install the two steering wheel plugs (one shown).



38. Connect the battery ground cable. For additional information, refer to Section 414-00 .

39. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

40. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a side air bag deployment took place, the seatback pad, trim cover and side air bag module must be replaced. The seatback frame should be replaced if necessary.

NOTE: Driver seat is shown, passenger seat is similar.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

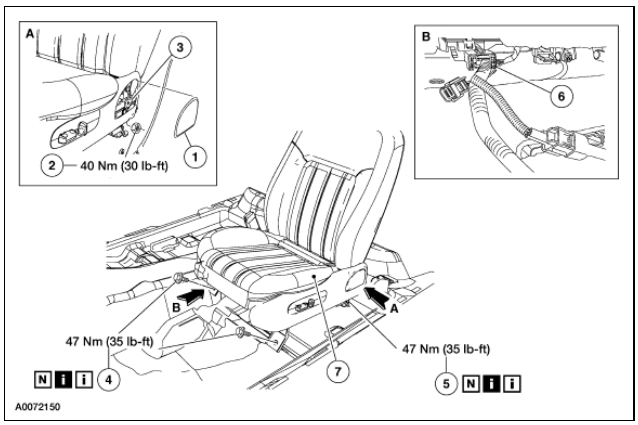
2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

3. Remove the components in the order listed in the following illustration and table.

4. **NOTE:** Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

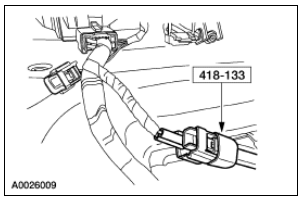
   To install, reverse the removal procedure.



Item	Part Number	Description
1	619C10	Safety belt anchor cover
2	N800937-S193	Safety belt anchor nut
3	611B08 RH/611B09 LH	Safety belt and anchor
4	W503942-S424	Front seat track-to-floor front fasteners Removal Note
4	W503942-S424	Front seat track-to-floor front fasteners Installation Note
5	W503942-S424	Front seat track-to-floor rear fasteners Removal Note
5	W503942-S424	Front seat track-to-floor rear fasteners Installation Note
6	14C719	Electrical disconnect

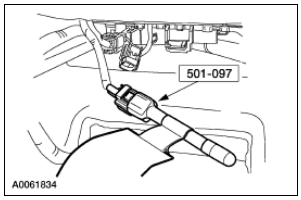
7	60005	Driver seat

5. For vehicles without side air curtains, remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side air bag electrical connector.



6. **NOTE:** If the headliner has the word "AIRBAG" embossed on it near each B-pillar , the vehicle is equipped with side air curtain modules.

   For vehicles with side air curtains, remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side thorax air bag electrical connector.



7. Connect the front seat restraint system electrical connector.

8. Connect the battery ground cable. For additional information, refer to Section 414-00 .

9. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the Diagnosis and Testing portion of this section.

10. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

11. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

12. Connect the battery ground cable. For additional information, refer to Section 414-00 .

13. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B in the Diagnosis and Testing portion of the section.

14. Check the active restraint system for correct operation. For additional information, refer to Section

501-20A .

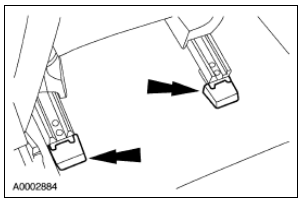
Item 4: Front Seat Track-to-Floor Front Fasteners Removal Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the front seat fasteners and discard.

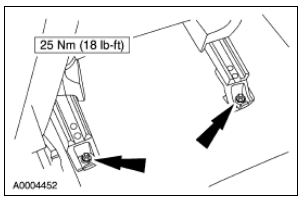
Item 5: Front Seat Track-to-Floor Rear Fasteners Removal Note

1. Connect the battery ground cable (14301). For additional information, refer to Section 414-00 .
2. Move the seat to the most forward position.
3. Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .
4. Remove the two seat track-to-floor covers.



5. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the track-to-floor fasteners and discard.



Item 5: Front Seat Track-to-Floor Rear Fasteners Installation Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Install a new bolt and washer assembly W503942-S424.

Item 4: Front Seat Track-to-Floor Front Fasteners Installation Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Install a new bolt and washer assembly W503942-S424.

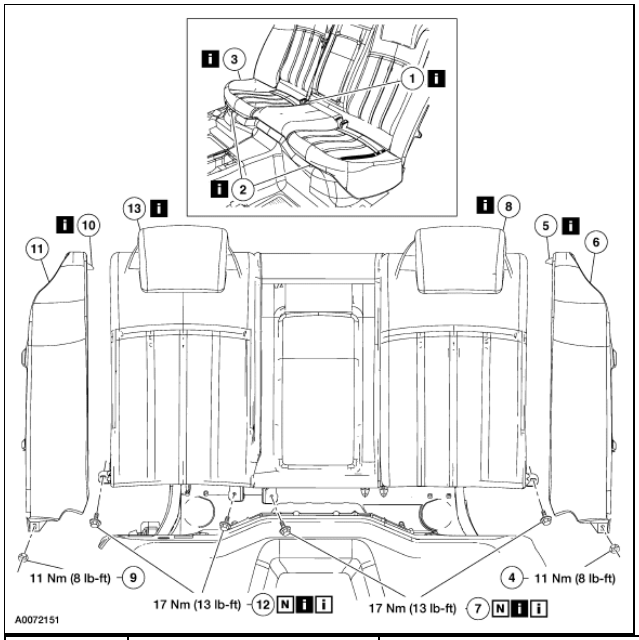
Rear Seat

Printable View (150 KB)

1. Remove the components in the order listed in the following illustration and table. To remove individual components, only carry out the listed steps:

Component	Steps
Rear seat cushion	1-3
Left side bolster	1-3, 4-6
60 percent seat backrest	1-3, 4-6, 7-8
Right side bolster	1-3, 9-11
40 percent seat backrest	1-3, 9-11, 12-13

2. To install, reverse the removal procedure.



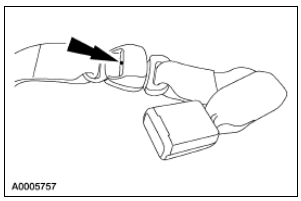
Item	Part Number	Description
1	600A38	Rear seat cushion mini-buckle Removal Note
2	101C24	Cushion release levers Removal Note
3	63804	Rear seat cushion Removal Note
4	N620482-S	Left side bolster nut
5	101C24	Left side bolster release lever Removal Note
6	66892	Left side bolster
7	W503942-S424	60 percent seat backrest fasteners Removal Note
7	W503942-S424	60 percent seat backrest fasteners Installation Note

8	66601	60 percent seat backrest Removal Note
9	N620482-S	Right side bolster nut
10	101C24	Right side bolster release lever Removal Note
11	66892	Right side bolster
12	W503942-S424	40 percent seat backrest fasteners Removal Note
12	W503942-S424	40 percent seat backrest fasteners Installation Note
13	66600	40 percent seat backrest Removal Note

3. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

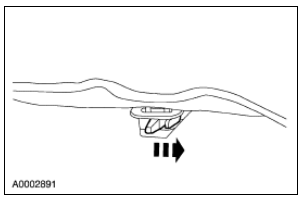
Item 1: Rear Seat Cushion Mini-Buckle Removal Note

1. Using a suitable tool, release the mini-buckle.



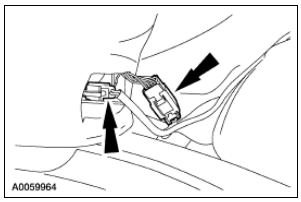
Item 2: Cushion Release Levers Removal Note

1. Release the two levers located at the lower outboard edges of the seat cushion, lift the cushion up and pull the cushion out.



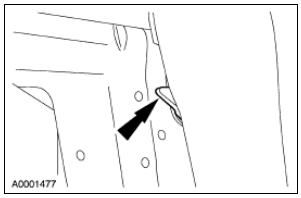
Item 3: Rear Seat Cushion Removal Note

1. Disconnect the heated seat electrical connectors at both outboard sides of the seat cushion (if equipped).



Item 5: Left Side Bolster Release Lever Removal Note

1. Pull down the lever to release the LH latch. Remove the left bolster.



Item 7: 60 Percent Seat Backrest Fasteners Removal Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

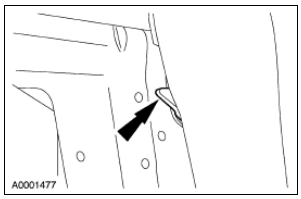
   Remove the rear seat backrest fasteners and discard.

Item 8: 60 Percent Seat Backrest Removal Note

1. From the luggage compartment, release the seat backrest.

Item 10: Right Side Bolster Release Lever Removal Note

1. Push up the lever to release the RH latch (left side shown). Remove the right bolster.



Item 12: 40 Percent Seat Backrest Fasteners Removal Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Remove the rear seat backrest fasteners and discard.

Item 13: 40 Percent Seat Backrest Removal Note

1. From the luggage compartment, release the seat backrest.

Item 12: 40 Precent Seat Backrest Fasteners Installation Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

   Install a new bolt and washer assembly W503942-S424.

Item 7: 60 Percent Seat Backrest Fasteners Installation Note

1. **NOTE:** Original fasteners must be discarded and new service fasteners installed. Service fasteners can be reused.

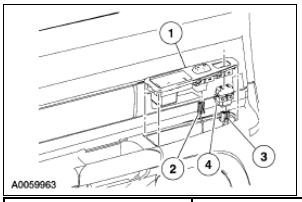
   Install a new bolt and washer assembly W503942-S424.

Heated Seat Switch Rear

Printable View (29 KB)

NOTE: Left side is shown, right side is similar.

1. Remove the components in the order listed in the following illustrations and table.
2. To install, reverse the removal procedure.



Item	Part Number	Description
1	14527	Bezel housing
2	14A005	Connector
3	14A005	Connector

 ST2507-A	Diagnostic Tool, Restraint System (4 req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 req'd) 418-F088 (105-R0012)

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a side air bag deployment took place, the seatback pad, trim cover and side air bag module must be replaced. The seatback frame should be replaced if necessary.

NOTE: Driver seat is shown, passenger seat is similar.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

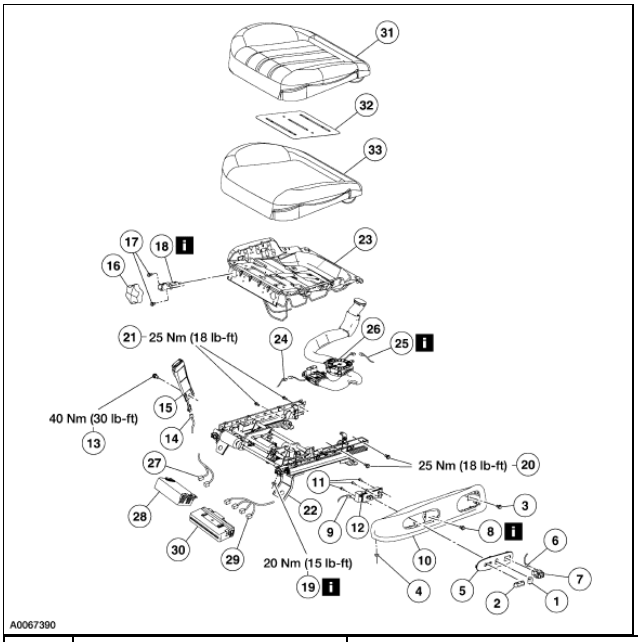
3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Remove the driver seat. For additional information, refer to Driver Seat in this section.

4. Disassemble the components in the order listed in the following illustration and table. To remove individual components, carry out only the following steps:

Component	Steps
Front seat backrest	1-21
Front seat cushion trim cover	1-31
Safety belt buckle	13-15
Power seat switch	1-12
Power lumbar switch	1-7
Climate controlled seat module	27, 28
Memory seat module	29, 30
Seat track, power seat motors	1-22
Blower assembly, ventilation air-lower	1-26

5. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	14711	Power seat knob
2	14711	Power seat knob
3	56902-S	Side shield screw
4	56902-S	Side shield screw
5	14A706	Power seat switch bezel
6	14B719	Connector (if equipped)
7	14C723	Power lumbar switch (if equipped)
8	56902-S	Side shield screw Disassembly Note
9	14B719	Connector
10	62185	Side shield
11	56902-S	Seat control switch screws
12	14A701	Power seat switch
13	18495	Safety belt buckle bolt
14	14B719	Connector
15	61203	Safety belt buckle
16	610A76	Manual lumbar knob (if equipped)
17	14C719	Manual lumbar adjuster screws (if equipped)
18	61203	Manual lumbar adjuster (if equipped) Disassembly Note
19	N620482-S	Power seat track nut Disassembly Note
20	009560	Backrest-to-seat track bolt
21	009560	Backrest-to-seat track bolt
22	61701	Power seat track
23	60327	Seat cushion pan
24	14C719-LH, 14A699-RH	Connector (if equipped)

25	14C719-LH, 14A699-RH	Connector (if equipped) Disassembly Note
26	19N550	Blower assembly, ventilation air-lower
27	14C719-LH, 14A699-RH	Connector (if equipped)
28	14C724	Climate controlled seat module (if equipped)
29	14C719-LH, 14A699-RH	Connector (if equipped)
30	14C708	Memory seat module (if equipped)
31	62900	Cushion trim cover
32	19N550	Climate controlled seat cushion duct (if equipped)
33	632A22	Cushion foam pad

6. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Install the passenger seat. For additional information, refer to Driver Seat in this section.

7. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

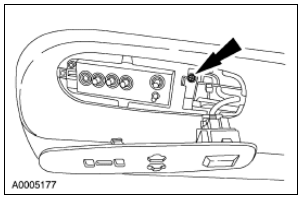
   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

8. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B in the Diagnosis and Testing portion of the section.

Item 8: Side Shield Screw Disassembly Note

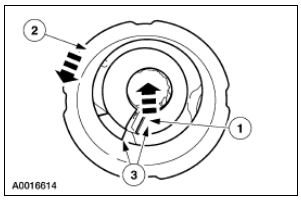
1. Remove the screw from behind the bezel.



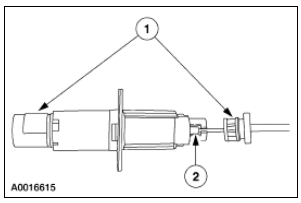
Item 18: Manual Lumbar Adjuster Disassembly Note

1. Release the manual lumbar adjustment screw.
   1. From inside the lumbar adjustment mechanism, push the screw stop in toward the center.
   2. While pushing the screw stop toward the center, rotate the lumbar adjustment mechanism counterclockwise.

3. The screw stop will pass clear of the internal stop, releasing the manual lumbar adjustment screw.



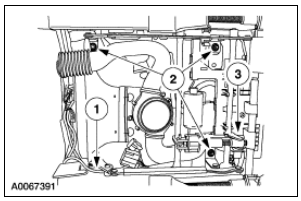
2. Remove the manual lumbar cable.
    1. Continue turning the manual lumbar mechanism counterclockwise until the cable support comes out.
    2. Push the screw out enough to remove the cable end.



3. Route the manual lumbar adjuster cable out from the seat cushion frame.

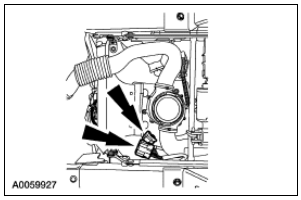
Item 19: Power Seat Track Nut Disassembly Note

1. Remove the seat track and the nuts.
    1. Detach the wire harness retainer from the seat track-to-cushion stud.
    2. Remove the four seat track-to-cushion nuts (three shown).
    3. Remove the seat track.



Item 25: Connector Disassembly Note

1. Separate the connectors from the seat cushion frame.



Front Seat Cushion Passenger Printable View (385 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 req'd) 418-133
 ST2507-A	Diagnostic Tool, Restraint System (4 req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 req'd) 418-F088 (105-R0012)

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

⚠ CAUTION: If replacing only the front passenger seat cushion trim cover, the occupant classification sensor must be rezeroed.

NOTE: Occupant classification sensor (OCS) system components (seat cushion foam pad, bladder with pressure sensor and electronic control unit [ECU]) are calibrated to each other and are serviced as an assembly. The OCS system components are not to be installed separately. If a new OCS system, OCS system component or seat cushion foam pad are needed, a new OCS system service kit (seat cushion foam pad, bladder with pressure sensor and electronic control unit) must be installed as an assembly.

NOTE: To identify between a production OCS system and a service OCS system (OCS service kit) inspect the ECU electrical connector. A production OCS system allows the disconnect of the ECU electrical connector. A service OCS system (OCS service kit) has the ECU electrical connector glued to the ECU, it cannot and should not be disconnected or altered.

NOTE: When installing a new occupant classification sensor (OCS) service kit, refer to Section 501-20B for the OCS service kit installation procedure.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

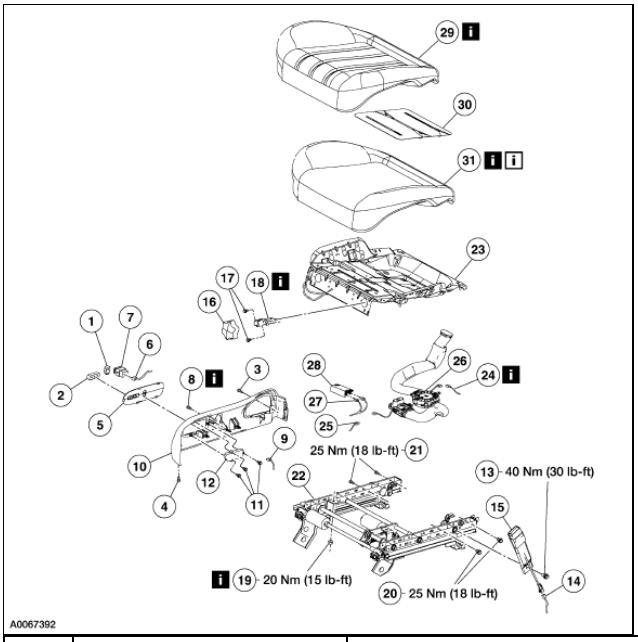
3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Remove the passenger seat. For additional information, refer to Driver Seat in this section.

4. Disassemble the components in the order listed in the following illustration and table. To remove individual components, carry out only the following steps:

Component	Steps
Front seat backrest	1-21
Front seat cushion trim cover	1-29
Safety belt buckle	13-15
Power seat switch	1-12
Power lumbar switch	1-7
Climate controlled seat module	27, 28
Seat track, power seat motors	1-22
Blower assembly, ventilation air-lower	1-26

5. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	14711	Power seat knob
2	14711	Power seat knob
3	56902-S	Side shield screw
4	56902-S	Side shield screw
5	14A706	Power seat switch bezel
6	14B719	Connector (if equipped)
7	14C723	Power lumbar switch (if equipped)
8	56902-S	Side shield screw Disassembly Note
9	14B719	Connector
10	62185	Side shield

26	19N550	Blower assembly, ventilation air-lower
27	14C719-LH, 14A699-RH	Connector (if equipped)
28	14C724	Climate controlled seat module (if equipped)
29	62900	Cushion trim cover Disassembly Note
30	19N550	Climate controlled seat cushion duct (if equipped)
31	603B02	Occupant Classification Sensor (OCS) Disassembly Note
31	603B02	Occupant Classification Sensor (OCS) Assembly Note

6. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Install the passenger seat. For additional information, refer to Driver Seat in this section.

7. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

8. ⚠ **CAUTION: The following precautions must be taken before rezeroing of the OCS system:**

   - Make sure the OCS system components are connected and no faults are present.
   - Make sure the vehicle has not been exposed to temperatures below 6°C (42°F) or above 36°C (97°F) within four hours prior to the rezeroing process. If the vehicle has been exposed to temperatures outside the temperature limits (6-36°C [42-97°F]), the vehicle must be exposed to and kept at a temperature within the limits for a minimum of four hours.
   - Make sure nothing is present on the passenger seat before rezeroing and nothing is placed on the seat during the rezeroing process.
   - Make sure a minimum five second time period has passed after cycling the ignition switch ON before the rezeroing process.

   NOTE: It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed, or an OCS service kit is installed. A scan tool is used to trigger the active command to carry out rezeroing of the OCS system.

   NOTE: When using a New Generation Star (NGS) tester, the OCS system rezero function is on the Ford Service Function (red) card. To rezero the OCS system:

   - select SERVICE BAY FUNCTIONS
   - select RCM
   - select SYSTEM RESET
   - select the vehicle from the menu
   - view the on-screen information then press TRIGGER

The NGS screen will then display OCS RESET: REZERO. Press DONE (button 8) to rezero the OCS system. The NGS will return the vehicle menu once rezeroing of the OCS system is complete.

NOTE: To rezero the OCS system using the Worldwide Diagnostic System (WDS):

- select the Toolbox icon
- select Body from the menu
- select Restraints from the menu
- select Seat Weight Sensor ReZero

After selecting "Seat Weight Sensor ReZero, follow the on-screen prompts to carry out rezeroing of the OCS system.

NOTE: If the first attempt to rezero the OCS system is unsuccessful, a second attempt must be made.

Rezero the occupant classification sensor.

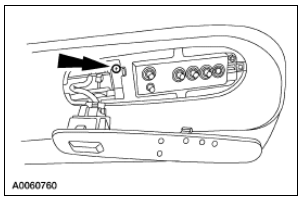
- With the front passenger seat empty, use a scan tool to trigger the active command and rezero the occupant classification sensor.

9. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B in the Diagnosis and Testing portion of the section.

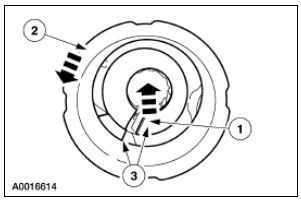
Item 8: Side Shield Screw Disassembly Note

1. Remove the screw from behind the bezel.



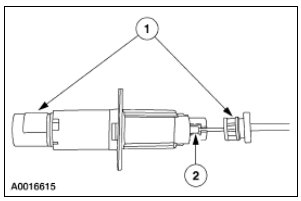
Item 18: Manual Lumbar Adjuster Disassembly Note

1. Release the manual lumbar adjustment screw.
   1. From inside the lumbar adjustment mechanism, push the screw stop in toward the center.
   2. While pushing the screw stop toward the center, rotate the lumbar adjustment mechanism counterclockwise.
   3. The screw stop will pass clear of the internal stop, releasing the manual lumbar adjustment screw.



2. Remove the manual lumbar cable.

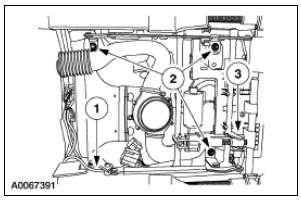
1. Continue turning the manual lumbar mechanism counterclockwise until the cable support comes out.
2. Push the screw out enough to remove the cable end.



3. Route the manual lumbar adjuster cable out from the seat cushion frame.

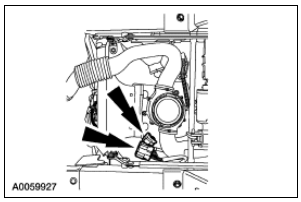
Item 19: Power Seat Track Nut Disassembly Note

1. Remove the seat track and the nuts.
    1. Detach the wire harness retainer from the seat track-to-cushion stud.
    2. Remove the four seat track-to-cushion nuts (three shown).
    3. Remove the seat track.



Item 24: Connector Disassembly Note

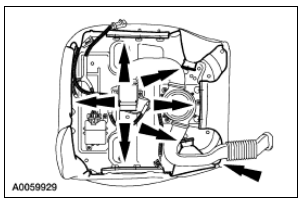
1. Separate the connectors from the seat cushion frame.



Item 29: Seat Cushion Trim Cover Disassembly Note

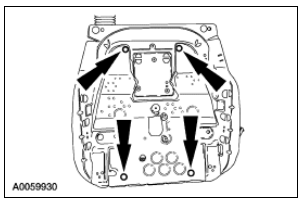
1. Remove the seat cushion frame, trim cover, foam pad and occupant classification sensor as an assembly.

2. Separate the seat cushion trim cover retainers.
    - Vehicles with an original equipment occupant classification sensor, remove the seat cushion trim cover retainers and separate the seat cushion pad and trim cover from the seat cushion frame.
    - Vehicles with a service part occupant classification sensor, remove the seat cushion trim cover retainers from the seat cushion frame.

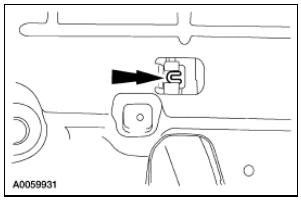


Item 31: Occupant Classification Sensor Disassembly Note

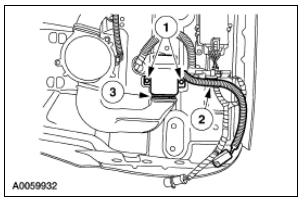
1. Vehicles with an original equipment occupant classification sensor, remove the pin-type retainers.



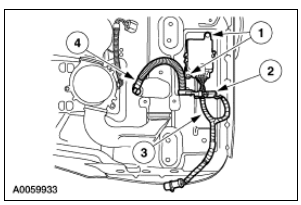
2. Releasing the pressure sensor retainer.
   - Vehicles with an original equipment occupant classification sensor, fold the bladder away and pry up, releasing the pressure sensor retainer.
   - Vehicles with a service part occupant classification sensor, fold the seat cushion pad and bladder away and pry up, releasing the pressure sensor retainer.



3. Remove the climate control components.
   1. Remove the screws.
   2. Separate the wire harness from the seat cushion pan.
   3. Separate the climate control duct and remove the assembly.



4. Remove the occupant classification sensor (OCS).
   1. Remove the screws.
   2. Separate the pressure sensor.
   3. Separate the wire harness from the seat cushion pan.
   4. Route the OCS components back through the seat cushion pan and remove the assembly.

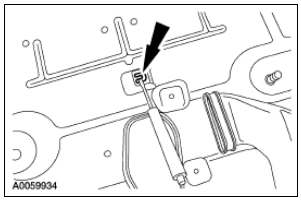


5. ⚠ **CAUTION: If replacing only the front passenger seat cushion trim cover, the occupant classification sensor must be rezeroed.**

   Separate the trim cover from the seat cushion pad.

Item 31: Occupant Classification Sensor Assembly Note

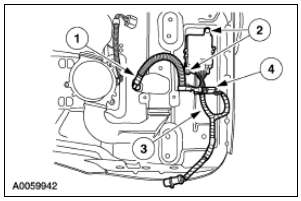
1. Bend the pressure sensor retaining tab back.



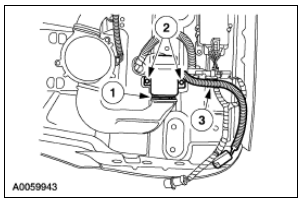
2. ⚠ **CAUTION: Inspect the occupant classification sensor assembly and seat cushion frame for any foreign objects before installing the occupant classification sensor assembly to the seat cushion frame. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   Install the occupant classification sensor (OCS).

   1. Feed the OCS components back through the cushion pan opening.
   2. Position the electronic control unit and install the screws.
   3. Route the wire harness and install the pin-type retainers.
   4. Install the pressure sensor onto the bracket.

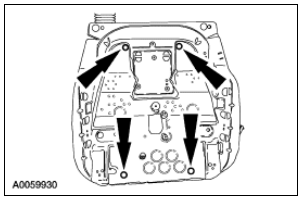


3. Install the climate control component.
   1. Position the climate control component into the duct and tie strap it in place.
   2. Install the screws.
   3. Route the wire harness and install the pin-type retainer to the seat cushion pan.



4. ⚠ **CAUTION: Inspect the occupant classification sensor assembly and seat cushion frame for any foreign objects before installing the occupant classification sensor assembly to the seat cushion frame. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   Vehicles having the original occupant classification sensor installed, position the bladder and install the pin-type retainers.



5. ⚠ **CAUTION: Inspect the seat cushion pad and seat cushion trim cover for any foreign objects, before installing the seat trim cover to the seat cushion pad. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

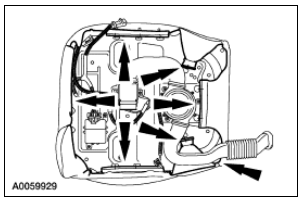
⚠ CAUTION: If replacing only the front passenger seat cushion trim cover, the occupant classification sensor must be rezeroed.

Install the cushion trim cover to the cushion foam pad.

6. **⚠ CAUTION: Inspect the seat cushion frame and seat cushion pad for any foreign objects before installing the cushion pad and trim cover assembly to the seat cushion frame. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   Attach the seat cushion trim cover retainers to the seat cushion frame.

   - Vehicles having a service part occupant classification sensor installed, position the seat cushion trim cover with foam pad and OCS bladder to the seat cushion frame and attach the trim cover to the frame.
   - Vehicles having the original occupant classification sensor installed, position the seat cushion trim cover with foam pad to the seat cushion frame and attach the trim cover to the frame.



7. Rezero the occupant classification sensor. With the front passenger seat empty, use a scan tool to trigger the active command and rezero the occupant classification sensor.

Rear Seat Cushion

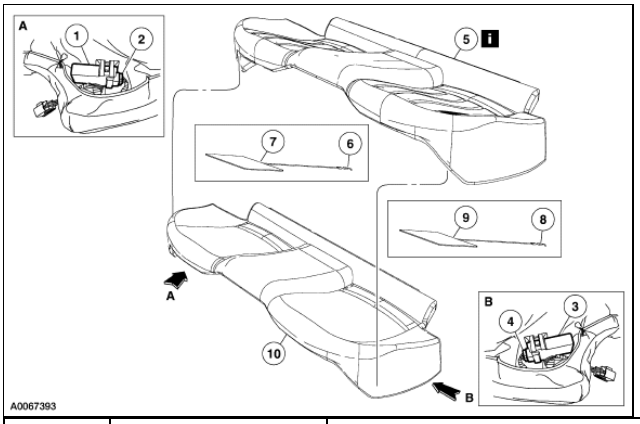
Printable View (77 KB)

1. Remove the rear seat cushion. For additional information, refer to Rear Seat in this section.

2. Disassemble the components in the order listed in the following illustration and table. To remove individual components, carry out only the following steps:

Component	Steps
Right heated seat module	1, 2
Left heated seat module	3, 4
Right heated seat cushion element	5, 6-7
Left heated seat cushion element	5, 8-9
Rear seat trim cover	5

3. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	14C724	Right heated seat module (if equipped)
2	19K315	Connector (if equipped)
3	14C724	Left heated seat module (if equipped)
4	19K315	Connector (if equipped)
5	63804	Cushion trim cover Disassembly Note
6	19K315	Connector (if equipped)
7	14D698	Cushion heater element (if equipped)
8	19K315	Connector (if equipped)
9	14D698	Cushion heater element (if equipped)
10	600A88	Cushion foam pad

Item 5: Cushion Trim Cover Disassembly Note

1. Remove all the outer seat cushion trim cover hog rings.

2. ⚠ **CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat cushion foam pad.**

   Separate the hook and loop fasteners.

3. Remove all the inner seat cushion trim cover hog rings.

4. Remove the seat cushion trim cover.

Front Seat Backrest

Printable View (215 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 req'd) 418-133
 ST2507-A	Diagnostic Tool, Restraint System (4 req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 req'd) 418-F088 (105-R0012)

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Side air bag modules with damaged covers must be replaced.

⚠ CAUTION: Do not handle or lift the seat by the inboard side shield or a torque tube (seat track motor cable and housing). Care must be taken when handling or lifting the seat to prevent damage.

NOTE: If a side air bag deployment took place, the seatback pad, trim cover and side air bag module must be replaced. The seatback frame should be replaced if necessary.

NOTE: The driver seat is shown, the passenger seat is similar.

NOTE: A seat side air bag module is shown, a seat side thorax air bag module is similar. For additional information, refer to Section 501-20B in the Description and Operation portion of the section.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Remove the front seat. For additional information, refer to Driver Seat in this section.

4. Remove the front seat backrest. for additional information, refer to Front Seat Cushion Driver or Front Seat Cushion Passenger in this section.

5. ⚠ **WARNING: Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).**

   ⚠ **CAUTION: When removing the seat back trim panel, be careful not to damage the J-hooks. If the seat back trim panel J-hooks are damaged, install a new seat back trim panel.**

   NOTE: If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

   Disassemble the components in the order listed in the following illustration and table. To remove individual components, carry out only the following steps:

Component	Steps
Blower assembly, ventilation air-upper	1-4
Power lumbar assembly	1-8, 10, 11
Manual lumbar assembly	1-8, 12

6. ⚠ **WARNING: Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

⚠ WARNING: Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

⚠ WARNING: Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. If the air bag module is damaged, replace it. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

⚠ WARNING: If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury, in the event of an air bag deployment.

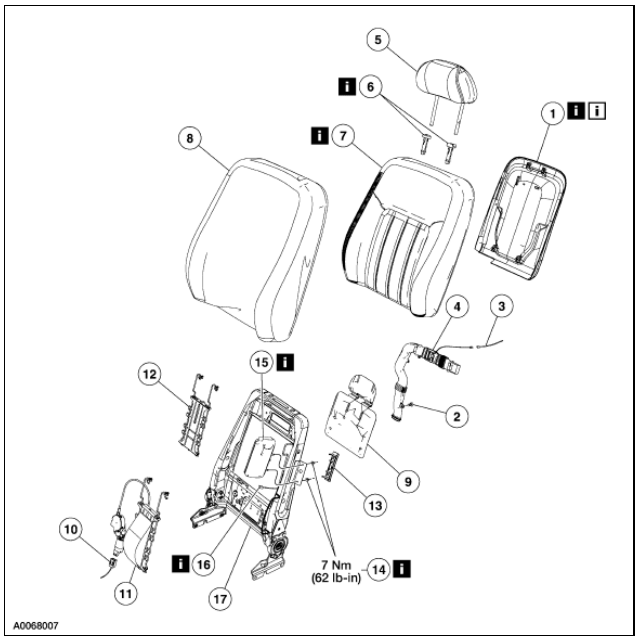
⚠ WARNING: Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

⚠ WARNING: If the air bag deployment chute is not properly positioned, the side air bag may not deploy properly.

⚠ WARNING: Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects, before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

NOTE: The alignment pin will only allow the side air bag module to be installed to the seat back mounting bracket one way.

To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	60762	Backrest trim panel Disassembly Note
1	60762	Backrest trim panel Assembly Note

2	807452	Pin-type retainer (if equipped)
3	14C719-LH, 14A699-RH	Connector (if equipped)
4	19N550	Blower assembly, ventilation air-upper
5	611A09	Head restraint
6	610A16	Head restraint sleeves Disassembly Note
7	64416	Backrest trim cover Disassembly Note
8	64810	Backrest foam pad
9	19N550	Climate controlled seat backrest cushion duct (if equipped)
10	14C719-LH, 14A699-RH	Connector (if equipped)
11	65500	Power lumbar assembly (if equipped)
12	65501	Manual lumbar assembly (if equipped)
13	009036	Seat side air bag nut cover
14	N620480-S	Seat side air bag nuts Disassembly Note
15	11791	Seat side air bag module Disassembly Note
15	611D10	Thorax side air bag module Disassembly Note
16	14K155	Connector Disassembly Note
17	61019	Backrest frame

7. Install the front seat backrest. For additional information, refer to Front Seat Cushion - Driver or Front Seat Cushion - Passenger in this section.

8. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   NOTE: Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   Install the front seat. For additional information, refer to Driver Seat in this section.

9. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

10. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

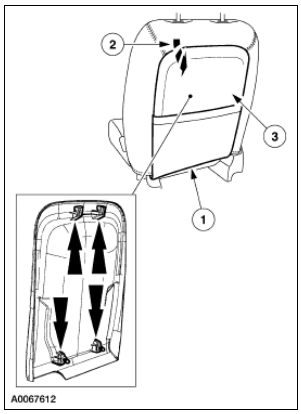
With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B in the Diagnosis and Testing portion of the section.

Item 1: Backrest Trim Panel Disassembly Note

1. **⚠ CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remained in the seat frame, install a new panel.**

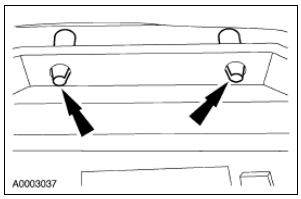
   Remove the seat back trim panel.

   1. Holding the panel at bottom center, pull rearward (not up) until both lower attachments are disengaged.
   2. While pushing in at the top of the panel, slide the panel down to disengage the upper J-hooks.
   3. Remove the panel.
      - Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame, install a new panel.
      - Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
      - Before installing the panel, install new pin-type retainers.



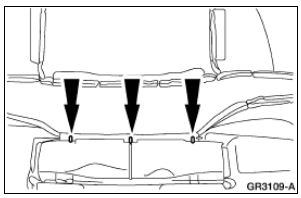
Item 6: Head Restraint Sleeves Disassembly Note

1. Pinch the end of the head restraint sleeves and remove.



Item 7: Backrest Trim Cover Disassembly Note

1. Remove and discard the hog rings. Remove backrest trim cover from the foam pad.

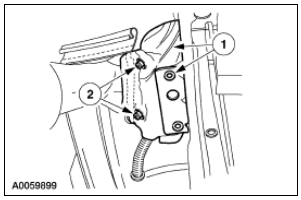


Item 14: Seat Side Air Bag or Thorax Side Air Bag Nuts Disassembly Note

1. If installing a new seat side air bag module or thorax side air bag module, use new retaining nuts. If the same seat side air bag module or thorax side air bag module is to be reused then reuse the seat side air bag module or thorax side air bag module nuts.

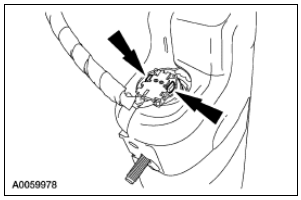
Item 15: Seat Side Air Bag Module or Thorax Side Air Bag Module Disassembly Note

1. Remove the side air bag module or thorax side air bag module from the deployment chute.
    1. Separate the side air bag module or thorax side air bag module and deployment chute from the seat back mounting bracket.
    2. Pull the side air bag module or thorax side air bag module mounting studs back through the deployment chute openings and remove the side air bag module or thorax side air bag module from the deployment chute.



Item 16: Connector Disassembly Note

1. Squeeze the tabs together, disconnect and remove the side air bag module or thorax side air bag module.



Item 1: Backrest Trim Panel Assembly Note

1. ⚠ **CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers stayed in the seat frame, install a new panel.**

   Align the seat back trim panel J-hooks to the seat back frame at the top and engage the pin-type retainers at the bottom of the seat back frame.

    - Inspect the lower panel attachments. If either pin-type retainer remained in the seat frame, install a new panel.
        - ♦ Inspect the upper panel attachments. If either J-hook is cracked or damaged, install a new panel.
        - ♦ Before installing the panel, install new pin-type retainers.

Rear Seat Backrest

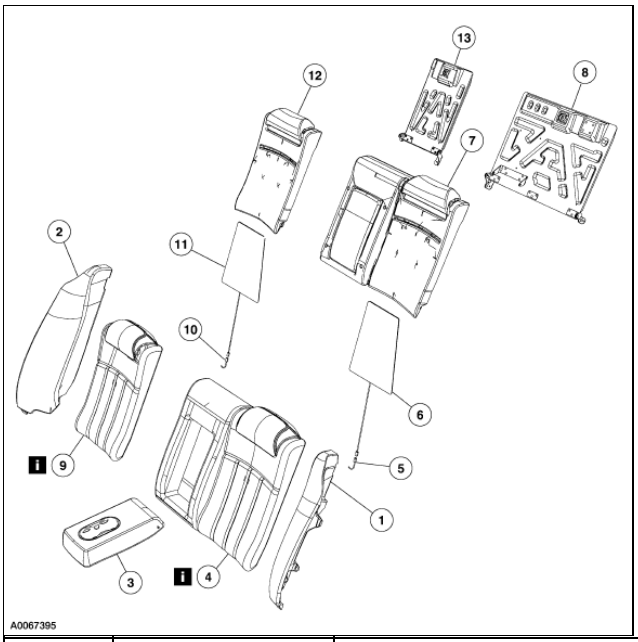
Printable View (137 KB)

1. Remove the rear seat backrest. For additional information, refer to Rear Seat in this section.

2. Disassemble the components in the order listed in the following illustration and table. To remove individual components, carry out only the following steps:

Component	Steps
Left heated seat backrest element	3-6
Right heated seat backrest element	9-11

3. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	66893	Left bolster
2	66892	Right bolster
3	67244	Backrest folding armrest
4	66601	60 percent seat backrest trim cover Disassembly Note
5	19K315	Connector (if equipped)
6	14D698	Backrest heater element (if equipped)
7	66800	60 percent seat backrest foam pad
8	613A38	60 percent seat backrest support panel
9	66600	40 percent seat backrest trim cover Disassembly Note
10	19K315	Connector (if equipped)
11	14D698	Backrest heater element (if equipped)
12	66800	40 percent seat backrest foam pad

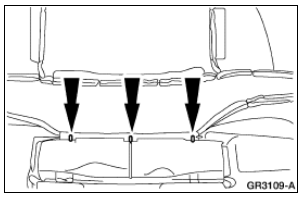
13	613A38	40 percent seat backrest support panel

Item 4: 60 Percent Seat Backrest Trim Cover Disassembly Note

1. ⚠ **CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat backrest foam pad.**

   Separate the hook and loop fasteners.

2. Remove and discard the hog rings.



Item 9: 40 Percent Seat Backrest Trim Cover Disassembly Note

1. ⚠ **CAUTION: Use care when separating the seat upholstery from the hook and loop strip, or the hook and loop strip can be torn from the seat backrest foam pad.**

   Separate the hook and loop fasteners.

2. Remove and discard the hog rings.

Handles, Locks, Latches and Entry Systems

Printable View (13 KB)

The hood latch system consists of one latch controlled by the hood release handle under the lower steering column cover.

The door latch system consists of a primary latch fastened to the inside of the door frame, controlled by the exterior and interior door handles. The door latch system has an integrated door ajar switch, door lock actuator and a driver set/reset switch (driver door only). The door locks are actuated by either a keyless entry remote transmitter, the interior door lock/unlock switch (located on the driver and passenger door trim panels), manually inserting the key into the driver door lock cylinder to lock/unlock or using the keyless entry keypad.

The luggage compartment lid latch is equipped with an interior release handle and actuator. The luggage compartment lid can be locked and unlocked using the lock cylinder (valet key will not fit the lock cylinder), the luggage compartment remote switch (remote switch will open the luggage compartment lid if it is not in the lock position), the keyless entry remote transmitter and keyless entry keypad.

The keyless entry remote transmitter communicates with the driver door module (DDM) which controls the output functions of the driver door lock actuator. The DDM communicates through the standard corporate protocol (SCP) link to the rear electronics module (REM) and the front electronic module (FEM) for the lock and unlock commands. The REM controls the output function of the luggage compartment lid actuator and the passenger door actuators. The REM is located in the RH rear side of the luggage compartment.

The keyless entry keypad remote entry feature allows the following functions to be carried out :

- unlock the driver door (when two stage unlocking is enabled)
- unlock all doors
- lock all doors
- arm the security system
- disarm the security system
- reset a panic alarm
- recall the memory seat/mirrors/steering column/pedals position associated with a particular remote entry device (when enabled)
- release the luggage compartment lid actuator

It also lights the keypad lamp and issues illuminated entry on/off requests to the DDM when locking and unlocking. The keyless entry keypad is wired to the DDM which controls the output functions of the driver door lock. The DDM then communicates with the REM which controls the output functions of the passenger door locks and luggage compartment lid.

Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

Principles of Operation

Rear Electronic Module (REM)

The REM controls the output functions of the passenger door lock actuators and luggage compartment lid actuator.

Locking and Unlocking

The driver door lock function is controlled by the driver door module (DDM).

The passenger door locks and the luggage compartment lid actuator functions are controlled by the REM.

The passenger lock/unlock actuators are hard wired to the REM.

Smart Lock

The smart lock feature is controlled by the REM. This feature prevents the operator from accidentally locking the vehicle with the key in the ignition lock cylinder. The REM receives the key-in ignition status from the instrument cluster, the driver and passenger door ajar status from the FEM before this feature can function. If the key is in the ignition, the driver door ajar, and an attempt is made to lock the vehicle with the driver door lock control switch, then all doors will lock and then the driver door will unlock. If the key is in the ignition, the passenger door is ajar, and an attempt is made to lock the vehicle with the passenger door lock control switch, then all doors will lock and then all doors will unlock. This feature is configurable in the REM.

Auto Lock

The automatic door locks feature is controlled by the REM. This feature locks the doors whenever the vehicle is being driven. This feature uses inputs from the ignition switch, the digital transmission range selector, the brake pedal position (BPP) sensor and the driver and passenger door ajar switch status. This feature is configurable by the REM. The autolock function will work when the following conditions are concurrently met during the current ignition cycle:

- all doors are closed
- the autolock function is active (this function has not been disabled through the message center or any programmable options)
- ignition switch is in the RUN position
- the selected PRNDL position is any forward gear or reverse
- the vehicle speed exceeds 3 mph (5 kph)

Autolock will be activated again if at least one door has been open and closed since the last autolock function and the following conditions are met:

- the autolock function is active (this function has not been disabled through the message center or any programmable options)
- the ignition switch is in the RUN position
- the selected PRNDL position is any forward gear or reverse
- the vehicle speed exceeds 3 mph (5 kph)
- all doors are closed

Interior Power Lock/Unlock

The power lock/unlock function is independent of the ignition switch position. Power lock of all doors is accomplished by:

- driver or passenger door lock control switches
- lock command from the remote transmitter
- lock command from the driver set/reset switch (part of the door latch)

- keyless entry keypad

If the perimeter alarm is armed, the interior luggage compartment lid release and door lock control switches are disabled. Disarming the alarm (through valid unlock commands) will enable them.

When the LOCK button on the remote transmitter is pressed once, the power lock function will initiate the locking of all doors. If pressed twice and all doors, luggage compartment lid and hood are closed then the horn will chirp once (if horn chirp is enabled). If pressed twice and any door, luggage compartment lid or hood is open/ajar then the horn will chirp twice (if horn chirp is enabled). If two-stage unlocking is enabled, the driver door will unlock on the first occurrence of one of the following events with no other identical UNLOCK events in the past five seconds:

- a command from the remote transmitter
- a command from driver set/reset switch (part of the door latch)
- a command from keyless entry keypad

When two stage unlocking is enabled, if a subsequent unlock event of the same type occurs within five seconds without the doors being relocked, then all the doors will unlock. When two stage unlock is disabled, all doors will unlock at first (and all subsequent) unlock commands.

Luggage Compartment Lid

The luggage compartment lid feature is controlled by the FEM and the REM. The luggage compartment lid release switch is hard-wired to the FEM. When the switch is active, the FEM will send a command to the REM through the SCP communication network. The REM also needs the vehicle speed status (must be less than 5 kph) from the network in order to activate the luggage compartment lid actuator. The REM will also activate the luggage compartment lid actuator by a command from the driver door module (DDM) through the SCP communication network (remote transmitter or keyless entry keypad..

Remote Keyless Entry

The door locks and luggage compartment lid can be operated by the remote transmitter. When a command is received from the remote transmitter, the DDM will send a command to the FEM or the REM to unlock a door or unlatch the luggage compartment lid.

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) 418-F224 New Generation STAR (NGS) Tester 418-F052 or equivalent diagnostic tool with appropriate adapter cable
ST1137-A	73III Automotive Meter 105-R0057 or equivalent

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Door lock mechanisms	• Rear battery junction box (BJB) fuses: ♦ 1 (15A) ♦ 4 (10A) ♦ 23 (30A) ♦ 25 (40A) ♦ 27 (30A) • Central junction box (CJB) fuses: ♦ 7 (5A) ♦ 20 (10A) ♦ 22 (10A) • Driver door module (DDM) • Rear electronic module (REM) • Front electronic module (FEM)

	• Circuitry • Remote transmitter

3. If the concern remains after the inspection, connect the diagnostic tool to the data link connector (DLC) located beneath the instrument panel and select the vehicle to be tested from the diagnostic tool menu. If the diagnostic tool does not communicate with the vehicle:
    - check that the program card is correctly installed.
    - check the connections to the vehicle.
    - check the ignition switch position.

4. If the diagnostic tool still does not communicate with the vehicle, refer to the diagnostic tool manual.

5. Carry out the diagnostic tool data link test. If the diagnostic tool responds with:
    - SCP+ or SCP- or circuit fault; all electronic control units no response/not equipped, refer to Section 418-00 .
    - No response/not equipped for DDM, refer to Section 418-00 .
    - No response/not equipped for REM, refer to Section 418-00 .
    - No response/not equipped for FEM, refer to Section 418-00 .
    - System passed, retrieve and record the continuous diagnostic trouble codes (DTCs), erase the continuous DTCs, and carry out the self-test diagnostics for the DDM, FEM or REM.

6. If the DTCs retrieved are related to the concern, go to driver door module (DDM) Diagnostic Trouble Code (DTC) Index, Rear Electronic Module (REM) Diagnostic Trouble Code (DTC) Index, Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index, or the Switched System Power (SSP) Relay Index to continue diagnostics.

7. If no DTCs related to the concern are retrieved, GO to Symptom Chart to continue diagnostics.

Driver Door Module (DDM) Diagnostic Trouble Code (DTC) Index

DTC	Description	Source	Action
B1309	Power Door Lock Circuit Short to Ground	DDM	Go To Pinpoint Test C .
B1341	Power Door Unlock Circuit Short to Ground	DDM	Go To Pinpoint Test C .
B1526	Keyless Entry Circuit Short to Ground	DDM	Go To Pinpoint Test J .
B2112	Door Driver Set Switch Stuck Failure	DDM	Go To Pinpoint Test E .
B2116	Door Driver Reset Switch Stuck Failure	DDM	Go To Pinpoint Test E .
B2425	Remote Keyless Entry Out of Synchronization	DDM	Go To Pinpoint Test K .

Front Electronic Module (FEM) Diagnostic Trouble Code (DTC) Index

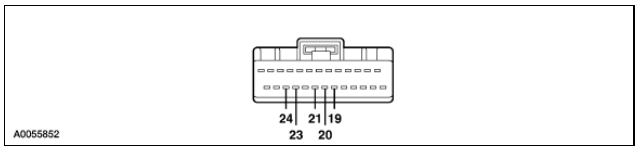
16	Circuit 31S-AA78 (BK/BU) driver set switch circuit	Less than 5 ohms resistance between the DDM and the driver door latch. Greater than 10,000 ohms between the DDM and ground.
17	31S-AA79 (BK/WH) driver reset switch circuit	Less than 5 ohms resistance between the DDM and the driver door latch. Greater than 10,000 ohms between the DDM and ground.
20	9-AA70 (BN/GN) keyless entry keypad signal return circuit	0 voltage. Less than 5 ohms resistance between the DDM and the keyless entry keypad.

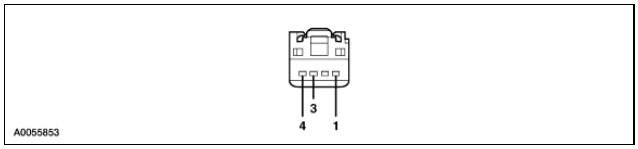
DDM C501d



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
19	8-AA70 (WH/GN) keyless entry keypad input circuit	Less than 5 ohms resistance between the keyless entry keypad and the DDM. Greater than 10,000 ohms resistance between the keyless entry keypad and ground.

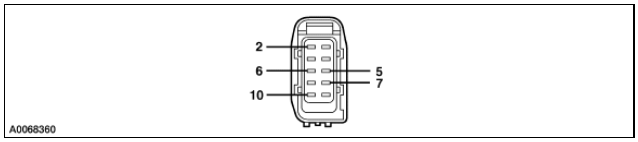
20	10-AA70 (GY/OG) keyless entry keypad input circuit	Less than 5 ohms resistance between the keyless entry keypad and the DDM. Greater than 10,000 ohms resistance between the keyless entry keypad and ground.
21	7-AA70 (YE/GN) keyless entry keypad input circuit	Less than 5 ohms resistance between the keyless entry keypad and the DDM. Greater than 10,000 ohms resistance between the keyless entry keypad and ground.
23	8-AA10 (WH/BK) driver door lock control switch lock input circuit	Less than 5 ohms resistance between the driver door lock control switch and the DDM. Greater than 10,000 ohms resistance between the DDM and ground.
24	8-AA11 (WH/VT) driver door lock control switch unlock input circuit	Less than 5 ohms resistance between the driver door lock control switch and the DDM. Greater than 10,000 ohms resistance between the DDM and ground.

Driver Door Lock Control Switch C505



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AA10 (WH/BK) driver door lock control switch lock input	Less than 5 ohms resistance between the driver door lock control switch and the DDM. Greater than 10,000 ohms between the driver door lock control switch and ground.
3	8-AA11 (WH/VT) driver door lock control switch unlock input	Less than 5 ohms resistance between the driver door lock control switch and the DDM. Greater than 10,000 ohms between the driver door lock control switch and ground.
4	31-LH28 (BK) driver door lock control switch ground	0 voltage. Less than 5 ohms resistance between the driver door lock control switch and ground.

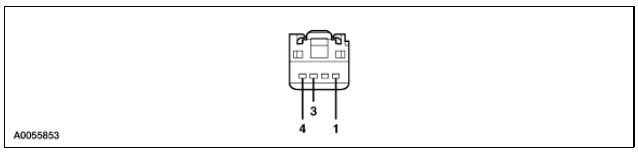
Driver Door Latch C525



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA10 (YE/BK) driver door latch lock output	Less than 5 ohms resistance between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.
5	31S-AA79 (BK/WH) driver reset switch circuit	Less than 5 ohms resistance between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.
6	31-AA58 (BK) driver set/reset switch ground circuit	Less than 5 ohms resistance between the driver door latch and ground.

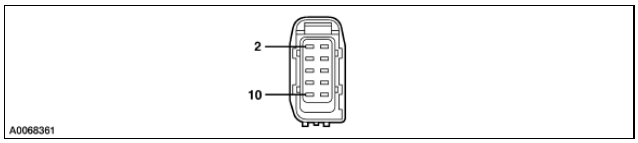
7	31S-AA78 (BK/BU) driver set switch circuit	Less than 5 ohms resistance between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.
10	32-AA11 (WH/VT) driver door latch lock output	Less than 5 ohms resistance between the driver door latch and the DDM. Greater than 10,000 ohms between the driver door latch and ground.

Passenger Door Lock Control Switch C605



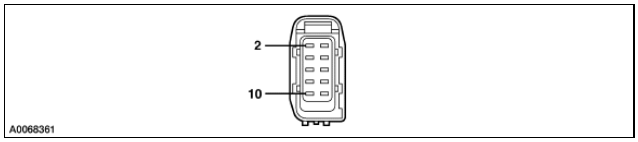
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
1	8-AA20 (WH/BU) passenger door lock control switch lock input	Less than 5 ohms resistance between the passenger door lock control switch and the DDM. Greater than 10,000 ohms between the passenger door lock control switch and ground.
3	8-AA21 (WH/GN) passenger door lock control switch unlock input	Less than 5 ohms resistance between the passenger door lock control switch and the DDM. Greater than 10,000 ohms between the passenger door lock control switch and ground.
4	31-LH42 (BK) passenger door lock control switch ground	0 voltage. Less than 5 ohms resistance between the passenger door lock control switch and ground.

RH Front Door Latch C609



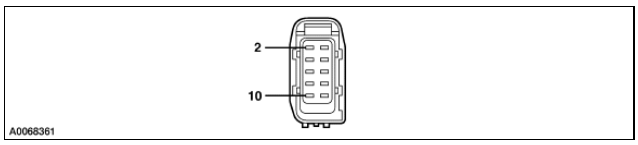
Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA20 (YE/BU) RH front door latch output	Less than 5 ohms resistance between the RH front door latch and the REM. Greater than 10,000 ohms between the RH front door latch and ground.
10	32-AA21 (WH/GN) RH front door latch unlock output	Less than 5 ohms resistance between the RH front door latch and the REM. Greater than 10,000 ohms between the RH front door latch and ground.

LH Rear Door Latch C704



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA15 (YE/GN) LH rear door latch output	Less than 5 ohms resistance between the LH rear door latch and the REM. Greater than 10,000 ohms between the LH rear door latch and ground.
10	32-AA16 (WH/BK) LH rear door latch unlock output	Less than 5 ohms resistance between the LH rear door latch and the REM. Greater than 10,000 ohms between the LH rear door latch and ground.

RH Rear Door Latch C804



Pin Number(s)	Circuit Designation/Description	Normal Condition/Measurement
2	33-AA25 (YE/RD) RH rear door latch lock output	Less than 5 ohms resistance between the RH rear door latch and the REM. Greater than 10,000 ohms between the RH rear door latch and ground.
10	32-AA26 (WH/BU) RH rear door latch unlock output	Less than 5 ohms resistance between the RH rear door latch and the REM. Greater than 10,000 ohms between the RH rear door latch and ground.

Pinpoint Test A: The Luggage Compartment Lid Is Inoperative From The Remote Switch

Normal Operation

The luggage compartment lid remote switch supplies a ground signal to the front electronic module (FEM). When the FEM receives the ground signal through circuit 8-AA30 (WH), the FEM sends an SCP message to the rear electronic module (REM) which energizes circuit 29S-AA83 (OG) and releases the luggage compartment lid.

Possible Causes

- DTC B1551 luggage compartment lid release circuit failure
- circuit 8-AA30 (WH) open or shorted to ground
- circuit 31-AA30 (BK/YE) open
- circuit 31-DA3 (BK/OG) open
- luggage compartment lid remote switch
- FEM

PINPOINT TEST A: THE LUGGAGE COMPARTMENT LID IS INOPERATIVE FROM THE REMOTE SWITCH

Test Step	Result / Action to Take
A1 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH INPUT TO FEM	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Key in OFF position. • Unlock the luggage compartment release switch with the valet key. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM luggage compartment lid remote switch PID. • Press and release the luggage compartment lid remote switch. • **Does the FEM luggage compartment lid remote switch PID agree with the luggage compartment lid remote switch position?**	**Yes** GO to A7 . **No** If the FEM luggage compartment lid remote switch PID indicates ON, GO to A2 . If the PID indicates OFF, GO to A4 .
A2 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM luggage compartment lid remote switch PID. • Disconnect: Luggage Compartment Lid Remote Switch C207. • **Did the FEM luggage compartment lid remote switch PID change from ON to OFF?**	**Yes** INSTALL a new luggage compartment lid remote switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to A3 .
A3 CHECK CIRCUIT 8-AA30 (WH) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: FEM C201e. • Measure the resistance between the FEM C201e-4, circuit 8-AA30 (WH), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A7 . **No** GO to A4 .
A4 CHECK CIRCUIT 8-AA30 (WH) FOR AN OPEN	
• Disconnect: FEM C201e. • Disconnect: Luggage Compartment Lid Remote Switch C207.	**Yes** Connect all disconnected connectors and GO to A5 . **No**

• Measure the resistance between the FEM C201e-4, circuit 8-AA30 (WH), harness side and the luggage compartment lid remote switch C207-1, circuit 8-AA30 (WH), harness side.  A0068362 • **Is the resistance less than 5 ohms?**	REPAIR the circuit. TEST the system for normal operation.
A5 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH	
• Key in OFF position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM luggage compartment lid remote switch PID. • Connect a 10A fused jumper wire between the luggage compartment lid remote switch C207-2, circuit 31-AA30 (BK/YE), harness side and the luggage compartment lid remote switch C207-1, circuit 8-AA30 (WH), harness side, while monitoring the FEM luggage compartment lid remote switch PID.  A0068363 • **Did the FEM luggage compartment lid remote switch PID change from OFF to ON?**	**Yes** INSTALL a new luggage compartment lid remote switch. CLEAR the DTCs. REPEAT the self-test. **No** GO to A6 .
A6 CHECK CIRCUIT 31-AA30 (BK/YE) FOR AN OPEN	
• Measure the resistance between the luggage compartment lid remote switch C207-2, circuit 31-AA30 (BK/YE), harness side and ground.  A0068364 • **Is the resistance less than 5 ohms?**	**Yes** GO to A7 . **No** REPAIR the circuit 31-AA30 (BK/YE) or circuit 31-DA3 (BK/OG). CLEAR the DTCs. REPEAT the self-test.
A7 CHECK FOR CORRECT FEM OPERATION	
• Disconnect all FEM connectors. • Check for: • corrosion	**Yes** INSTALL a new FEM. REFER to Section 418-00 for the removal and installation procedure. TEST the

• pushed-out pins • Connect all FEM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test B: The Luggage Compartment Lid Is Inoperative From The Remote Switch And The Remote Transmitter

Normal Operation

The luggage compartment lid remote switch supplies a ground signal to the front electronic module (FEM). When the FEM receives ground through circuit 8-AA30 (WH), the FEM sends an SCP message to the rear electronic module (REM) which energizes circuit 29S-AA83 (OG) and releases the luggage compartment lid. When the driver door module (DDM) receives the signal to open the luggage compartment lid from the remote transmitter, the DDM sends an SCP message to the REM which energizes circuit 29S-AA83 (OG) and releases the luggage compartment lid.

Possible Causes

- circuit 29S-AA83 (OG) shorted to ground or open
- circuit 31-AA83 (BK/OG) open
- luggage compartment lid actuator
- REM

PINPOINT TEST B: THE LUGGAGE COMPARTMENT LID IS INOPERATIVE FROM THE REMOTE SWITCH AND THE REMOTE TRANSMITTER

Test Step	Result / Action to Take
B1 CHECK THE LUGGAGE COMPARTMENT LID REMOTE SWITCH INPUT TO THE FEM	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM luggage compartment lid remote switch PID. • Press and release the luggage compartment lid remote switch. • **Does the FEM luggage compartment lid remote switch PID agree with the luggage compartment lid remote switch position?**	**Yes** GO to B2 . **No** GO to B7 .
B2 CHECK THE REM OUTPUT USING ACTIVE COMMANDS	
• Trigger the REM active command RELEASE ON. • **Does the luggage compartment lid release?**	**Yes** GO to B7 . **No**

	GO to B3 .
B3 CHECK LUGGAGE COMPARTMENT LID REMOTE SWITCH OUTPUT FROM THE REM	
• Disconnect: Luggage Compartment Lid Actuator C430. • Enter the following diagnostic mode on the diagnostic tool: Trigger the REM luggage compartment lid release active command ON. • Measure the voltage between the luggage compartment lid actuator C430-2, circuit 29S-AA83 (OG), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to B4 . **No** GO to B5 .
B4 CHECK CIRCUIT 31-AA83 (BK/OG) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between the luggage compartment lid actuator C430-3, circuit 31-AA83 (BK/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new luggage compartment lid actuator. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B5 CHECK CIRCUIT 29S-AA83 (OG) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the REM C420c-10, circuit 29S-AA83 (OG), harness side and the luggage compartment lid actuator C430-2, circuit 29S-AA83 (OG), harness side.  	**Yes** GO to B6 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

• **Is the resistance less than 5 ohms?**	
B6 CHECK CIRCUIT 29S-AA83 (OG) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420c-10, circuit 29S-AA83 (OG) harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
B7 CHECK FOR CORRECT REM OPERATION	

• Disconnect all REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test C: All Door Locks Are Inoperative From The Driver Door Lock Control Switch

Normal Operation

The driver door lock control switch supplies a ground signal to the driver door module (DDM). When the DDM receives ground through circuit 8-AA10 (WH/BK), the DDM sends a message through the SCP network to the rear electronic module (REM) which locks the passenger doors. At the same time the DDM locks the driver door. When the DDM receives ground through circuit 8-AA11 (WH/VT), the DDM sends a message through the SCP network to the REM which unlocks the passenger doors. At the same time the DDM unlocks the driver door.

Possible Causes

- DTC B1309 power door lock circuit short to ground
- DTC B1341 power door unlock circuit short to ground
- circuit 8-AA10 (WH/BK) shorted to ground or open
- circuit 8-AA11 (WH/VT) shorted to ground or open
- circuit 31-LH28 (BK) open
- driver door lock control switch
- DDM

PINPOINT TEST C: ALL DOOR LOCKS ARE INOPERATIVE FROM THE DRIVER DOOR LOCK CONTROL SWITCH

Test Step	Result / Action to Take

C1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST DDM	
• Use the recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** If DTC B1309 or DTC B1341 were retrieved, GO to C3 . For all other DDM DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index. **No** GO to C2 .
C2 CHECK DRIVER DOOR LOCK CONTROL SWITCH AND CIRCUITS MONITOR THE DDM DOOR LOCK AND DOOR UNLOCK PIDS	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Key in OFF position. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM door lock and door unlock PIDs. • Lock and unlock the driver door using the driver door lock control switch while monitoring the DDM door lock and door unlock PIDs. • **Do the DDM door LOCK and door UNLOCK PIDs values agree with the driver door lock control switch positions?**	**Yes** GO to C8 . **No** If the PID(s) read YES at all timesGO to C3 . If the PID(s) read NO at all timesGO to C5 .
C3 CHECK THE DRIVER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Driver Door Lock Control Switch C505. • Carry out the driver door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the driver door lock control switch OK?**	**Yes** GO to C4 . **No** INSTALL a new driver door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
C4 CHECK CIRCUITS 8-AA10 (WH/BK) AND 8-AA11 (WH/VT) FOR A SHORT TO GROUND	
• Disconnect: DDM C501d. • Measure the resistance between the DDM C501d-23, circuit 8-AA10 (WH/BK), harness side and ground; and between the DDM C501d-24, circuit 8-AA11 (WH/VT), harness side and ground.	**Yes** GO to C8 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

 A0004129 • **Are the resistances greater than 10,000 ohms?**	
C5 CHECK THE DRIVER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Driver Door Lock Control Switch C505. • Carry out the driver door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the driver door lock control switch OK?**	**Yes** GO to C6 . **No** INSTALL a new driver door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
C6 CHECK CIRCUIT 31-LH28 (BK) FOR OPEN	
• Measure the resistance between the driver door lock control switch C505-4, circuit 31-LH28 (BK), harness side and ground.  A0056655 • **Is the resistance less than 5 ohms?**	**Yes** GO to C7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
C7 CHECK CIRCUITS 8-AA10 (WH/BK) AND 8-AA11 (WH/VT) FOR OPEN	
• Disconnect: DDM C501d. • Measure the resistance between the DDM C501d-23, circuit 8-AA10 (WH/BK), harness side and the driver door lock control switch C505-1, circuit 8-AA10 (WH/BK), harness side; and between the DDM C501d-24, circuit 8-AA11 (WH/VT), harness side and the driver door lock control switch C505-3, circuit 8-AA11 (WH/VT), harness side.  A0056656 • **Are the resistances less than 5 ohms?**	**Yes** GO to C8 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
C8 CHECK FOR CORRECT DDM OPERATION	
• Disconnect all DDM connectors.	**Yes** INSTALL a new DDM. REFER

• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test D: All Door Locks Are Inoperative From The Passenger Door Lock Control Switch

Normal Operation

The passenger door lock control switch supplies a ground signal to the rear electronic module (REM). When the REM receives ground through circuit 8-AA20 (WH/BU), the REM locks the passenger doors and sends an SCP message to the driver door module (DDM) to lock the driver door. When the REM receives ground through circuit 8-AA21 (WH/GN), the REM unlocks the passenger doors and sends an SCP message to the DDM to unlock the driver door.

Possible Causes

- DTC 1300, power door lock circuit failure
- DTC 1310 power door lock circuit failure
- circuit 8-AA20 (WH/BU) open
- circuit 8-AA21 (WH/GN) open
- circuit 31-LH42 (BK) open
- passenger door lock control switch
- REM

PINPOINT TEST D: ALL DOOR LOCKS ARE INOPERATIVE FROM THE PASSENGER DOOR LOCK CONTROL SWITCH

Test Step	Result / Action to Take
D1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REM	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any REM DTCs recorded?**	**Yes** For DTC B1300 or B1310, GO to D3 . For all other REM DTCs, REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to D2 .
D2 CHECK PASSENGER DOOR LOCK CONTROL SWITCH AND CIRCUITS MONITOR THE REM RH FRONT DOOR LOCK AND UNLOCK PIDS	
NOTE: Cycle the key from OFF to ON to enable the	**Yes** GO to D8 .

switched system power feature. • Key in OFF position. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the REM RH front door lock and unlock PIDs. • Lock and unlock the RH front door using the passenger door lock control switch while monitoring the REM RH front door lock and unlock PIDs. • **Do the REM RH front door lock and unlock PIDs values agree with the passenger door lock control switch positions?**	**No** If the PID(s) read YES at all timesGO to D3 . If the PID(s) read NO at all timesGO to D5 .
D3 CHECK PASSENGER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Passenger Door Lock Control Switch C605. • Carry out the passenger door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the passenger door lock control switch OK?**	**Yes** GO to D4 . **No** INSTALL a new passenger door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
D4 CHECK CIRCUITS 8-AA20 (WH/BU) AND 8-AA21 (WH/GN) FOR A SHORT TO GROUND	
• Disconnect: REM C420c. • Measure the resistance between the REM C420c-20, circuit 8-AA20 (WH/BU), harness side and ground; and between the REM C420c-21, circuit 8-AA21 (WH/GN), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to D8 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
D5 CHECK PASSENGER DOOR LOCK CONTROL SWITCH	
• Key in OFF position. • Disconnect: Passenger Door Lock Control Switch C605. • Carry out the passenger door lock control switch component test. Refer to Wiring Diagrams Cell 149 for schematic and connector information. • **Is the passenger door lock control switch OK?**	**Yes** GO to D6 . **No** INSTALL a new passenger door lock control switch. REFER to Door Lock Control Switch in this section. CLEAR the DTCs. REPEAT the self-test.
D6 CHECK CIRCUIT 31-LH42 (BK) FOR AN OPEN	

• Measure the resistance between the passenger door lock control switch C605-4, circuit 31-LH42 (BK), harness side and ground.  A0056655 • **Is the resistance less than 5 ohms?**	**Yes** GO to D7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
D7 CHECK CIRCUITS 8-AA20 (WH/BU) AND 8-AA21 (WH/GN) FOR AN OPEN	
• Disconnect: REM C420c. • Measure the resistance between the REM C420c-20, circuit 8-AA20 (WH/BU), harness side and passenger door lock control switch C605-1, circuit 8-AA20 (WH/BU), harness side; and between the REM C420c-21, circuit 8-AA21 (WH/GN), harness side and the passenger door lock control switch C605-3, circuit 8-AA21 (WH/GN), harness side.  A0056657 • **Are the resistances less than 5 ohms?**	**Yes** GO to D8 **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
D8 CHECK FOR CORRECT REM OPERATION	

• Disconnect all REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test E: All Door Locks Are Inoperative From The Driver Door Lock Cylinder

Normal Operation

When the driver door lock cylinder is turned once to either lock or unlock position, the driver set/reset switch grounds either circuit 31S-AA78 (BK/BU) for the lock command or circuit 31S-AA79 (BK/WH) for the unlock command through circuit 31-AA58 (BK) to the driver door module (DDM). The DDM will lock and unlock the driver door. When a global lock/unlock command is requested through driver door lock cylinder (two turns of the lock cylinder), the driver set/reset switch grounds either circuit 31S-AA78 (BK/BU) for the lock command or circuit 31S-AA79 (BK/WH) for the unlock command through circuit 31-AA58 (BK) to the driver door module (DDM). The DDM will lock or unlock the driver door and send an SCP message to the

rear electronic module (REM) to lock/unlock the passenger doors.

Possible Causes

- DTC B2112, door driver set switch stuck failure
- DTC B2116, door driver reset switch stuck failure
- circuit 31-AA58 (BK) open
- circuit 31S-AA78 (BK/BU) open
- circuit 31S-AA79 (BK/WH) open
- driver door latch (driver set/reset switch)
- DDM

PINPOINT TEST E: ALL DOOR LOCKS ARE INOPERATIVE FROM THE DRIVER DOOR LOCK CYLINDER

Test Step	Result / Action to Take
E1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST DDM	
• Use the recorded DDM DTCs from the continuous and on-demand self-test. • **Are any DDM DTCs recorded?**	**Yes** For DTC B2112 or DTC B2116, GO to E3 . For all other DDM DTCs, REFER to the DDM Diagnostic Trouble Code (DTC) Index. **No** GO to E2 .
E2 CHECK DRIVER DOOR LOCK CYLINDER AND CIRCUITS MONITOR THE DDM LOCK CYLINDER INPUT SWITCH STATUS AND DOOR UNLOCK DISARM INPUT SWITCH STATUS PIDS	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Key in OFF position. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM lock cylinder input switch status and door unlock disarm input switch status PIDs. • Lock and unlock the driver door using the driver door lock cylinder while monitoring the DDM lock cylinder input switch status and door unlock disarm input switch status PIDs. • **Do the DDM lock cylinder input switch status and door unlock disarm input switch status PIDs values agree with the driver door lock cylinder positions?**	**Yes** GO to E9 . **No** GO to E3 .
E3 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR A SHORT TO GROUND	

• Key in OFF position. • Disconnect: DDM C501c. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground.  A0003773 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to E5 . **No** GO to E4 .
E4 CHECK DRIVER DOOR LOCK LATCH FOR A SHORT TO GROUND	
• Disconnect: Driver Door Latch C525. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground.  A0003773 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new driver door latch. REFER to Front Door Handle in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
E5 CHECK DDM FOR AN INTERNAL SHORT TO GROUND	
• Connect: DDM C501c. • Disconnect: Driver Door Latch C525. • Measure the resistance between the driver door latch C525-7, circuit 31S-AA78 (BK/BU), harness side and ground; and between the driver door latch C525-5, circuit 31S-AA79 (BK/WH), harness side and ground.  A0003772 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to E6 . **No** GO to E9 .
E6 CHECK CIRCUIT 31-AA58 (BK) FOR AN OPEN	

• Measure the resistance between the driver door latch C525-6, circuit 31-AA58 (BK), harness side and ground.  A0004114 • **Is the resistance less than 5 ohms?**	**Yes** GO to E7 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
E7 CHECK DRIVER SET AND RESET SWITCH	
• Connect: Driver Door Latch C525. • Disconnect: DDM C501c. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and ground, while turning the key cylinder to the SET position; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and ground, while turning the key cylinder to the RESET position.  A0003773 • **Are the resistances less than 5 ohms?**	**Yes** GO to E9 . **No** GO to E8 .
E8 CHECK CIRCUITS 31S-AA78 (BK/BU) AND 31S-AA79 (BK/WH) FOR AN OPEN	
• Disconnect: Driver Door Latch C525. • Measure the resistance between the DDM C501c-16, circuit 31S-AA78 (BK/BU), harness side and the driver door latch C525-7, circuit 31S-AA78 (BK/BU), harness side; and between the DDM C501c-17, circuit 31S-AA79 (BK/WH), harness side and the driver door latch C525-5, circuit 31S-AA79 (BK/WH), harness side.  A0004115 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new driver door latch. REFER to Front Door Handle in this section. CLEAR the DTCs. REPEAT the self-test. **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
E9 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.

• Connect all DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test F: A Single Door Lock Is Inoperative Driver Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, passenger door lock control switch (through the rear electronic module), remote transmitter or keyless entry keypad. The DDM will then lock/unlock the driver door by utilizing circuit 33-AA10 (YE/BK) and circuit 32-AA11 (WH/VT).

Possible Causes

- circuit 33-AA10 (YE/BK) shorted to ground or open
- circuit 32-AA11 (WH/VT) shorted to ground or open
- driver door latch
- DDM

PINPOINT TEST F: A SINGLE DOOR LOCK IS INOPERATIVE DRIVER DOOR

Test Step	Result / Action to Take
F1 CHECK DRIVER DOOR LOCK OPERATION USING ACTIVE COMMANDS	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Trigger the DDM driver door lock and driver door unlock active commands on and off. • **Do the DDM driver door lock and driver door unlock active commands operate correctly?**	**Yes** GO to F5 . **No** GO to F2 .
F2 CHECK DDM LOCK AND UNLOCK OUTPUTS USING ACTIVE COMMANDS	
• Key in OFF position. • Disconnect: Driver Door Latch C525. • Key in ON position. • Measure the voltage between the driver door latch C525-2, circuit 33-AA10 (YE/BK), harness side and ground, while triggering the DDM driver door lock active command to ON; and measure the voltage between the driver door latch C525-10, circuit 32-AA11 (WH/VT), harness side and ground, while triggering the DDM driver door unlock active command to ON.	**Yes** INSTALL a new driver door latch. REFER to Front Door Handle in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to F3 .

 A0004118 • **Are the voltages greater than 10 volts?**	
F3 CHECK CIRCUITS 33-AA10 (YE/BK) AND 32-AA11 (WH/VT) FOR AN OPEN	
• Key in OFF position. • Disconnect: DDM C501c. • Measure the resistance between the driver door latch C525-2, circuit 33-AA10 (YE/BK), harness side and the DDM C501c-8, circuit 33-AA10 (YE/BK) harness side; and between the driver door latch C525-10, circuit 32-AA11 (WH/VT) harness side and the DDM C501c-9, circuit 32-AA11 (WH/VT) harness side.  A0004119 • **Are the resistances less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
F4 CHECK CIRCUITS 33-AA10 (YE/BK) AND 32-AA11 (WH/VT) FOR A SHORT TO GROUND	
• Measure the resistance between the driver door latch C525-2, circuit 33-AA10 (YE/BK), harness side and ground; and between the driver door latch C525-10, circuit 32-AA11 (WH/VT), harness side and ground.  A0004120 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to F5 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
F5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been

	caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test G: More Than One Door Lock Is Inoperative RH Front Door, RH Rear Door And LH Rear Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, remote transmitter or keyless entry keypad. The DDM sends an SCP message to the rear electronic module (REM) for the lock/unlock function.

The REM receives lock/unlock input from the DDM and the passenger door lock control switch. The REM will then lock/unlock the passenger doors by utilizing circuit 32-AA1 (WH/RD), circuit 32-AA16 (WH/BK), circuit 33-AA2 (YE/RD) and circuit 33-AA15 (YE/GN). The REM is energize through circuit 29S-DK31 (OG/BK) and grounded through circuit 31-DK30H (BK/OG).

Possible Causes

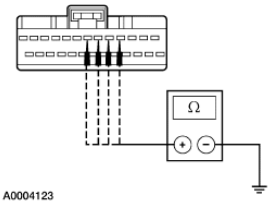
- circuit 29S-DK31 (OG/BK) shorted to ground or open
- circuit 31-DK30 (BK/OG) open
- circuit 32-AA1 (WH/RD) shorted to ground or open
- circuit 32-AA16 (WH/BK) shorted to ground or open
- circuit 33-AA2 (YE/RD) shorted to ground or open
- circuit 33-AA15 (YE/GN) shorted to ground or open
- REM

PINPOINT TEST G: MORE THAN ONE DOOR LOCK IS INOPERATIVE RH FRONT DOOR, RH REAR DOOR AND LH REAR DOOR

Test Step	Result / Action to Take
G1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REM	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to G2 .
G2 CHECK BATTERY JUNCTION BOX (BJB) FUSE 1 (15A) FOR VOLTAGE	
NOTE: Cycle the key from OFF to ON to enable the switched system power feature. • Disconnect: BJB fuse 1 (15A). • Measure the voltage between the BJB fuse 1 (15A) input cavity, component side and ground.	**Yes** RECONNECT the BJB fuse 1 (15A). GO to G3 . **No** REPAIR the BJB. CLEAR the DTCs. REPEAT the self-test.

 A0004121 • **Is the voltage greater than 10 volts?**	
G3 CHECK CIRCUIT 29S-DK31 (OG/BK) FOR OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Key in ON position. • Measure the voltage between the REM C420c-13, circuit 29S-DK31 (OG/BK), harness side and ground.  A0004122 • **Is the voltage greater than 10 volts?**	**Yes** GO to G4 . **No** REPAIR circuit 29S-DK31 (OG/BK). CLEAR the DTCs. REPEAT the self-test.
G4 CHECK REM OUTPUT USING ACTIVE COMMANDS	
• Key in OFF position. • Connect: REM C420c. • Key in ON position. • Trigger the REM LH rear LOCK, RH rear LOCK, RH rear UNLOCK and LH rear UNLOCK active commands ON and OFF while observing the RH front, RH rear and LH rear latches. • **Do the REM LH rear lock, LH rear unlock, RH rear lock and RH rear unlock active commands operate correctly?**	**Yes** GO to G6 . **No** If only an individual lock does not operate, REFER to Symptom Chart. If two or more do not operate, GO to G5 .
G5 CHECK CIRCUITS 33-AA2 (YE/RD), 32-AA1 (WH/RD), 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the REM connector, harness side and ground as follows: **Connector Pin** | **Circuit**	**Yes** GO to G6 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

C420c-4	33-AA15 (YE/GN)
C420c-5	33-AA2 (YE/RD)
C420c-6	32-AA1 (WH/RD)
C420c-7	32-AA16 (WH/BK)



- **Are the resistances greater than 10,000 ohms?**

G6 CHECK CIRCUIT 31-DK30H (BK/OG) FOR AN OPEN	
• Disconnect: REM C420b. • Measure the resistance between the REM C420b-12, circuit 31-DK30H (BK/OG), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to G7 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
G7 CHECK FOR CORRECT REM OPERATION	

• Disconnect all REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test H: More Than One Door Lock Is Inoperative RH Front Door And RH Rear Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, remote transmitter or keyless entry keypad. The DDM sends an SCP message to the rear electronic module (REM) for the lock/unlock function.

The REM receives lock/unlock input from the DDM and the passenger door lock control switch. The REM will then lock/unlock the RH front door and RH rear door by utilizing circuit 32-AA1 (WH/RD), circuit 33-AA25 (YE/RD), circuit 33-AA2 (YE/RD), circuit 32-AA21 (WH/GN), circuit 33-AA20 (YE/BU) and circuit 32-AA26 (WH/BU).

Possible Causes

- circuit 32-AA21 (WH/GN) shorted to ground or open
- circuit 32-AA1 (WH/RD) shorted to ground or open
- circuit 32-AA26 (WH/BU) shorted to ground or open
- circuit 33-AA20 (YE/BU) shorted to ground or open
- circuit 33-AA2 (YE/RD) shorted to ground or open
- circuit 33-AA25 (YE/RD) shorted to ground or open
- door latch (front or rear)
- REM

PINPOINT TEST H: MORE THAN ONE DOOR LOCK IS INOPERATIVE RH FRONT DOOR AND RH REAR DOOR

Test Step	Result / Action to Take
H1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REM	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to H2 .
H2 CHECK REM OUTPUT USING ACTIVE COMMANDS	
• Key in ON position. • Trigger the REM RH rear lock and RH rear unlock active commands ON and OFF while observing the RH front and RH rear lock function. • **Do the REM RH rear lock and RH rear unlock active commands operate correctly?**	**Yes** GO to H6 . **No** GO to H3 .
H3 CHECK REM OUTPUT TO RH FRONT AND RH REAR LATCHES	
NOTE: Disconnect the inoperative door latch. If both doors are inoperative you must disconnect both latches. • Key in OFF position. • Disconnect: RH Rear Door Latch C804. • Disconnect: RH Front Door Latch C609. • Key in ON position. • Measure the voltage between the RH front door latch C609-2, circuit 33-AA20 (YE/BU), harness side and ground, while triggering the REM RH front door lock active command to ON; and measure the voltage between the RH front door latch C609-10, circuit 32-AA21 (WH/GN), harness side and ground, while triggering the REM RH front door unlock active command to ON.	**Yes** INSTALL a new door latch(es). REFER to Front Door Handle or Rear Door Handle in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to H4 .

 A0004118 • Measure the voltage between the RH rear door latch C804-2, circuit 33-AA25 (YE/RD), harness side and ground, while triggering the REM RH rear door lock active command to ON; and measure the voltage between RH rear door latch C804-10, circuit 32-AA26 (WH/BU), harness side and ground, while triggering the REM RH rear door unlock active command to ON.  A0004118 • **Are the voltages greater than 10 volts?**	
H4 CHECK CIRCUITS 33-AA20 (YE/BU), 32-AA21 (WH/GN), 33-AA2 (YE/RD), 32-AA1 (WH/RD), 32-AA26 (WH/BU) AND 33-AA25 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the RH front door latch C609-2, circuit 33-AA20 (YE/BU), harness side and the REM C420c-5, circuit 33-AA2 (YE/RD), harness side; and between the RH front door latch C609-10, circuit 32-AA21 (WH/GN), harness side and the REM C420c-6, circuit 32-AA1 (WH/RD), harness side.  A0004124 • Measure the resistance between the RH rear door latch C804-2, circuit 33-AA25 (YE/RD), harness side and the REM C420c-5, circuit 33-AA2 (YE/RD), harness side; and between the RH rear door lock latch C804-10, circuit 32-AA26 (WH/BU), harness side and the REM C420c-6, circuit 32-AA1 (WH/RD), harness side.  A0004124 • **Are the resistances less than 5 ohms?**	**Yes** GO to H5 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

H5 CHECK CIRCUITS 33-AA2 (YE/RD) AND 32-AA1 (WH/RD) FOR SHORT TO GROUND	
• Measure the resistance between the REM C420c-5, circuit 33-AA2 (YE/RD) harness side and ground; and between the REM C420c-6, circuit 32-AA1 (WH/RD), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to H6 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
H6 CHECK FOR CORRECT REM OPERATION	

• Disconnect all REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test I: A Single Door Lock Is Inoperative LH Rear Door

Normal Operation

The driver door module (DDM) receives lock/unlock inputs from the driver door lock control switch, remote transmitter or keyless entry keypad. The DDM sends an SCP message to the rear electronic module (REM) for the lock/unlock function.

The REM receives lock/unlock input from the DDM and the passenger door lock control switch. The REM will then lock/unlock the LH rear door by utilizing circuit 32-AA16 (WH/BK) and circuit 33-AA15 (YE/GN).

Possible Causes

- circuit 32-AA16 (WH/BK) shorted to ground or open
- circuit 33-AA15 (YE/GN) shorted to ground or open
- rear door latch
- REM

PINPOINT TEST I: A SINGLE DOOR LOCK IS INOPERATIVE LH REAR DOOR

Test Step	Result / Action to Take
I1 RETRIEVE THE RECORDED DTCS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TEST REM	
• Use the recorded REM DTCs from the continuous and on-demand self-test. • **Are any DTCs recorded?**	**Yes** REFER to the REM Diagnostic Trouble Code (DTC) Index. **No** GO to I2 .
I2 CHECK REM OUTPUT USING ACTIVE COMMANDS	
• Key in ON position. • Trigger the REM LH rear lock and LH rear unlock active commands ON and OFF while observing the LH rear lock function. • **Do the REM LH rear lock and LH rear unlock active commands operate correctly?**	**Yes** GO to I6 . **No** GO to I3 .
I3 CHECK REM OUTPUT TO LH REAR LATCH	
• Key in OFF position. • Disconnect: LH Rear Door Latch C704. • Key in ON position. • Measure the voltage between the LH rear door latch C704-2, circuit 33-AA15 (YE/GN), harness side and ground, while triggering the REM LH rear door lock active command to ON; and measure the voltage between the LH rear door latch C704-10, circuit 32-AA16 (WH/BK), harness side and ground, while triggering the REM LH rear door unlock active command to ON.  • **Are the voltages greater than 10 volts?**	**Yes** INSTALL a new rear door latch. REFER to Rear Door Handle in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to I4 .
I4 CHECK CIRCUITS 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR AN OPEN	
• Key in OFF position. • Disconnect: REM C420c. • Measure the resistance between the LH rear door latch C704-2, circuit 33-AA15 (YE/GN), harness side and the REM C420c-4, circuit 33-AA15 (YE/GN), harness side; and between the LH rear door latch C704-10, circuit 32-AA16 (WH/BK), harness side and the REM C420c-7, circuit 32-AA16 (WH/BK), harness side.	**Yes** GO to I5 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.

 A0056658 • **Are the resistances less than 5 ohms?**	
I5 CHECK CIRCUITS 33-AA15 (YE/GN) AND 32-AA16 (WH/BK) FOR A SHORT TO GROUND	
• Measure the resistance between the REM C420c-4, circuit 33-AA15 (YE/GN), harness side and ground; and between the REM C420c-7, circuit 32-AA16 (WH/BK), harness side and ground.  A0004141 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to I6 . **No** REPAIR the circuit(s) in question. CLEAR the DTCs. REPEAT the self-test.
I6 CHECK FOR CORRECT REM OPERATION	

• Disconnect all REM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all REM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new REM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test J: The Doors Do Not Lock/Unlock Using The Keyless Entry Keypad

Normal Operation

When a button is pressed on the keyless entry keypad, a signal is sent to the driver door module (DDM) to activate the function requested. A code is entered to unlock the driver door. A code plus 3/4 button will unlock all doors. Pressing 7/8 plus 9/0 will lock all doors.

Possible Causes

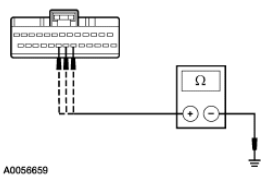
- B1526 keyless entry circuit short to ground
- circuit 7-AA70 (YE/GN) shorted to ground or open
- circuit 8-AA70 (WH/GN) shorted to ground or open
- circuit 9-AA70 (BN/GN) open
- circuit 10-AA70 (GY/OG) shorted to ground or open
- keyless entry keypad
- DDM

PINPOINT TEST J: THE DOORS DO NOT LOCK/UNLOCK USING THE KEYLESS ENTRY KEYPAD

<table>
<tr><th>Test Step</th><th>Result / Action to Take</th></tr>
<tr><td>J1 CHECK THE LOCK/UNLOCK OPERATION FROM THE DRIVER DOOR LOCK CONTROL SWITCH</td><td></td></tr>
<tr><td>• Lock and unlock all the doors using the driver door lock control switch.
• Do all the doors lock and unlock correctly?</td><td>Yes
GO to J2 .

No
REFER to the Symptom Chart to diagnose the inoperative function.</td></tr>
<tr><td>J2 CHECK THE DIAGNOSTIC TROUBLE CODE (DTCS)</td><td></td></tr>
<tr><td>• Refer to the recorded results from the DDM self-test.
• Is DTC B1526 recorded?</td><td>Yes
GO to J3 .

No
GO to J5 .</td></tr>
<tr><td>J3 CHECK THE KEYLESS ENTRY KEYPAD INPUT TO THE DDM FOR A SHORT TO GROUND</td><td></td></tr>
<tr><td>• Key in OFF position.
• Disconnect: DDM C501d.
• Measure the resistance between each DDM C501d pin, harness side and ground using the following chart:

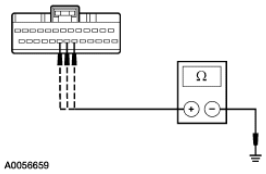
<table><tr><th>DDM C501d</th><th>Circuit</th></tr><tr><td>19</td><td>8-AA70 (WH/GN)</td></tr><tr><td>20</td><td>10-AA70 (GY/OG)</td></tr><tr><td>21</td><td>7-AA70 (YE/GN)</td></tr></table>
 


• Is each resistance greater than 10,000 ohms?</td><td>Yes
GO to J9 .

No
GO to J4 .</td></tr>
<tr><td>J4 CHECK THE KEYLESS ENTRY KEYPAD FOR A SHORT TO GROUND</td><td></td></tr>
</table>

<table>
<tr>
<td>
• Disconnect: Keyless Entry Keypad C500.
• Measure the resistance between each DDM C501d pin, harness side and ground using the following chart:

<table>
<tr><th>DDM C501d</th><th>Circuit</th></tr>
<tr><td>19</td><td>8-AA70 (WH/GN)</td></tr>
<tr><td>20</td><td>10-AA70 (GY/OG)</td></tr>
<tr><td>21</td><td>7-AA70 (YE/GN)</td></tr>
</table>



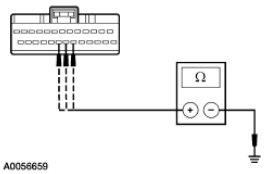
• Is each resistance greater than 10,000 ohms?
</td>
<td>
Yes
INSTALL a new keyless entry keypad. REFER to Keyless Entry Keypad in this section. TEST the system for normal operation.

No
REPAIR the circuit(s). TEST the system for normal operation.
</td>
</tr>
<tr>
<td>J5 CHECK THE FACTORY KEYLESS CODE</td>
<td></td>
</tr>
<tr>
<td>
• Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM key code PID.
• Record the code.
• Does the recorded code match the code on the factory sticker or wallet card?
</td>
<td>
Yes
GO to J6 .

No
CHECK the operation of the factory code retrieved from the DDM. If OK, NOTIFY customer of the correct code. If still inoperative, REPEAT the DDM self-test and GO to J6 .
</td>
</tr>
<tr>
<td>J6 CHECK THE KEYLESS ENTRY KEYPAD OPERATION</td>
<td></td>
</tr>
<tr>
<td>
• Key in OFF position.
• Disconnect: DDM C501d.
• Measure the resistance between each DDM C501d pin, harness side and ground while pressing the associated keyless entry keypad button using the following chart:

<table>
<tr><th>DDM C501d</th><th>Circuit</th><th>Keypad Buttons</th></tr>
<tr><td>19</td><td>8-AA70 (WH/GN)</td><td>1/2, 3/4 and 5/6</td></tr>
<tr><td>20</td><td>10-AA70 (GY/OG)</td><td>5/6 and 7/8</td></tr>
<tr><td>21</td><td>7-AA70 (YE/GN)</td><td>3/4 and 9/0</td></tr>
</table>
</td>
<td>
Yes
GO to J9 .

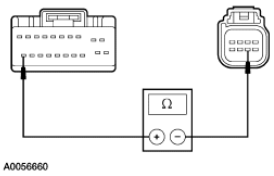
No
GO to J7 .
</td>
</tr>
</table>



- **Is each resistance less than 5 ohms with the associated button pressed?**

J7 CHECK CIRCUIT 9-AA70 (BN/GN) FOR AN OPEN

- Disconnect: DDM C501c.
- Disconnect: Keyless Entry Keypad C500.
- Measure the resistance between the keyless entry keypad C500-6, circuit 9-AA70 (BN/GN), harness side and the DDM C501c-20, circuit 9-AA70 (BN/GN), harness side.



- **Is the resistance less than 5 ohms?**

Yes
GO to J8 .

No
REPAIR the circuit. TEST the system for normal operation.

J8 CHECK THE KEYLESS ENTRY KEYPAD CIRCUITS FOR AN OPEN

- Measure the resistance between each DDM C501d pins, harness side and the associated keyless entry keypad C500 pins using the following chart:

DDM C501d	Circuit	Keyless Entry Keypad C500
pin 19	8-AA70 (WH/GN)	pin 1
pin 20	10-AA70 (GY/OG)	pin 3
pin 21	7-AA70 (YE/GN)	pin 7

- **Is each resistance less than 5 ohms?**

Yes
INSTALL a new keyless entry keypad. REFER to Keyless Entry Keypad in this section. TEST the system for normal operation.

No
REPAIR the circuit. TEST the system for normal operation.

J9 CHECK FOR CORRECT DDM OPERATION

- Disconnect all DDM connectors.
- Check for:

Yes
INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal

• corrosion • pushed-out pins	operation.
• Connect all DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test K: The Doors Do Not Lock/Unlock Using The Remote Transmitter

Normal Operation

Remote locking and unlocking of the doors is accomplished by the driver door module (DDM) receiving a command message from the remote transmitter. The DDM processes the command and sends a signal directly to the driver door latch. The DDM sends a message through the SCP network to the rear electronic module (REM) which drives the passenger door latches. Fault management disables the remote locking and unlocking feature in the event of an ignition switch or PRNDL invalid or missing message to the DDM.

Possible Causes

- remote transmitter battery
- remote transmitter programming
- DDM

PINPOINT TEST K: THE DOORS DO NOT LOCK/UNLOCK USING THE REMOTE TRANSMITTER

Test Step	Result / Action to Take
K1 CHECK THE DOOR LOCKS AT THE DRIVER DOOR LOCK CONTROL SWITCH	
• Check the locks from the driver door lock control switch. • **Do the doors lock and unlock?**	**Yes** GO to K2 . **No** Go To Pinpoint Test C to diagnose the inoperative door locks from the driver door lock control switch.
K2 CHECK REMOTE TRANSMITTER BUTTONS WITH DIAGNOSTIC TOOL	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the lock, then the unlock button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** GO to K5 . **No** GO to K3 .

K3 CHECK THE BATTERY IN THE REMOTE TRANSMITTER	
• Install a new battery in the remote transmitter. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the lock, then the unlock button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** TEST all remote transmitter functions. CLEAR the DTCs. REPEAT the self-test. **No** GO to K4 .
K4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER	
• Reprogram all the remote transmitters. REFER to Remote Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the lock, then the unlock button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** Fault found as remote transmitter not programmed. CLEAR the DTCs. REPEAT the self-test. **No** PROGRAM a new remote transmitter to the vehicle. REFER to Remote Transmitter Programming in this section. CLEAR the DTCs. REPEAT the self-test.
K5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test L: Panic Feature Is Inoperative

Normal Operation

When the panic button on the remote transmitter is pressed, it sends a signal to the driver door module (DDM) which sends the information to the front electronic module (FEM) to activate the alarm.

Possible Causes

- remote transmitter battery
- remote transmitter programming
- DDM

PINPOINT TEST L: PANIC FEATURE IS INOPERATIVE

Test Step	Result / Action to Take
L1 CHECK FEM INPUT	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM panic PID. • Press the PANIC button while monitoring the FEM panic PID. • **Does the FEM panic PID indicate PANIC?**	**Yes** REFER to Section 419-01 to diagnose the alarm. **No** GO to L2 .
L2 CHECK THE REMOTE TRANSMITTER LUGGAGE COMPARTMENT LID RELEASE BUTTON WITH THE DIAGNOSTIC TOOL	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** GO to L5 . **No** GO to L3 .
L3 CHECK THE BATTERY IN THE REMOTE TRANSMITTER	
• Install a new battery in the remote transmitter. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** TEST all remote transmitter functions. CLEAR the DTCs. REPEAT the self-test. **No** GO to L4 .
L4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER	
• Reprogram the remote transmitter. Refer to Remote Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM	**Yes** The remote transmitter was not programmed. CLEAR the DTCs. REPEAT the self-test. **No** PROGRAM a new remote transmitter to the

FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	vehicle. REFER to Remote Transmitter Programming in this section. CLEAR the DTCs. REPEAT the self-test.
L5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test M: The Autolock Does Not Operate Correctly

Normal Operation

The autolocking function will cause the vehicle to initially automatically lock all doors when all of the following conditions are concurrently met during the current key cycle:

- all doors are closed
- autolocking function is active
- key in ON position
- transmission in DRIVE or REVERSE
- vehicle speed exceeds 5 kph (3.10 mph)

After the initial activation of autolocking and at least one door has been opened, autolocking will be activated again if the following conditions are concurrently met:

- all doors are closed
- autolocking function is active
- key in ON position
- transmission in DRIVE or REVERSE
- vehicle speed exceeds 5 kph (3.10 mph)

Possible Causes

- Door ajar switches
- DDM
- Vehicle speed sensor (VSS) message from ABS module
- Digital transmission range sensor message from the powertrain control module (PCM)

PINPOINT TEST M: THE AUTOLOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take

M1 CHECK DRIVER DOOR AJAR PID	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Close all doors and luggage compartment lid. • Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM driver door ajar PID. • **Does the FEM driver door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M2 .
M2 CHECK THE RH FRONT DOOR AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM RH front door ajar PID. • **Does the FEM RH front door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M3 .
M3 CHECK LH REAR DOOR AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the REM LH rear door ajar PID. • **Does the REM LH rear door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M4 .
M4 CHECK RH REAR DOOR AJAR PID	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the REM RH rear door ajar PID. • **Does the REM RH rear door ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M5 .
M5 CHECK LUGGAGE COMPARTMENT LID AJAR	

PID	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the REM luggage compartment lid ajar PID. • **Does the REM luggage compartment lid ajar PID read AJAR?**	**Yes** REFER to Section 417-02 to diagnose the door ajar switch. **No** GO to M6 .
M6 CHECK IGNITION SWITCH POSITION STATUS	
• Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM ignition switch position PID. • Enter the following diagnostic mode on the diagnostic tool: Monitor the FEM vehicle speed sensor (VSS) PID. • Enter the following diagnostic mode on the diagnostic tool: Monitor the PCM digital transmission range sensor PID. • **Are the FEM and PCM PIDs correct?**	**Yes** GO to M7 . **No** If the FEM ignition switch position PID is incorrect, REFER to Section 211-00 to diagnose the ignition switch. If the FEM VSS PID is incorrect, REFER to Section 206-09 to diagnose VSS signal. If the PCM digital transmission range sensor PID is incorrect, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual to diagnose the digital transmission range sensor.
M7 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test N: The Smart Lock Does Not Operate Correctly

Normal Operation

The smart locking function helps prevent the driver from locking the keys in the vehicle. With the driver or passenger door ajar, the key in the ignition and the driver door lock control switch is pressed, all doors will

lock then the driver door will unlock. With the driver or passenger door ajar, the key in the ignition and the passenger door lock control switch pressed, all the doors lock, then all the doors will unlock.

Possible Causes

- Driver door ajar switch
- Passenger door ajar switch
- DDM

PINPOINT TEST N: THE SMART LOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
N1 CHECK COURTESY LIGHTS	
• Open the driver door. • **Do the courtesy lights illuminate?**	**Yes** GO to N2 . **No** REFER to Section 417-02 to diagnose the interior lighting.
N2 CHECK WARNING CHIMES	
• Key in ON position. • Open the driver door. • **Do the warning chimes operate?**	**Yes** GO to N3 . **No** REFER to Section 413-00 to diagnose the chime.
N3 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test O: The Luggage Compartment Lid Is Inoperative Using The Remote Transmitter

Normal Operation

When the luggage compartment lid release button on the remote transmitter is pressed it sends a signal to the driver door module (DDM) which sends a message through the SCP network to the rear electronic module (REM) to energize the luggage compartment lid actuator.

Possible Causes

- remote transmitter battery
- remote transmitter programming
- remote transmitter association with a memory position
- DDM

PINPOINT TEST O: THE LUGGAGE COMPARTMENT LID IS INOPERATIVE USING THE REMOTE TRANSMITTER

Test Step	Result / Action to Take
NOTE: The luggage compartment lid key cylinder will not arm/disarm the perimeter alarm. Once armed, the perimeter alarm can only be disarmed using the remote transmitter or the driver set/reset switch.	
O1 TEST THE LUGGAGE COMPARTMENT LID REMOTE SWITCH	
• Press the luggage compartment lid remote switch. • **Did the luggage compartment lid open?**	**Yes** GO to O2 . **No** Go To Pinpoint Test A to diagnose the inoperative luggage compartment lid from the remote switch.
O2 CHECK THE REMOTE TRANSMITTER LUGGAGE COMPARTMENT LID RELEASE BUTTON WITH THE DIAGNOSTIC TOOL	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** GO to O5 . **No** GO to O3 .
O3 CHECK THE BATTERY IN THE REMOTE TRANSMITTER	
• Install a new battery in the remote transmitter. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** TEST all remote transmitter functions. CLEAR the DTCs. REPEAT the self-test. **No** GO to O4 .
O4 CHECK THE PROGRAMMING OF THE	

REMOTE TRANSMITTER	
• Reprogram all the remote transmitters. Refer to Remote Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the luggage compartment lid release button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does last received data indicate TRUNK?**	**Yes** The remote transmitter was not programmed. CLEAR the DTCs. REPEAT the self-test. **No** PROGRAM a new remote transmitter to the vehicle. REFER to Remote Transmitter Programming in this section. CLEAR the DTCs. REPEAT the self-test.
O5 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Pinpoint Test P: The Memory Seat Does Not Operate Correctly Using The Remote Transmitter

Normal Operation

When the UNLOCK button on the remote transmitter is pressed it sends a signal to the DDM to initiate the memory seat function if the transmitter has been associated with a memory position.

Possible Causes

- remote transmitter battery
- remote transmitter programming
- remote transmitter association with a memory position
- DDM

PINPOINT TEST P: THE MEMORY SEAT DOES NOT OPERATE CORRECTLY USING THE REMOTE TRANSMITTER

Test Step	Result / Action to Take
P1 CHECK THE MEMORY SET SWITCH	
• Make sure the key is in the key lock cylinder. • Operate the memory seat using the memory set switch.	**Yes** GO to P2 . **No** REFER to Section 501-10 to diagnose the memory set switch.

• **Does the memory seat operate correctly?**	
P2 CHECK THE REMOTE TRANSMITTER BUTTONS WITH THE DIAGNOSTIC TOOL	
• Key in OFF position. • Connect the diagnostic tool. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the lock, then the unlock button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** GO to P5 . **No** GO to P3 .
P3 CHECK THE BATTERY IN REMOTE TRANSMITTER	
• Install a new battery in the remote transmitter. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the lock, then the unlock button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** TEST all the remote transmitter functions. CLEAR the DTCs. REPEAT the self-test. **No** GO to P4 .
P4 CHECK THE PROGRAMMING OF THE REMOTE TRANSMITTER	
• Reprogram all the remote transmitters. Refer to Remote Transmitter Programming in this section. • Enter the following diagnostic mode on the diagnostic tool: Monitor the DDM FUNCTION TEST TIC/DATA. • Press the lock, then the unlock button on the remote transmitter while monitoring the DDM FUNCTION TEST TIC/DATA. • **Does the data received indicate LOCK, then UNLOCK?**	**Yes** The remote transmitter was not programmed. CLEAR the DTCs. REPEAT the self-test. **No** PROGRAM a new remote transmitter to the vehicle. REFER to Remote Transmitter Programming in this section. CLEAR the DTCs. REPEAT the self-test.
P5 CHECK THAT REMOTE TRANSMITTER IS ASSOCIATED WITH A MEMORY POSITION	
	Yes The system is operating correctly at this time. Concern

• Activate the remote transmitter memory recall feature. • Position the seat, mirrors, steering column and adjustable pedals to the desired positions. • **Does the remote transmitter operate correctly?**	may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation. **No** GO to P6 .
P6 CHECK FOR CORRECT DDM OPERATION	

• Disconnect all DDM connectors.
• Check for:
  • corrosion
  • pushed-out pins
• Connect all DDM connectors and make sure they seat correctly.
• Operate the system and verify the concern is still present.
• **Is the concern still present?**
	Yes
	INSTALL a new DDM. REFER to Section 418-00 . TEST the system for normal operation.
	
	No
	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. TEST the system for normal operation.

Remote Transmitter Programming

Printable View (9 KB)

NOTE: All keyless entry remote transmitters must be programmed at the same time.

1. Turn the ignition switch from OFF to RUN 8 times within 10 seconds, ending in RUN. If the module has successfully entered program mode, it will lock and then unlock all doors.

2. Within 20 seconds, press any button on a keyless entry remote transmitter, and the doors will lock and then unlock to confirm that each keyless entry remote transmitter has been programmed. Repeat this step for each transmitter.

3. If the door locks do not respond for any keyless entry remote transmitter, wait several seconds and press the button again. If the door locks still fail to respond, refer to Locks, Latches and Entry Systems in this section.

4. Turn the ignition switch to the OFF position, or wait up to 20 seconds after Step 2, to exit program mode. If a keyless entry remote transmitter has been programmed (or reprogrammed), the doors will lock and unlock one last time to confirm.

Hood Latch Printable View (163 KB)

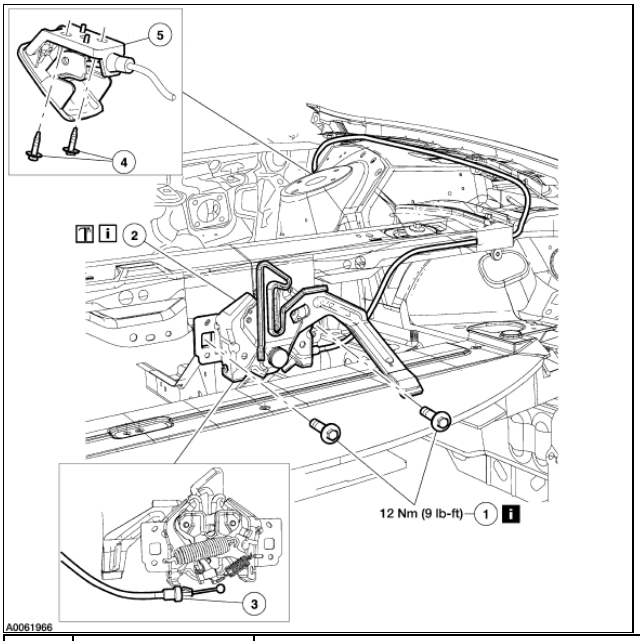
Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M1C93-B

1. To remove the individual components, only carry out the listed steps.

Component	Steps
Hood latch	1-3
Hood latch release cable assembly	1-5

2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	N808727-S	Hood latch bolts (two required) Removal Note
2	011403	Hood latch Installation Note
3	-	Hood latch release cable (part of 16B975)
4	-	Hood latch release handle screws (two required)
5	16B975	Hood latch release handle and cable assembly

3. To install, reverse the removal procedure.

Item 1: Hood Latch Bolts Removal Note

1. Mark the hood latch prior to removal of the bolts.

Item 2: Hood Latch Installation Note

1. When a new hood latch is installed, latch adjustment must be checked to make sure the latch was installed correctly.

Front Door Handle

Printable View (173 KB)

Special Tool(s)

ST1132-A	Heavy Duty Riveter 501-D011 (D80L-23200-A)

Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M1C93-B

NOTE: Passenger side shown, driver side similar.

1. Remove the front door trim panel. For additional information, refer to Section 501-01 .

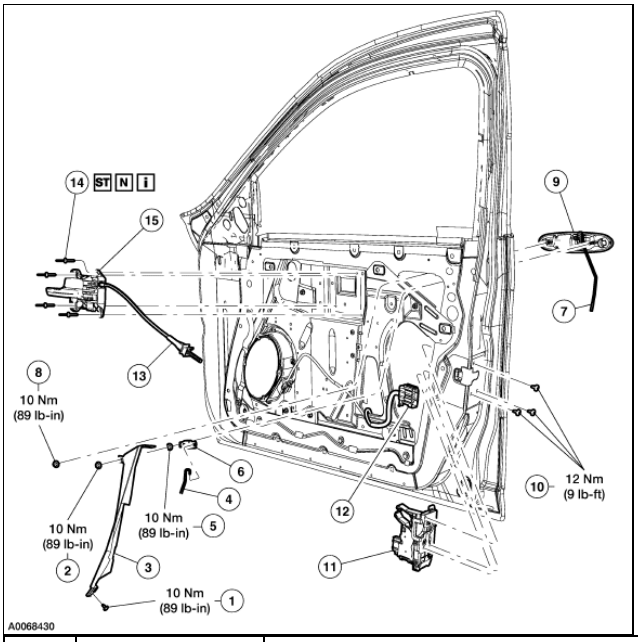
2. **NOTE:** When a new lock cylinder is installed, the luggage compartment lid lock cylinder and ignition lock cylinder should be installed as a set. This will eliminate carrying an extra key which will fit only one lock. If a new key is to be used, the new key code number is stamped on a metal tag attached to the key.

   NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

   To remove individual components, only carry out the listed steps.

Component	Steps
Exterior door handle	1- 3, 5, 7-9
Door lock cylinder	1- 6
Front door latch	1-4, 7, 10-13
Interior door handle	1-4, 7, 10-15

3. Remove the components in the order indicated in the following illustration and table.

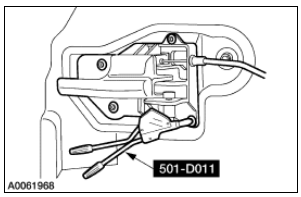


Item	Part Number	Description
1	N811471	Screw (one required)
2	N621906-S	Nut (one required)
3	21978 / 21979	Front door latch shield
4	219A64	Lock cylinder actuating rod (if equipped)
5	N621906-S	Nut (one required)
6	21991	Door lock cylinder (if equipped)
7	22152	Exterior door handle actuating rod
8	N621906-S	Nut (one required)
9	21812	Exterior front door handle
10	N81147-S	Screws (three required)
11	54218B18	Front door latch
12	14A099	Electrical connector
13	5421818	Interior front door handle cable
14	-	Interior front door handle rivets (four required) Installation Note
15	5421818	Interior front door handle

4. To install, reverse the removal procedure.

Item 14: Interior Front Door Handle Rivets Installation Note

1. Use special tool to install the new rivets.



Rear Door Handle

Printable View (108 KB)

Material

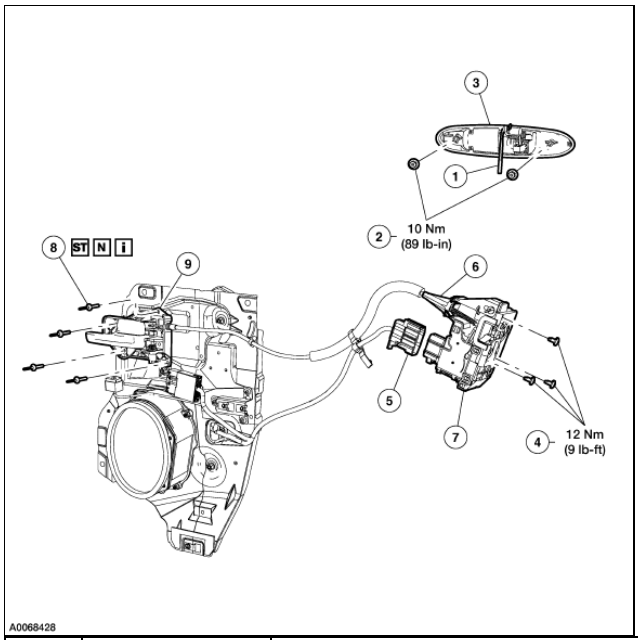
Item	Specification
Multi-Purpose Grease Spray F5AZ-19G209-AA	ESR-M1C159-A

1. Remove the rear door trim panel. For additional information, refer to Section 501-01 .

2. To remove the individual components, only carry out the listed steps.

Component	Steps
Exterior door handle	1-3
Rear door latch	1, 4-7
Interior door handle	1, 4-9

3. Remove the components in the order indicated in the following illustration and table.



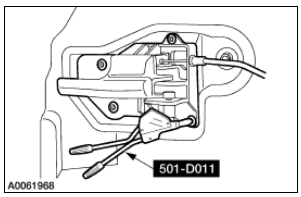
Item	Part Number	Description
1	5422400	Exterior rear door handle actuating rod
2	N621906	Nuts (two required)
3	5422400	Exterior door handle
4	11471	Screw (three required)
5	14A464	Electrical connector
6	5421B18	Rear door actuating cable
7	5421812	Rear door latch

8	5403A28A	Interior rear door handle rivets (four required) Installation Note
9	5421818	Interior rear door handle

4. To install, reverse the removal procedure.

Item 8: Interior Rear Door Handle Rivets Installation Note

1. Use the special tool to install the new rivets.



Luggage Compartment Lid Latch

Printable View (132 KB)

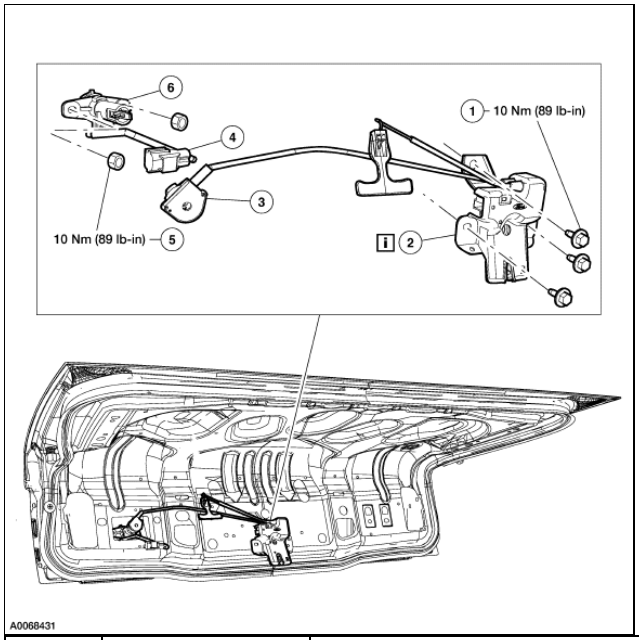
Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M193-B

1. Remove the luggage compartment lid trim panel.
2. To remove the individual components, only carry out the listed steps.

Component	Steps
Luggage compartment lid latch	1-3
Luggage compartment lid lock cylinder	4-6

3. Remove the components in the order indicated in the illustration and table.



Item	Part Number	Description
1	W7707795-S	Bolts (three required)
2	7643282	Luggage compartment lid latch Installation Note
3	5422400	Luggage compartment lid actuating cable
4	11471	Electrical connector
5	N806385	Nuts (two required)
6	43262	Luggage compartment lid lock cylinder

4. To install, reverse the removal procedure.

Item 2: Luggage Compartment Lid Latch Installation Note

1. When a new luggage compartment lid latch is installed, latch adjustment must be checked to make sure the latch was installed correctly.

Ignition Lock Cylinder

Printable View (125 KB)

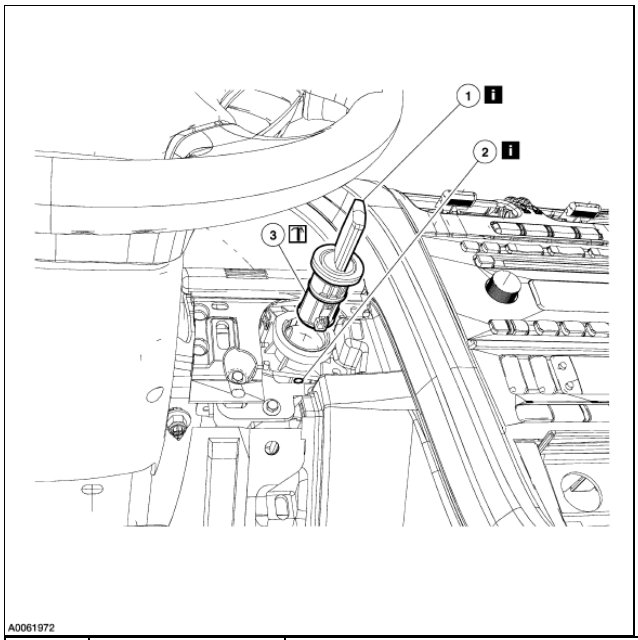
Material

Item	Specification
Multi-Purpose Grease Spray XL-5	ESB-M1C93-B

NOTE: When any new lock cylinder is installed, the luggage compartment lid lock cylinder, the driver door lock cylinder and ignition lock cylinders should be installed as a set. This eliminates carrying an extra key which will fit only one lock. If a new key is used, the new key code number is stamped on a metal tag attached to the key.

NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

1. Disconnect the battery ground cable and wait at least one minute to allow for depletion of the restraint system back up power supply. For additional information refer to Section 414-00 .
2. Remove the steering column opening finish panel. For additional information, refer to Section 501-01 .
3. Remove the inner instrument finish panel. For additional information, refer to Section 501-01 .
4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	7822053	Ignition key Removal Note
2	-	

		Lock cylinder release button (part of 11583) Removal Note
3	11583	Ignition lock cylinder

Item 1: Ignition Key Removal Note

1. Turn the ignition key to the RUN position.

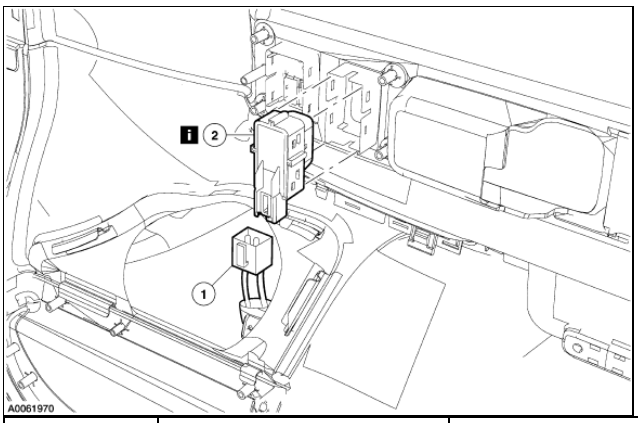
Item 2: Lock Cylinder Button Removal Note

1. Using a small flat-blade screwdriver, press the ignition lock cylinder release button.

Door Lock Control Switch

Printable View (120 KB)

1. Remove the door trim panel. For additional information, refer to Section 501-01 .
2. Remove the components in the order indicated in the illustration and table.

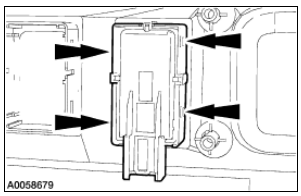


Item	Part Number	Description
1	14A205/14B121	Electrical connector
2	14017	Door lock control switch Removal Note

3. To install, reverse the removal procedure.

Item 2: Door Lock Control Switch Removal Note

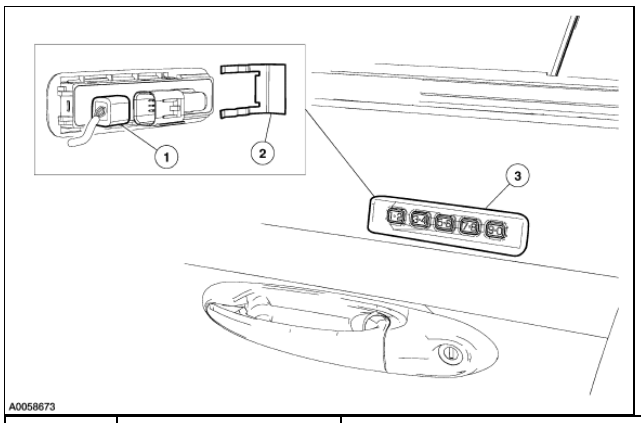
1. Release the switch from the locking tabs.



Keyless Entry Keypad

Printable View (47 KB)

1. Remove the front door trim panel. For additional information, refer to Section 501-01 .
2. Remove the components in the order indicated in the illustration and table.



Item	Part Number	Description
1	-	Electrical connector (part of 14K138)
2	-	Retaining clip (part of 14A626)
3	14A626	Keyless entry keypad

3. To install, reverse the removal procedure.

Safety Belt System Component Location Index

Child safety seat tether anchor LATCH	10		89

Safety Belt System

Printable View (20 KB)

⚠ WARNING: All safety belt assemblies including retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjusters, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. Ford recommends new safety belt assemblies be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Safety belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted.

The Automatic Locking Retractor (ALR) feature of the safety belt retractor must be checked by a qualified technician to verify that the ALR feature for a child seat is functioning properly, in addition to other checks for correct safety belt system function. A belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when inspected according to the functional inspection procedures in the workshop manual. Failure to replace the belt and retractor assembly could increase the risk of injury in collisions.

⚠ WARNING: Each seating position in the vehicle has a specific safety belt assembly which consists of one buckle and one tongue. The safety belt assembly is designed to be used as a pair and is not to be used across seating positions.

⚠ WARNING: Never put a rear-facing child seat on the front seat of a vehicle with a passenger airbag. If the airbag deploys, it can hit the back of the child seat with enough force to cause severe personal injury or death to the infant.

⚠ WARNING: A forward-facing child safety seat should only be placed in the front seat when it is unavoidable. If you must place a forward facing child seat in the front, always move the seat as far back as possible, because the force of the deploying front passenger air bag could cause death or serious injury to the infant. If the vehicle is equipped with a passenger airbag deactivation switch, the passenger airbag must be deactivated.

NOTE: New safety belt buckles, height adjusters, center adjust tongues and belts and retractors can be installed separately. However, if a safety assembly was in use during a collision, a new belt and retractor must be installed as well as the center adjust tongue, and belt and buckle assembly or the center adjust tongue, and the cable and buckle assembly. When installing new safety belts and buckles, height adjusters, safety cables and buckles, center adjust tongues, and belt and retractors, use only the parts specified in the Ford Master Parts Catalogs for the make and model of the vehicle being repaired. Safety belt assemblies must not be interchanged between vehicle models.

The active restraint system consists of:

- front seat safety belt retractor pretensioners with adjustable D-rings.
- front seat safety belt buckles attached to the power seat track bracket.
- rear seat safety belt retractors attached to the C-pillar behind the corner trim panel.
- the rear center safety belt retractor, which is located under the package tray trim.
- the rear LH, RH and center buckle ends, which are secured to the rear floor pan under the rear seat.
- child safety seat tether anchors located in the rear at all three seating positions.
- child safety seat LATCH system located at the rear outboard seating positions, behind the rear seat backrest

When installing new safety belt buckles and/or retractor assemblies, use only the replacement parts specified in the Ford Customer Service Division Master Parts and Accessories Catalog.

Safety Belt Retractor Pretensioners

The front outboard safety belt retractors use a safety belt pretensioner system. This works in conjunction with the front air bag system mounted in the steering wheel and instrument panel. The pretensioner is a pyrotechnic device that removes excess webbing slack from the safety belt. When the front air bags are deployed, the pretensioner deploys in the retractor, removing excess slack from the lap and shoulder safety belt. The pretensioners are activated when the restraints control module (RCM) detects a frontal impact force exceeding a programmed limit. If the vehicle is involved in a collision that results in deployment of the front air bags and safety belt pretensioners, a new driver and passenger seat belt system (including safety belt buckle and pretensioners or safety belt retractor and pretensioners, safety belt retractors, safety belts, buckles and height adjusters), must be installed.

For additional information, refer to Section 501-20B .

Dual Locking Mode Retractors

NOTE: When replacing a dual locking mode retractor, the retractor should be checked to make sure it is not in the automatic locking retractor (ALR) mode after installation in the stowed position.

All outboard continuous-loop, three-point retractor systems, except the driver position, are equipped with the dual locking mode system.

The emergency locking retractor (ELR) mode will allow the occupant freedom of movement, locking tight only on hard braking, hard cornering, or an impact of approximately 8 km/h (5 mph). The ELR mode helps to reduce the forward movement of the driver and passengers. The ELR mode is continuously in operation at all seating positions.

The ALR portion of this system does not allow the occupant freedom of movement. The ALR mode is used when locking a child seat in an outboard seating position or when a tight belt fit is desired. The ALR mode is automatically engaged when the webbing is fully extracted from the retractor and then allowed to retract. As the webbing is retracted back onto the spool, an audible clicking sound is made indicating the retractor is in ALR mode and the webbing will not pull back out of the retractor. To disengage the ALR mode, let the webbing retract back onto the spool. The ALR mode is disengaged when the webbing is free to move out and back into the retractor.

Safety Belt Extension Assembly

In certain cases, the safety belt may be too short even when it is fully extended. About 20 cm (8 inches) can be added to the belt length by using a safety belt extension (611C22). Safety belt extensions are available through the dealership parts department at no cost. Safety belt extensions are only available with black webbing. There is one extension assembly available for the front and rear seating positions.

Use only extensions manufactured by the same supplier as the safety belt. Manufacturer identification is located at the end of the webbing on the label. Also, use the safety belt extension only if the safety belt is too short for you when fully extended. Do not use the extension to change the fit of the shoulder belt across the torso.

Safety Belt Warning System Driver Safety Belt

The driver safety belt incorporates a safety belt warning indicator switch (10B924), warning indicator and chime. The warning indicator and chime are reminders to fasten the safety belt.

- If the driver safety belt is not buckled before the ignition key is turned to the ON position, the safety belt warning light illuminates for one to two minutes and the warning chime sounds for four to eight seconds.
- If the safety belt is buckled while the warning indicator is on and the chime is sounding, the warning light and warning chime turn off.
- If the safety belt is buckled before the key is turned to the ON position, the warning indicator will come on for four to eight seconds with no chime.

Belt Minder

The Belt Minder feature is a supplemental warning to the safety belt warning function. This feature provides additional reminders to the driver that the driver and/or passenger safety belt is unbuckled by intermittently sounding a chime and illuminating the safety belt warning lamp in the instrument cluster.

The passenger safety belt minder feature is activated only when the OCS detects a passenger in the right front seat and the passenger weight exceeds a programmed limit.

If...	Then...
The driver and/or passenger safety belt is not buckled before the vehicle has reached at least 5 km/h (3 mph) and 1-2 minutes have elapsed since the ignition switch has been turn to ON...	The Belt Minder feature is activated the safety belt warning light illuminates and the warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until safety belt is buckled.
The driver and/or passenger safety belt is buckled while the safety belt indicator light is illuminated and the safety belt warning chime is sounding...	The Belt Minder feature will not activate.
The driver and/or passenger safety belt is buckled before the ignition switch is turned to the ON position...	The Belt Minder feature will not activate.

Child Safety Seat Tether Anchors

⚠ WARNING: The child safety seat tether anchor/bolt MUST be securely tightened to specification. Otherwise, the child safety seat may not be correctly secured and the child could be injured if the vehicle is involved in a collision or stops suddenly.

Child safety seat tether anchors are located in the rear at both seating locations. If a child safety seat was in use during a collision, inspect the tether anchor and seat backrest frame for damage. Install a new tether anchor or seat backrest frame if necessary. For additional information, refer to Child Safety Seat Tether Anchor in this section.

Lower Anchors and Tethers for Children (LATCH)

The lower anchors and tethers for children (LATCH) system is a standardized and uniform attachment system for installing child safety seats in passenger vehicles. LATCH- equipped child safety seats have two lower

attachments that connect to the vehicle portion of the LATCH system.

The vehicle portion of the system consists of two attachment points (6 mm wires) bolted to the floor pan at both second row outboard seating positions. The attachment points protrude from the biteline between the seat cushion and seat backrest.

If a child safety seat was in use during a collision, inspect the vehicle portion of the system for damage. If any of the attachment points (6 mm wires) are damaged, a new one must be installed. See the appropriate removal and installation procedure in this section for service.

Safety Belt System Printable View (19 KB)

Inspection and Verification

1. Verify the customer's original concern by operating the active restraint system to duplicate the condition.

2. Inspect to determine if any of the following mechanical or electrical concerns apply:

   Visual Inspection Chart

Mechanical	Electrical
• Inspect the safety belt webbing for integrity • Safety belt buckle and tongue assembly • Safety belt retractor	• Open fuse. • Bare, broken or disconnected wire. • Connector not tightly engaged. • Safety belt warning indicator lamp burned out or broken.

3. If the inspection reveals an obvious concern(s) that can be readily identified, service as required. With the exception of removing a twist from the safety belt webbing, do not attempt to repair a component of the safety belt system; new components must be installed.

4. If the concern remains after the inspection, determine the symptom. GO to Symptom Chart .

5. To check the active restraint system for correct operation, carry out the appropriate Functional Test(s).

Symptom Chart

SYMPTOM CHART

Component Test

Carry out the appropriate Functional Test(s) as determined in Inspection and Verification.

Functional Test I (Buckle and Tongue)

The safety belt buckle and tongue assembly must operate freely during the latching and unlatching function. Fasten the safety belt by inserting the tongue (male portion) into the buckle (female portion).

1. Verify the following during the latching sequence:
   - Tongue insertion is not hindered by excessive effort.
   - A click is heard when the buckle latches the tongue.

2. Verify the system integrity by forcefully pulling on the belt webbing.

3. Unlatch the belt by fully depressing the buckle release button, and allowing the belt to release and retract.

4. Verify the following during the unlatching process:
   - Push-button depression does not require excessive effort.
   - Tongue can be removed easily from the buckle.

5. Repeat the above steps three times.

6. If the inspection reveals an obvious concern(s) that can be readily identified, service as required. Do not attempt to carry out any repair on the buckle and tongue assembly. If a concern exists with either component, a new safety belt buckle and safety belt and retractor assembly must be installed.

Functional Test II (Retractor)

The safety belt and retractor assembly must be freely operational for extraction and retraction of the safety belt webbing between full extension and in-vehicle stowed positions.

1. Extract and retract the safety belt between the full extension and stowed positions.

2. Verify the retractor operates without excessive effort or binding.

3. Install a new safety belt buckle retractor and tongue assembly if no obvious concerns are noticed and the complaint has been verified.

Functional Test III (System Road Test Inspection)

1. **NOTE:** If the RH or the rear safety belts are to be tested, a passenger must be used.

   Fasten the safety belts and proceed to a safe area.

2. Attain a speed of 8 km/h (5 mph).

3. ⚠ **WARNING: The driver and passenger must be prepared to brace themselves if the retractor does not lock.**

   Test the safety belts.

   1. Grasp the shoulder harness and prepare to lean forward.
   2. ⚠ **WARNING: The maximum brake application should be on dry concrete or equivalent hard surface, NEVER on wet pavement or gravel.**

      ⚠ **WARNING: The driver and passenger must be prepared to brace themselves in the event the retractor does not lock.**

      Make a maximum brake application without a skid.
   3. NOTE: Do not jerk on the safety belt webbing when carrying out this test.
      Lean forward slightly when the brake application is made.

4. The safety belts should lock up with minimum webbing extension.

5. If there is a lockup of both shoulder straps, the safety belt assemblies are functioning correctly.

Should either or both retractors fail to lock up at the 8 km/h (5 mph) speed, repeat the test at a constant 24 km/h (15 mph) speed. (This test must be carried out with a RH front or rear passenger if the RH front or rear safety belts are to be tested).

6. **⚠ CAUTION: Before installing a new safety belt assembly, inspect the mounting area for damage and distortion. If the retractor of a new safety belt assembly has been bolted into a damaged or distorted mounting area, the retractor could be warped and may not function. If this is the case, remove the retractor and return the sheet metal to the original configuration and install another complete safety belt assembly.**

   If either or both retractors do not lock up at the 24 km/h (15 mph) test, return the vehicle for service of malfunctioning safety belts.

Functional Test IV (Automatic Locking Retractor)

⚠ WARNING: After any vehicle collision, the safety belt system at all outboard seating positions (except driver, which has no "automatic locking retractor" feature) must be checked by a qualified technician to verify that the "automatic locking" feature for child seats is still functioning properly, in addition to other checks for correct safety belt system function. A safety belt and retractor assembly must be replaced if the safety belt assembly's "automatic locking retractor" feature or any other safety belt function is not operating properly when checked according to the procedures in the workshop manual. Failure to replace the safety belt and retractor assembly could increase the risk of injury in collisions.

1. Position the seat back into the full up position.
2. Position the height adjuster in the full down or up position.
3. Latch the seat belt buckle and tongue assembly.
4. Pull the shoulder belt out until the automatic locking retractor (ALR) feature is activated.
5. Release the shoulder belt and allow it to retract until it stops.
6. Pull on the shoulder belt to check that the belt has remained in the ALR mode. If the belt is not locked, install a new safety belt and retractor assembly.
7. Unlatch the safety belt tongue from the buckle and allow the safety belt to retract to its stowed position.
8. Pull the shoulder belt to verify the retractor assembly has converted automatically out of the ALR mode. If the shoulder belt remains locked in the stowed position, install a new safety belt and retractor assembly.

Supplemental Restraint System (SRS) Deactivation and Reactivation

Printable View (636 KB)

Special Tool(s)

 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (014-R1076)
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

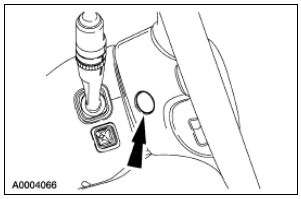
   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

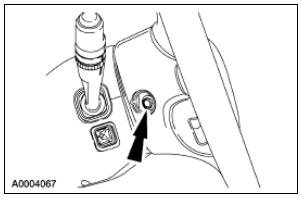
   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

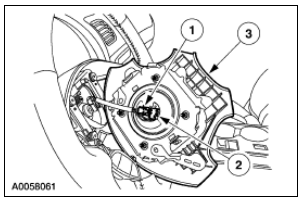
2. Remove the two steering wheel plugs (one shown).



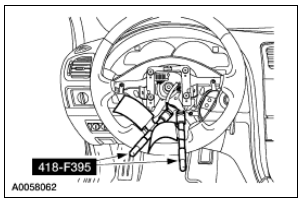
3. Remove the two driver air bag module bolts (one shown).



4. Disconnect and remove the driver air bag module.
    1. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    2. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    3. Remove the driver air bag module.



5. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.

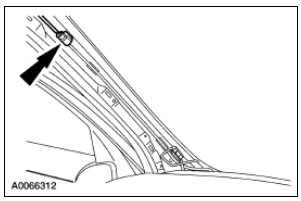


Vehicles with side air curtains

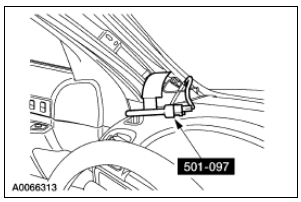
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

6. Remove the A-pillar trim panel. For additional information, refer to Section 501-01 .

7. Disconnect the driver side air curtain module electrical connector.



8. Attach the restraint system diagnostic tool to the vehicle harness side of the driver side air curtain module electrical connector.



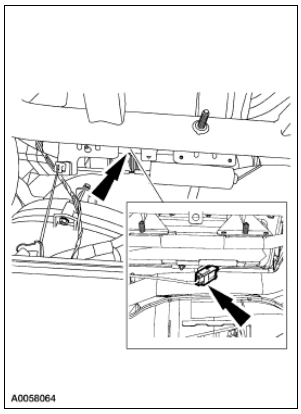
All vehicles

9. Remove the glove compartment. For additional information, refer to Section 501-01 .

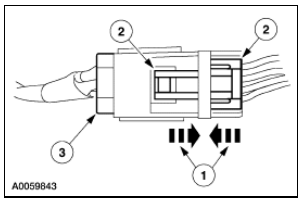
10. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

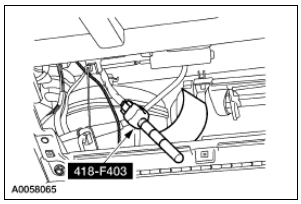
    Locate the passenger air bag module electrical connector.



11. Disconnect the passenger air bag module.
    1. Push the passenger air bag module electrical connector together.
    2. Push down, pivoting the electrical connector and release the electrical connector retainer.
    3. Pull out, disconnecting the vehicle harness end of the connector from the component end.



12. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag module electrical connector.

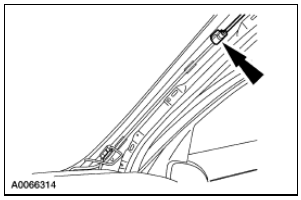


Vehicles with side air curtains

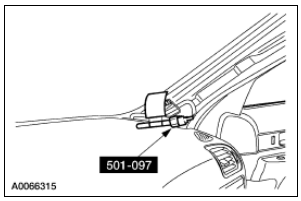
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

13. Remove the A-pillar trim panel. For additional information, refer to Section 501-01

14. Disconnect the passenger side air curtain module electrical connector.



15. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger side air curtain module electrical connector.



All vehicles

16. Connect the battery ground cable. For additional information, refer to Section 414-00 .

17. Move and tilt the front seats to their highest and most forward position.

18. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

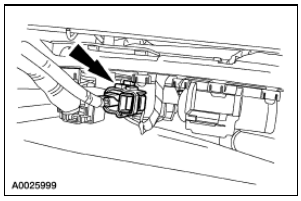
    The first row side impact sensors are located at or near the base of the B-pillars.

    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

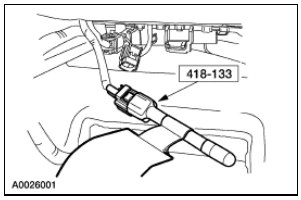
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

19. From under the passenger seat, release the tab and disconnect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



Vehicles without side air curtains

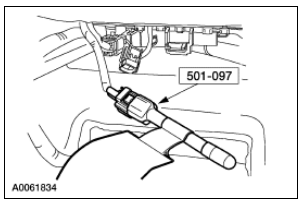
20. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side air bag electrical connector.



Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

21. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side thorax air bag electrical connector.

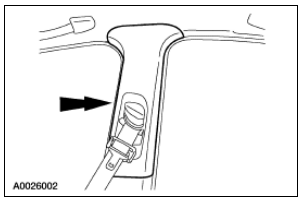


All vehicles

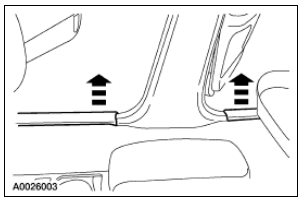
22. Remove the passenger side B-pillar weatherstripping.

23. Position the passenger side safety belt shoulder height adjuster to its highest point.

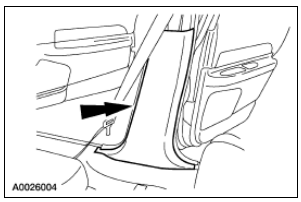
24. Detach the passenger side B-pillar trim panel.



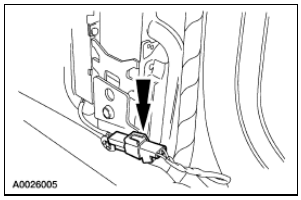
25. Remove the passenger side front and rear door scuff plates.



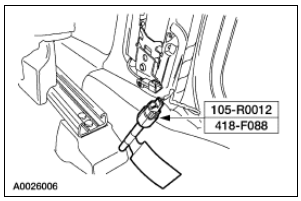
26. Remove the passenger side B-pillar lower trim panel.



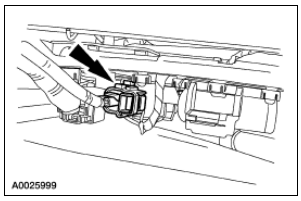
27. Disconnect the passenger side safety belt retractor pretensioner electrical connector.



28. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

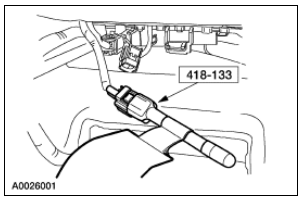


29. From under the driver seat, release the tab and disconnect the driver seat side air bag or driver seat side thorax air bag electrical connector.



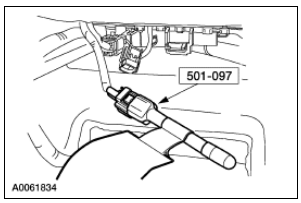
Vehicles without side air curtains

30. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side air bag electrical connector.



Vehicles with side air curtains

31. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side thorax air bag electrical connector.

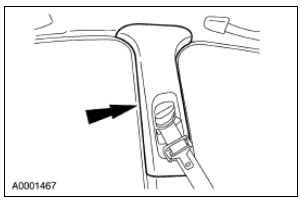


All vehicles

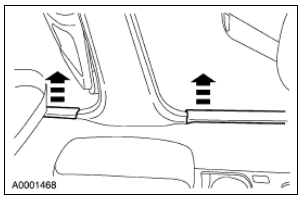
32. Remove the driver side B-pillar weatherstripping.

33. Position the driver side safety belt shoulder height adjuster to its highest point.

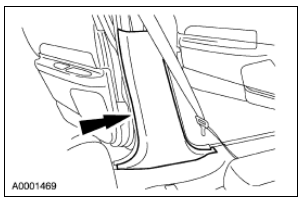
34. Detach the driver side B-pillar upper trim panel.



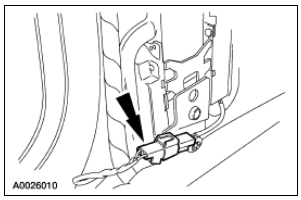
35. Remove the driver side front and rear door scuff plate.



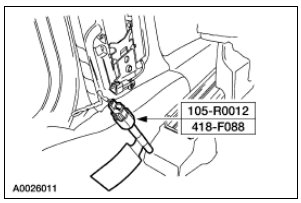
36. Remove the driver side B-pillar trim panel.



37. Disconnect the driver side safety belt retractor pretensioner electrical connector.



38. Attach the restraint system diagnostic tool to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



39. Connect the battery ground cable. For additional information, refer to Section 414-00 .

40. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

41. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Reactivation

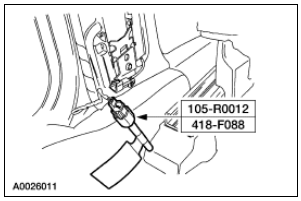
⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions,**

and notes at the beginning of the deactivation procedure.

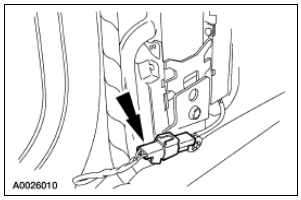
All vehicles

1. **NOTE:** Make sure the battery negative cable is still disconnected before proceeding with the reactivation procedure.

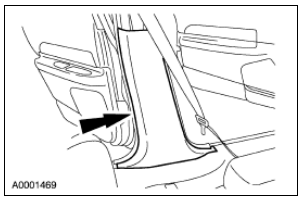
   Remove the restraint system diagnostic tool from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



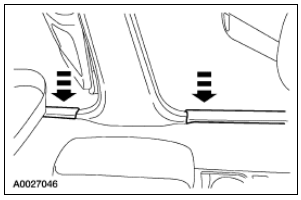
2. Connect the driver side safety belt retractor pretensioner electrical connector.



3. Install the driver side B-pillar lower trim panel.

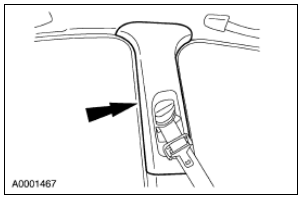


4. Install the driver side front and rear door scuff plates.



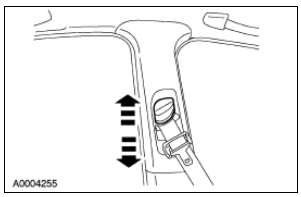
5. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

   Install the driver side B-pillar upper trim panel.



6. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks

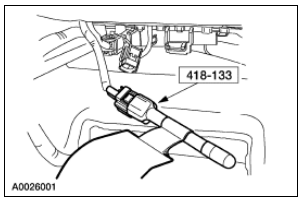
correctly in each position.



7. Install the driver side B-pillar weatherstripping.

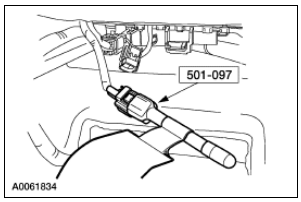
Vehicles without side air curtains

8. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side air bag electrical connector.



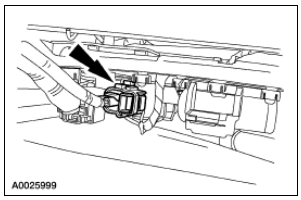
Vehicles with side air curtains

9. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side thorax air bag electrical connector.

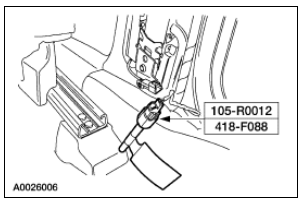


All vehicles

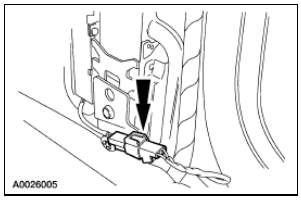
10. Connect the driver seat side air bag or driver seat side thorax air bag electrical connector.



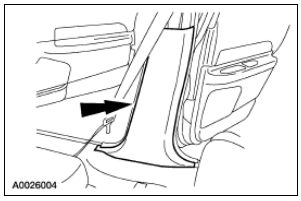
11. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.



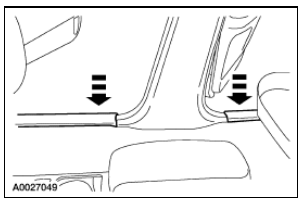
12. Connect the passenger side safety belt retractor pretensioner electrical connector.



13. Install the passenger side B-pillar lower trim panel.

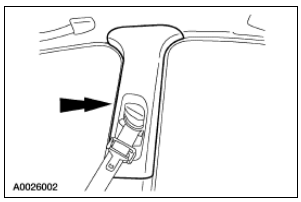


14. Install the passenger side front and rear door scuff plates.

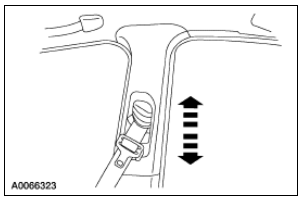


15. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

    Install the passenger side B-pillar upper trim panel.



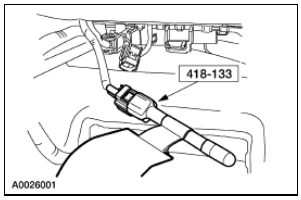
16. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.



17. Install the passenger side B-pillar weatherstripping.

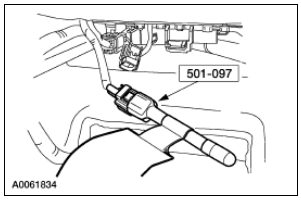
Vehicles without side air curtains

18. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side air bag electrical connector.



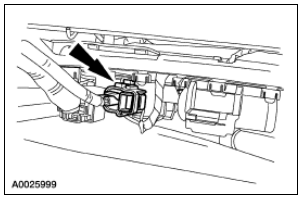
Vehicles with side air curtains

19. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side thorax air bag electrical connector.



All vehicles

20. Connect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



21. Connect the battery ground cable. For additional information, refer to Section 414-00 .

22. Position the front seats rearward.

23. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

    The first row side impact sensors are located at or near the base of the B-pillars.

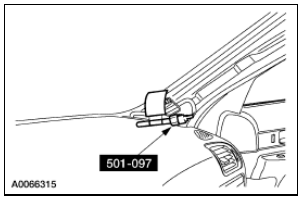
    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

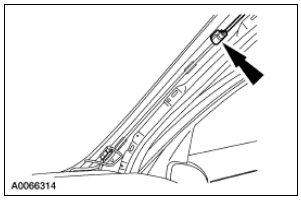
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Vehicles with side air curtains

24. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger side air curtain module electrical connector.



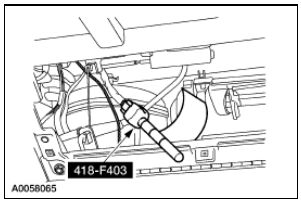
25. Connect the passenger side air curtain module electrical connector.



26. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .

All vehicles

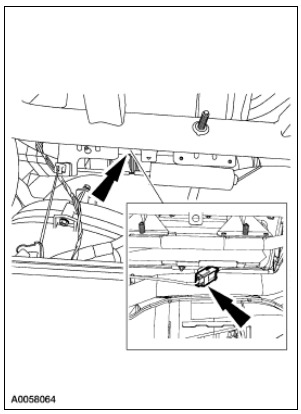
27. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.



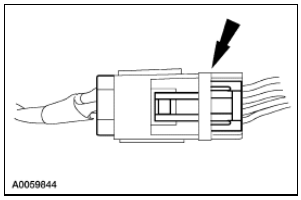
28. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

    Locate the passenger air bag module electrical connector.



29. Connect the passenger air bag module.

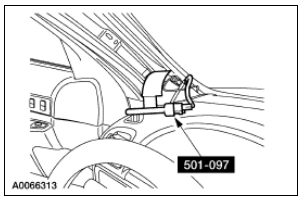


30. Install the glove compartment. For additional information, refer to Section 501-01 .

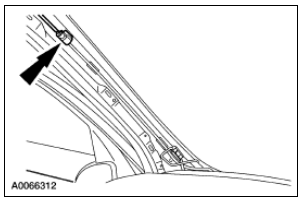
Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

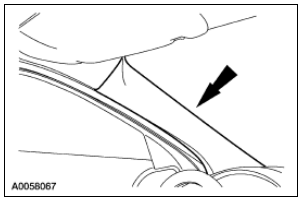
31. Remove the restraint system diagnostic tool from the vehicle harness side of the driver side air curtain module electrical connector.



32. Connect the driver side air curtain module electrical connector.

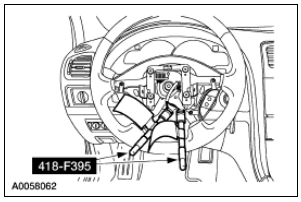


33. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .



All vehicles

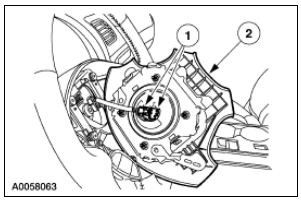
34. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



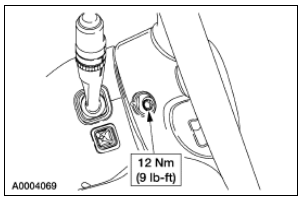
35. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

Connect and position the driver air bag module.

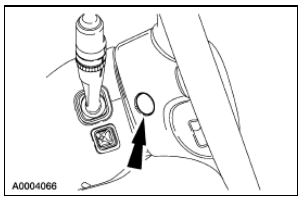
1. Connect the driver air bag module electrical connectors.
2. Position the driver air bag module to the steering wheel.



36. Install the two driver air bag module bolts (one shown).



37. Install the two steering wheel plugs (one shown).



38. Connect the battery ground cable. For additional information, refer to Section 414-00 .

39. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

40. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Safety Belt Cleaning

Printable View (9 KB)

1. **WARNING: Do not bleach or re-dye the webbing, as the webbing may weaken.**

   Clean the safety belt webbing only with a mild soap solution recommended for cleaning upholstery or carpets. Follow the instructions provided with the soap.

Safety Belt Maintenance

Printable View (10 KB)

⚠ WARNING: All safety belt assemblies include retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjuster, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

1. The safety belt assemblies should be periodically inspected to make sure that they have not become damaged and that they remain in correct operating condition, particularly if they have been subjected to severe stress.

2. Before installing the new safety belt assembly; the safety belt retaining areas must be inspected for damage and distortion. If the retaining points are damaged and distorted, the sheet metal must be reworked back to its original shape and structural integrity.

3. Install the new safety belt(s) using the appropriate instructions. Carry out the Functional Test Procedure. For additional information, refer to Safety Belt System in this section.

Replacement of the Weld Nut and Reinforcement

Printable View (9 KB)

1. **NOTE:** If the safety belt anchor nuts or reinforcements are stripped or missing, a new nut/reinforcement plate must be installed.

   Expose the suspect anchor point.

2. Drill out two 8 mm (5/16 inch) diameter access holes adjacent to the weld nut clearance hole.

3. Thread a length of copper welding wire through the clearance hole and position to secure the weld nut and washer.

4. Use MIG wire feed welder and plug weld a M10 weld nut and standard washer in place at the two 8 mm (5/16 inch) holes.

5. Metal finish as necessary.

6. Install the restraint system.

7. Carry out the Functional Test. For additional information, refer to Safety Belt System in this section.

Safety Belt Shoulder Height Adjuster With Stripped Weld Nuts

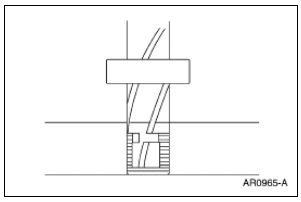
Printable View (85 KB)

Special Tool(s)

 ST1657-A	D-Ring Installation Kit 100-F012 (134-00018) or equivalent
 ST1181-A	Safety Belt Bolt Bit 501-010 (T77L-2100-A) or equivalent

1. Remove the shoulder safety belt height adjuster. For additional information, refer to Front Safety Belt in this section.

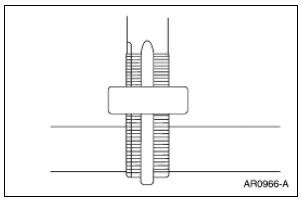
2. Use the half-inch drill provided in the D-Ring Installation Kit to drill out the damaged threads in the upper pillar structure.



AR0965-A

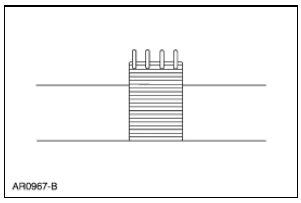
3. **NOTE:** After each rotation, back off the tap slightly to remove the new cuttings and be sure to blow out any chips before proceeding.

   Apply a suitable lubricant to the M14x1.5 tap provided in the D-Ring Installation Kit and tap new threads.



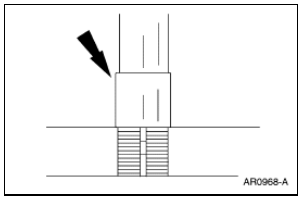
AR0966-A

4. Use a threaded insert (Part of #N807170-S190) provided in the D-Ring Installation Kit and screw it into the retapped hole until it is slightly below the surface.



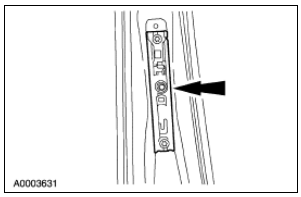
AR0967-B

5. Use a hammer to lightly tap the installation tool provided in the D-Ring Installation Kit several times to seat the insert keys.

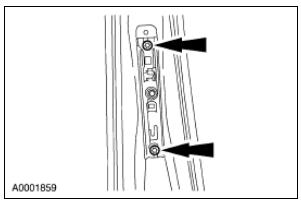


6. **NOTE:** If the shoulder safety belt height adjuster bolts are stripped, install a new height adjuster.

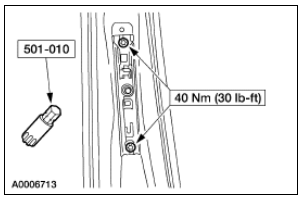
   Insert the shoulder safety belt height adjuster in the opening of the upper B-pillar structure, making sure the shoulder belt height adjuster knob on the shoulder safety belt height adjuster is positioned above the D-ring attachment nut. (The tab is located at the top and is to be inserted in the hole provided in the B-pillar structure).



7. Hand tighten the height adjuster bolts until they are snug.

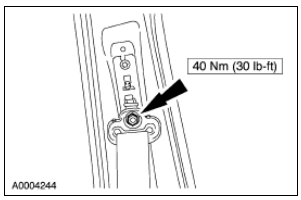


8. Using the special tool, tighten the height adjuster bolts.



9. **NOTE:** Make sure the D-ring rotates freely.

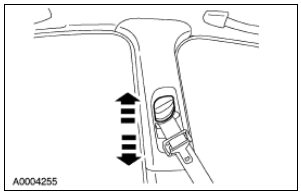
   Install the safety belt D-ring and tighten the nut.



10. **NOTE:** Position the safety belt D-ring to its highest point before installing B-pillar trim.

    Install the B-pillar trim.

11. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.



12. Check the restraint system for correct operation.

Safety Belt Procedure After a Collision

Printable View (10 KB)

⚠ WARNING: All safety belt assemblies include retractors, buckles, front seat belt buckle support assemblies (slide bar), if equipped, shoulder belt height adjuster, if equipped, child safety seat tether bracket assemblies, if equipped, and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected. New safety belt assemblies should be installed if either damage or incorrect operation is noted.

NOTE: The driver and front passenger seat belt system (including belt and retractor assembly, buckles, and height adjusters) must be replaced if the vehicle is involved in a collision that results in deployment of the front air bags and safety belt pretensioners.

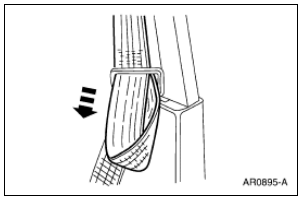
1. Before installing a new safety belt assembly, the safety belt attaching areas must be inspected for damage and distortion. If the attaching points are damaged and distorted, the sheet metal must be worked back to its original shape and structural integrity.

2. Install the new safety belt(s). For additional information, refer to the procedure in this section. Carry out the Functional Test. For additional information, refer to Safety Belt System in this section.

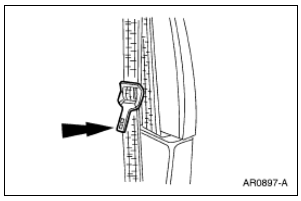
Safety Belt Tongue Rotated on Belt

Printable View (25 KB)

1. Grasp the belt tongue and pull the belt webbing down to form a loop through the slot in the tongue.



2. Rotate and fold the belt webbing over itself within the slot to remove the twist.
3. Pull the excess belt webbing back through the slot in the belt tongue.
4. Pull the excess belt webbing through the slot.
5. The safety belt tongue should face inward when completed.



Front Safety Belt

 ST2507-A	Diagnostic Tool, Restraint System (4 req'd) 501-097

⚠ WARNING: All safety belt assemblies including retractors, buckles, shoulder belt height adjusters (if so equipped) child safety seat tether attachments and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate properly. Belt assemblies not in use during a collision should also be inspected and installed new if either damage or improper operation is noted.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: After deployment, the air bag surface could contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

NOTE: Right side shown, left side similar.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

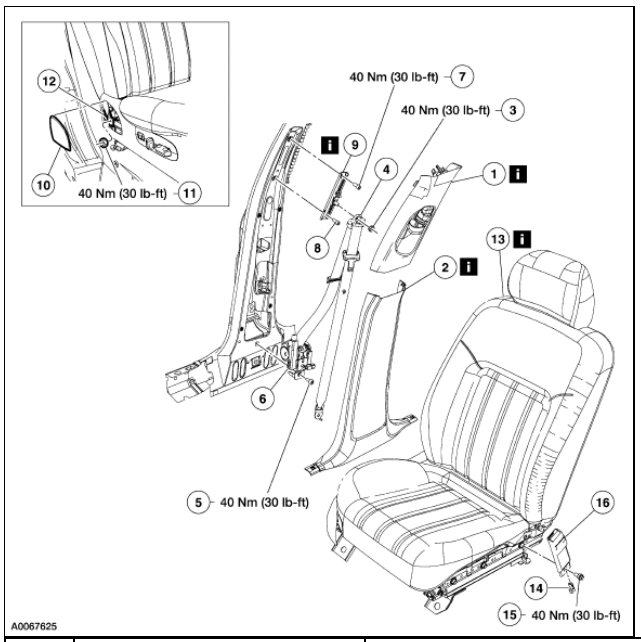
   When servicing the safety belt retractor pretensioner or safety belt buckle, deactivate the supplemental restraint system. For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.

3. When servicing the safety belt buckle, remove the affected seat from the vehicle. For additional information, refer to Section 501-10 .

4. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the following steps.

Component	Steps
Safety belt retractor	1-6, 10-12
Safety belt buckle	13-16
Safety belt shoulder height adjuster	1, 3, 4, 7-9

5. To install, reverse the removal procedure.



Item	Part Number	Description
1	5424356 RH/LH 5424357	Upper B-pillar trim panel Removal Note
2	7824396 RH/ 7824397 LH	Lower B-pillar trim panel Removal Note

3	N800937-S193	Safety belt D-ring nut
4		Safety belt D-ring (part of 611B08 RH/611B09 LH)
5	W700883- S409M	Bolt, retractor
6		Safety belt retractor
7		Safety belt shoulder height adjuster bolt
8		Safety belt shoulder height adjuster bolt
9	602B82	Safety belt shoulder height adjuster Removal Note
10		Seat side trim panel and safety belt anchor cover
11	N800937-S193	Safety belt anchor nut
12		Safety belt and anchor (part of 611B08 RH/611B09 LH)
13		Seat assembly Removal Note
14		Safety belt buckle switch connector
15	W700883-S409M	Safety belt buckle bolt
16	61202 RH/ 61203 LH	Safety belt buckle assembly

6. When installing the safety belt retractor pretensioner:
    1. Remove the restraint system diagnostic tool from the safety belt retractor pretensioner.
    2. Connect the safety belt retractor pretensioner electrical connector.
    3. Connect the battery ground cable. For additional information, refer to Section 414-00 .
    4. With the restraint system diagnostic tools installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B in the Diagnosis and Testing portion of the section.
    5. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .
    6. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

       Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in this section.
    7. Connect the battery ground cable. For additional information, refer to Section 414-00 .
    8. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

       With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B in the Diagnosis and Testing portion of the section.

7. Check the active restraint system for correct operation. For additional information, refer to Safety Belt System in this section.

Item 1: Upper B-Pillar Trim Panel Removal Note

1. For additional information, refer to Section 501-01 .

Item 2: Lower B-Pillar Trim Panel Removal Note

1. For additional information, refer to Section 501-01 .

Item 9: Safety Belt Shoulder Height Adjuster Removal Note

1. Rotate the safety belt shoulder height adjuster downward to release the lower tab.
2. Remove the safety belt shoulder height adjuster.

Item 13: Seat Assembly Removal Note

1. For additional information, refer to Section 501-10 .

Rear Safety Belt

Printable View (147 KB)

Special Tool(s)

 ST1181-A	Torx Bit, Safety Belt Bolt 501-010 (T77L-2100-A)

Removal and Installation

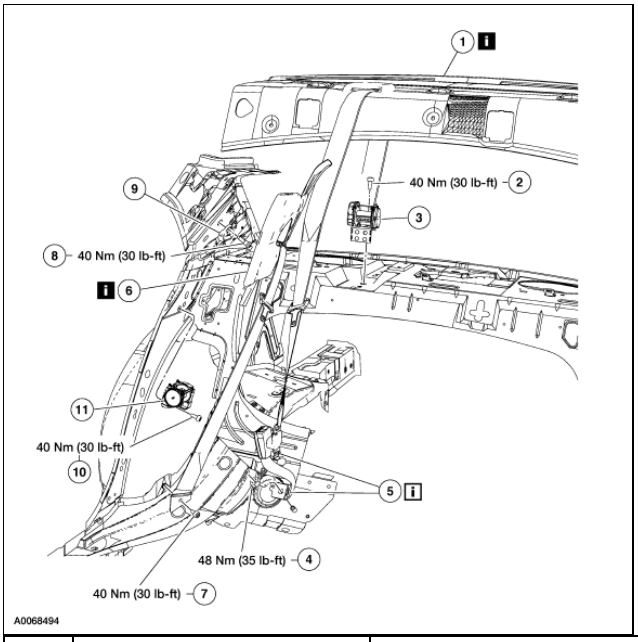
⚠ **WARNING: All safety belt assemblies including retractors, buckles, front seat belt buckle support assemblies (slide bar), shoulder belt height adjusters (if so equipped) child safety seat tether attachments and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate properly. Belt assemblies not in use during a collision should also be inspected and installed new if either damage or improper operation is noted.**

NOTE: Rear seat and package tray trim removed for clarity. Right side shown, left side similar.

1. To access the rear outboard safety belt retractor, remove the quarter trim panel. For additional information, refer to Section 501-01 .
2. To access the rear outboard safety belt anchor, remove the rear seat cushion. For additional information, refer to Section 501-10 .
3. To access the center safety belt retractor, remove the retractor cover. For additional information, refer to Section 501-01 .
4. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the following steps.

Component	Steps
Rear safety belt and retractor	6-10
Center seat safety belt	2-3
Seat belt buckle	4-5

5. To install, reverse the removal procedure.



Item	Part Number	Description
1		Package tray trim panel Removal Note
2	W700883	Bolt, center seat safety belt retractor
3	601B30	Center seat safety belt and retractor assembly
4	N800937-S193	Nut, right side and center buckle anchor
5	60045	Right side and center buckle assembly Installation Note
6	RH 52018 / LH 52017	Quarter panel trim Removal Note
7	W700883- S409M	Bolt, retractor
8	W700883- S409M	D-ring bolt
9		D-ring (part of 611B68 RH/611B69 LH)
10	W700883-S409M	Bolt, retractor
11	611B68 RH/ 611B69 LH	Belt and retractor

Item 1: Package Tray Trim Panel Removal Note

1. For additional information, refer to Section 501-01 .

Item 6: Quarter Panel Trim Removal Note

1. For additional information, refer to Section 501-01 .

Item 5: Right Side and Center Buckle Assembly Installation Note

1. The anti-rotation tab must be correctly aligned for correct installation.

Child Safety Seat Tether Anchor

Printable View (107 KB)

Material

Item	Specification
Clear Silicone Rubber D6AZ-19562-AA	ESB-M4G92-A

Removal and Installation

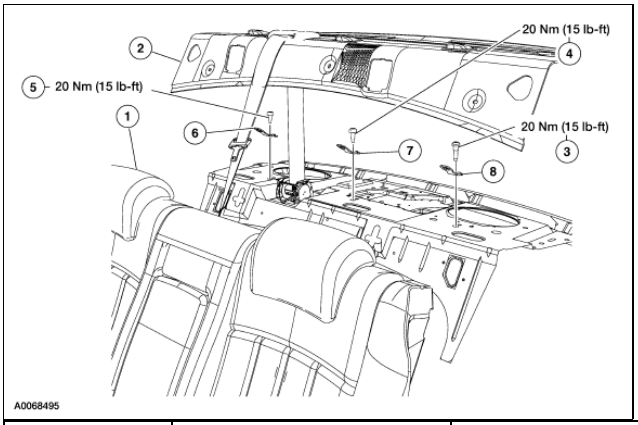
⚠ WARNING: All safety belt assemblies including retractors, buckles, front seat belt buckle support assemblies (slide bar), shoulder belt height adjusters (if so equipped), child safety seat tether attachments and attaching hardware should be inspected after any collision. All belt assemblies should be installed new unless a qualified technician finds the assemblies show no damage and operate properly. Belt assemblies not in use during a collision should also be inspected and installed new if either damage or improper operation is noted.

NOTE: Sealant **must** be applied to the tether anchor bolts when installed.

1. To access the tether anchors, remove the rear seat cushion, seat back. For additional information, refer to Section 501-10 .
2. Remove the package tray trim panel. For additional information, refer to Section 501-01 .
3. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the following steps.

Component	Steps
Tether anchors	1-8

4. To install, reverse the removal procedure.



Item	Part Number	Description
1		Rear seat
2	46668	Package tray trim panel

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Printable View (28 KB)

The air bag supplemental restraint system (SRS) is designed to provide increased collision protection for front seat occupants in addition to that provided by the three-point safety belt system. The SRS will also provide increased collision protection for the rear occupants when equipped with optional side air curtains. Safety belt use is necessary to obtain the best occupant protection and to receive the full advantage of the SRS.

This vehicle line contains dual-stage deployment (advanced restraint system) driver and front passenger air bag modules. These vehicles are also equipped with seat side air bag modules and optional side air curtain modules.

Vehicles equipped with side air curtain modules are also equipped with seat side thorax air bag modules. Vehicles that are not equipped with side air curtain modules are equipped with seat side air bag modules. Seat side air bag modules and seat side thorax air bag modules deploy from the outboard front seat backrest upon a side impact. Side air curtain modules deploy from the headliner, protecting the first and second row outboard occupants during a side impact.

Driver Air Bag Module

NOTE: References to the driver air bag module must not be confused with the driver seat side air bag components of the supplemental restraint system (SRS).

The driver air bag module:

- is steering wheel mounted.
- will deploy upon receiving a flow of current from the restraints control module (RCM).
- has no subassemblies.

Clockspring

The clockspring:

- is mounted on the steering column, behind the steering wheel.
- provides a continuous electrical path from the driver air bag module to the restraints control module (RCM).

Seat Side Air Bag Modules and Seat Side Thorax Air Bag Modules

⚠ CAUTION: When installing a seat side air bag module or a seat side thorax air bag module always make sure the correct module is being installed. Seat side air bag modules and seat side thorax air bag modules are not interchangeable. The electrical connectors are different between the modules. DO NOT damage or alter the electrical connectors.

NOTE: When installing a new side air bag module or a new side thorax air bag module after deployment, refer to Section 501-10 for additional information.

This vehicle is equipped with a seat side air bag module or a seat side thorax air bag module. The modules are not interchangeable. The electrical connectors are keyed differently between the modules. **DO NOT** damage or alter the electrical connectors in any way.

A specific seat side air bag wiring harness (14K155) is used for a seat side air bag module, with a unique, specific seat side air bag wiring harness used for a seat side thorax air bag module. The electrical connectors to the module and to the body main wiring harness (14A005) are keyed differently on a seat side air bag wiring harness than those used on a seat side thorax air bag wiring harness. The seat side air bag wiring harness and the seat side thorax air bag wiring harness are not interchangeable.

Seat Side Air Bag Modules

The seat side air bag module is a carryover component used on prior model year vehicles. A seat side air bag module provides combined protection of the head area and thorax area (between the neck and abdomen) of the body. A seat side air bag module is physically larger than a seat side thorax air bag module. Although a seat side air bag module and a seat side thorax air bag module are similarly mounted to the front seat backrests, **the modules are not interchangeable.** Vehicles equipped with a seat side air bag module will not be equipped with side air curtain modules.

The seat side air bag module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the side impact sensor and internal RCM circuitry.
- is installed as an assembly.
- is mounted in the front seat backrests.
- is not interchangeable with a seat side thorax air bag module.

Seat Side Thorax Air Bag Modules

The seat side thorax air bag module is a new component being introduced on this vehicle. A seat side thorax air bag module provides protection of the thorax area (between the neck and abdomen) of the body, working in conjunction with the head protection provided by a side air curtain module. A seat side thorax air bag module is physically smaller than a seat side air bag module. Although a seat side thorax air bag module and a seat side air bag module are similarly mounted to the front seat backrests, **the modules are not interchangeable.** Vehicles equipped with seat side thorax air bag modules will also be equipped with side air curtain modules.

The seat side thorax air bag module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the side impact sensors and internal RCM circuitry.
- is installed as an assembly.
- is mounted in the front seat backrests.
- is used in conjunction with a side air curtain.
- is not interchangeable with a seat side air bag module.

Side Air Curtain Module

⚠ WARNING: The side air curtain must be installed in the vehicle using new torque-prevailing type U-nuts, part number W520822. Use of this U-nut is mandatory so as to reduce the risk of loss of fastener effectiveness. Failure to follow these instructions can result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A, B, and C pillar upper trim panels and attaching hardware must be replaced along with any other damaged components and hardware. Failure to do so can result in personal injury in the event of a side air curtain deployment.

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

The side air curtain module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the side impact sensors and internal RCM circuitry.
- is installed as an assembly.
- is mounted above the headliner.
- attaches from the A-pillar frame to the C-pillar frame.
- cannot be interchanged from side to side.

Side Air Curtain Bridge Resistor

NOTE: Do not deactivate the side air curtain module circuit by removing the bridge resistor from the electrical connector.

If the side air curtain bridge resistor is removed, an open circuit fault will be generated by the restraints control module (RCM).

If a restraint system diagnostic tool is installed at the side air curtain electrical connector, a low-resistance fault will be generated.

The side air curtain bridge resistors:

- are equipped on vehicles without side air curtain modules.
- must not be removed in the deactivation procedure.
- are located on the driver side of the vehicle on the 14401 wiring harness. For additional information, refer to Wiring Diagrams Cell 151 for side air curtain bridge resistor locations.

Occupant Classification Sensor

⚠ CAUTION: If installing only the front passenger seat cushion trim cover, the seat occupant classification sensor (OCS) must be rezeroed.

⚠ CAUTION: The following precautions must be taken before rezeroing of the OCS system.

- Make sure the OCS system components are connected and no faults are present.
- Make sure the vehicle has not been exposed to temperatures below 6°C (42° F) or above 36°C (97°F) within four hours prior to the rezeroing process. If the vehicle has been exposed to temperatures outside the temperature limits (6-36°C [42-97°F]), the vehicle must be exposed to and kept at a temperature within the limits for minimum of four hours.
- Make sure nothing is present on the passenger seat before rezeroing and nothing is placed on the seat during the rezeroing process.
- Make sure a minimum five second time period has passed after cycling the ignition switch ON before the rezeroing process.

NOTE: It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed, or an OCS service kit is installed. A scan tool is used to trigger the active command to carry out rezeroing of the OCS system.

NOTE: When using a New Generation STAR (NGS) Tester, the OCS system rezero function is on the Ford Service Function (red) card. To rezero the OCS system:

- select "SERVICE BAY FUNCTIONS"
- select "RCM"
- select "SYSTEM RESET"
- select the vehicle from the menu
- view the on-screen information then press "TRIGGER"

The NGS screen will then display "OCS RESET: REZERO." Press "DONE" (button 8) to rezero the OCS system. The NGS will return to the vehicle menu once rezeroing of the OCS system is complete.

NOTE: To rezero the OCS system using the Worldwide Diagnostic System (WDS):

- select the "Toolbox" icon
- select "Body" from the menu
- select "Restraints" from the menu
- select "Seat Weight Sensor ReZero"

After selecting "Seat Weight Sensor ReZero", follow the on-screen prompts to carry out rezeroing of the OCS system.

NOTE: If the first attempt to rezero the OCS system is unsuccessful, a second attempt must be made.

The seat occupant classification sensor system is found only on the front passenger seat. The front passenger seat occupant classification sensor (OCS) system is comprised of a silicone gel-filled bladder mounted in the seat cushion, a pressure sensor that is mounted to the seat frame and an electronic control unit which is also mounted to the seat frame. Pressure is applied to the OCS bladder when weight of any occupant or object in the front passenger seat is present. The pressure is then transferred through a tube, is sensed by the OCS pressure sensor, then electronically communicated to the OCS electronic control unit. Based on programed limits, the OCS electronic control unit will inform the restraints control module (RCM), via a High Speed Controller Area Network (CAN), of the necessary information. The RCM uses this information in determining if the passenger air bag module or passenger seat side air bag module is to be deployed in the event of a deployable collision. The OCS system components (seat cushion foam pad, bladder with pressure sensor and electronic control unit) are calibrated to each other and are serviced as an assembly. **OCS system components are not to be installed separately.** If installing a new OCS system, OCS system component or seat cushion foam pad, a new OCS system service kit (seat cushion foam pad, bladder with pressure sensor and electronic control unit) must be installed as an assembly.

Passenger Air Bag Module

NOTE: References to the passenger air bag module must not be confused with the passenger seat side air bag components of the supplemental restraint system (SRS).

The passenger air bag module:

- will deploy upon receiving a flow of current from the restraints control module (RCM) initiated by the front impact severity sensor and internal RCM circuitry.
- is installed as an assembly.

- is mounted in the passenger side of the instrument panel.

Safety Belt Pretensioners

As part of the supplemental restraint system (SRS), the safety belt retractors are equipped with pretensioners. The safety belt retractor pretensioners rotate the safety belt retractors to remove excess slack from the safety belt webbing. The pretensioners are activated by the restraints control module (RCM) when the module detects a frontal impact event exceeding a programmed limit.

Safety Belt Switch

As part of the supplemental restraint system (SRS), the driver and passenger safety belt buckles are equipped with a belt buckle connect switch. The safety belt switches indicate to the restraints control module (RCM) whether the safety belt buckles are connected or disconnected.

The safety belt switches are also used for the driver safety belt warning system and the driver and passenger belt minder. For additional information, refer to Section 501-20A .

Restraints Control Module (RCM)

⚠ **WARNING: The restraints control module (RCM) orientation is critical for correct air bag supplemental restraint system (SRS) operation. If a vehicle equipped with an SRS system has been involved in a collision in which the center tunnel area has been damaged, inspect the mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.**

NOTE: When installing a new restraints control module (RCM), always make sure the correct RCM is being installed. If an incorrect RCM is installed, erroneous DTCs will result.

The restraints control module (RCM) is mounted on the center tunnel under the instrument panel. The RCM carries out the following functions:

- supplies current flow to the inflators to deploy the air bags in the event of a deployable crash.
- activates the safety belt retractor pretensioners to remove slack from the safety belt.
- monitors the air bag supplemental restraint system (SRS) for faults.
- illuminates the air bag indicator if a fault is detected.
- flashes the air bag indicator to indicate the lamp fault code (LFC) detected.
- communicates through the data link connector (DLC) the current or historical diagnostic trouble codes (DTCs).
- signals the instrument cluster module to activate a chime if the air bag indicator is not available and another SRS fault exists.
- contains an internal safing sensor which is not serviced separately.
- records deployment event data.

The RCM monitors the SRS for possible faults. If a fault is detected while the ignition switch is in the RUN position, the RCM will illuminate the air bag indicator located in the instrument cluster.

When the ignition is cycled (turned off and then on), the air bag indicator will remain lit for six seconds and then go out. If an SRS fault exists, the air bag indicator will then flash the two-digit LFC. The air bag indicator will flash the LFC three times, then it will remain illuminated for the rest of the key cycle. The RCM will also communicate the current and historical DTCs through the (DLC), using a scan tool. If the air bag

indicator does not function, and the system detects a fault condition, the RCM will signal the instrument cluster module to activate an audible chime. The chime is a series of five sets of five tone bursts. If the chime is heard, the SRS and the air bag indicator require repair.

LFCs are prioritized. If two or more faults occur at the same time, the fault having the highest priority will be displayed first. After that fault has been corrected, the next highest priority fault will be displayed.

The RCM includes a backup power supply. This feature provides sufficient current to deploy the front air bags and safety belt pretensioners in the event that the ignition circuit is damaged or lost in a collision before the RCM determines that air bag deployment is required. The backup power supply will deplete its stored energy approximately one minute after the battery ground cable is disconnected.

Electrical System

The electrical system that supports the air bag supplemental restraint system (SRS):

- receives power from the battery through the ignition circuit.
- provides the electrical path from the restraints control module (RCM) to the SRS components.
- provides the electrical ground path for the air bag indicator.
- provides the electrical path from the RCM to the data link connector (DLC).
- provides the electrical ground path from the instrument cluster to the RCM.

Impact Sensors

⚠ **WARNING: The restraints control module (RCM) orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) has been involved in a collision in which the vehicle center tunnel area has been damaged, inspect the RCM mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.**

The RCM incorporates integral sensors that are not separately serviceable. All vehicles will have a front impact severity sensor located behind the front radiator grille. In addition, there are two side impact sensors located on the driver and passenger side near the B-pillars. In addition to the B-pillar side impact sensors there are two additional side impact sensors mounted near the driver and passenger C-pillars when the vehicle is equipped with driver and passenger side air curtain modules. The RCM is mounted on the center tunnel under the instrument panel. Mounting orientation is critical for correct operation of all impact sensors.

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Printable View (69 KB)

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Restraint System Diagnostic Tool Warning

⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.

Diagnosing Customer Concerns Without Hard DTCs

If a lamp fault code (LFC) is reported by the customer but is not present when the vehicle comes in for service, follow the Diagnostic Instruction procedures in this section to identify the intermittent DTC.

Once the DTC is known, read the Normal Operation section of the pinpoint test for the DTC involved.

- Follow the deactivation procedure in this section.

- Determine the location of components involved in creating the DTC.
- Carry out a thorough visual inspection of:
    - ♦ components.
    - ♦ connectors.
    - ♦ splices and wiring harnesses.
    - ♦ insulation on conductors.

Refer to the Possible Causes section of the pinpoint test for the DTC involved, which lists the common concerns that relate to the DTC. Concerns are listed according to priority.

Diagnosing Customer Concerns with Hard DTCs

Most Supplemental Restraint System (SRS) diagnostic procedures will require deactivation and reactivation of the system. Deactivation and reactivation require the disconnection of most SRS components and the installation of restraint system diagnostic tools. This reduces the risk of inadvertent deployment of SRS components while diagnostic procedures are being carried out.

Restraint system diagnostic tools are required for the diagnosis and testing of the SRS. It is not acceptable to short-circuit the air bag module connections with a jumper wire. If a jumper wire is used to short-circuit the air bag module connections, a lamp fault code (LFC) will be displayed.

Deactivation and Reactivation Procedure

There are four deactivation and reactivation procedures.

- Two of the procedures (one for vehicles without side air curtains, one for vehicles with side air curtains) require removal of the front seat(s). These procedures will be used when diagnosing or repairing a seat side air bag concern. This procedure will also be used when diagnosing or repairing any in-seat or seat mounted component of a seat equipped with a seat side air bag.
- The other two procedures (one for vehicles without side air curtains, one for vehicles with side air curtains) do not require front seat removal during the diagnostic and repair process. These procedures will be used when diagnosing or repairing a concern that is not related to a seat equipped with a seat side air bag.

Deactivation Procedure Vehicles Without Side Air Curtains, Seat Removed

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Never probe the connectors on a side air curtain module. Doing so can result in side air curtain module deployment.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Do not deactivate the side air curtain module circuit by removing the bridge resistor from the electrical connector.

If the side air curtain bridge resistor is removed, an open circuit fault will be generated by the restraints control module (RCM).

If a restraint system diagnostic tool is installed at the side air curtain electrical connector, a low-resistance fault will be generated.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the RCM backup power supply must be depleted before repairing or replacing any front or side air bag (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait for one minute. For additional information, refer to Section 414-00 .

2. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

3. Attach restraint system diagnostic tools 418-F395 (2 req'd) to the clockspring side of the driver air bag module electrical connectors.

4. Remove the glove compartment. For additional information, refer to Section 501-01 .

5. Disconnect the passenger air bag module electrical connector and attach restraint system diagnostic tool 418-F403 to the vehicle harness side of the passenger air bag module electrical connector.

6. Disconnect the passenger seat side air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 418-133 (014-R1076) to the vehicle harness side of the passenger seat side air bag module electrical connector.

7. When diagnosing or repairing any front passenger in-seat or seat mounted component, remove the passenger front seat. For additional information, refer to Section 501-10 .

8. Detach the passenger upper B-pillar trim panel, remove the passenger front and rear door scuff plates, and remove the passenger lower B-pillar trim panel.

9. Disconnect the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

10. Disconnect the driver seat side air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 418-133 (014-R1076) to the vehicle harness side of the driver seat side air bag module electrical connector.

11. When diagnosing or repairing any driver in-seat or seat mounted component, remove the driver seat. For additional information, refer to Section 501-10 .

12. Detach the driver upper B-pillar trim panel, remove the driver front and rear door scuff plates, and remove the driver lower B-pillar trim panel.

13. Disconnect the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.

14. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

Reactivation Procedure Vehicles Without Side Air Curtains, Seat Removed

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the deactivation procedure.

1. Disconnect the battery ground cable and wait one minute. For additional information, refer to Section 414-00 .

2. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the driver safety belt retractor pretensioner electrical connector.

3. Install the driver lower B-pillar trim panel, the driver front and rear door scuff plates, and the driver upper B-pillar trim panel.

4. When any driver in-seat or seat mounted component is diagnosed and repaired, install the driver seat. For additional information, refer to Section 501-10 .

5. Remove restraint system diagnostic tool 418-133 (014-R1076) from the vehicle harness side of the driver seat side air bag module electrical connector, located under the seat, and connect the driver seat side air bag module electrical connector.

6. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the passenger safety belt retractor pretensioner electrical connector.

7. Install the passenger lower B-pillar trim panel, the passenger front and rear door scuff plates, and the passenger upper B-pillar trim panel.

8. When any front passenger in-seat or seat mounted component is diagnosed and repaired, install the front passenger seat. For additional information, refer to Section 501-10 .

9. Remove restraint system diagnostic tool 418-133 (014-R1076) from the vehicle harness side of the passenger seat side air bag module electrical connector, located under the seat, and connect the passenger seat side air bag module electrical connector.

10. Remove restraint system diagnostic tool 418-F403 from the vehicle harness side of the passenger air bag module electrical connector and connect the passenger air bag module electrical connector.

11. Install the glove compartment. For additional information, refer to Section 501-01 .

12. Remove restraint system diagnostic tools 418-F395 (2 req'd) from the clockspring side of the driver air bag module electrical connectors.

13. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

14. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

15. Prove out the system.

Deactivation Procedure Vehicles With Side Air Curtains, Seat Removed

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Never probe the connectors on a side air curtain module. Doing so can result in side air curtain module deployment.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the RCM backup power supply must be depleted before repairing or replacing any front or side air bag (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait for one minute. For additional information, refer to Section 414-00 .

2. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

3. Attach restraint system diagnostic tools 418-F395 (2 req'd) to the clockspring side of the driver air bag module electrical connectors.

4. Remove the driver A-pillar trim panel.

5. Disconnect the driver side air curtain module electrical connector, located at the A-pillar, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the driver side air curtain module electrical connector.

6. Remove the glove compartment. For additional information, refer to Section 501-01 .

7. Disconnect the passenger air bag module electrical connector and attach restraint system diagnostic tool 418-F403 to the vehicle harness side of the passenger air bag module electrical connector.

8. Remove the passenger A-pillar trim panel.

9. Disconnect the passenger side air curtain module electrical connector, located at the A-pillar, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the passenger side air curtain module electrical connector.

10. Disconnect the passenger seat side thorax air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the passenger seat side thorax air bag module electrical connector.

11. When diagnosing or repairing any front passenger in-seat or seat mounted component, remove the passenger front seat. For additional information, refer to Section 501-10 .

12. Detach the passenger upper B-pillar trim panel, remove the passenger front and rear door scuff plates, and remove the passenger lower B-pillar trim panel.

13. Disconnect the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

14. Disconnect the driver seat side thorax air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the driver seat side thorax air bag module electrical connector.

15. When diagnosing or repairing any driver in-seat or seat mounted component, remove the driver seat. For additional information, refer to Section 501-10 .

16. Detach the driver upper B-pillar trim panel, remove the driver front and rear door scuff plates, and remove the driver lower B-pillar trim panel.

17. Disconnect the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.

18. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

Reactivation Procedure Vehicles With Side Air Curtains, Seat Removed

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the deactivation procedure.

1. Disconnect the battery ground cable and wait one minute. For additional information, refer to Section 414-00 .

2. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the driver safety belt retractor pretensioner electrical connector.

3. Install the driver lower B-pillar trim panel, the driver front and rear door scuff plates, and the driver upper B-pillar trim panel.

4. When any driver in-seat or seat mounted component is diagnosed and repaired, install the driver seat. For additional information, refer to Section 501-10 .

5. Remove restraint system diagnostic tool 501-097 from the vehicle harness side of the driver seat thorax side air bag module electrical connector, located under the seat, and connect the driver seat side thorax air bag module electrical connector.

6. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the passenger safety belt retractor pretensioner electrical connector.

7. Install the passenger lower B-pillar trim panel, the passenger front and rear door scuff plates, and the passenger upper B-pillar trim panel.

8. When any front passenger in-seat or seat mounted component is diagnosed and repaired, install the front passenger seat. For additional information, refer to Section 501-10 .

9. Remove restraint system diagnostic tool 501-097 from the vehicle harness side of the passenger seat side thorax air bag module electrical connector, located under the seat, and connect the passenger seat side thorax air bag module electrical connector.

10. Remove restraint system diagnostic tool 501-097 to the vehicle harness side of the passenger side air curtain module electrical connector, located at the A-pillar, and connect the passenger side air curtain

module electrical connector.

11. Install the passenger side A-pillar trim panel.

12. Remove restraint system diagnostic tool 418-F403 from the vehicle harness side of the passenger air bag module electrical connector and connect the passenger air bag module electrical connector.

13. Install the glove compartment. For additional information, refer to Section 501-01 .

14. Remove restraint system diagnostic tool 501-097 from the vehicle harness side of the driver side air curtain module electrical connector, located at the A-pillar, and connect the driver side air curtain module electrical connector.

15. Install the driver side A-pillar trim panel.

16. Remove restraint system diagnostic tools 418-F395 (2 req'd) from the clockspring side of the driver air bag module electrical connectors.

17. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

18. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

19. Prove out the system.

Deactivation Procedure Vehicles Without Side Air Curtains, Seat Not Removed

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Never probe the connectors on a side air curtain module. Doing so can result in side air curtain module deployment.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Do not deactivate the side air curtain module circuit by removing the bridge resistor from the electrical connector.

If the side air curtain bridge resistor is removed, an open circuit fault will be generated by the restraints control module (RCM).

If a restraint system diagnostic tool is installed at the side air curtain electrical connector, a low-resistance fault will be generated.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the RCM backup power supply must be depleted before repairing or replacing any front or side air bag (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait for one minute. For additional information, refer to Section 414-00 .

2. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

3. Attach restraint system diagnostic tools 418-F395 (2 req'd) to the clockspring side of the driver air bag module electrical connectors.

4. Remove the glove compartment. For additional information, refer to Section 501-01 .

5. Disconnect the passenger air bag module electrical connector and attach restraint system diagnostic tool 418-F403 to the vehicle harness side of the passenger air bag module electrical connector.

6. Disconnect the passenger seat side air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 418-133 (014-R1076) to the vehicle harness side of the passenger seat side air bag module electrical connector.

7. Detach the passenger upper B-pillar trim panel, remove the passenger front and rear door scuff plates, and remove the passenger lower B-pillar trim panel.

8. Disconnect the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

9. Disconnect the driver seat side air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 418-133 (014-R1076) to the vehicle harness side of the driver seat side air bag module electrical connector.

10. Detach the driver upper B-pillar trim panel, remove the driver front and rear door scuff plates, and remove the driver lower B-pillar trim panel.

11. Disconnect the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.

12. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

Reactivation Procedure Vehicles Without Side Air Curtains, Seat Not Removed

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the deactivation procedure.

1. Disconnect the battery ground cable and wait one minute. For additional information, refer to Section 414-00 .

2. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the driver safety belt retractor pretensioner electrical connector.

3. Install the driver lower B-pillar trim panel, the driver front and rear door scuff plates, and the driver upper B-pillar trim panel.

4. Remove restraint system diagnostic tool 418-133 (014-R1076) from the vehicle harness side of the driver seat side air bag module electrical connector, located under the seat, and connect the driver seat side air bag module electrical connector.

5. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the passenger safety belt retractor pretensioner electrical connector.

6. Install the passenger lower B-pillar trim panel, the passenger front and rear door scuff plates, and the passenger upper B-pillar trim panel.

7. Remove restraint system diagnostic tool 418-133 (014-R1076) from the vehicle harness side of the passenger seat side air bag module electrical connector, located under the seat, and connect the passenger seat side air bag module electrical connector.

8. Remove restraint system diagnostic tool 418-F403 from the vehicle harness side of the passenger air bag module electrical connector and connect the passenger air bag module electrical connector.

9. Install the glove compartment. For additional information, refer to Section 501-01 .

10. Remove restraint system diagnostic tools 418-F395 (2 req'd) from the clockspring side of the driver air bag module electrical connectors.

11. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

12. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

13. Prove out the system.

Deactivation Procedure Vehicles With Side Air Curtains, Seat Not Removed

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Never probe the connectors on a side air curtain module. Doing so can result in side air curtain module deployment.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the RCM backup power supply must be depleted before repairing or replacing any front or side air bag (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait for one minute. For additional information, refer to Section 414-00 .

2. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

3. Attach restraint system diagnostic tools 418-F395 (2 req'd) to the clockspring side of the driver air bag module electrical connectors.

4. Remove the driver A-pillar trim panel.

5. Disconnect the driver side air curtain module electrical connector, located at the A-pillar, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the driver side air curtain module electrical connector.

6. Remove the glove compartment. For additional information, refer to Section 501-01 .

7. Disconnect the passenger air bag module electrical connector and attach restraint system diagnostic tool 418-F403 to the vehicle harness side of the passenger air bag module electrical connector.

8. Remove the passenger A-pillar trim panel.

9. Disconnect the passenger side air curtain module electrical connector, located at the A-pillar, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the passenger side air curtain module electrical connector.

10. Disconnect the passenger seat side thorax air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the passenger seat side thorax air bag module electrical connector.

11. Detach the passenger upper B-pillar trim panel, remove the passenger front and rear door scuff plates, and remove the passenger lower B-pillar trim panel.

12. Disconnect the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

13. Disconnect the driver seat side thorax air bag module electrical connector, located under the seat, and attach restraint system diagnostic tool 501-097 to the vehicle harness side of the driver seat side thorax air bag module electrical connector.

14. Detach the driver upper B-pillar trim panel, remove the driver front and rear door scuff plates, and remove the driver lower B-pillar trim panel.

15. Disconnect the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and attach restraint system diagnostic tool 418-F088 (105-R0012) to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.

16. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

Reactivation Procedure Vehicles With Side Air Curtains, Seat Not Removed

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the deactivation procedure.

1. Disconnect the battery ground cable and wait one minute. For additional information, refer to Section 414-00 .

2. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and

connect the driver safety belt retractor pretensioner electrical connector.

3. Install the driver lower B-pillar trim panel, the driver front and rear door scuff plates, and the driver upper B-pillar trim panel.

4. Remove restraint system diagnostic tool 501-097 from the vehicle harness side of the driver seat side thorax air bag module electrical connector, located under the seat, and connect the driver seat side thorax air bag module electrical connector.

5. Remove restraint system diagnostic tool 418-F088 (105-R0012) from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector, located near the base of the B-pillar, and connect the passenger safety belt retractor pretensioner electrical connector.

6. Install the passenger lower B-pillar trim panel, the passenger front and rear door scuff plates, and the passenger upper B-pillar trim panel.

7. Remove restraint system diagnostic tool 501-097 from the vehicle harness side of the passenger seat side thorax air bag module electrical connector, located under the seat, and connect the passenger seat side thorax air bag module electrical connector.

8. Remove restraint system diagnostic tool 501-097 to the vehicle harness side of the passenger side air curtain module electrical connector, located at the A-pillar, and connect the passenger side air curtain module electrical connector.

9. Install the passenger side A-pillar trim panel.

10. Remove restraint system diagnostic tool 418-F403 from the vehicle harness side of the passenger air bag module electrical connector and connect the passenger air bag module electrical connector.

11. Install the glove compartment. For additional information, refer to Section 501-01 .

12. Remove restraint system diagnostic tool 501-097 from the vehicle harness side of the driver side air curtain module electrical connector, located at the A-pillar, and connect the driver side air curtain module electrical connector.

13. Install the driver side A-pillar trim panel.

14. Remove restraint system diagnostic tools 418-F395 (2 req'd) from the clockspring side of the driver air bag module electrical connectors.

15. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

16. Reconnect the battery ground cable. For additional information, refer to Section 414-00 .

17. Prove out the system.

Prove Out Procedure

Turn the ignition switch from the OFF to the ON position and visually monitor the air bag indicator with all SRS components connected or restraint system diagnostic tools installed. The air bag indicator will light continuously for approximately six seconds and then turn off. If an SRS fault is present, the air bag indicator will either:

- fail to light.
- remain lit continuously.
- flash.

The flashing might not occur until approximately 30 seconds after the ignition switch has been turned from the OFF to the ON position. This is the time required for the restraints control module (RCM) to complete the testing of the SRS. If the air bag indicator is inoperative and an SRS fault exists, a chime will sound in a pattern of five sets of five beeps. If this occurs, the air bag indicator will need to be repaired before diagnosis can continue.

Glossary

Secondary Air Bag Warning

The secondary air bag warning is an audible fault format that consists of five sets of five tone bursts, with each set of five tone bursts separated by a five second quiet period. One tone burst cycle will consist of one second ON and one second OFF. This series of five activations is repeated every 30 minutes.

Air Bag/Pretensioner Restraint System Diagnostic Tools

Air bag/pretensioner restraint system diagnostic tools are used to simulate the equivalent resistance of an air bag module or safety belt pretensioner during certain diagnostic procedures.

Disconnect the Component

Disconnect the component means to disconnect the component vehicle harness connector, not to remove the component. Do not reconnect a disconnected component unless instructed to do so.

Deactivate the System

Deactivate the system means to carry out a deactivation procedure. For additional information, refer to Deactivation Procedure in this section.

Prove Out the System

Prove out the system means to turn the ignition switch from the OFF to the ON position, and to visually monitor the air bag indicator with the air bag modules and safety belt pretensioners or restraint system diagnostic tools installed. For additional information, refer to Prove Out Procedure in this section.

Reactivate the System

Reactivate the system means to carry out the reactivation procedure. For additional information, refer to Reactivation Procedure in this section.

Reconnect the System

Reconnect the system means to reconnect all system components. For additional information, refer to Air Bag System Reconnect Checklist in this section.

Install a New Component

Install a new component means to remove the existing component and install a new authorized part obtained from Ford Customer Service Division.

Verify the System

Verify the system means to prove out the system with restraint system diagnostic tools installed in place of the SRS components.

Air Bag Reconnect Checklist

The checklist below should be completed following diagnosis or repair of any air bag system concern:

- All restraint system diagnostic tools removed?
- All in-seat harness connectors connected?
- All air bag modules connected?
- Safety belt pretensioner connectors connected?
- Restraints control module (RCM) connected?
- All sensors (front and side impact sensors) connected?
- Battery connected?

Diagnostic Instructions Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Printable View (43 KB)

Special Tool(s)

ST2332-A	Worldwide Diagnostic System (WDS) 418-FS317 New Generation STAR (NGS) Tester 418-F052, or equivalent scan tool with required communication adapter

The symptom chart can be used to help locate supplemental restraint system (SRS) concerns if no diagnostic trouble codes (DTCs) are retrieved and the listed symptoms are observed. Whether or not the listed symptoms are observed, always carry out the following:

1. Retrieve all DTCs stored in the restraints control module (RCM) memory. For additional information, refer to Retrieve/Clear Continuous DTCs in this section.

2. Run the On-Demand Self Test to determine what DTCs are currently being sensed by the RCM. Refer to On-Demand Self Test in this section.

3. If the stored DTCs are different than the current DTCs, always repair the current DTCs first.

4. If memory displays different continuous DTCs than the On-Demand Self Test, carry out in the following order:

- On-Demand Self Test
- Memory (Retrieve/Clear Continuous DTCs)

A DTC can indicate several concerns. The DTCs are to assist in system diagnosis and are not to be considered definitive. Always refer to the pinpoint test corresponding to the DTC to determine where the concern lies and to repair the concern correctly.

The SRS diagnostics can be divided into three sections:

- diagnostic test modes
- PID/data monitor and record
- active command modes

Diagnostic Test Modes

Two menu options are available under the diagnostic test modes:

- Retrieve/Clear Continuous DTCs
- On-Demand Self Test

Retrieve/Clear Continuous DTCs

During vehicle operation, the restraints control module (RCM) will detect and store both intermittent and hard failure DTCs in nonvolatile memory. The DTC strategy employed by the RCM incorporates a time-out scheme for determining when a concern exists in the system. This requires a concern to exist for up to one minute in the system before the RCM will detect it. For the RCM to determine that a concern no longer exists, the concern must be absent for up to one minute. The actual detection time-outs vary with each DTC. The DTCs can be retrieved with a scan tool using the retrieve/clear continuous DTCs option. Any DTCs stored in the RCM will be displayed on the scan tool along with a brief description of the DTC. If no DTCs are present, the scan tool will display a SYSTEM PASSED message. This option can also be used to clear DTCs from the RCM memory, as long as the concern no longer exists. Once 128 key cycles have been recorded since the concern was last detected, the DTC will automatically be removed from memory.

To retrieve or clear DTCs, follow these steps:

5. Connect the scan tool to the data link connector (DLC).
6. Turn the ignition switch to the ON position.
7. Follow the manufacturer's instructions for the scan tool being used.
8. **NOTE:** Before proceeding with the clearing operation, make note of the DTCs displayed. Once cleared, DTCs cannot be retrieved.

   All continuous DTCs will be displayed on the screen.
9. Clear the DTCs. After clearing the DTCs, cycle the key OFF, then ON.
   - Continuous DTCs that have been cleared will **not** re-occur as "Continuous" in the same key cycle. Only new DTCs which were **not** present before clearing can occur as "Continuous" after clearing.

On-Demand Self Test

The On-Demand Self Test option is used to verify that no electrical concerns exist with the air bag SRS. Upon entering the self-test, the restraints control module (RCM) will make an electrical check of each electrical component in the system. If a concern is detected, a DTC is displayed on the scan tool with a brief description of the DTC. Concerns detected during the self-test are not stored in memory, unless the same concern was also detected during normal vehicle operation. The self-test should always be run after any repair to verify that the repair was successful.

To run the On-Demand Self Test, follow these steps:

1. Connect the scan tool to the data link connector (DLC).
2. Turn the ignition switch to the ON position.
3. Follow the manufacturer's instructions for the scan tool being used.
4. The RCM will run the On-Demand Self Test and display on-demand DTCs (reflecting hard system concerns) on the screen.

Bit-Mapped Diagnostic Trouble Codes (DTCs)

Many of the continuous and on-demand DTCs that can be present in the RCM are bit-mapped DTCs that

utilize PIDs (flagged faults). Bit-mapped DTCs are conceptually different from the previous style of DTCs. Previously, DTCs identified a specific concern for a given component and pointed to a particular diagnostic path. In the diagnostic path, PIDs are sometimes used to determine the root cause. Bit-mapped DTCs do not identify the specific concern. A bit-mapped DTC identifies the component(s) in which the concern exists. The next level (PIDs or flagged faults) identifies the specific concern.

A scan tool must be used to view the PIDs (flagged faults) of a bit-mapped DTC. Once a scan tool has retrieved a bit-mapped DTC, the scan tool will provide the option to "FLAG" that DTC. When the option to "FLAG" the DTC is available, it must be carried out to identify the specific concern that is present. When the option to "FLAG" the DTC has been carried out, the scan tool will then display the PIDs (flagged faults) for that DTC, including the status or state that exists (on-demand DTC) or existed (continuous DTC).

To view and flag bit-mapped DTCs, follow these steps:

1. Connect the scan tool to the data link connector (DLC).
2. Turn the ignition switch to the ON position.
3. Follow the manufacturer's instructions for the scan tool being used.
4. Carry out an On-Demand Self Test or retrieve continuous DTCs.
5. Select the DTC and the "FLAG" option on the scan tool.
6. The scan tool will display PIDs for the DTC. Record all flagged faults.

PID/Data Monitor and Record

The PID/Data Monitor and Record option allows the scan tool operator to read the state of several parameter IDs (PIDs) to aid in diagnosing the system. PIDs are real time measurements of parameters such as voltages, resistances, etc., calculated by the restraints control module (RCM) and sent to the scan tool for display. Many of the PIDs supported by the RCM are calculated periodically and are, therefore, not true real time readings.

To retrieve PIDs, follow these steps:

1. Connect the scan tool to the data link connector (DLC).
2. Turn the ignition switch to the ON position.
3. Follow the manufacturer's instructions for the scan tool being used.
4. Record all PIDs that are to be retrieved and initiate PID retrieval. PIDs are updated continuously on the display.

Active Commands

Instrument Cluster Module

These commands allow the technician to verify the operation of instrument cluster module components and sub-systems.

Restraints Control Module

These commands allow the technician to verify operation of the supplemental restraint system (SRS) indicator lamps.

Lamp Fault Codes

When the restraints control module (RCM) detects a system fault, it will cause the air bag indicator to flash a coded sequence: a lamp fault code (LFC). The code is two digits. The first digit is flashed with a 0.5 second interval between pulses. There is a 2 second pause before the second digit is flashed, which also has a 0.5 second interval between pulses. There is a 5 second pause between each display of an LFC.

Each LFC is flashed five times after which the air bag indictor will remain lit for the remainder of the key-on cycle. If there are multiple LFCs, each LFC will flash in order of priority.

Diagnostic Trouble Codes (DTCs)

While the lamp fault codes (LFCs) are an indication of a general concern in the passive restraints system, the diagnostic trouble codes (DTCs) are more specific. The DTCs can be retrieved from the restraints control module (RCM) with a scan tool via the data link connector (DLC).

Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table

DTC [a]	LFC [b]	Description	Action To Take
	Continuous	The Air Bag Indicator is Illuminated Continuously, RCM Disconnected or Inoperative, Loss of Battery Feed, or Loss of Signal Ground	Go To Pinpoint Test A .
B1231	13	Crash Data Memory Full	Install a new RCM and impact sensors. REFER to Inspection and Repair After a Supplemental Restraint System (SRS) Deployment .
B1317	Continuous	Battery Voltage High	CHECK battery voltage; to be below 16 volts. REFER to Section 414-00 .
B1318	Continuous	Battery Voltage Low	CHECK battery voltage; to be above 9.0 volts. REFER to Section 414-00 .
B1342	12	RCM Is Faulted	Install a new RCM.
B1869	NONE Continuous lamp Secondary air bag warning sounds if another fault is present	Lamp Air Bag Warning Indicator Circuit Open or Short to Ground	Go To Pinpoint Test B .
B1870	NONE Secondary air bag warning sounds if another fault is	Air Bag Warning Indicator Circuit Short to Battery	Go To Pinpoint Test C .

	present		
B1891	53	Air Bag Tone Warning Indicator Circuit Short to Battery	Go To Pinpoint Test D .
B1892	53	Air Bag Tone Warning Indicator Circuit Open or Short to Ground	Go To Pinpoint Test E .
B1921	14	Air Bag Diagnostic Monitor Ground Circuit Open	Go To Pinpoint Test F .
B2290	16	Occupant Classification System Fault	Go To Pinpoint Test G .
B2292	33	Restraint System Safety Belt Pretensioner Fault (Driver Pretensioner Circuit Fault)	Go To Pinpoint Test H .
B2292	34	Restraint System Safety Belt Pretensioner Fault (Passenger Pretensioner Circuit Fault)	Go To Pinpoint Test H .
B2293	19	Restraint System Air Bag Fault (Driver Front Air Bag Circuit Fault)	Go To Pinpoint Test I .
B2293	21	Restraint System Air Bag Fault (Passenger Front Air Bag Circuit Fault)	Go To Pinpoint Test I .
B2294	24	Restraint System Curtain Fault (Driver Side Air Curtain Circuit Fault)	Go To Pinpoint Test J .
B2294	25	Restraint System Curtain Fault (Passenger Side Air Curtain Circuit Fault)	Go To Pinpoint Test J .
B2295	22	Restraint System Side Air Bag Fault (Driver Seat Side Air Bag Circuit Fault)	Go To Pinpoint Test K .
B2295	23	Restraint System Side Air Bag Fault (Passenger Seat Side Air Bag Circuit Fault)	Go To Pinpoint Test K .
B2296	42	Restraint System Impact Sensor Fault (Front Impact Severity Sensor Circuit Fault)	Go To Pinpoint Test L .
B2296	43	Restraint System Impact Sensor Fault (Driver Side Front Row Impact Sensor Circuit Fault)	Go To Pinpoint Test L .
B2296	45	Restraint System Impact Sensor Fault (Driver Side Second Row Impact Sensor Circuit Fault)	Go To Pinpoint Test L .
B2296	44	Restraint System Impact Sensor Fault (Passenger Side Front Row Impact Sensor Circuit Fault)	Go To Pinpoint Test L .
B2296	46	Restraint System Impact Sensor Fault (Passenger Side Second Row Impact Sensor Circuit Fault)	Go To Pinpoint Test L .
B2434	51	Driver Safety Belt Buckle Switch Circuit Short To Ground	Go To Pinpoint Test M .
B2435	51	Driver Safety Belt Buckle Switch Circuit Resistance Out Of Range	Go To Pinpoint Test N .
B2438	52	Passenger Safety Belt Buckle Switch Circuit Short To Ground	Go To Pinpoint Test O .

B2439	52	Passenger Safety Belt Buckle Switch Circuit Resistance Out Of Range	Go To Pinpoint Test P .
B2477	Continuous	Module Configuration Error	INSTALL a new RCM.
B2691	51	Driver Safety Belt Buckle Switch Circuit Fault	Go To Pinpoint Test Q .
B2692	52	Passenger Safety Belt Buckle Switch Circuit Fault	Go To Pinpoint Test R .
C1414	15	Incorrect Module Design Level	Go To Pinpoint Test S .
C1947	49	Driver Seat Track Position Sensor Circuit Short to Ground	Go To Pinpoint Test T .
C1948	49	Driver Seat Track Position Sensor Circuit Resistance Out Of Range	Go To Pinpoint Test U .
C1981	49	Driver Seat Track Position Sensor Circuit Fault	Go To Pinpoint Test V .
		No Communication with the Restraints Control Module.	Go To Pinpoint Test W .

[a] DTC: Diagnostic trouble code, retrieved using scan tool.
[b] LFC: Lamp fault code, flashed on air bag indicator.

Inspection and Verification

1. Verify the customer concern by checking the air bag indicator in the instrument cluster. For additional information, refer to Prove Out the System in this section.

2. Visually inspect for obvious signs of mechanical and electrical damage using the following chart.

Visual Inspection Chart

Mechanical	Electrical
• Damaged restraints control module (RCM) bracket • Damaged front impact severity sensor or bracket • Damaged side impact sensor or bracket	• Open fuse(s) • Damaged wiring harness • Loose or corroded connectors • Circuitry open/shorted • Damaged shorting bars

3. If the concern is not visually evident, use the scan tool to retrieve diagnostic trouble codes (DTCs) and carry out the on-demand self test.

4. If the on-demand self test is passed and no DTCs are retrieved, GO to Symptom Chart .

5. If DTCs are retrieved, refer to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table.

Restraint System Diagnostic Tool Warning

⚠ WARNING: Restraint system diagnostic tools are for service only. Tools must be removed prior to operating the vehicle over the road. Failure to remove restraint system diagnostic tools could result in injury and possible violation of vehicle safety standards.

Pinpoint Test A: The Air Bag Warning Indicator Is Illuminated Continuously RCM Disconnected or Inoperative, Loss of Battery Feed, or Loss of Signal Ground

Normal Operation

NOTE: During normal operation, the air bag indicator will illuminate continuously for 6 seconds after the ignition switch is placed to the ON or START position and after five cycles of a lamp fault code (LFC), if a fault exists. Be sure to cycle the ignition switch and look for a 6 second indicator prove-out without LFCs.

The restraints control module (RCM) will communicate diagnostic trouble codes (DTCs) to the scan tool through the data link connector (DLC). If the scan tool displays NO COMMUNICATION when retrieving

continuous DTCs, Go To Pinpoint Test W to troubleshoot the system.

Possible Causes

An air bag indicator that is illuminated continuously can be caused by one of the following:

- damaged ignition circuit.
- RCM disconnected from the vehicle harness.
- a loss of RCM signal ground.
- a faulted RCM.
- damaged wiring, terminals, or connectors.
- a loss of RCM battery feed.
- a faulted instrument cluster

PINPOINT TEST A: THE AIR BAG WARNING INDICATOR IS ILLUMINATED CONTINUOUSLY RCM DISCONNECTED OR INOPERATIVE, LOSS OF BATTERY FEED, OR LOSS OF SIGNAL GROUND

Test Step	Result / Action to Take
A1 CHECK FOR CONTINUOUS OR ON-DEMAND SELF TEST DTCs	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Were any continuous or on-demand self test DTCs retrieved?**	**Yes** If continuous DTCs were retrieved, GO to A2 . If on-demand DTCs were retrieved, GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** GO to A2 .
A2 CHECK THE RCM CONNECTION	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal**	**Yes** GO to A3 . **No** CONNECT C310a and ENGAGE the locking tab. GO to A7 .

injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Connect: RCM C310a. • **Is RCM C310a fully connected and the connector locking tab engaged?**	
A3 CHECK CIRCUIT 15-JA10A (GN/OG) FOR AN OPEN	
• Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between RCM C310a pin 12, circuit 15-JA10A (GN/OG), harness side and ground.  A0039638 • **Is the voltage between 9 and 16 volts?**	**Yes** GO to A4 . **No** REPAIR circuit 15-JA10A (GN/OG). GO to A7 .
A4 CHECK CIRCUIT 31-JA10 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side and ground.  A0039639 • **Is the resistance less than 5 ohms?**	**Yes** GO to A5 . **No** REPAIR circuit 31-JA10 (BK/RD). GO to A7 .
A5 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR AN OPEN	

• Disconnect: Instrument Cluster C220a. • Measure the resistance between instrument cluster module C220a pin 22, circuit 31S-JA14 (BK/GN), harness side and RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side.  A0057054 • **Is the resistance less than 5 ohms?**	**Yes** GO to A6 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to A7 .
A6 CHECK THE INDICATOR LAMP OPERATION (DRIVE LAMP OFF)	
• Connect: Instrument Cluster C220a. • Key in ON position. • Connect a fused jumper between the RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side and ground.  A0049155 • **Is the indicator lamp off?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to A7 . **No** REPAIR or INSTALL a new instrument cluster module. REFER to Section 413-00 . GO to A7 .
A7 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step A1. • **Were any continuous DTCs retrieved during Step A1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

	CLEAR all DTCs.

Pinpoint Test B: DTC B1869 Lamp Air Bag Warning Indicator Circuit Open or Short to Ground

Normal Operation

If the restraints control module (RCM) detects an open or short to ground on the air bag warning indicator circuit, it will store diagnostic trouble code (DTC) B1869 in memory.

Possible Causes

An open air bag indicator circuit can be caused by:

- damaged wiring, terminals, or connectors.
- a faulted RCM.
- an instrument cluster module internal concern.

PINPOINT TEST B: DTC B1869 LAMP AIR BAG WARNING INDICATOR CIRCUIT OPEN OR SHORT TO GROUND

Test Step	Result / Action to Take
B1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1869 retrieved during the on-demand self test?**	**Yes** If the air bag indicator lamp **does** illuminate,GO to B2 . If the air bag indicator **does not** illuminate,GO to B4 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to B5 .
B2 CHECK THE INDICATOR LAMP OPERATION (DRIVE LAMP OFF)	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to B6 . **No** GO to B3 .

bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: RCM C310a. • Key in ON position. • Connect a fused jumper between the RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side and ground.  A0049155 • **Is the indicator lamp off?**	
B3 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR AN OPEN	
• Key in OFF position. • Disconnect: Instrument Cluster Module C220a. • Disconnect: RCM 310a. • Measure the resistance between instrument cluster module C220a pin 22, circuit 31S-JA14 (BK/GN), harness side and RCM C310a pin 19, circuit 31S-JA14 (BK/GN), harness side.  A0057054 • **Is the resistance less than 5 ohms?**	**Yes** REPAIR or INSTALL a new instrument cluster module. REFER to Section 413-00 . GO to B6 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to B6 .
B4 CHECK THE INDICATOR LAMP OPERATION (DRIVE LAMP ON)	
• Key in OFF position.	**Yes** INSTALL a new

• Disconnect: RCM 310a. • Key in ON position. • **Is the indicator lamp on?**	RCM. REFER to Restraints Control Module (RCM) in this section. GO to B6 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to B6 .
B5 CHECK FOR AN INTERMITTENT FAULT	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.** ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1869 retrieved during the on-demand self test?**	**Yes** GO to B2 . **No** CHECK for causes of intermittent open or short to ground on circuit 31S-JA14 (BK/GN). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to B6 .
B6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step B1. • **Were any continuous DTCs retrieved during Step B1?**	**Yes** Do not clear any DTCs until all DTCs

	have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test C: DTC B1870 Air Bag Warning Indicator Circuit Short to Battery

Normal Operation

If the restraints control module detects a short to battery on the air bag warning indicator circuit, it will store diagnostic trouble code (DTC) B1870 in memory. If any other DTCs are detected with this DTC active, the secondary air bag warning will be activated.

Possible Causes

An air bag indicator circuit short to battery can be caused by:

- damaged wiring, terminals, or connectors.
- a faulted RCM.

PINPOINT TEST C: DTC B1870 AIR BAG INDICATOR CIRCUIT SHORT TO BATTERY

Test Step	Result / Action to Take
C1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1870 retrieved during the on-demand self test?**	**Yes** GO to C2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to C4 .
C2 CHECK CIRCUIT 31S-JA14 (BK/GN) FOR A SHORT TO BATTERY	

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. **NOTE:** Any DTCs for air bag indicator faults associated with the instrument cluster module will be logged by the RCM. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: Instrument Cluster Module C220a. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between C220a pin 22, circuit 31S-JA14 (BK/GN), harness side and ground.  • **Is the voltage less than 0.2 volt?**	**Yes** GO to C3 . **No** REPAIR circuit 31S-JA14 (BK/GN). GO to C5 .

C3 CHECK THE RCM	
• Key in OFF position. • Connect: RCM C310a. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **NOTE:** DTC B1869 should be retrieved when carrying out the on-demand self test due to an open on circuit 31S-JA14 (BK/GN), DTC B1870 should not be retrieved at this time. • **Was DTC B1870 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to C5 . **No** REPAIR or INSTALL a new instrument cluster module. REFER to Section 413-00 . GO to C5 .
C4 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.	**Yes** GO to C2 . **No** CHECK for causes of intermittent short to battery on circuit 31S-JA14 (BK/GN). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. ACTIVATE other systems in the same wire bundle. REPAIR any intermittent concerns found. GO to C5 .

• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1870 retrieved during the on-demand self test?**	
C5 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step C1. • **Were any continuous DTCs retrieved during Step C1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test D: DTC B1891 Air Bag Tone Warning Indicator Circuit Short to Battery

Normal Operation

The restraints control module (RCM) monitors its connection to the instrument cluster module at C310a pin 22. This connection is used to signal a chime if the air bag indicator is inoperative and another SRS fault exists. If the RCM detects a short to battery on the connection to the instrument cluster module, it will store diagnostic trouble code (DTC) B1891 in memory.

Possible Causes

An air bag tone warning circuit short to battery or ignition can be caused by:

- damaged wiring, terminals, or connectors.
- a damaged or inoperative instrument cluster module.
- a faulted RCM.

PINPOINT TEST D: DTC B1891 AIR BAG TONE WARNING INDICATOR CIRCUIT SHORT TO BATTERY

Test Step	Result / Action to Take
D1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1891 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during

	the on-demand self test. GO to D2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to D4 .
D2 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT FOR A SHORT TO BATTERY	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: RCM C310a. • Disconnect: Instrument Cluster Module C220a. • Key in ON position. • Measure the voltage between RCM C310a pin 22, circuit 8-GE52 (WH/BK), harness side and ground.	**Yes** GO to D3 . **No** REPAIR circuit 8-GE52 (WH/BK). GO to D5 .

 • **Is the voltage less than 0.2 volt?**	
D3 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT	
• Key in OFF position. • Connect: RCM C310a. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **NOTE:** DTC 1892 should be retrieved when carrying out the on-demand self test due to an open circuit 8-GE52 (WH/BK), DTC 1891 should not be retrieved at this time. • **Was DTC B1891 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to D5 . **No** INSTALL a new instrument cluster module. REFER to Section 413-00 . GO to D5 .
D4 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test E: LFC 53/DTC B1892 Air Bag Tone Warning Indicator Circuit Short to Ground or Open

Normal Operation

The restraints control module (RCM) monitors its connection to the instrument cluster module at C310a pin 22. This connection is used to signal a chime if the air bag indicator is inoperative and another SRS fault exists. If the RCM detects a short to ground or open on the connection to the cluster, it will store diagnostic trouble code (DTC) B1892 in memory and flash lamp fault code (LFC) 53 (or a higher priority code if one exists) on the air bag indicator.

Possible Causes

An air bag tone warning indicator circuit short to ground or open can be caused by:

- damaged wiring, terminals, or connectors.
- a damaged or inoperative instrument cluster module.
- a faulted RCM.

PINPOINT TEST E: LFC 53/DTC B1892 AIR BAG TONE WARNING INDICATOR CIRCUIT SHORT TO GROUND OR OPEN

Test Step	Result / Action to Take
E1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1892 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to E2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to E5 .
E2 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT FOR A GROUND SHORT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system**	**Yes** GO to E3 . **No** REPAIR circuit 8-GE52 (WH/BK). GO to E6 .

diagnostic tools must be removed before operating the vehicle over the road. NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: RCM C310a. • Disconnect: Instrument Cluster Module C220a. • Measure the resistance between RCM C310a pin 22, circuit 8-GE52 (WH/BK), harness side and RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side.  A0049256 • **Is the resistance greater than 1,000,000 ohms?**	
E3 CHECK THE AIR BAG TONE WARNING INDICATOR CIRCUIT FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310a pin 22, circuit 8-GE52 (WH/BK), harness side and instrument cluster module C220a pin 18, circuit 8-GE52 (WH/BK), harness side.  A0057056 • **Is the resistance less than 5 ohms?**	**Yes** GO to E4 . **No** REPAIR circuit 8-GE52 (WH/BK). GO to E6 .
E4 CHECK THE AIR BAG TONE WARNING INDICATOR	
• Connect: Instrument Cluster Module C220a. • Key in ON position. • Measure the voltage at RCM C310a pin 22, circuit 8-GE52 (WH/BK).  A0049254 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to E6 . **No** INSTALL a new instrument cluster module. REFER to Section 413-00 . GO to E6 .
E5 CHECK FOR AN INTERMITTENT FAULT	
	Yes GO to E2 .

⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1892 retrieved during the on-demand self test?**	**No** CHECK for causes of intermittent short to ground or open on circuit 8-GE52 (WH/BK). ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to E6 .
E6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step E1. • **Were any continuous DTCs retrieved during Step E1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system.

	REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test F: LFC 14/DTC B1921 Air Bag Diagnostic Monitor Ground Circuit Open

Normal Operation

⚠ WARNING: The tightening torque of the restraints control module (RCM) retaining bolts is critical for correct air bag supplemental restraint system (SRS) operation. Refer to Restraints Control Module (RCM) in this section for correct torque values.

NOTE: A resistance difference as low as 10 ohms may set the LFC.

The restraints control module (RCM) monitors the resistance between the ground connections at the mounting bracket and the reference ground at C310a pin 16, circuit 31-JA10 (BK/RD). If the RCM detects a difference in resistance, it will store diagnostic trouble code (DTC) B1921 in memory and flash lamp fault code (LFC) 14 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A resistance difference between the RCM bracket ground and harness ground can be caused by:

- RCM or RCM bracket not securely mounted.
- damaged wiring, terminals, or connectors.
- a faulted RCM.

PINPOINT TEST F: LFC 14/DTC B1921 AIR BAG DIAGNOSTIC MONITOR CIRCUIT OPEN

Test Step	Result / Action to Take
F1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1921 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to F2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to F5 .
F2 INSPECT THE RCM MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Inspect the RCM retainers and RCM bracket mounting bolts and make sure they are fully seated and tightened correctly. • Remove the RCM. Refer to Restraints Control Module (RCM) in this section. • Visually inspect the RCM, mounting bracket and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the RCM mounting bracket attached to the mounting surface incorrectly or were the RCM bolts not fully seated and tightened correctly?**	**Yes** CLEAN and TIGHTEN the bolts. REPAIR the mounting surface as necessary. REINSTALL the RCM and mounting bracket to the mounting surface. GO to F6 . **No** GO to F3 .
F3 INSTALL THE RCM AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean the RCM mounting surfaces and bolts.	**Yes** GO to F4 .

• Install the RCM. Refer to Restraints Control Module (RCM) in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1921 retrieved during the on-demand self test?**	**No** Fault corrected. GO to F6 .
F4 CHECK GROUND CIRCUIT 31-JA10 (BK/RD) FOR HIGH RESISTANCE	
• Key in OFF position. • Measure the resistance between RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side and the RCM case ground.  • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to F6 . **No** REPAIR circuit 31-JA10 (BK/RD). GO to F6 .
F5 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed**	**Yes** GO to F2 . **No** CHECK for causes of intermittent high resistance on circuit 31-JA10 (BK/RD) or the chassis ground. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to F6 .

before operating the vehicle over the road. NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B1921 retrieved during the on-demand self test?**	
F6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step F1. • **Were any continuous DTCs retrieved during Step F1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test G: LFC 16/DTC B2290 Occupant Classification Sensor (OCS) System Fault

Normal Operation

The restraints control module (RCM) checks the occupant classification sensor (OCS) circuits for faults. If the RCM detects one of the following faults on any of the OCS circuits, it will store diagnostic trouble code (DTC) B2290 in memory and flash either lamp fault code (LFC) 16 (or higher priority code if one exists) on the air bag indicator.

The OCS system components (seat cushion foam pad, bladder with pressure sensor and electronic control unit) are calibrated to each other and are serviced as an assembly. The OCS system components are not to be installed separately. If installing a new OCS system, OCS system component or seat cushion foam pad, a new OCS system service kit (seat cushion foam pad, bladder with pressure sensor and electronic control unit) must be installed as an assembly.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to battery.
- circuit short to ground.

Possible Causes

An occupant classification sensor (OCS) circuit fault can be caused by:

- wiring, terminals, or connectors.
- a faulty OCS system.
- a faulted RCM.

PINPOINT TEST G: LFC 16/DTC B2290 OCCUPANT CLASSIFICATION SENSOR (OCS) CIRCUIT FAULT

Test Step	Result / Action to Take
NOTE: To identify between a production OCS system and a service OCS system (OCS service kit) inspect the OCS ECU electrical connector. A production OCS system allows the disconnect of the electrical connector from the OCS ECU. A service OCS system (OCS service kit) has the OCS ECU electrical connector glued to the ECU, it cannot and should not be disconnected or altered.	
G1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2290/Record All Flagged Faults. • **Was DTC B2290 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. **Vehicles with a production OCS system** For OCS system with a communications fault, GO to G2 . For OCS system with an internal fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a calibration fault, INSTALL a new

	OCS system service kit. GO to G27 . For OCS system with a pressure sensor fault, GO to G18 . **Vehicles with a service OCS system** For OCS system with a communications fault, GO to G2 . For OCS system with an internal fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a calibration fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a pressure sensor fault, INSTALL a new OCS system service kit. GO to G27 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to G26 .
G2 CHECK THE SEAT WIRING AND CONNECTORS	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle**	**Yes** REPAIR the seat connectors and wiring as needed. GO to G27 . **No** **Vehicles with a production OCS system** , GO to G3 . **Vehicles with a service OCS system** , GO to G10 .

pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Do not remove the passenger seat at this time. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Carry out a thorough visual inspection of the OCS system wiring, terminals and connectors, the RCM wiring and terminals at C310b pins 17 and 18, and the related seat wiring harness and body wiring harness wiring, terminals and connectors. • **Were any problems noted?**	
G3 CHECK IGNITION CIRCUIT 15-JA10B (GN/OG) FOR AN OPEN PRODUCTION OCS	
• Disconnect: OCS ECU C3043. • Key in ON position. • Measure the voltage between OCS ECU C3043 pin G, circuit 15-JA10B (GN/OG), harness side and ground.  A0029324 • **Is the voltage greater than 10 volts?**	**Yes** GO to G4 . **No** REPAIR circuit 15-JA10B (GN/OG). GO to G27 .
G4 CHECK GROUND CIRCUIT 31-JA52 (BK/GN) FOR AN OPEN PRODUCTION OCS	
• Key in OFF position. • Measure the resistance between OCS ECU C3043 pin D, circuit 31-JA52 (BK/GN), harness side and ground.	**Yes** GO to G5 . **No** REPAIR circuit 31-JA52 (BK/GN). GO to G27 .

 A0029325 • **Is the resistance less than 5 ohms?**	
G5 CHECK CIRCUITS 4-EC9 (GY) AND 5-EC9 (BU) FOR A SHORT TO VOLTAGE BETWEEN THE OCS AND THE RCM PRODUCTION OCS	
• Disconnect: RCM C310a. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between OCS ECU C3043 pin E, circuit 4-EC9 (GY), harness side and ground; and between OCS ECU C3043 pin F, circuit 5-EC9 (BU), harness side and ground.  A0029636 • **Are the voltages less than 0.2 volt?**	**Yes** GO to G6 . **No** REPAIR circuit 4-EC9 (GY) or circuit 5-EC9 (BU). GO to G27 .
G6 CHECK CIRCUITS 4-EC9 (GY) AND 5-EC9 (BU) FOR A SHORT TO GROUND BETWEEN THE OCS AND THE RCM PRODUCTION OCS	
• Key in OFF position. • Measure the resistance between OCS ECU C3043 pin E, circuit 4-EC9 (GY), harness side and ground; and between OCS ECU C3043 pin F, circuit 5-EC9 (BU), harness side and ground.  A0029401 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to G7 . **No** REPAIR circuit 4-EC9 (GY) or circuit 5-EC9 (BU). GO to G27 .
G7 CHECK CIRCUIT 5-EC9 (BU) FOR AN OPEN BETWEEN THE OCS AND THE RCM PRODUCTION OCS	
• Measure the resistance between RCM C310b pin 18, circuit 5-EC9 (BU), harness side and OCS ECU C3043 pin F, circuit 5-EC9 (BU), harness side.  A0057214	**Yes** GO to G8 . **No** REPAIR circuit 5-EC9 (BU). GO to G27 .

• **Is the resistance less than 0.5 ohm?**	
G8 CHECK CIRCUIT 4-EC9 (GY) FOR AN OPEN BETWEEN THE OCS AND THE RCM PRODUCTION OCS	
• Measure the resistance between RCM C310b pin 17, circuit 4-EC9 (GY), harness side and OCS ECU C3043 pin E, circuit 4-EC9 (GY), harness side.  A0057215 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G9 . **No** REPAIR circuit 4-EC9 (GY). GO to G27 .
G9 CHECK CIRCUIT 4-EC9 (GY) FOR A SHORT TO CIRCUIT 5-EC9 (BU) BETWEEN THE OCS AND THE RCM PRODUCTION OCS	
• Measure the resistance between OCS ECU C3043 pin E, circuit 4-EC9 (GY), harness side and OCS ECU C3043 pin F, circuit 5-EC9 (BU), harness side.  A0058552 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G17 . **No** REPAIR circuits 4-EC9 (GY) and circuit 5-EC9 (BU). GO to G27 .
G10 CHECK IGNITION CIRCUIT 15-JA10B (GN/OG) FOR AN OPEN SERVICE OCS	
• Disconnect: Passenger Seat Wiring Harness C3047. • Key in ON position. • Measure the voltage between passenger seat wiring harness C3047 pin 1, circuit 15-JA10B (GN/OG), harness side and ground.  A0062569 • **Is the voltage greater than 10 volts?**	**Yes** GO to G11 . **No** REPAIR circuit 15-JA10B (GN/OG). GO to G27 .
G11 CHECK GROUND CIRCUIT 31-JA52 (BK/GN) FOR AN OPEN SERVICE OCS	
• Key in OFF position. • Measure the resistance between passenger seat wiring harness C3047 pin 2, circuit 31-JA52 (BK/GN), harness side and ground.	**Yes** GO to G12 . **No** REPAIR circuit

 A0062570 • **Is the resistance less than 5 ohms?**	31-JA52 (BK/GN). GO to G27 .
G12 CHECK CIRCUITS 4-EC9 (GY) AND 5-EC9 (BU) FOR A SHORT TO VOLTAGE BETWEEN THE OCS AND THE RCM SERVICE OCS	
• Disconnect: RCM C310a. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between passenger seat wiring harness C3047 pin 4, circuit 4-EC9 (GY), harness side and ground; and between passenger seat wiring harness C3047 pin 3, circuit 5-EC9 (BU), harness side and ground.  A0062571 • **Are the voltages less than 0.2 volt?**	**Yes** GO to G13 . **No** REPAIR circuit 4-EC9 (GY) or circuit 5-EC9 (BU). GO to G27 .
G13 CHECK CIRCUITS 4-EC9 (GY) AND 5-EC9 (BU) FOR A SHORT TO GROUND BETWEEN THE OCS AND THE RCM SERVICE OCS	
• Key in OFF position. • Measure the resistance between passenger seat wiring harness C3047 pin 4, circuit 4-EC9 (GY), harness side and ground; and between passenger seat wiring harness C3047 pin 3, circuit 5-EC9 (BU), harness side and ground.  A0062572 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to G14 . **No** REPAIR circuit 4-EC9 (GY) or circuit 5-EC9 (BU). GO to G27 .
G14 CHECK CIRCUIT 5-EC9 (BU) FOR AN OPEN BETWEEN THE OCS AND THE RCM SERVICE OCS	
• Measure the resistance between RCM C310b pin 18, circuit 5-EC9 (BU), harness side and passenger seat wiring harness C3047 pin 3, circuit 5-EC9 (BU), harness side.	**Yes** GO to G15 . **No** REPAIR circuit 5-EC9 (BU). GO to G27 .

 A0062573 • **Is the resistance less than 0.5 ohm?**	
G15 CHECK CIRCUIT 4-EC9 (GY) FOR AN OPEN BETWEEN THE OCS AND THE RCM SERVICE OCS	
• Measure the resistance between RCM C310b pin 17, circuit 4-EC9 (GY), harness side and passenger seat wiring harness C3047 pin 4, circuit 4-EC9 (GY), harness side.  A0062574 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G16 . **No** REPAIR circuit 4-EC9 (GY). GO to G27 .
G16 CHECK CIRCUIT 4-EC9 (GY) FOR A SHORT TO CIRCUIT 5-EC9 (BU) BETWEEN THE OCS AND THE RCM SERVICE OCS	
• Measure the resistance between passenger seat wiring harness C3047 pin 4, circuit 4-EC9 (GY), harness side and passenger seat wiring harness C3047 pin 3, circuit 5-EC9 (BU), harness side.  A0062575 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to G17 . **No** REPAIR circuits 4-EC9 (GY) and circuit 5-EC9 (BU). GO to G27 .
G17 CHECK THE OCS SYSTEM	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Install a known good OCS system service kit. • Connect: RCM C310a. • Connect: RCM C310b. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: OCS Rezeroing. • ⚠ **CAUTION: The following precautions must be taken before rezeroing of the OCS system:** ♦ **Make sure the OCS system components are connected and no faults are present.** ♦ **Make sure the vehicle has not been exposed to temperatures below 6°C (42°F) or above 36°C (97°F) within four hours**	**Yes** If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. INSTALL a new RCM. GO to G27 . **No** Fault corrected. GO to G27 .

prior to the rezeroing process. If the vehicle has been exposed to temperatures outside the temperature limits (6-36°C [42-97°F]), the vehicle must be exposed and kept at a temperature within the limits for a minimum of four hours. ♦ **Make sure nothing is present on the passenger seat before rezeroing and nothing is placed on the seat during the rezeroing process.** ♦ **Make sure a minimum five second time period has passed after cycling the ignition switch ON before the rezeroing process.** • **NOTE:** It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed, or an OCS service kit is installed. A scan tool is used to trigger the active command to carry out rezeroing of the OCS system. • **NOTE:** When using a New Generation STAR (NGS) Tester, the OCS system rezero function is on the Ford Service Function (red) card. To rezero the OCS system: • select SERVICE BAY FUNCTIONS • select RCM • select SYSTEM RESET • select the vehicle from the menu • view the on-screen information then press TRIGGER The NGS screen will then display OCS RESET: REZERO. Press DONE (button 8) to rezero the OCS system. The NGS will return to the vehicle menu once rezeroing of the OCS system is complete. • **NOTE:** To rezero the OCS system using the Worldwide Diagnostic System (WDS): • select the TOOLBOX icon • select BODY from the menu • select RESTRAINTS from the menu • select SEAT WEIGHT SENSOR REZERO After selecting SEAT WEIGHT SENSOR REZERO, follow the on-screen prompts to carry out rezeroing of the OCS sytem. • **NOTE:** If the first attempt to rezero the OCS system is unsuccessful, a second attempt must be made. • Carry out rezeroing of the OCS system using the scan tool. • Key in OFF position. • **NOTE:** The ignition switch must be cycled after rezeroing the OCS system. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2290/Record All Flagged Faults. • **Was DTC B2290 retrieved during the on-demand self test?**	
G18 CHECK THE SEAT WIRING AND CONNECTORS PRODUCTION OCS	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and**	**Yes** REPAIR the seat connectors and wiring as needed. GO to G27 . **No**

the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Do not remove the passenger seat at this time. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Carry out a thorough visual inspection of the OCS system wiring, terminals and connectors. • **Were any problems noted?**	GO to G19 .
G19 CHECK CIRCUITS 7-JA52 (YE/GN), 8-JA52 (WH/GN) AND 9-JA52 (BN/GN) FOR A SHORT TO VOLTAGE PRODUCTION OCS	
• Disconnect: RCM C310a. • Disconnect: RCM C310b. • Disconnect: OCS ECU C3043. • Disconnect: OCS Pressure Sensor C3042. • Key in ON position. • Measure the voltage between OCS pressure sensor C3042 pin C, circuit 7-JA52 (YE/GN), harness side and ground; between OCS pressure sensor C3042 pin B, circuit 8-JA52 (WH/GN), harness side and ground; and between OCS pressure sensor C3042 pin A, circuit 9-JA52 (BN/GN), harness side and ground.  • **Are the voltages less than 0.2 volt?**	**Yes** GO to G20 . **No** REPAIR circuit 7-JA52 (YE/GN), circuit 8-JA52 (WH/GN) or circuit 9-JA52 (BN/GN). GO to G27 .

G20 CHECK CIRCUITS 7-JA52 (YE/GN), 8-JA52 (WH/GN) AND 9-JA52 (BN/GN) FOR A SHORT TO GROUND PRODUCTION OCS	
• Key in OFF position. • Measure the resistance between OCS pressure sensor C3042 pin C, circuit 7-JA52 (YE/GN), harness side and ground; between OCS pressure sensor C3042 pin B, circuit 8-JA52 (WH/GN), harness side and ground; and between OCS pressure sensor C3042 pin A, circuit 9-JA52 (BN/GN), harness side and ground.  A0067404 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to G21 . **No** REPAIR circuit 7-JA52 (YE/GN), circuit 8-JA52 (WH/GN) or circuit 9-JA52 (BN/GN). GO to G27 .
G21 CHECK CIRCUIT 7-JA52 (YE/GN) FOR AN OPEN BETWEEN THE OCS ECU AND PRESSURE SENSOR PRODUCTION OCS	
• Measure the resistance between OCS ECU C3043 pin J, circuit 7-JA52 (YE/GN), harness side and OCS pressure sensor C3042 pin C, circuit 7-JA52 (YE/GN), harness side.  A0067407 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G22 . **No** REPAIR circuit 7-JA52 (YE/GN). GO to G27 .
G22 CHECK CIRCUIT 9-JA52 (BN/GN) FOR AN OPEN BETWEEN THE OCS ECU AND PRESSURE SENSOR PRODUCTION OCS	
• Measure the resistance between OCS ECU C3043 pin H, circuit 9-JA52 (BN/GN), harness side and OCS pressure sensor C3042 pin A, circuit 9-JA52 (BN/GN), harness side.  A0067408 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G23 . **No** REPAIR circuit 9-JA52 (BN/GN). GO to G27 .
G23 CHECK CIRCUIT 8-JA52 (WH/GN) FOR AN OPEN BETWEEN THE OCS ECU AND PRESSURE SENSOR PRODUCTION OCS	

• Measure the resistance between OCS ECU C3043 pin K, circuit 8-JA52 (WH/GN), harness side and OCS pressure sensor C3042 pin B, circuit 8-JA52 (WH/GN), harness side.  A0067405 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to G24 . **No** REPAIR circuit 8-JA52 (WH/GN). GO to G27 .
G24 CHECK CIRCUITS 7-JA52 (YE/GN), 8-JA52 (WH/GN) AND 9-JA52 (BN/GN) FOR A SHORT PRODUCTION OCS	
• Measure the resistance between the OCS pressure sensor C3042: ♦ pin C, circuit 7-JA52 (YE/GN), harness side and pin B, circuit 8-JA52 (WH/GN), harness side. ♦ pin C, circuit 7-JA52 (YE/GN), harness side and pin A, circuit 9-JA52 (BN/GN), harness side. ♦ pin B, circuit 8-JA52 (WH/GN), harness side and pin A, circuit 9-JA52 (BN/GN), harness side.  A0067406 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to G25 . **No** REPAIR circuit 7-JA52 (YE/GN), circuit 8-JA52 (WH/GN) and/or circuit 9-JA52 (BN/GN). GO to G27 .
G25 CHECK OCS SYSTEM	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Install a known good OCS system service kit. • Connect: RCM C310a. • Connect: RCM C310b. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: OCS Rezeroing. • ⚠ **CAUTION: The following precautions must be taken before rezeroing of the OCS system:** ♦ **Make sure the OCS system components are connected and no faults are present.** ♦ **Make sure the vehicle has not been exposed to temperatures below 6°C (42°F) or above 36°C (97°F) within four hours prior to the rezeroing process. If the vehicle has been exposed to temperatures outside the temperature limits (6-36°C [42-97°F]), the vehicle must be exposed and kept at a temperature within the limits for a minimum of four hours.** ♦ **Make sure nothing is present on the passenger seat before rezeroing and nothing is placed on the seat during the rezeroing process.**	**Yes** If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out. INSTALL a new RCM. GO to G27 . **No** Fault corrected. GO to G27 .

♦ **Make sure a minimum five second time period has passed after cycling the ignition switch ON before the rezeroing process.** • **NOTE:** It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed, or an OCS service kit is installed. A scan tool is used to trigger the active command to carry out rezeroing of the OCS system. • **NOTE:** When using a New Generation STAR (NGS) Tester, the OCS system rezero function is on the Ford Service Function (red) card. To rezero the OCS system: • select SERVICE BAY FUNCTIONS • select RCM • select SYSTEM RESET • select the vehicle from the menu • view the on-screen information then press TRIGGER The NGS screen will then display OCS RESET: REZERO. Press DONE (button 8) to rezero the OCS system. The NGS will return to the vehicle menu once rezeroing of the OCS system is complete. • **NOTE:** To rezero the OCS system using the Worldwide Diagnostic System (WDS): • select the TOOLBOX icon • select BODY from the menu • select RESTRAINTS from the menu • select SEAT WEIGHT SENSOR REZERO After selecting SEAT WEIGHT SENSOR REZERO, follow the on-screen prompts to carry out rezeroing of the OCS sytem. • **NOTE:** If the first attempt to rezero the OCS system is unsuccessful, a second attempt must be made. • Carry out rezeroing of the OCS system using the scan tool. • Key in OFF position. • **NOTE:** The ignition switch must be cycled after rezeroing the OCS system. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2290/Record All Flagged Faults. • **Was DTC B2290 retrieved during the on-demand self test?**	
G26 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt buckle pretensioner and safety belt retractor pretensioner are pyrotechnic devices. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in**	**Yes** This is a hard fault. The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire

personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2290/Record All Flagged Faults. • **Was DTC B2290 retrieved during the on-demand self test?**	pinpoint test must be carried out. **Vehicles with a production OCS system** For OCS system with a communications fault, GO to G2 . For OCS system with an internal fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a calibration fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a pressure sensor fault, GO to G18 . **Vehicles with a service OCS system** For OCS system with a communications fault, GO to G2 . For OCS system with an internal fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a calibration fault, INSTALL a new OCS system service kit. GO to G27 . For OCS system with a pressure sensor fault, INSTALL a new OCS system service kit. GO to G27 . **No**

	CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to G27 .
G27 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step G1. • **Were any continuous DTCs retrieved during Step G1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test H: LFC 33 and 34/DTC B2292 Restraint System Safety Belt Pretensioner Fault

Normal Operation

The restraints control module (RCM) checks all of the safety belt pretensioners for faults. If the RCM detects one of the following faults on any of the safety belt pretensioner circuits, it will store diagnostic trouble code (DTC) B2292 in memory and flash, depending on the fault indicator, either lamp fault code (LFC) 33 or 34 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A safety belt pretensioner fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulted pretensioner.
- a faulted RCM.

PINPOINT TEST H: LFC 33 AND 34/DTC B2292 RESTRAINT SYSTEM SAFETY BELT PRETENSIONER FAULT

Test Step	Result / Action to Take
H1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2292/Record All Flagged Faults. • **Was DTC B2292 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to H2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to H18 .
H2 CHECK THE PRETENSIONER	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. Using the flagged faults recorded in the Step H1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver safety belt retractor pretensioner

attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2292 retrieved during the on-demand self test?**	(DF_PRT) with a low resistance (LOWRES) fault, GO to H3 . For DF_PRT with an open circuit (O_CIR) fault, GO to H4 . For DF_PRT with a short to battery (STB) fault, GO to H6 . For DF_PRT with a short to ground (STG) fault, GO to H8 . For passenger safety belt retractor pretensioner (PF_PRT) with a low resistance (LOWRES) fault, GO to H10 . For PF_PRT with an open circuit (O_CIR) fault, GO to H11 . For PF_PRT with a short to battery (STB) fault, GO to H13 . For PF_PRT with a short to ground (STG) fault, GO to H15 . **No** INSTALL a new driver or passenger safety belt retractor pretensioner. REFER to Section 501-20A . GO to H19 .
H3 CHECK THE DRIVER SAFETY BELT PRETENSIONER CIRCUIT 30S-JA33 (RD/BU) AND CIRCUIT 31S-JA33 (BK/BU) FOR LOW RESISTANCE	
• Key in OFF position. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), and pin 31, circuit 30S-JA33 (RD/BU), harness side.	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA33 (BK/BU) and circuit 30S-JA33 (RD/BU). GO to H19 .

 A0041018 • **Is the resistance greater than 1,000,000 ohms?**	
H4 CHECK CIRCUIT 30S-JA33 (RD/BU) FOR AN OPEN	
• Key in OFF position. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 31, circuit 30S-JA33 (RD/BU), harness side and driver safety belt retractor pretensioner C323 pin 3, circuit 30S-JA33 (RD/BU), harness side.  A0057057 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H5 . **No** REPAIR circuit 30S-JA33 (RD/BU). GO to H19 .
H5 CHECK CIRCUIT 31S-JA33 (BK/BU) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), harness side and driver safety belt retractor pretensioner C323 pin 1, circuit 31S-JA33 (BK/BU), harness side.  A0057058 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA33 (BK/BU). GO to H19 .
H6 CHECK CIRCUIT 30S-JA33 (RD/BU) FOR A SHORT TO VOLTAGE	
• Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 31, circuit 30S-JA33 (RD/BU), harness side and ground.	**Yes** GO to H7 . **No** REPAIR circuit 30S-JA33 (RD/BU). GO to H19 .

 A0041022 • **Is the voltage less than 0.2 volt?**	
H7 CHECK CIRCUIT 31S-JA33 (BK/BU) FOR A SHORT TO VOLTAGE	
• Measure the voltage between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), harness side and ground.  A0041023 • **Is the voltage less than 0.2 volt?**	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA33 (BK/BU). GO to H19 .
H8 CHECK CIRCUIT 30S-JA33 (RD/BU) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Driver Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 31, circuit 30S-JA33 (RD/BU), harness side and ground.  A0041024 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to H9 . **No** REPAIR circuit 30S-JA33 (RD/BU). GO to H19 .
H9 CHECK CIRCUIT 31S-JA33 (BK/BU) FOR A SHORT TO GROUND	
• Measure the resistance between RCM C310b pin 32, circuit 31S-JA33 (BK/BU), harness side and ground.  A0041025 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA33 (BK/BU). GO to H19 .
H10 CHECK THE PASSENGER SAFETY BELT PRETENSIONER CIRCUIT 30S-JA34 (RD/BK) AND CIRCUIT 31S-JA34 (BK/RD) FOR	

LOW RESISTANCE	
• Key in OFF position. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), and pin 33, circuit 30S-JA34 (RD/BK), harness side.  • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to H17 . **No** REPAIR circuit 30S-JA34 (RD/BK) and circuit 31S-JA34 (BK/RD). GO to H19 .
H11 CHECK CIRCUIT 30S-JA34 (RD/BK) FOR AN OPEN	
• Key in OFF position. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 33, circuit 30S-JA34 (RD/BK), harness side and passenger safety belt retractor pretensioner C303 pin 3, circuit 30S-JA34 (RD/BK), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H12 . **No** REPAIR circuit 30S-JA34 (RD/BK). GO to H19 .
H12 CHECK CIRCUIT 31S-JA34 (BK/RD) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), harness side and passenger safety belt retractor pretensioner C303 pin 1, circuit 31S-JA34 (BK/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA34 (BK/RD). GO to H19 .
H13 CHECK CIRCUIT 30S-JA34 (RD/BK) FOR A SHORT TO VOLTAGE	

• Key in OFF position. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 33, circuit 30S-JA34 (RD/BK), harness side and ground.  A0041029 • **Is the voltage less than 0.2 volt?**	**Yes** GO to H14 . **No** REPAIR circuit 30S-JA34 (RD/BK). GO to H19 .
H14 CHECK CIRCUIT 31S-JA34 (BK/RD) FOR A SHORT TO VOLTAGE	
• Measure the voltage between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), harness side and ground.  A0041030 • **Is the voltage less than 0.2 volt?**	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA34 (BK/RD). GO to H19 .
H15 CHECK CIRCUIT 30S-JA34 (RD/BK) FOR A SHORT TO GROUND	
• Key in OFF position. • Disconnect: Passenger Safety Belt Pretensioner Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 33, circuit 30S-JA34 (RD/BK), harness side and ground.  A0041261 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to H16 . **No** REPAIR circuit 30S-JA34 (RD/BK). GO to H19 .
H16 CHECK CIRCUIT 31S-JA34 (BK/RD) FOR A SHORT TO GROUND	

• Measure the resistance between RCM C310b pin 34, circuit 31S-JA34 (BK/RD), harness side and ground.  • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to H17 . **No** REPAIR circuit 31S-JA34 (BK/RD). GO to H19 .
H17 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: Restraint System Diagnostic Tools. • Connect: RCM C310b. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2292/Record All Flagged Faults. • **Was DTC B2292 retrieved during the on-demand self test?**	**Yes** If a **"?"** was flagged by the scan tool, CARRY OUT the entire pinpoint test before installing a new RCM. INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to H19 . **No** Fault corrected. GO to H19 .
H18 CHECK FOR AN INTERMITTENT FAULT	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air	**Yes** Check for causes of the intermittent fault at or near the affected safety belt retractor pretensioner electrical connector. REPAIR any intermittent concern found. If an intermittent concern **was** found and repaired, GO to H19 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM.

bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2292/Record All Flagged Faults. • **Was DTC B2292 retrieved during the on-demand self test?**	For driver safety belt pretensioner (DF_PRT) with a low resistance (LOWRES) fault, GO to H3 . For DF_PRT with an open circuit (O_CIR) fault, GO to H4 . For DF_PRT with a short to battery (STB) fault, GO to H6 . For DF_PRT with a short to ground (STG) fault, GO to H8 . For passenger safety belt pretensioner (PF_PRT) with a low resistance (LOWRES) fault, GO to H10 . For PF_PRT with an open circuit (O_CIR) fault, GO to H11 . For PF_PRT with a short to battery (STB) fault, GO to H13 . For PF_PRT with a short to ground (STG) fault, GO to H15 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to H19 .
H19 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step H1. • **Were any continuous DTCs retrieved during Step H1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM)

	Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test I: LFC 19 and 21/DTC B2293 Restraint System - Airbag Fault

Normal Operation

The restraints control module (RCM) checks all of the front air bag circuits for faults. If the RCM detects one of the following faults on any of the front air bag circuits, it will store diagnostic trouble code (DTC) B2293 in memory, and depending on the fault, flash either lamp fault code (LFC) 19 or 21 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A driver air bag fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty clockspring.
- a faulty driver air bag module.
- a faulted RCM.

A passenger air bag fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty passenger air bag module.
- a faulted RCM.

Test Step	Result / Action to Take
I1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2293/Record All Flagged Faults. • **Was DTC B2293 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to I2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to I38 .
I2 CHECK THE DRIVER AND PASSENGER AIR BAG MODULES	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. Using the flagged faults recorded in the step I1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver air bag module squib 1 (D_ABAG) with a short to ground (STG) fault, GO to I3 . For driver air bag module squib 1 (D_ABAG) with a short to battery (STB) fault, GO to I5 . For driver air bag module squib 1 (D_ABAG) with

fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2293 retrieved during the on-demand self test?**	an open circuit (O_CIR) fault, GO to I7 . For driver air bag module squib 1 (D_ABAG) with a low resistance (LOWRES) fault, GO to I11 . For passenger air bag module squib 1 (P_ABAG) with a short to ground (STG) fault, GO to I14 . For passenger air bag module squib 1 (P_ABAG) with a short to battery (STB) fault, GO to I15 . For passenger air bag module squib 1 (P_ABAG) with an open circuit (O_CIR) fault, GO to I16 . For passenger air bag module squib 1 (P_ABAG) with a low resistance (LOWRES) fault, GO to I18 . For driver air bag module squib 2 (D_ABAG2) with a short to ground (STG) fault, GO to I20 . For driver air bag module squib 2 (D_ABAG2) with a short to battery (STB) fault, GO to I22 . For driver air bag module squib 2 (D_ABAG2) with an open circuit (O_CIR) fault, GO to I24 . For driver air bag module squib 2 (D_ABAG2) with a low resistance (LOWRES) fault, GO to I28 . For passenger air bag

	module squib 2 (P_ABAG2) with a short to ground (STG) fault, GO to I31 . For passenger air bag module squib 2 (P_ABAG2) with a short to battery (STB) fault, GO to I32 . For passenger air bag module squib 2 (P_ABAG2) with an open circuit (O_CIR) fault, GO to I33 . For passenger air bag module squib 2 (P_ABAG2) with a low resistance (LOWRES) fault, GO to I35 . **No** If a flagged fault of **"?"** was recorded in Step I1, multiple faults exist and the entire pinpoint test must be carried out before installing a new driver or passenger air bag module. If a fault was flagged against driver air bag module in Step I1, INSTALL a new driver air bag module. REFER to Driver Air Bag Module in this section. GO to I39 . If a fault was flagged against passenger air bag module in Step I1, INSTALL a new passenger air bag module. REFER to Passenger Air Bag Module in this section. GO to I39 .
I3 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	

• Key in OFF position. • Disconnect: RCM C310a. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041212 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to I37 . **No** GO to I4 .
I4 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041212 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA8 (RD/OG) or circuit 31S-JA8 (BK/OG). GO to I39 .
I5 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041263	**Yes** GO to I37 . **No** GO to I6 .

• **Are the voltages less than 0.2 volt?**	
I6 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE CLOCKSPRING	
• Key in OFF position. • Disconnect: Clockspring C218a. • Key in ON position. • Measure the voltage between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and ground; and between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and ground.  A0041263 • **Are the voltages less than 0.2 volt?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA8 (RD/OG) or 31S-JA8 (BK/OG). GO to I39 .
I7 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and driver air bag module squib 1, circuit 30S-JA8 (GY/OG), harness side.  A0048570 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I9 . **No** GO to I8 .
I8 CHECK CIRCUIT 30S-JA8 (RD/OG) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), harness side and clockspring C218a pin 4, circuit 30S-JA8 (RD/OG), harness side.	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** REPAIR circuit 30S-JA8 (RD/OG). GO to I39 .

 A0049601 • **Is the resistance less than 0.5 ohm?**	
I9 CHECK CIRCUIT 31S-JA8 (BK/OG) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Measure the resistance between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and driver air bag module squib 1, circuit 31S-JA8 (GY/WH), harness side.  A0048571 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I37 . **No** GO to I10 .
I10 CHECK CIRCUIT 31S-JA8 (BK/OG) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between RCM C310a pin 2, circuit 31S-JA8 (BK/OG), harness side and clockspring C218a pin 3, circuit 31S-JA8 (BK/OG), harness side.  A0049602 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** REPAIR circuit 31S-JA8 (BK/OG). GO to I39 .
I11 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR LOW RESISTANCE BETWEEN THE DRIVER AIR BAG MODULE AND THE RCM	
• Key in OFF position. • Disconnect: Driver Air Bag Module Squib 1 Restraint System Diagnostic Tool. • Measure the resistance between driver air bag module squib 1, circuit 30S-JA8 (GY/OG) and circuit 31S-JA8 (GY/WH), harness side.  A0030492	**Yes** GO to I37 . **No** GO to I12 .

• **Is the resistance greater than 10,000 ohms?**	
I12 MEASURE RESISTANCE BETWEEN RCM CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG)	
• Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 1, circuit 30S-JA8 (RD/OG), and pin 2, circuit 31S-JA8 (BK/OG), component side.  A0041266 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I13 . **No** GO to I37 .
I13 CHECK CIRCUIT 30S-JA8 (RD/OG) AND CIRCUIT 31S-JA8 (BK/OG) FOR LOW RESISTANCE BETWEEN THE CLOCKSPRING AND THE RCM	
• Connect: RCM C310a. • Disconnect: Clockspring C218a. • Measure the resistance between clockspring C218a pin 4, circuit 30S-JA8 (RD/OG) and pin 3, circuit 31S-JA8 (BK/OG), harness side.  A0029872 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** REPAIR circuit 30S-JA8 (RD/OG) and circuit 31S-JA8 (BK/OG). GO to I39 .
I14 CHECK CIRCUIT 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), harness side and ground; and between RCM C310a pin 4, circuit 31S-JA11 (BK/WH), harness side and ground.	**Yes** GO to I37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar.

 A0041267 • **Are the resistances greater than 1,000,000 ohms?**	REPAIR circuit 30S-JA11 (RD/WH) or 31S-JA11 (BK/WH). GO to I39 .
I15 CHECK CIRCUIT 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), harness side and ground; and between RCM C310a pin 4, circuit 31S-JA11 (BK/WH), harness side and ground.  A0041268 • **Are the voltages less than 0.2 volt?**	**Yes** GO to I37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA11 (RD/WH) or circuit 31S-JA11 (BK/WH). GO to I39 .
I16 CHECK CIRCUIT 30S-JA11 (RD/WH) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), harness side and passenger air bag module C256 pin 3, circuit 30S-JA11 (RD/WH), harness side.  A0050601 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I17 . **No** REPAIR circuit 30S-JA11 (RD/WH). GO to I39 .
I17 CHECK CIRCUIT 31S-JA11 (BK/WH) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Measure the resistance between RCM C310a pin 4, circuit 31S-JA11 (BK/WH), harness side and passenger air bag module C256 pin 4, circuit 31S-JA11 (BK/WH), harness side.	**Yes** GO to I37 . **No** REPAIR circuit 31S-JA11 (BK/WH). GO to I39 .

 A0050602 • **Is the resistance less than 0.5 ohm?**	
I18 CHECK CIRCUIT 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH) FOR LOW RESISTANCE BETWEEN THE PASSENGER AIR BAG MODULE AND THE RCM	
• Key in OFF position. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between passenger air bag module C256 pin 3, circuit 30S-JA11 (RD/WH), and pin 4, circuit 31S-JA11 (BK/WH), harness side.  A0029872 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I37 . **No** GO to I19 .
I19 MEASURE THE RESISTANCE BETWEEN RCM CIRCUITS 30S-JA11 (RD/WH) AND CIRCUIT 31S-JA11 (BK/WH)	
• Disconnect: RCM C310a. • Measure the resistance between RCM C310a pin 3, circuit 30S-JA11 (RD/WH), and pin 4, circuit 31S-JA11 (BK/WH), component side.  A0041271 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA11 (RD/WH) and circuit 31S-JA11 (BK/WH). GO to I22 . **No** GO to I37 .
I20 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	

• Disconnect: RCM C310a. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041272 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to I37 . **No** GO to I21 .
I21 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041272 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA48 (RD/GN) or 31S-JA48 (BK/GN). GO to I39 .
I22 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041273 • **Are the voltages less than 0.2 volt?**	**Yes** GO to I37 . **No** GO to I23 .

I23 CHECK CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE CLOCKSPRING	
• Key in OFF position. • Disconnect: Clockspring C218a. • Key in ON position. • Measure the voltage between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and ground; and between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and ground.  A0041273 • **Are the voltages less than 0.2 volt?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA48 (RD/GN) or 31S-JA48 (BK/GN). GO to I39 .
I24 CHECK CIRCUIT 30S-JA48 (RD/GN) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and the driver air bag module squib 2, circuit 30S-JA48 (RD/BK), harness side.  A0049606 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I26 . **No** GO to I25 .
I25 CHECK CIRCUIT 30S-JA48 (RD/GN) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), harness side and the clockspring C218a pin 2, circuit 30S-JA48 (RD/GN), harness side.  A0049603	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** REPAIR circuit 30S-JA48 (RD/GN). GO to I39 .

• **Is the resistance less than 0.5 ohm?**	
I26 CHECK CIRCUIT 31S-JA48 (BK/GN) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Measure the resistance between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and the driver air bag module squib 2, circuit 31S-JA48 (GN/OG), harness side.  A0049605 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I37 . **No** GO to I27 .
I27 CHECK CIRCUIT 31S-JA48 (BK/GN) FOR AN OPEN BETWEEN THE RCM AND THE CLOCKSPRING	
• Disconnect: Clockspring C218a. • Measure the resistance between the RCM C310a pin 6, circuit 31S-JA48 (BK/GN), harness side and the clockspring C218a pin 1, circuit 31S-JA48 (BK/GN), harness side.  A0049604 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** REPAIR circuit 31S-JA48 (BK/GN). GO to I39 .
I28 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA48 (RD/GN) AND 31S-JA48 (BK/GN) BETWEEN THE RCM AND THE DRIVER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Air Bag Module Squib 2 Restraint System Diagnostic Tool. • Measure the resistance between the driver air bag module squib 2, circuit 30S-JA48 (RD/BK), harness side and circuit 31S-JA48 (GN/OG), harness side.  A0030495 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I37 . **No** GO to I29 .
I29 MEASURE THE RESISTANCE BETWEEN THE RCM CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN)	

• Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 5, circuit 30S-JA48 (RD/GN), component side and pin 6, circuit 31S-JA48 (BK/GN), component side.  A0041276 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I30 . **No** GO to I37 .
I30 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA48 (RD/GN) AND CIRCUIT 31S-JA48 (BK/GN) BETWEEN THE DRIVER AIR BAG MODULE AND THE CLOCKSPRING	
• Connect: RCM C310a. • Disconnect: Clockspring C218a. • Measure the resistance between the clockspring C218a pin 1, circuit 30S-JA48 (RD/GN), harness side and pin 2, circuit 31S-JA48 (BK/GN), harness side.  A0029882 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to I39 . **No** REPAIR circuit 30S-JA48 (RD/GN) and circuit 31S-JA48 (BK/GN). GO to I39 .
I31 CHECK CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), harness side and ground; and between the RCM C310a pin 14, circuit 31S-JA32 (BK/YE), harness side and ground.  A0041277	**Yes** GO to I37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA32 (RD/YE) or circuit 31S-JA32 (BK/YE). GO to I39 .

• **Are the resistances greater than 1,000,000 ohms?**	
I32 CHECK CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Key in ON position. • Measure the voltage between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), harness side and ground; and between the RCM C310a pin 14, circuit 31S-JA32 (BK/YE), harness side and ground.  A0041278 • **Are the voltages less than 0.2 volt?**	**Yes** GO to I37 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. **DO NOT** remove or defeat the shorting bar. REPAIR circuit 30S-JA32 (RD/YE) or circuit 31S-JA32 (BK/YE). GO to I39 .
I33 CHECK CIRCUIT 30S-JA32 (RD/YE) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), harness side and the passenger air bag module C256 pin 1, circuit 30S-JA32 (RD/YE), harness side.  A0050603 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I34 . **No** REPAIR circuit 30S-JA32 (RD/YE). GO to I39 .
I34 CHECK CIRCUIT 31S-JA32 (BK/YE) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Measure the resistance between the RCM C310a pin 14, circuit 31S-JA32 (BK/YE), harness side and the passenger air bag module C256 pin 2, circuit 31S-JA32 (BK/YE), harness side.  A0050604 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to I37 . **No** REPAIR circuit 31S-JA32 (BK/YE). GO to I39 .

I35 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE) BETWEEN THE RCM AND THE PASSENGER AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between the passenger air bag module C256 pin 1, circuit 30S-JA32 (RD/YE), harness side and pin 2, circuit 31S-JA32 (BK/YE), harness side.  A0029882 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I37 . **No** GO to I36 .
I36 MEASURE THE RESISTANCE BETWEEN THE RCM CIRCUIT 30S-JA32 (RD/YE) AND CIRCUIT 31S-JA32 (BK/YE)	
• Disconnect: RCM C310a. • Measure the resistance between the RCM C310a pin 13, circuit 30S-JA32 (RD/YE), component side and pin 14, circuit 31S-JA32 (BK/YE), component side.  A0041281 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA32 (RD/YE) and circuit 31S-JA32 (BK/YE). GO to I39 . **No** GO to I37 .
I37 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors and the RCM electrical connector are connected before carrying out the on-demand self-test. If not, erroneous DTCs will be recorded • Key in OFF position. • Connect: Restraint System Diagnostic Tools. • Connect: RCM C310a. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2293/Record All Flagged Faults.	**Yes** If a **"?"** was flagged by the scan tool, CARRY OUT the entire pinpoint test before installing a new RCM. INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to I39 .

• **Was DTC B2293 retrieved during the on-demand self test?**	**No** Fault corrected. GO to I39 .
I38 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2293/Record All Flagged Faults. • **Was the DTC B2293 retrieved during the on-demand self test?**	**Yes** CHECK for causes of the intermittent fault at or near the affected air bag module connector. REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to I39 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver air bag module squib 1 (D_ABAG) with a short to ground (STG) fault, GO to I3 . For driver air bag module squib 1 (D_ABAG) with a short to battery (STB) fault, GO to I5 . For driver air bag module squib 1 (D_ABAG) with an open circuit (O_CIR) fault, GO to I7 . For driver air bag module squib 1 (D_ABAG) with a low resistance (LOWRES) fault, GO to I11 . For passenger air bag module squib 1 (P_ABAG) with a short to ground (STG) fault, GO to

	I14 . For passenger air bag module squib 1 (P_ABAG) with a short to battery (STB) fault, GO to I15 . For passenger air bag module squib 1 (P_ABAG) with an open circuit (O_CIR) fault, GO to I16 . For passenger air bag module squib 1 (P_ABAG) with a low resistance (LOWRES) fault, GO to I18 . For driver air bag module squib 2 (D_ABAG2) with a short to ground (STG) fault, GO to I20 . For driver air bag module squib 2 (D_ABAG2) with a short to battery (STB) fault, GO to I22 . For driver air bag module squib 2 (D_ABAG2) with an open circuit (O_CIR) fault, GO to I24 . For driver air bag module squib 2 (D_ABAG2) with a low resistance (LOWRES) fault, GO to I28 . For passenger air bag module squib 2 (P_ABAG2) with a short to ground (STG) fault, GO to I31 . For passenger air bag module squib 2 (P_ABAG2) with a short to battery (STB) fault, GO to I32 . For passenger air bag

	module squib 2 (P_ABAG2) with an open circuit (O_CIR) fault, GO to I33 . For passenger air bag module squib 2 (P_ABAG2) with a low resistance (LOWRES) fault, GO to I35 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to I39 .
I39 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step I1. • **Were any continuous DTCs retrieved during Step I1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) . CLEAR all DTCs.

Pinpoint Test J: LFC 24 and 25/DTC B2294 Restraint System Side Air Curtain Module Fault

Normal Operation

The restraints control module (RCM) checks all side air curtain module circuits for faults. If the RCM detects one of the following faults on any of the side air curtain module circuits, it will store diagnostic trouble code (DTC) B2294 in memory and flash, depending on the fault, either lamp fault code (LFC) 24 or 25 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A side air curtain module fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty side air curtain module (if equipped).
- a faulty side air curtain bridge resistor (if equipped).
- a faulted RCM.

PINPOINT TEST J: LFC 24 AND 25/DTC B2294 RESTRAINT SYSTEM SIDE AIR CURTAIN MODULE FAULT

Test Step	Result / Action to Take
NOTE: Side air curtain bridge resistor connectors shown, side air curtain module connectors similar.	
J1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during the on-demand self test?**	**Yes** **Vehicles with side air curtain modules** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to J3 . **Vehicles without side air curtain modules** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to J2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to J17 .
J2 CHECK THE SIDE AIR CURTAIN MODULE BRIDGE RESISTOR	

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: Driver and Passenger Side Air Curtain Bridge Resistor. • Transfer the driver side air curtain bridge resistor to the passenger side and the passenger side air curtain bridge resistor to the driver side. • Connect: Driver and Passenger Side Air Curtain Bridge Resistor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Did the flagged fault transfer between the driver side and the passenger side?**	**Yes** Using the flagged faults recorded Step J1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step J1, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver side air curtain module (DFCURTN) with a short to battery (STB) fault, GO to J4 . For driver side air curtain module (DFCURTN) with a short to ground (STG) fault, GO to J5 . For driver side air curtain module (DFCURTN) with an open circuit (O_CIR) fault, GO to J6 . For driver side air curtain module (DFCURTN) with a low resistance (LOWRES) fault, GO to J8 . For passenger side air curtain module (PFCURTN) with a short to battery (STB) fault, GO to J10 . For passenger side air curtain module (PFCURTN) with a short to ground (STG) fault, GO to J11 . For passenger side air curtain module (PFCURTN) with an open circuit (O_CIR) fault, GO to J12 . For passenger side air curtain module

	(PFCURTN) with a low resistance (LOWRES) fault, GO to J14 . **No** INSTALL a new side air curtain bridge resistor. GO to J18 .
J3 CHECK THE DRIVER AND PASSENGER SIDE AIR CURTAIN MODULE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during the on-demand self test?**	**Yes** Using the flagged faults recorded in Step J1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step J1, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver side air curtain module (DFCURTN) with a short to battery (STB) fault, GO to J4 . For driver side air curtain module (DFCURTN) with a short to ground (STG) fault, GO to J5 . For driver side air curtain module (DFCURTN) with an open circuit (O_CIR) fault, GO to J6 . For driver side air curtain module (DFCURTN) with a low resistance (LOWRES) fault, GO to J8 . For passenger side air curtain module (PFCURTN) with a short to battery (STB) fault, GO to J10 . For passenger side air curtain module (PFCURTN) with a short to ground (STG) fault,

	GO to J11 . For passenger side air curtain module (PFCURTN) with an open circuit (O_CIR) fault, GO to J12 . For passenger side air curtain module (PFCURTN) with a low resistance (LOWRES) fault, GO to J14 . **No** If a flagged fault of **"?"** was recorded in Step I1, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. If a fault was flagged against the driver side air curtain module in Step J1, INSTALL a new driver side air curtain module. REFER to Side Air Curtain Module in this section. GO to J18 . If a fault was flagged against the passenger side air curtain module in Step J1, INSTALL a new passenger side air curtain module. REFER to Side Air Curtain Module in this section. GO to J18 .
J4 CHECK CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD) FOR A SHORT TO BATTERY BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Disconnect: Driver Side Air Curtain Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain). • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and ground; and between RCM C310b pin 4, circuit 31S-JA50 (BK/RD), harness side and ground.	**Yes** GO to J16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA50

 A0048593 • **Are the voltages less than 0.2 volt?**	(RD/BK) or circuit 31S-JA50 (BK/RD). GO to J18 .
J5 CHECK CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Disconnect: Driver Side Air Curtain Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain). • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and ground; and between RCM C310b pin 4 circuit 31S-JA50 (BK/RD), harness side and ground.  A0048594 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to J16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA50 (RD/BK) or circuit 31S-JA50 (BK/RD). GO to J18 .
J6 CHECK CIRCUIT 30S-JA50 (RD/BK) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Disconnect: Driver Side Air Curtain Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain). • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), harness side and driver side air curtain module C9006 pin 2, (or driver side air curtain bridge resistor C2283), circuit 30S-JA50 (RD/BK), harness side.  A0057067 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to J7 . **No** REPAIR circuit 30S-JA50 (RD/BK). GO to J18 .
J7 CHECK CIRCUIT 31S-JA50 (BK/RD) FOR AN OPEN BETWEEN THE RCM AND THE DRIVER SIDE AIR CURTAIN MODULE	

• Measure the resistance between RCM C310b pin 4, circuit 31S-JA50 (BK/RD), harness side and driver side air curtain module C9006 pin 1, (or driver side air curtain bridge resistor C2283), circuit 31S-JA50 (BK/RD), harness side.  A0057068 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to J16 . **No** REPAIR circuit 31S-JA50 (BK/RD). GO to J18 .
J8 CHECK FOR LOW RESISTANCE ON CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD) BETWEEN THE DRIVER SIDE AIR CURTAIN MODULE AND THE RCM	
• Key in OFF position. • Disconnect: Driver Side Air Curtain Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Driver Side Air Curtain Bridge Resistor (without Side Air Curtain). • Measure the resistance between driver side air curtain module C9006 pin 1, (or driver side air curtain bridge resistor C2283), circuit 31S-JA50 (BK/RD), and driver side air curtain module C9006 pin 2, (or driver side air curtain bridge resistor C2283), circuit 30S-JA50 (RD/BK), harness side.  A0029687 • **Is the resistance greater than 10, 000 ohms?**	**Yes** GO to J16 . **No** GO to J9 .
J9 MEASURE RESISTANCE BETWEEN RCM CIRCUIT 30S-JA50 (RD/BK) AND CIRCUIT 31S-JA50 (BK/RD)	
• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 3, circuit 30S-JA50 (RD/BK), and pin 4, circuit 31S-JA50 (BK/RD), component side.  A0048575 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA50 (RD/BK) and circuit 31S-JA50 (BK/RD). GO to J18 . **No** GO to J16 .
J10 CHECK CIRCUIT 30S-JA51 (RD/BU) AND CIRCUIT 31S-JA51 (BK/BU) FOR A SHORT TO BATTERY BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	

• Key in OFF position. • Disconnect: Passenger Side Air Curtain Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain). • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and ground; and between RCM C310b pin 6, circuit 31S-JA51 (BK/BU), harness side and ground.  A0048595 • **Are the voltages less than 0.2 volt?**	**Yes** GO to J16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA51 (RD/BU) or circuit 31S-JA51 (BK/BU). GO to J18 .
J11 CHECK CIRCUIT 30S-JA51 (RD/BU) AND CIRCUIT 31S-JA51 (BK/BU) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Disconnect: Passenger Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain). • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and ground; and between RCM C310b pin 6, circuit 31S-JA51 (BK/BU), harness side and ground.  A0048596 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to J16 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit 30S-JA51 (RD/BU) or circuit 31S-JA51 (BK/BU). GO to J18 .
J12 CHECK CIRCUIT 30S-JA51 (RD/BU) FOR AN OPEN BETWEEN THE RCM AND THE PASSENGER SIDE AIR CURTAIN MODULE	
• Key in OFF position. • Disconnect: Passenger Side Air Curtain Module Restraint System Diagnostic Tool (with Side Air Curtain). • Disconnect: Passenger Side Air Curtain Bridge Resistor (without Side Air Curtain). • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), harness side and passenger side air curtain module C9007 pin 2, (or passenger side air curtain bridge resistor C2284), circuit 30S-JA51 (RD/BU), harness side.	**Yes** GO to J13 . **No** REPAIR circuit 30S-JA51 (RD/BU). • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 5, circuit 30S-JA51 (RD/BU), and pin 6, circuit 31S-JA51 (BK/BU), component side.	**Yes** REPAIR circuit 30S-JA51 (RD/BU) and circuit 31S-JA51 (BK/BU). GO to J18 .

 • **Is the resistance greater than 10,000 ohms?**	**No** GO to J16 .
J16 CONFIRM THE RCM FAULT	
• Key in OFF position. • Connect: Restraint System Diagnostic Tools (with Side Air Curtain). • Connect: Side Air Curtain Bridge Resistors (without Side Air Curtain). • Connect: RCM C310b. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during the on-demand self test?**	**Yes** If a **"?"** was flagged by the scan tool, CARRY OUT the entire pinpoint test before installing a new RCM. INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to J18 . **No** Fault corrected. GO to J18 .
J17 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system**	**Yes** CHECK for causes of the intermittent fault at or near the affected side air curtain module connector. REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to J18 . If an intermittent concern **was not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step J1, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver side air curtain module (DFCURTN) with a short to battery (STB)

diagnostic tools must be removed before operating the vehicle over the road. NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2294/Record All Flagged Faults. • **Was DTC B2294 retrieved during on-demand self test?**	fault, GO to J4 . For driver side air curtain module (DFCURTN) with a short to ground (STG) fault, GO to J5 . For driver side air curtain module (DFCURTN) with an open circuit (O_CIR) fault, GO to J6 . For driver side air curtain module (DFCURTN) with a low resistance (LOWRES) fault, GO to J8 . For passenger side air curtain module (PFCURTN) with a short to battery (STB) fault, GO to J10 . For passenger side air curtain module (PFCURTN) with a short to ground (STG) fault, GO to J11 . For passenger side air curtain module (PFCURTN) with an open circuit (O_CIR) fault, GO to J12 . For passenger side air curtain module (PFCURTN) with a low resistance (LOWRES) fault, GO to J14 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to J18 .
J18 CHECK FOR ADDITIONAL DTCs	

• Refer to the continuous DTCs recorded during Step J1. • **Were any continuous DTCs retrieved during Step J1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test K: LFC 22 and 23/DTC B2295 Restraint System Side Airbag Fault

Normal Operation

The restraints control module (RCM) checks all of the seat side air bag circuits for faults. If the RCM detects one of the following faults on any of the seat side air bag circuits, it will store diagnostic trouble code (DTC) B2295 in memory and flash either lamp fault code (LFC) 22 or 23 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to battery.
- circuit short to ground.

Possible Causes

A seat side air bag status fault can be caused by:

- wiring, terminals, or connectors.
- a faulty seat side air bag module.
- a faulted RCM.

PINPOINT TEST K: LFC 22 AND 23/DTC B2295 RESTRAINT SYSTEM SIDE AIRBAG FAULT

Test Step	Result / Action to Take
NOTE: Seat side air bag module connectors shown, seat side thorax air bag module connectors similar.	

K1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to K2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to K26 .
K2 CHECK THE DRIVER AND PASSENGER SEAT SIDE AIR BAG MODULES	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.** ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer.	**Yes** Using the flagged faults recorded in Step K1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step K1, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to battery (STB) fault, GO to K3 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to ground (STG) fault, GO to K4 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with an open circuit (O_CIR) fault, GO to K5 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a low resistance (LOWRES) fault, GO to K7 .

• Key in OFF position. • Deactivate the system and remove the affected seat. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to battery (STB) fault, GO to K9 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to ground (STG) fault, GO to K10 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with an open circuit (O_CIR) fault, GO to K11 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a low resistance (LOWRES) fault, GO to K13 . **No** Using the flagged faults recorded in Step K1, GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded in Step K1, multiple faults exist and the entire pinpoint test must be carried out before installing a new seat side air bag module. For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to battery (STB) fault, GO to K15 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to ground (STG) fault, GO to K16 . For driver seat side air bag

	module or driver seat side thorax air bag module (DFSIDE) with an open circuit (O_CIR) fault, GO to K17 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a low resistance (LOWRES) fault, GO to K19 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to battery (STB) fault, GO to K20 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to ground (STG) fault, GO to K21 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with an open circuit (O_CIR) fault, GO to K22 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a low resistance (LOWRES) fault, GO to K24 .
K3 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO BATTERY BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.	**Yes** GO to K25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN). GO to K27 .

 A0041282 • **Are the voltages less than 0.2 volt?**	
K4 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO GROUND BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310a. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.  A0041283 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN). GO to K27 .
K5 CHECK CIRCUIT 30S-JA37 (RD/GN) FOR A OPEN BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and driver seat side air bag module wiring harness C316 pin 2, circuit 30S-JA37 (RD/GN), harness side.  A0041284 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K6 . **No** REPAIR circuit 30S-JA37 (RD/GN). GO to K27 .
K6 CHECK CIRCUIT 31S-JA37 (BK/GN) FOR AN OPEN BETWEEN THE RCM AND DRIVER SEAT SIDE AIR BAG MODULE	

• Measure the resistance between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and driver seat side air bag wiring harness C316 pin 1, circuit 31S-JA37 (BK/GN), harness side.  A0041285 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K25 . **No** REPAIR circuit 31S-JA37 (BK/GN). GO to K27 .
K7 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA37 (RD/GN) AND BETWEEN 31S-JA37 (BK/GN) THE DRIVER SEAT SIDE AIR BAG MODULE AND RCM	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between driver seat side air bag wiring harness C316 pin 2, circuit 30S-JA37 (RD/GN), harness side and pin 1, circuit 31S-JA37 (BK/GN), harness side.  A0029887 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to K25 . **No** GO to K8 .
K8 CHECK FOR LOW RESISTANCE BETWEEN RCM CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN)	
• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), component side and pin 2, circuit 31S-JA37 (BK/GN), component side.  A0041286 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA37 (RD/GN) and circuit 31S-JA37 (BK/GN). GO to K27 . **No** GO to K25 .

K9 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO BATTERY BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.  A0041287 • **Are the voltages less than 0.2 volt?**	**Yes** GO to K25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defate the shorting bars. REPAIR circuit 30S-JA38 (RD/BK) or circuit 31S-JA38 (BK/RD). GO to K27 .
K10 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO GROUND BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 22, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.  A0041288 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to K25 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defate the shorting bars. REPAIR circuit 30S-JA38 (RD/BK) or circuit 31S-JA38 (BK/RD). GO to K27 .
K11 CHECK CIRCUIT 30S-JA38 (RD/BK) FOR AN OPEN BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Disconnect: RCM C310b.	**Yes** GO to K12 . **No** REPAIR circuit 30S-JA38 (RD/BK). GO to K27 .

• Measure the resistance between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and passenger seat side air bag wiring harness C314 pin 2, circuit 30S-JA38 (RD/BK), harness side.  A0041290 • **Is the resistance less than 0.5 ohm?**	
K12 CHECK CIRCUIT 31S-JA38 (BK/RD) FOR AN OPEN BETWEEN THE RCM AND PASSENGER SEAT SIDE AIR BAG MODULE	
• Measure the resistance between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and passenger seat side air bag wiring harness C314 pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0041289 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K25 . **No** REPAIR circuit 31S-JA38 (BK/RD). GO to K27 .
K13 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) BETWEEN THE PASSENGER SEAT SIDE AIR BAG MODULE AND RCM	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Measure the resistance between passenger seat side air bag wiring harness C314 pin 2, circuit 30S-JA38 (RD/BK), harness side and pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0029887 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to K25 . **No** GO to K14 .
K14 CHECK FOR LOW RESISTANCE BETWEEN RCM CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD)	

• Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), component side and pin 22, circuit 31S-JA38 (BK/RD), component side.  A0041291 • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuit 30S-JA38 (RD/BK) and circuit 31S-JA38 (BK/RD). GO to K27 . **No** GO to K25 .
K15 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO BATTERY IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or driver seat side thorax air bag module C3226, refer to Side Air Bag Module in this section. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Side Air Bag Wiring Harness C316. • Connect: Driver Seat Connectors. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.  A0041282 • **Are the voltages less than 0.2 volt?**	**Yes** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. CHECK for causes of the intermittent fault in circuit 31S-JA38 (BK/RD) or circuit 30S-JA38 (RD/BK) at or near passenger seat side air bag wiring harness C316 or in the driver seat side air bag harness. ATTEMPT to recreate the hard fault by flexing the wiring harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to K27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37

	(BK/GN) between C367 or C3226 and C316. GO to K27 .
K16 CHECK CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) FOR A SHORT TO GROUND IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or C3226, refer to Side Air Bag Module in this section. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Side Air Bag Wiring Harness C316. • Connect: Driver Seat Connectors. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 1, circuit 30S-JA37 (RD/GN), harness side and ground; and between RCM C310b pin 2, circuit 31S-JA37 (BK/GN), harness side and ground.  A0041283 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** INSTALL a new driver seat side air bag module or driver seat side thorax air bag module. GO to K27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA37 (RD/GN) or 31S-JA37 (BK/GN) between C367 or C3226 and C316. GO to K27 .
K17 CHECK CIRCUIT 30S-JA37 (RD/GN) FOR AN OPEN IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or driver seat side thorax air bag module C3226, refer to Side Air Bag Module in this section. • Measure the resistance between driver seat side air bag wiring harness C316 pin 2, circuit 30S-JA37 (RD/GN), harness side and driver seat side air bag module C367 or driver seat side thorax air bag module C3226 pin 2, circuit 30S-JA37 (RD/GN), harness side.  A0060477 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K18 . **No** REPAIR circuit 30S-JA37 (RD/GN). GO to K27 .

K18 CHECK CIRCUIT 31S-JA37 (BK/GN) FOR AN OPEN IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Measure the resistance between driver seat side air bag wiring harness C316 pin 1, circuit 31S-JA37 (BK/GN), harness side and driver seat side air bag module C367 or driver seat side thorax air bag module C3226 pin 1, circuit 31S-JA37 (BK/GN), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new driver seat side air bag module or driver seat side thorax air bag module. GO to K27 . **No** REPAIR circuit 31S-JA37 (BK/GN). GO to K27 .
K19 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA37 (RD/GN) AND 31S-JA37 (BK/GN) IN THE DRIVER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Driver Seat Side Air Bag Module C367 or Driver Seat Side Thorax Air Bag Module C3226. • For additional information to access driver seat side air bag module C367 or driver seat side thorax air bag module C3226, refer to Side Air Bag Module in this section. • Disconnect: Driver Seat Side Air Bag Module or Driver Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Side Air Bag Wiring Harness C316. • Connect: Driver Seat Connectors. • Measure the resistance between driver seat side air bag module C367 or driver seat side thorax air bag module C3226 pin 2, circuit 30S-JA37 (RD/GN), harness side and pin 1, circuit 31S-JA37 (BK/GN), harness side.  • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new driver seat side air bag module or driver seat side thorax air bag module. GO to K27 . **No** REPAIR circuits 30S-JA37 (RD/GN) and 31S-JA37 (BK/GN) between C367 or C3226 and C316. GO to K27 .
K20 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO BATTERY IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227.	**Yes** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the

• For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the passenger seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Passenger Seat Side Air Bag Wiring Harness C314. • Connect: Passenger Seat Connectors. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.  A0041287 • **Are the voltages less than 0.2 volt?**	shorting bars. CHECK for causes of the intermittent fault in circuit 31S-JA38 (BK/RD) or circuit 30S-JA38 (RD/BK) at or near passenger seat side air bag wiring harness C314 or in the driver seat side air bag harness. ATTEMPT to recreate the hard fault by flexing the wiring harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to K27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA38 (RD/BK) or 31S-JA38 (BK/RD) between C337 or C3227 and C314. GO to K27 .
K21 CHECK CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) FOR A SHORT TO GROUND IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the passenger seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Passenger Seat Side Air Bag Wiring Harness C314. • Connect: Passenger Seat Connectors. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 21, circuit 30S-JA38 (RD/BK), harness side and ground; and between RCM C310b pin 22, circuit 31S-JA38 (BK/RD), harness side and ground.	**Yes** INSTALL a new passenger seat side air bag module or passenger seat side thorax air bag module. GO to K27 . **No** Due to the shorting bar feature in the electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bars. REPAIR circuit 30S-JA38 (RD/BK) or 31S-JA38 (BK/RD) between C337 or C3227 and C314. GO to K27 .

 A0041288 • **Are the resistances greater than 1,000,000 ohms?**	
K22 CHECK CIRCUIT 30S-JA38 (RD/BK) FOR AN OPEN IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Measure the resistance between passenger seat side air bag warning harness C314 pin 2, circuit 30S-JA38 (RD/BK), harness side and passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227 pin 2, circuit 30S-JA38 (RD/BK), harness side.  A0060477 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to K23 . **No** REPAIR circuit 30S-JA38 (RD/BK). GO to K27 .
K23 CHECK CIRCUIT 31S-JA38 (BK/RD) FOR AN OPEN IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	
• Measure the resistance between passenger seat side air bag wiring harness C314 pin 1, circuit 31S-JA38 (BK/RD), harness side and passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227 pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0060476 • **Is the resistance less than 0.5 ohm?**	**Yes** INSTALL a new passenger seat side air bag module or passenger seat side thorax air bag module. GO to K27 . **No** REPAIR circuit 31S-JA38 (BK/RD). GO to K27 .
K24 CHECK FOR LOW RESISTANCE ON CIRCUITS 30S-JA38 (RD/BK) AND 31S-JA38 (BK/RD) IN THE PASSENGER SEAT SIDE AIR BAG WIRING HARNESS	

• Key in OFF position. • Disconnect: Passenger Seat Side Air Bag Module C337 or Passenger Seat Side Thorax Air Bag Module C3227. • For additional information to access passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227, refer to Side Air Bag Module in this section. • Disconnect: Passenger Seat Side Air Bag Module or Passenger Seat Side Thorax Air Bag Module Restraint System Diagnostic Tool. • Position the passenger seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Passenger Seat Side Air Bag Warning Harness C314. • Connect: Passenger Seat Connectors. • Measure the resistance between passenger seat side air bag module C337 or passenger seat side thorax air bag module C3227 pin 2, circuit 30S-JA38 (RD/BK), harness side and pin 1, circuit 31S-JA38 (BK/RD), harness side.  A0030495 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new passenger seat side air bag module or passenger seat side thorax air bag module. GO to K27 . **No** REPAIR circuits 30S-JA38 (RD/BK) and 31S-JA38 (BK/RD) between C337 or C3227 and C314. GO to K27 .
K25 CONFIRM RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: Restraint System Diagnostic Tools. • Connect: RCM C310b. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	**Yes** If a **"?"** was flagged by the scan tool, CARRY OUT the entire pinpoint test before installing a new RCM. INSTALL a new RCM. REFER to Restraints Control Module (RCM) . GO to K27 . **No** Fault corrected. GO to K27 .
K26 CHECK FOR AN INTERMITTENT FAULT	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat	**Yes** CHECK for causes of the intermittent fault at or near the affected seat side air bag connector. REPAIR any intermittent concerns found. If an intermittent concern **was** found and repaired, GO to K27 . If an intermittent concern **was**

side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing a SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2295/Record All Flagged Faults. • **Was DTC B2295 retrieved during the on-demand self test?**	**not** found and repaired, USE the flagged faults recorded and GO to the appropriate pinpoint test step. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to battery (STB) fault, GO to K3 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a short to ground (STG) fault, GO to K4 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with an open circuit (O_CIR) fault, GO to K5 . For driver seat side air bag module or driver seat side thorax air bag module (DFSIDE) with a low resistance (LOWRES) fault, GO to K7 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to battery (STB) fault, GO to K9 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a short to ground (STG) fault, GO to K10 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with an open circuit

	(O_CIR) fault, GO to K11 . For passenger seat side air bag module or passenger seat side thorax air bag module (PFSIDE) with a low resistance (LOWRES) fault, GO to K13 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to K27 .
K27 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step K1. • **Were any continuous DTCs retrieved during Step K1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) . CLEAR all DTCs.

Pinpoint Test L: LFC 42, 43, 44, 45 and 46/DTC B2296 Restraint System - Impact Sensor Fault

Normal Operation

The restraints control module (RCM) checks all of the impact sensor circuits for faults. If the RCM detects one of the following faults on any of the impact sensor circuits, it will store diagnostic trouble code (DTC) B2296 in memory and flash either lamp fault code (LFC) 42, 43, 44, 45 or 46 depending on the fault (or higher priority code if one exists) on the air bag indicator.

Fault Conditions

The RCM monitors for the following fault conditions:

- low resistance.
- high resistance or circuit open.
- circuit short to voltage.
- circuit short to ground.

Possible Causes

A impact sensor fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty impact sensor.
- incorrect sensor mounting.
- a faulted RCM.

PINPOINT TEST L: LFC 42, 43, 44, 45 AND 46/DTC B2296 RESTRAINT SYSTEM IMPACT SENSOR FAULT

Test Step	Result / Action to Take
L1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Flag/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For first row driver side impact (F_D_SEN) sensor with a mounting/communications (COMM) fault, GO to L2 . For first row driver side impact sensor (F_D_ SEN) with an internal fault (INT) fault, INSTALL a new first row driver side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to L54 . For first row passenger side impact sensor (F_P_ SEN) with a mounting/communications (COMM) fault, GO to L12 . For first row passenger side impact sensor (F_P_ SEN) with an internal fault (INT) fault, INSTALL a new first row passenger side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to L54 .

	For second row driver side impact sensor (D_2_SEN) with a mounting/communication (COMM) fault, GO to L22 . For second row driver side impact sensor (D_2_ SEN) with an internal (INT) fault, INSTALL a new second row driver side impact sensor. REFER to Side Impact Sensor Second Row, C-Pillar in this section. GO to L54 . For second row passenger side impact sensor (P_2_ SEN) with a mounting /communications (COMM) fault, GO to L32 . For second row passenger side impact sensor (P_2_SEN) with an internal (INT) fault, INSTALL a new second row passenger side impact sensor. REFER to Side Impact Sensor Second Row, C-Pillar in this section. GO to L54 . For front impact severity sensor (FNT_SEN) with a mounting/communications (COMM) fault, GO to L42 . For front impact severity sensor (FNT_SEN) with an internal fault (INT) fault, INSTALL a new front impact severity sensor. REFER to Front Impact Severity Sensor in this section. GO to L54 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to L53 .
L2 INSPECT THE FIRST ROW DRIVER SIDE IMPACT SENSOR MOUNTING, AND MOUNTING SURFACE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the**	**Yes** CLEAN and TIGHTEN the bolt. REPAIR the mounting surface as necessary. REINSTALL the first row driver side impact sensor. GO to L54 . **No** GO to L3 .

system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ **WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** ⚠ **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** ⚠ **WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Access the first row driver side impact sensor. For additional information, refer to Side Impact Sensor - First Row, B-Pillar in this section. • Inspect the first row driver side impact sensor for: ♦ loose electrical connector. ♦ loose sensor mounting bolt. • Remove the first row driver side impact sensor. • Visually inspect the first row driver side impact sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt. • **Was a significant amount of corrosion or dirt found, or was the first row driver side impact sensor attached to the mounting surface incorrectly or was the impact sensor bolt not fully seated and tightened correctly?**	
L3 INSTALL THE FIRST ROW DRIVER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the first row driver side impact sensor mounting bolt. • Install the first row driver side impact sensor.	**Yes** GO to L4 . **No**

• Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	Fault corrected. GO to L54 .
L4 CHECK THE FIRST ROW DRIVER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA39 (BN) FOR HIGH RESISTANCE	
• Key in OFF position. • Disconnect: First Row Driver Side Impact Sensor C3209. • Measure the resistance between first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side and the first row driver side impact sensor case ground. • **Is the resistance less than 100 ohms?**	**Yes** GO to L6 . **No** GO to L5 .
L5 CLEAN THE FIRST ROW DRIVER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the first row driver side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the first row driver side impact sensor mounting bolt. • Install the first row driver side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L6 . **No** Fault corrected. GO to L54 .
L6 CHECK CIRCUIT 7-JA39 (YE) AND CIRCUIT 9-JA39 (BN) FOR A SHORT TO VOLTAGE BETWEEN THE FIRST ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in ON position. • Measure the voltage between first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side and ground; and between pin 2, circuit 7-JA39 (YE), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	**Yes** GO to L7 . **No** REPAIR circuit 7-JA39 (YE) or circuit 9-JA39 (BN). GO to L54 .
L7 CHECK CIRCUIT 7-JA39 (YE) AND CIRCUIT 9-JA39 (BN) FOR A SHORT TO GROUND BETWEEN THE FIRST ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	

• Key in OFF position. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Measure the resistance between first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side and ground; and between pin 2, circuit 7-JA39 (YE), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to L8 . **No** REPAIR circuit 7-JA39 (YE) or circuit 9-JA39 (BN). GO to L54 .
L8 CHECK CIRCUIT 7-JA39 (YE) FOR AN OPEN BETWEEN THE RCM AND THE FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Key in OFF position. • Measure the resistance between RCM C310b pin 27, circuit 7-JA39 (YE), harness side and first row driver side impact sensor C3209 pin 2, circuit 7-JA39 (YE), harness side.  A0060503 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L9 . **No** REPAIR circuit 7-JA39 (YE). GO to L54 .
L9 CHECK CIRCUIT 9-JA39 (BN) FOR AN OPEN BETWEEN THE RCM AND FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 28, circuit 9-JA39 (BN), harness side and first row driver side impact sensor C3209 pin 1, circuit 9-JA39 (BN), harness side.  A0060504 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L10 . **No** REPAIR circuit 9-JA39 (BN). GO to L54 .
L10 CHECK CIRCUIT 7-JA39 (YE) FOR A SHORT TO CIRCUIT 9-JA39 (BN) BETWEEN THE RCM AND THE FIRST ROW DRIVER SIDE IMPACT SENSOR	

• Measure the resistance between first row driver side impact sensor C3209 pin 2, circuit 7-JA39 (YE), harness side and pin 1, circuit 9-JA39 (BN), harness side.  • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to L11 . **No** REPAIR circuit 7-JA39 (YE) and circuit 9-JA39 (BN). GO to L54 .
L11 CHECK THE FIRST ROW DRIVER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good first row driver side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the first row driver side impact sensor?**	**Yes** INSTALL the original first row driver side impact sensor. GO to L52 . **No** Fault corrected. GO to L54 .
L12 INSPECT THE FIRST ROW PASSENGER SIDE IMPACT SENSOR MOUNTING, AND MOUNTING SURFACE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.** **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air	**Yes** CLEAN and TIGHTEN the bolt. REPAIR the mounting surface and electrical connections as necessary. REINSTALL the first row passenger side impact sensor. GO to L54 . **No** GO to L13 .

bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer.
• Key in OFF position.
• Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.
• Access the first row passenger side impact sensor. For additional information, refer to Side Impact Sensor First Row, B-Pillar in this section.
• Inspect the first row passenger side impact sensor for:
  • loose electrical connector.
  • loose sensor mounting bolt.
• Remove the first row passenger side impact sensor.
• Visually inspect the first row passenger side impact sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt.
• **Was a significant amount of corrosion or dirt found, or was the passenger side impact sensor attached to the mounting surface incorrectly or was the sensor bolt not fully seated and tightened correctly?**	

L13 INSTALL THE FIRST ROW PASSENGER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the first row passenger side impact sensor mounting bolt. • Install the first row passenger side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L14 . **No** Fault corrected. GO to L54 .
L14 CHECK THE FIRST ROW PASSENGER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA40 (BN/WH) FOR HIGH RESISTANCE	
• Key in OFF position. • Disconnect: First Row Passenger Side Impact Sensor C3211. • Measure the resistance between first row passenger side impact sensor C3211 pin 1, circuit 9-JA40 (BN/WH),	**Yes** GO to L16 . **No** GO to L15 .

harness side and first row passenger side impact sensor case ground. • **Is the resistance less than 100 ohms?**	
L15 CLEAN FIRST ROW PASSENGER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT ON-DEMAND SELF TEST	
• Remove the first row passenger side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the first row passenger side impact sensor mounting bolts. • Install the first row passenger side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L16 . **No** Fault corrected. GO to L54 .
L16 CHECK CIRCUIT 7-JA40 (YE/VT) AND CIRCUIT 9-JA40 (BN/WH) FOR A SHORT TO BATTERY BETWEEN THE FIRST ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in ON position. • Measure the voltage between first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA40 (BN/WH), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	**Yes** GO to L17 . **No** REPAIR circuit 7-JA40 (YE/VT) or circuit 9-JA40 (BN/WH). GO to L54 .
L17 CHECK CIRCUIT 7-JA40 (YE/VT) AND CIRCUIT 9-JA40 (BN/WH) FOR A SHORT TO GROUND BETWEEN THE FIRST ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Measure the resistance between first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA40 (BN/WH), harness side and ground.	**Yes** GO to L18 . **No** REPAIR circuit 7-JA40 (YE/VT) or circuit 9-JA40 (BN/WH). GO to L54 .

 A0058373 • **Are the resistances greater than 1,000,000 ohms?**	
L18 CHECK CIRCUIT 7-JA40 (YE/VT) FOR AN OPEN BETWEEN THE RCM AND THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Key in OFF position. • Measure the resistance between RCM C310b pin 29, circuit 7-JA40 (YE/VT), harness side and first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side.  A0060505 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L19 . **No** REPAIR circuit 7-JA40 (YE/VT). GO to L54 .
L19 CHECK CIRCUIT 9-JA40 (BN/WH) FOR AN OPEN BETWEEN THE RCM AND THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 30, circuit 9-JA40 (BN/WH), harness side and first row passenger side impact sensor C3211 pin 1, circuit 9-JA40 (BN/WH), harness side.  A0060506 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L20 . **No** REPAIR circuit 9-JA40 (BN/WH). GO to L54 .
L20 CHECK CIRCUIT 7-JA40 (YE/VT) FOR A SHORT TO CIRCUIT 9-JA40 (BN/WH) BETWEEN THE RCM AND THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between first row passenger side impact sensor C3211 pin 2, circuit 7-JA40 (YE/VT), harness side pin 1, circuit 9-JA40 (BN/WH), harness side.	**Yes** GO to L21 . **No** REPAIR short between circuit 7-JA40 (YE/VT) and circuit 9-JA40 (BN/WH). GO to L54 .

 • **Is the resistance greater than 1,000,000 ohms?**	
L21 CHECK THE FIRST ROW PASSENGER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good first row passenger side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the first row passenger side impact sensor?**	**Yes** INSTALL the original first row passenger side impact sensor. GO to L52 . **No** Fault corrected. GO to L54 .
L22 INSPECT THE SECOND ROW DRIVER SIDE IMPACT SENSOR MOUNTING, AND MOUNTING SURFACE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. operating the vehicle over the road. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer.
• Key in OFF position.
• Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.
• Access the second row side impact sensor. For additional information, refer to Side Impact Sensor Second Row, C-Pillar in his section.
• Inspect the second row driver side impact sensor for:
  • a loose electrical connector.
  • a loose sensor mounting bolt.
  • a loose sensor mounting bracket.
• Remove the second row driver side impact sensor.
• Visually inspect the second row driver side impact sensor, electrical connector, mounting bracket and mounting surface for damage, corrosion or dirt.
• **Was a significant amount of corrosion or dirt found, or was the second row driver side impact sensor mounting bracket attached to the mounting surface incorrectly or was the second row driver side impact sensor bolt not fully seated and tightened correctly?**	

L23 INSTALL THE SECOND ROW DRIVER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the second row driver side impact sensor mounting bolt. • Install the second row driver side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L24 . **No** Fault corrected. GO to L54 .
L24 CHECK THE SECOND ROW DRIVER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA41 (BN) FOR HIGH RESISTANCE	
• Key in OFF position. • Disconnect: Second Row Driver Side Impact Sensor Connector. • Measure the resistance between second row driver side impact sensor connector pin 1, circuit 9-JA41 (BN), harness side and the second row driver side impact sensor case ground.	**Yes** GO to L26 . **No** GO to L25 .

• **Is the resistance less than 100 ohms?**	
L25 CLEAN THE SECOND ROW DRIVER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the second row driver side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the second row driver side impact sensor mounting bolt. • Install the second row driver side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L26 . **No** Fault corrected. GO to L54 .
L26 CHECK CIRCUIT 7-JA41 (YE) AND CIRCUIT 9-JA41 (BN) FOR A SHORT TO BATTERY BETWEEN THE SECOND ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in ON position. • Measure the voltage between second row driver side impact sensor connector pin 2, circuit 7-JA41 (YE), harness side and ground; and between pin 1, circuit 9-JA41 (BN), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	**Yes** GO to L27 . **No** REPAIR circuit 7-JA41 (YE) or circuit 9-JA41 (BN). GO to L54 .
L27 CHECK CIRCUIT 7-JA41 (YE) AND CIRCUIT 9-JA41 (BN) FOR A SHORT TO GROUND BETWEEN THE SECOND ROW DRIVER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Measure the resistance between second row driver side impact sensor connector pin 1, circuit 9-JA41 (BN), harness side and ground; and between pin 2, circuit 7-JA41 (YE), harness side and ground.	**Yes** GO to L28 . **No** REPAIR circuit 7-JA41 (YE) or circuit 9-JA41 (BN). GO to L54 .

 A0058373 • **Are the resistances greater than 1,000,000 ohms?**	
L28 CHECK CIRCUIT 7-JA41 (YE) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Key in OFF position. • Measure the resistance between RCM C310b pin 13, circuit 7-JA41 (YE), harness side and second row driver side impact sensor connector pin 2, circuit 7-JA41 (YE), harness side.  A0060507 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L29 . **No** REPAIR circuit 7-JA41 (YE). GO to L54 .
L29 CHECK CIRCUIT 9-JA41 (BN) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 14, circuit 9-JA41 (BN), harness side and second row driver side impact sensor connector pin 1, circuit 9-JA41 (BN), harness side.  A0060508 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L30 . **No** REPAIR circuit 9-JA41 (BN). GO to L54 .
L30 CHECK CIRCUIT 7-JA41 (YE) FOR A SHORT TO CIRCUIT 9-JA41 (BN) BETWEEN THE RCM AND SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Measure the resistance between second row driver side impact sensor connector pin 2, circuit 7-JA41 (YE), harness side and pin 1, circuit 9-JA41 (BN), harness side.	**Yes** GO to L31 . **No** REPAIR circuit 7-JA41 (YE) or circuit 9-JA41 (BN). GO to L54 .

 A0058377 • **Is the resistance greater than 1,000,000 ohms?**	
L31 CHECK THE SECOND ROW DRIVER SIDE IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good second row driver side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the second row driver side impact sensor?**	**Yes** INSTALL the original second row driver side impact sensor. GO to L52 . **No** Fault corrected. GO to L54 .
L32 INSPECT THE SECOND ROW PASSENGER SIDE IMPACT SENSOR MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After	**Yes** CLEAN, TIGHTEN the bolt or REPAIR the mounting surface as necessary. REINSTALL the second row passenger side impact sensor. GO to L54 . **No** GO to L33 .

diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer.
• Key in OFF position.
• Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.
• Access the second row passenger side impact sensor. For additional information, refer to Side Impact Sensor - Second Row, C-Pillar in this section.
• Inspect the second row passenger side impact sensor for:
  • loose electrical connector.
  • loose sensor mounting bolt.
• Remove the second row passenger side impact sensor.
• Visually inspect the second row passenger side impact sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt.
• **Was a significant amount of corrosion or dirt found, or was the second row passenger side impact sensor mounting bracket attached to the mounting surface incorrectly or were the impact sensor bolts not fully seated and tightened correctly?**	

L33 INSTALL THE SECOND ROW PASSENGER SIDE IMPACT SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the second row passenger side impact sensor mounting bolt. • Install the second row passenger side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L34 . **No** Fault corrected. GO to L54 .
L34 CHECK THE SECOND ROW PASSENGER SIDE IMPACT SENSOR GROUND CIRCUIT 9-JA43 (BN/WH) FOR HIGH RESISTANCE	
• Key in OFF position. • Disconnect: Second Row Passenger Side Impact Sensor Connector. • Measure the resistance between second row passenger side impact sensor connector pin 1, circuit 9-JA43 (BN/WH), harness side and the second row passenger side impact sensor case ground. • **Is the resistance less than 100 ohms?**	**Yes** GO to L36 . **No** GO to L35 .

L35 CLEAN THE SECOND ROW PASSENGER SIDE IMPACT SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF TEST	
• Remove the second row passenger side impact sensor. • Clean and repair the mounting surface as necessary. • Clean the second row passenger side impact sensor mounting bolt. • Install the second row passenger side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L36 . **No** Fault corrected. GO to L54 .
L36 CHECK CIRCUIT 7-JA43 (YE/VT) AND CIRCUIT 9-JA43 (BN/WH) FOR A SHORT TO VOLTAGE BETWEEN THE SECOND ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in ON position. • Measure the voltage between second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA43 (BN/WH), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	**Yes** GO to L37 . **No** REPAIR circuit 7-JA43 (YE/VT) or circuit 9-JA43 (BN/WH). GO to L54 .
L37 CHECK CIRCUIT 7-JA43 (YE/VT) AND CIRCUIT 9-JA43 (BN/WH) FOR A SHORT TO GROUND BETWEEN THE SECOND ROW PASSENGER SIDE IMPACT SENSOR AND THE RCM	
• Key in OFF position. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Measure the resistance between second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side and ground; and between pin 1, circuit 9-JA43 (BN/WH), harness side and ground.  A0058373	**Yes** GO to L38 . **No** REPAIR circuit 7-JA43 (YE/VT) or circuit 9-JA43 (BN/WH). GO to L54 .

• **Are the resistances greater than 1,000,000 ohms?**	
L38 CHECK CIRCUIT 7-JA43 (YE/VT) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	
• Key in OFF position. • Measure the resistance between RCM C310b pin 15, circuit 7-JA43 (YE/VT), harness side and second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side.  A0060509 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L39 . **No** REPAIR circuit 7-JA43 (YE/VT). GO to L54 .
L39 CHECK CIRCUIT 9-JA43 (BN/WH) FOR AN OPEN BETWEEN THE RCM AND THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between RCM C310b pin 16, circuit 9-JA43 (BN/WH), harness side and second row passenger side impact sensor connector pin 1, circuit 9-JA43 (BN/WH), harness side.  A0060510 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L40 . **No** REPAIR circuit 9-JA43 (BN/WH). GO to L54 .
L40 CHECK CIRCUIT 7-JA43 (YE/VT) FOR A SHORT TO CIRCUIT 9-JA43 (BN/WH) BETWEEN THE RCM AND THE SECOND ROW PASSENGER SIDE IMPACT SENSOR	
• Measure the resistance between second row passenger side impact sensor connector pin 2, circuit 7-JA43 (YE/VT), harness side and pin 1, circuit 9-JA43 (BN/WH), harness side.  A0058377 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to L41 . **No** REPAIR circuit 7-JA43 (YE/VT) and circuit 9-JA43 (BN/WH). GO to L54 .
L41 CHECK THE SECOND ROW PASSENGER SIDE	

IMPACT SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good second row passenger side impact sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the second row passenger side impact sensor?**	**Yes** INSTALL the original second row passenger side impact sensor. GO to L52 . **No** Fault corrected. GO to L54 .
L42 INSPECT THE FRONT IMPACT SEVERITY SENSOR MOUNTING, MOUNTING BRACKET AND MOUNTING SURFACE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.** **⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.** **⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.** **⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer.	**Yes** CLEAN, TIGHTEN bolt or REPAIR the mounting surface as necessary. REINSTALL the front impact severity sensor. GO to L54 . **No** GO to L43 .

• Key in OFF position.
• Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.
• Access the front impact severity sensor. For additional information, refer to Front Impact Severity Sensor in this section.
• Inspect the front impact severity sensor for:
  • loose electrical connector.
  • loose sensor mounting bolt.
• Remove the front impact severity sensor.
• Visually inspect the front impact severity sensor, alignment tabs, electrical connector, and mounting surface for damage, corrosion or dirt.
• **Was a significant amount of corrosion or dirt found, or was the front impact severity sensor mounting bracket attached to the mounting surface incorrectly or were the front impact severity sensor bolts not fully seated and tightened correctly?**	

L43 INSTALL THE FRONT IMPACT SEVERITY SENSOR AND CARRY OUT THE ON-DEMAND SELF TEST	
• Clean and repair the mounting surface as necessary. • Clean the front impact severity sensor mounting bolt. • Install the front impact severity sensor. Refer to Front Impact Severity Sensor . • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	**Yes** GO to L44 . **No** Fault corrected. GO to L54 .
L44 CHECK THE FRONT IMPACT SEVERITY SENSOR GROUND CIRCUIT 9-JA49 (BN) FOR HIGH RESISTANCE	
• Key in OFF position. • Disconnect: Front Impact Severity Sensor C177. • Measure the resistance between front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side and front impact severity sensor case ground. • **Is the resistance less than 100 ohms?**	**Yes** GO to L46 . **No** GO to L45 .
L45 CLEAN THE FRONT IMPACT SEVERITY SENSOR MOUNTING SURFACE AND CARRY OUT THE ON-DEMAND SELF-TEST	
• Remove the front impact severity sensor. Refer to Front Impact Severity Sensor . • Clean and repair the mounting surface as necessary. • Clean the front impact severity sensor mounting bolt. • Install the front impact severity sensor. Refer to Front Impact Severity Sensor . • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test.	**Yes** GO to L46 . **No** Fault corrected. GO to L54 .

• Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	
L46 CHECK CIRCUIT 7-JA49 (YE) AND CIRCUIT 9-JA49 (BN) FOR A SHORT TO VOLTAGE BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Key in ON position. • Measure the voltage resistance between front impact severity sensor C177 pin 2, circuit 7-JA49 (YE), harness side and ground; and between front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side and ground.  A0058374 • **Are the voltages less than 0.2 volt?**	**Yes** GO to L47 . **No** REPAIR circuit 7-JA49 (YE) or circuit 9-JA49 (BN). GO to L54 .
L47 CHECK CIRCUIT 7-JA49 (YE) AND CIRCUIT 9-JA49 (BN) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Key in OFF position. • Disconnect: RCM C310a. • Disconnect: RCM C310b. • Measure the resistance between front impact severity sensor C177 pin 2, circuit 7-JA49 (YE), harness side and ground; and between front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side and ground.  A0058373 • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to L48 . **No** REPAIR circuit 7-JA49 (YE) or circuit 9-JA49 (BN). GO to L54 .
L48 CHECK CIRCUIT 7-JA49 (YE) FOR AN OPEN BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Key in OFF position. • Measure the resistance between RCM C310b pin 19, circuit 7-JA49 (YE), harness side and front impact severity sensor C177 pin 2, circuit 7-JA49 (YE), harness side.	**Yes** GO to L49 . **No** REPAIR circuit 7-JA49 (YE). GO to L54 .

 A0060511 • **Is the resistance less than 0.5 ohm?**	
L49 CHECK CIRCUIT 9-JA49 (BN) FOR AN OPEN BETWEEN THE RCM AND THE FRONT IMPACT SEVERITY SENSOR	
• Measure the resistance between RCM C310b pin 20, circuit 9-JA49 (BN), harness side and front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side.  A0060512 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to L50 . **No** REPAIR circuit 9-JA49 (BN). GO to L54 .

• Measure the resistance between C177 pin 2, circuit 7-JA49 (YE), harness side and the front impact severity sensor C177 pin 1, circuit 9-JA49 (BN), harness side.  A0060479 • **Is the resistance greater than 1,000,000 ohms?**	**Yes** GO to L51 . **No** REPAIR circuits 7-JA49 (YE) and circuit 9-JA49 (BN). GO to L54 .
L51 CHECK THE FRONT IMPACT SEVERITY SENSOR	
• Connect: RCM C310a. • Connect: RCM C310b. • Install a known good front impact severity sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Were any faults flagged against the front impact severity sensor?**	**Yes** INSTALL the original front impact severity sensor. GO to L52 . **No** Fault corrected. GO to L54 .
L52 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical	**Yes** If a **"?"** was flagged by the scan tool, CARRY OUT the entire

connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: Impact Sensors. • Connect: RCM C310a. • Connect: RCM C310b. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	pinpoint test before installing a new RCM. INSTALL a new RCM. GO to L54 . **No** Fault corrected. GO to L54 .
L53 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position.	**Yes** This is a hard fault. The fault condition is now present. The fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If a flagged fault of **"?"** was recorded, multiple faults exist and the entire pinpoint test must be carried out before installing a new RCM. For first row driver side impact (F_D_SEN) sensor with a mounting/communications (COMM) fault, GO to L2 . For first row driver side impact sensor (F_D_ SEN) with an internal fault (INT) fault, INSTALL a new first row driver side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to L54 . For first row passenger side impact sensor (F_P_ SEN) with a mounting/communications (COMM) fault, GO to L12 . For first row passenger side impact sensor (F_P_ SEN) with an internal fault (INT) fault, INSTALL a new first row passenger side impact sensor. REFER to Side Impact Sensor - First Row, B-Pillar in this section. GO to L54 .

• Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Flag DTC B2296/Record All Flagged Faults. • **Was DTC B2296 retrieved during the on-demand self test?**	For second row driver side impact sensor (D_2_SEN) with a mounting/communication (COMM) fault, GO to L22 . For second row driver side impact sensor (D_2_ SEN) with an internal (INT) fault, INSTALL a new second row driver side impact sensor. REFER to Side Impact Sensor - Second Row, C-Pillar in this section. GO to L54 . For second row passenger side impact sensor (P_2_ SEN) with a mounting /communications (COMM) fault, GO to L32 . For second row passenger side impact sensor (P_2_SEN) with an internal (INT) fault, INSTALL a new second row passenger side impact sensor. REFER to Side Impact Sensor - Second Row, C-Pillar in this section. GO to L54 . For front impact severity sensor (FNT_SEN) with a mounting/communications (COMM) fault, GO to L42 . For front impact severity sensor (FNT_SEN) with an internal fault (INT) fault, INSTALL a new front impact severity sensor. REFER to Front Impact Severity Sensor in this section. GO to L54 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found.
L54 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step L1. • **Were any continuous DTCs retrieved during Step L1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction.

	No RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test M: LFC 51/DTC B2434 Driver Safety Belt Buckle Switch Circuit Short to Ground

Normal Operation

The restraints control module (RCM) checks the driver safety belt buckle switch circuits for faults. If the RCM detects a short to ground fault, it will store diagnostic trouble code (DTC) B2434 in memory and flash lamp fault code (LFC) 51 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver safety belt buckle switch open circuit fault can be caused by:

- wiring, terminals, or connectors.
- a faulty driver safety belt buckle switch.
- a faulted RCM.

PINPOINT TEST M: LFC 51/DTC B2434 DRIVER SAFETY BELT BUCKLE SWITCH CIRCUIT SHORT TO GROUND

Test Step	Result / Action to Take
M1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2434 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to M2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to M6 .
M2 CHECK CIRCUIT 8-JA54 (WH) FOR A SHORT TO GROUND BETWEEN THE RCM AND DRIVER SEAT	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.**	**Yes** GO to M3 . **No** REPAIR circuit 8-JA54 (WH). GO to M7 .

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system and remove the driver seat. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Key in OFF position. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 25, circuit 8-JA54 (WH), harness side and ground.  • **Is the resistance greater than 1,000,000 ohms?**	
M3 CHECK CIRCUIT 8-JA54 (WH) FOR A SHORT TO GROUND BETWEEN THE DRIVER SAFETY BELT BUCKLE SWITCH AND GROUND	
• Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Connectors. • Disconnect: Driver Safety Belt Buckle Switch C3065.	**Yes** GO to M4 . **No** REPAIR short to ground

• Measure the resistance between driver safety belt buckle switch C3065 pin 1, circuit 8-JA54 (WH), harness side and ground.  A0030636 • **Is the resistance greater than 1,000,000 ohms?**	in circuit 8-JA54 (WH). GO to M7 .

Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2434 retrieved during the on-demand self test?**	
M7 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step M1. • **Were any continuous DTCs retrieved during Step M1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) . CLEAR all DTCs.

Pinpoint Test N: LFC 51/DTC B2435 Driver Safety Belt Buckle Switch Circuit Resistance Out of Range

Normal Operation

The restraints control module (RCM) checks the driver safety belt buckle switch circuits for faults. If the RCM detects a current out of range fault, it will store diagnostic trouble code (DTC) B2435 in memory and flash lamp fault code (LFC) 51 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver safety belt buckle switch current out of range fault can be caused by:

- wiring, terminals, or connectors.
- a faulty driver safety belt buckle switch.
- a faulted RCM.

Pinpoint Test O: LFC 52/DTC B2438 Passenger Safety Belt Buckle Switch Circuit Short to Ground

Normal Operation

The restraints control module (RCM) checks the passenger safety belt buckle switch circuits for faults. If the RCM detects a short to ground fault, it will store diagnostic trouble code (DTC) B2438 in memory and flash lamp fault code (LFC) 52 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger safety belt buckle switch open circuit fault can be caused by:

- wiring, terminals, or connectors.
- a faulty passenger safety belt buckle switch.
- a faulted RCM.

PINPOINT TEST O: LFC 52/DTC B2438 PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT SHORT TO GROUND

Test Step	Result / Action to Take

Pinpoint Test Q: LFC 51/DTC B2691 Driver Safety Belt Buckle Switch Circuit Fault

Normal Operation

The restraints control module (RCM) checks the driver safety belt buckle switch circuits for faults. If the RCM detects an open circuit or short to voltage fault, it will store diagnostic trouble code (DTC) B2691 in memory and flash lamp fault code (LFC) 51 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver safety belt buckle switch open circuit short to voltage fault can be caused by:

- wiring, terminals, or connectors.

- a faulty driver safety belt buckle switch.
- a faulted RCM.

Pinpoint Test R: LFC 52/DTC B2692 Passenger Safety Belt Buckle Switch Circuit Fault

Normal Operation

The restraints control module (RCM) checks the passenger safety belt buckle switch circuits for faults. If the RCM detects an open circuit or a short to voltage fault, it will store diagnostic trouble code (DTC) B2692 in memory and flash lamp fault code (LFC) 52 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A passenger safety belt buckle switch short to battery fault can be caused by:

- wiring, terminals, or connectors.
- a faulty passenger safety belt buckle switch.
- a faulty RCM.

PINPOINT TEST R: LFC 52/DTC B2692 PASSENGER SAFETY BELT BUCKLE SWITCH CIRCUIT FAULT

Test Step	Result / Action to Take
R1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to R2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to R7 .
R2 CHECK CIRCUIT 8-JA55 (WH/BK) FOR A SHORT TO BATTERY BETWEEN THE RCM AND PASSENGER SEAT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before**	**Yes** GO to R3 . **No** REPAIR circuit 8-JA55 (WH/BK). GO to R6 .

operating the vehicle over the road. NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system and remove the passenger seat. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Key in OFF position. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between passenger seat C313 pin 11, circuit 8-JA55 (WH/BK), harness side and ground.  • **Is the voltage less than 0.2 volt?**	
R3 CHECK CIRCUIT 8-JA55 (WH/BK) FOR A OPEN BETWEEN THE PASSENGER SAFETY BELT BUCKLE SWITCH AND RCM	
• Disconnect: Passenger Safety Belt Buckle Switch C3066. • Key in ON position. • Measure the resistance between passenger safety belt buckle switch C3066 pin 1, circuit 8-JA55 (WH/BK), harness side and seat harness C313 pin 11, circuit 8-JA55 (WH/BK).  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to R4 . **No** REPAIR circuit 8-JA55 (WH/BK). GO to R8 .
R4 CHECK CIRCUIT 8-JA55 (WH/BK) FOR A SHORT TO BATTERY BETWEEN THE PASSENGER SAFETY BELT BUCKLE AND RCM	
• Key in OFF position. • Position the passenger seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Passenger Seat Connectors. • Disconnect: Passenger Safety Belt Buckle Switch C3066. • Key in ON position. • Measure the voltage between passenger safety belt buckle switch C3066 pin 1, circuit 8-JA55 (WH/BK), harness side and ground.	**Yes** GO to R5 . **No** REPAIR circuit 8-JA55 (WH/BK). GO to R8 .

 A0057209 • **Is the voltage less than 0.2 volt?**	
R5 CHECK CIRCUIT 8-JA55 (WH/BK) FOR AN OPEN BETWEEN THE PASSENGER SAFETY BELT BUCKLE SWITCH AND RCM	
• Key in OFF position. • Measure the voltage between passenger safety belt buckle switch C3066 pin 1, circuit 8-JA55 (WH/BK), harness side and RCM C310b pin 26, circuit 8-JA55 (WH/BK).  A0057212 • **Is the voltage less than 0.2 volt?**	**Yes** GO to R6 . **No** REPAIR circuit 8-JA55 (WH/BK). GO to R8 .
R6 CONFIRM RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Connect: RCM C310b. • Connect: Passenger Safety Belt Buckle Switch C3066. • Key in ON position. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) . GO to R8 . **No** Fault corrected. GO to R8 .
R7 CHECK FOR AN INTERMITTENT FAULT	
⚠ **WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.** **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the**	**Yes** GO to R2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to R8 .

vehicle over the road. NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC B2692 retrieved during the on-demand self test?**	
R8 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step R1. • **Were any continuous DTCs retrieved during Step R1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Priority Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test S: LFC 15/DTC C1414 Incorrect Vehicle ID

Normal Operation

The RCM monitors the communication condition and circuits of the OCS sensor for an embedded vehicle I.D. If the RCM detects an unexpected condition or code from the OCS, it will store diagnostic trouble code (DTC) C1414 in memory and flash lamp fault code (LFC) 15 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

An incorrect vehicle identification code can be caused by:

- incorrect RCM for vehicle.
- incorrect OCS system for vehicle.
- wiring, terminals, or connectors.

PINPOINT TEST S: LFC 15/DTC C1414 INCORRECT VEHICLE ID

Test Step	Result / Action to Take
S1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1414 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. GO to S2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to S5 .
S2 CHECK OCS PART NUMBER	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment.** **NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.** **NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system,	**Yes** GO to S3 . **No** INSTALL a new OCS with the correct part number. REFER to Occupant Classification Sensor in this section. GO to S6 .

the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Check the part number on the OCS against the part number listed in the master parts catalog. • **Did the part number on the OCS match the part number listed in the master parts catalog?**	
S3 CHECK RCM PART NUMBER	
• Check the part number on the RCM against the part number listed in the master parts catalog. • **Did the part number on the RCM match the part number listed in the master parts catalog?**	**Yes** GO to S4 . **No** INSTALL a new RCM with the correct part number. REFER to Restraints Control Module (RCM) in this section. GO to S6 .
S4 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was the DTC C1414 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. GO to S5 . **No** Fault corrected. GO to S5 .
S5 CHECK FOR INTERMITTENT FAULTS	
• Enter the following diagnostic mode on the diagnostic tool: Clear continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • Enter the following diagnostic mode on the diagnostic tool: Retrieve continuous DTCs. • Refer to the continuous DTCs recorded during Step S1. • **Was DTC C1414 retrieved?**	**Yes** INSTALL new RCM. GO to S2 . **No** Fault corrected. GO to S6 .
S6 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step S1. • **Were any continuous DTCs retrieved during Step S1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction.

	No RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test T: LFC 49/DTC C1947 Seat Track Position Sensor Circuit Short To Ground

Normal Operation

The restraints control module (RCM) monitors the driver seat track position sensor circuits. If the RCM detects a short to ground, it will store diagnostic trouble code (DTC) C1947 in memory and flash lamp fault code (LFC) 49 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat track position sensor short to ground fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty driver seat track position sensor.
- a faulted RCM.

PINPOINT TEST T: LFC 49/DTC C1947 SEAT TRACK POSITION SENSOR CIRCUIT SHORT TO GROUND

Test Step	Result / Action to Take
T1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1947 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to T2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to T5 .
T2 CHECK CIRCUIT 7-JA53 (YE/RD) AND CIRCUIT 9-JA53 (BN/RD) FOR A SHORT TO GROUND BETWEEN THE RCM AND THE DRIVER SEAT	

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system and remove the driver seat. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Key in OFF position. • Disconnect: RCM C310b. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and ground; and between pin 24, circuit 9-JA53 (BN/RD), harness side and ground.  • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to T3 . **No** REPAIR circuit 7-JA53 (YE/RD) or circuit 9-JA53 (BN/RD). GO to T6 .
T3 CHECK CIRCUIT 7-JA53 (YE/RD) AND CIRCUIT 9-JA53 (BN/RD) FOR A SHORT TO GROUND	

• Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Connectors. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and ground; and between pin 24, circuit 9-JA53 (BN/RD), harness side and ground.  • **Are the resistances greater than 1,000,000 ohms?**	**Yes** GO to T4 . **No** REPAIR circuit 7-JA53 (YE/RD) or circuit 9-JA53 (BN/RD). GO to T7 .
T4 CHECK THE SEAT TRACK POSITION SENSOR	
• Connect: RCM C310b. • Install a known good seat track position sensor. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1947 retrieved during the on-demand self test?**	**Yes** GO to T5 . **No** Fault corrected. GO to T7 .
T5 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Reinstall the original seat track position sensor. • Connect: Seat Track Position Sensor C3207. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self-Test. • **Was DTC C1947 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Restraints Control Module (RCM) in this section. GO to T7 . **No** Fault corrected. GO to T7 .
T6 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. T7 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step T1. • **Were any continuous DTCs retrieved during Step T1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test U: LFC 49/DTC C1948 Seat Track Position Sensor Circuit Resistance Out Of Range

NOTE: Due to the seat track position sensor being a hall-effect type sensor, this pinpoint test will be diagnosing a current out of range fault instead of the current DTC definition for a resistance out of range fault.

Normal Operation

The restraints control module (RCM) monitors the driver seat track position sensor circuits. If the RCM detects a current out of range condition, it will store diagnostic trouble code (DTC) C1948 in memory and flash lamp fault code (LFC) 49 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A seat track sensor circuit resistance out of range fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty driver seat track position sensor.
- a faulted RCM.

PINPOINT TEST U: LFC 49/DTC C1948 SEAT TRACK POSITION SENSOR CIRCUIT RESISTANCE OUT OF RANGE

Test Step	Result / Action to Take
U1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1948 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to U2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to U8 .
U2 CHECK CIRCUIT 7-JA53 (YE/RD) FOR AN OPEN	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING:**	**Yes** GO to U3 . **No** REPAIR circuit 7-JA53 (YE/RD). GO to U9 .

Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. REFER to Air Bag and Safety Belt Pretensioner

	Supplemental Restraint System (SRS) . CLEAR all DTCs.

Pinpoint Test V: LFC 49/DTC C1981 Seat Track Position Sensor Circuit Fault

Normal Operation

The restraints control module (RCM) monitors the driver seat track position sensor circuits. If the RCM detects an open or short to battery, it will store diagnostic trouble code (DTC) C1981 in memory and flash lamp fault code (LFC) 49 (or higher priority code if one exists) on the air bag indicator.

Possible Causes

A driver seat track position sensor open circuit or short to battery fault can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty seat track position sensor.
- a faulted RCM.

PINPOINT TEST V: LFC 49/DTC C1981 SEAT TRACK POSITION SENSOR CIRCUIT FAULT

Test Step	Result / Action to Take
V1 CHECK FOR A HARD OR INTERMITTENT DTC	
• Enter the following diagnostic mode on the diagnostic tool: Retrieve/Record Continuous DTCs. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	**Yes** This is a hard fault. The fault condition is still present. This fault cannot be cleared until it is corrected and DTC is no longer retrieved during the on-demand self test. GO to V2 . **No** This is an intermittent fault. The fault condition is not present at this time. GO to V10 .
V2 CHECK CIRCUIT 7-JA53 (YE/RD) AND CIRCUIT 9-JA53 (BN/RD) FOR A SHORT TO VOLTAGE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the**	**Yes** GO to V3 . **No** REPAIR circuit 7-JA53 (YE/RD) or circuit 9-JA53 (BN/RD). GO to V11 .

connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system and remove the driver seat. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: RCM C310b. • Key in ON position. • Measure the voltage between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and ground, and between pin 24, circuit 9-JA53 (BN/RD), harness side and ground.  • **Are the voltages less than 0.2 volt?**	
V3 CHECK CIRCUIT 7-JA53 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and driver seat C315 pin 2, circuit 7-JA53 (YE/RD), body harness side.	**Yes** GO to V4 . **No** REPAIR circuit 7-JA53 (YE/RD). GO to V11 .

 A0068248 • **Is the resistance less than 0.5 ohm?**	
V4 CHECK CIRCUIT 9-JA53 (BN/RD) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 24, circuit 9-JA53 (BN/RD), harness side and driver seat C315 pin 3, 9-JA53 (BN/RD), body harness side.  A0068249 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to V5 . **No** REPAIR circuit 9-JA53 (BN/RD). GO to V11 .
V5 CHECK CIRCUIT 7-JA53 (YE/RD) AND CIRCUIT 9-JA53 (BN/RD) FOR A SHORT TO VOLTAGE	
• Disconnect: Driver Seat Position Sensor C3207. • Position the driver seat in the vehicle. **Do not** reactivate the system at this time. • Connect: Driver Seat Connectors. • Key in ON position. • Measure the voltage between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and ground, and between pin 24, circuit 9-JA53 (BN/RD), harness side and ground.  A0048718 • **Are the voltages less than 0.2 volt?**	**Yes** GO to V6 . **No** REPAIR circuit 7-JA53 (YE/RD) or circuit 9-JA53 (BN/RD). GO to V11 .
V6 CHECK CIRCUIT 7-JA53 (YE/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310b pin 23, circuit 7-JA53 (YE/RD), harness side and driver seat C3207 pin 2, circuit 7-JA53 (YE/RD), harness side.  A0048716	**Yes** GO to V7 . **No** REPAIR circuit 7-JA53 (YE/RD). GO to V11 .

• **Is the resistance less than 0.5 ohm?**	
V7 CHECK CIRCUIT 9-JA53 (BN/RD) FOR AN OPEN	
• Measure the resistance between RCM C310b pin 24, circuit 9-JA53 (BN/RD), harness side and driver seat C3207 pin 1, circuit 9-JA53 (BN/RD), harness side.  • **Is the resistance less than 0.5 ohm?**	**Yes** GO to V8 . **No** REPAIR circuit 9-JA53 (BN/RD). GO to V11 .
V8 CHECK THE SEAT TRACK POSITION SENSOR	
• Connect: RCM C310b. • Install a known good seat track position sensor. • Connect: Seat Track Position Sensor C3207. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	**Yes** GO to V9 . **No** Fault corrected. GO to V11 .
V9 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Key in OFF position. • Install the original seat track position sensor. • Connect: Seat Track Position Sensor C3207. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	**Yes** INSTALL a new RCM. REFER to Driver Air Bag Module in this section. GO to V11 . **No** Fault corrected. GO to V11 .
V10 CHECK FOR AN INTERMITTENT FAULT	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical**	**Yes** GO to V2 . **No** CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition key frequently. REPAIR any intermittent concerns found. GO to V11 .

connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion in this section. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Was DTC C1981 retrieved during the on-demand self test?**	
V11 CHECK FOR ADDITIONAL DTCs	
• Refer to the continuous DTCs recorded during Step V1. • **Were any continuous DTCs retrieved during Step V1?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the Restraints Control Module (RCM) Diagnostic Trouble Code (DTC) Table in this section for pinpoint test direction. **No** RECONNECT the system. REACTIVATE the system. PROVE OUT the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. CLEAR all DTCs.

Pinpoint Test W: No Communication With The Restraints Control Module (RCM)

Normal Operation

The scan tool communicates with the restraints control module (RCM) monitors through the data link connector (DLC) C251 pin 7, 4-EE10 (GY/BK).

Possible Causes

A no communication fault with the RCM can be caused by:

- damaged wiring, terminals, or connectors.
- a faulty data link connector (DLC).
- a faulted RCM.

PINPOINT TEST W: NO COMMUNICATION WITH THE RESTRAINTS CONTROL MODULE (RCM)

Test Step	Result / Action to Take
W1 CHECK THE RCM C310a PIN 11 FOR DAMAGE	
⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury. ⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury. ⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury. ⚠ WARNING: Never probe the electrical connector on a side air curtain module. Doing so can result in side air curtain deployment. NOTE:** Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road. NOTE:** After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road. NOTE:** The SRS must be fully operational and free of faults before releasing the vehicle to the customer. • Key in OFF position. • Deactivate the system. Refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section. • Disconnect: RCM C310a.	**Yes** GO to W2 . **No** REPAIR RCM C310a or RCM C310a pin 11 as necessary. RETEST the communication to the RCM. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

• Inspect the RCM C310a, harness side and RCM C310a, component side, pin 11 for damage. • **Are RCM C310a and RCM C310a pin 11 OK?**	
W2 CHECK THE DLC C251 PIN 7 FOR DAMAGE	
• Inspect the DLC C251 and DLC C251 pin 7 for damage.  A0030459 • **Are DLC C251 and DLC C251 pin 7 OK?**	**Yes** GO to W3 . **No** REPAIR DLC C251 or DLC C251 pin 7 as necessary. RETEST the communication to the RCM. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.
W3 CHECK THE IGNITION CIRCUIT 15-JA10A (GN/OG) FOR AN OPEN	
• Key in ON position. • Measure the voltage between RCM C310a pin 12, circuit 15-JA10A (GN/OG), harness side and ground.  A0039638 • **Is the voltage greater than 10 volts?**	**Yes** GO to W4 . **No** REPAIR circuit 15-JA10A (GN/OG). RETEST the communication to the RCM. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.
W4 CHECK THE GROUND CIRCUIT 31-JA10 (BK/RD) FOR AN OPEN	
• Key in OFF position. • Measure the resistance between RCM C310a pin 16, circuit 31-JA10 (BK/RD), harness side and a sheet metal ground near the RCM.  A0039639 • **Is the resistance less than 5 ohms?**	**Yes** GO to W5 . **No** REPAIR circuit 31-JA10 (BK/RD). RETEST the communication to the RCM. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.
W5 CHECK CIRCUIT 4-EE1 (GY/RD) AND 4-EE10 (GY/BK) FOR AN OPEN	

• Measure the resistance between RCM C310a pin 11, circuit 4-EE1 (GY/RD), harness side and the DLC C251 pin 7, circuit 4-EE10 (GY/BK), harness side.  A0041599 • **Is the resistance less than 5 ohms?**	**Yes** GO to W6 . **No** REPAIR circuit 4-EE1 (GY/RD) or circuit 4-EE10 (GY/BK). RETEST the communication to the RCM. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.
W6 CONFIRM THE RCM FAULT	
NOTE: Make sure the safety belt pretensioner restraint system diagnostic tools, sensor electrical connectors, and the RCM electrical connector are connected before carrying out the on-demand self test. If not, erroneous DTCs will be recorded. • Connect: RCM C310a. • Enter the following diagnostic mode on the diagnostic tool: On-Demand Self Test. • **Did the scan tool communicate with the RCM?**	**Yes** Fault corrected. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section. **No** INSTALL a new RCM. RETEST the communication to the RCM. REACTIVATE the system. REFER to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

Supplemental Restraint System (SRS) Deactivation and Reactivation

Printable View (636 KB)

Special Tool(s)

 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133 (014-R1076)
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Vehicle sensor orientation is critical for proper system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and properly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

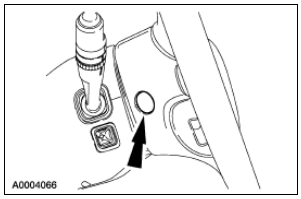
   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

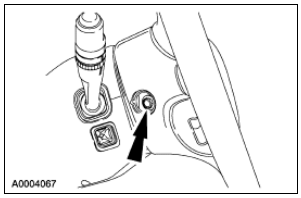
   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

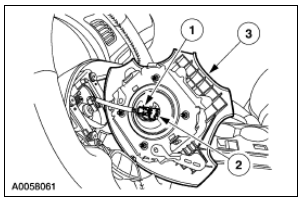
2. Remove the two steering wheel plugs (one shown).



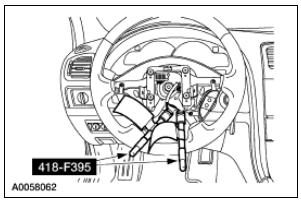
3. Remove the two driver air bag module bolts (one shown).



4. Disconnect and remove the driver air bag module.
    1. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    2. Squeeze the tabs and disconnect the driver air bag module electrical connector.
    3. Remove the driver air bag module.



5. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.

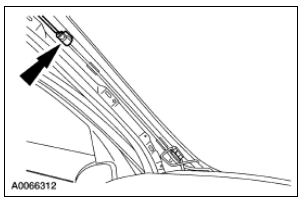


Vehicles with side air curtains

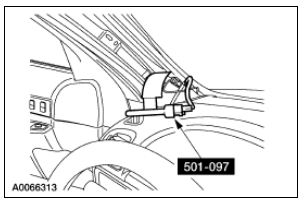
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

6. Remove the A-pillar trim panel. For additional information, refer to Section 501-01 .

7. Disconnect the driver side air curtain module electrical connector.



8. Attach the restraint system diagnostic tool to the vehicle harness side of the driver side air curtain module electrical connector.



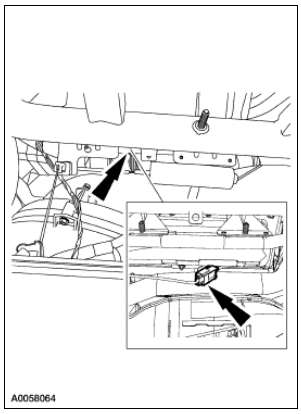
All vehicles

9. Remove the glove compartment. For additional information, refer to Section 501-01 .

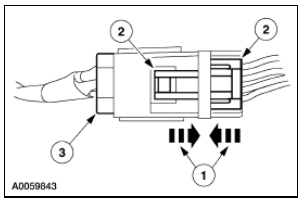
10. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

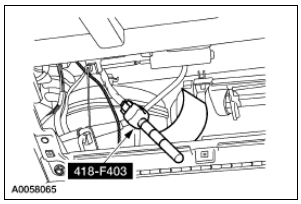
    Locate the passenger air bag module electrical connector.



11. Disconnect the passenger air bag module.
    1. Push the passenger air bag module electrical connector together.
    2. Push down, pivoting the electrical connector and release the electrical connector retainer.
    3. Pull out, disconnecting the vehicle harness end of the connector from the component end.



12. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger air bag module electrical connector.

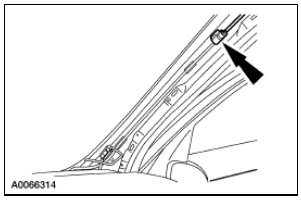


Vehicles with side air curtains

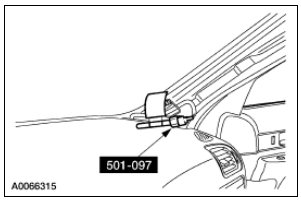
NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

13. Remove the A-pillar trim panel. For additional information, refer to Section 501-01

14. Disconnect the passenger side air curtain module electrical connector.



15. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger side air curtain module electrical connector.



All vehicles

16. Connect the battery ground cable. For additional information, refer to Section 414-00 .

17. Move and tilt the front seats to their highest and most forward position.

18. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

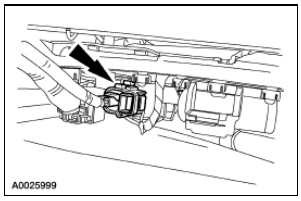
    The first row side impact sensors are located at or near the base of the B-pillars.

    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

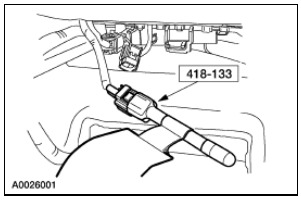
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

19. From under the passenger seat, release the tab and disconnect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



Vehicles without side air curtains

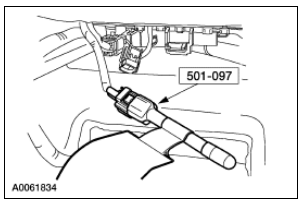
20. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side air bag electrical connector.



Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

21. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger seat side thorax air bag electrical connector.

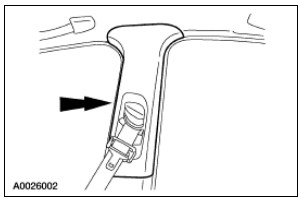


All vehicles

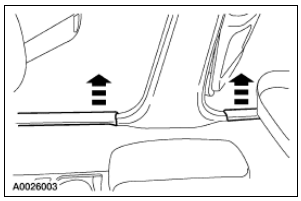
22. Remove the passenger side B-pillar weatherstripping.

23. Position the passenger side safety belt shoulder height adjuster to its highest point.

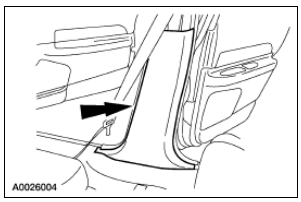
24. Detach the passenger side B-pillar trim panel.



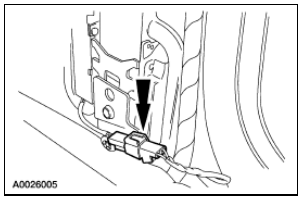
25. Remove the passenger side front and rear door scuff plates.



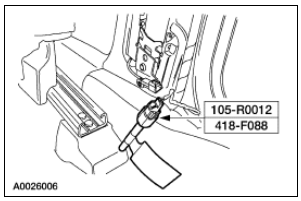
26. Remove the passenger side B-pillar lower trim panel.



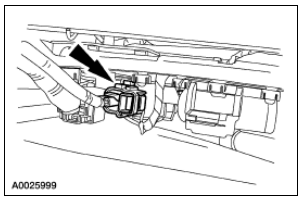
27. Disconnect the passenger side safety belt retractor pretensioner electrical connector.



28. Attach the restraint system diagnostic tool to the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.

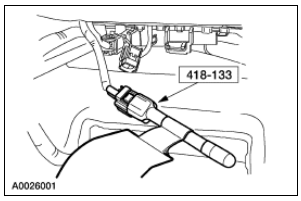


29. From under the driver seat, release the tab and disconnect the driver seat side air bag or driver seat side thorax air bag electrical connector.



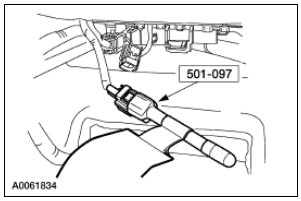
Vehicles without side air curtains

30. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side air bag electrical connector.



Vehicles with side air curtains

31. Attach the restraint system diagnostic tool to the vehicle harness side of the driver seat side thorax air bag electrical connector.

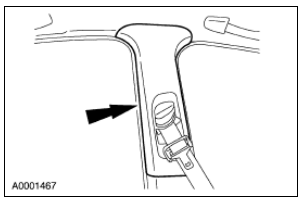


All vehicles

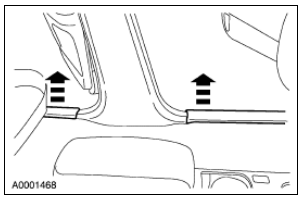
32. Remove the driver side B-pillar weatherstripping.

33. Position the driver side safety belt shoulder height adjuster to its highest point.

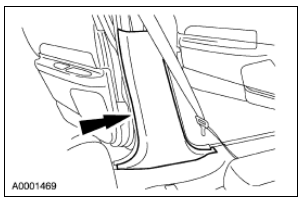
34. Detach the driver side B-pillar upper trim panel.



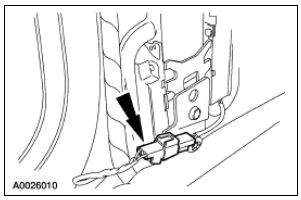
35. Remove the driver side front and rear door scuff plate.



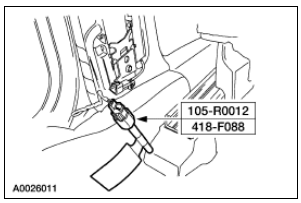
36. Remove the driver side B-pillar trim panel.



37. Disconnect the driver side safety belt retractor pretensioner electrical connector.



38. Attach the restraint system diagnostic tool to the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



39. Connect the battery ground cable. For additional information, refer to Section 414-00 .

40. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

41. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Reactivation

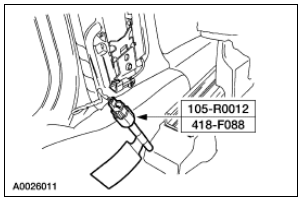
⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions,

and notes at the beginning of the deactivation procedure.

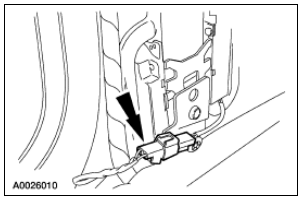
All vehicles

1. **NOTE:** Make sure the battery negative cable is still disconnected before proceeding with the reactivation procedure.

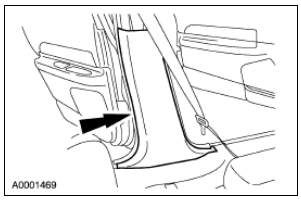
   Remove the restraint system diagnostic tool from the vehicle harness side of the driver safety belt retractor pretensioner electrical connector.



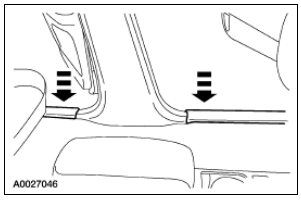
2. Connect the driver side safety belt retractor pretensioner electrical connector.



3. Install the driver side B-pillar lower trim panel.

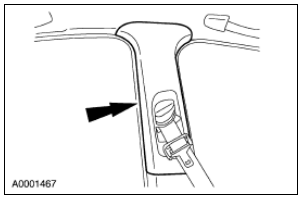


4. Install the driver side front and rear door scuff plates.



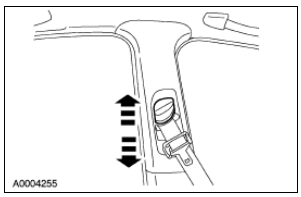
5. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

   Install the driver side B-pillar upper trim panel.



6. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks

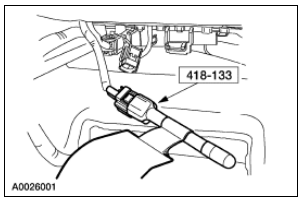
correctly in each position.



7. Install the driver side B-pillar weatherstripping.

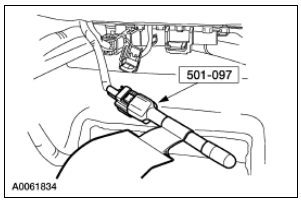
Vehicles without side air curtains

8. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side air bag electrical connector.



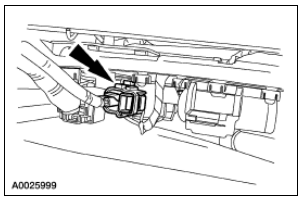
Vehicles with side air curtains

9. Remove the restraint system diagnostic tool from the vehicle harness side of the driver seat side thorax air bag electrical connector.

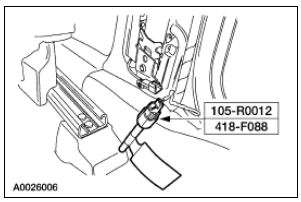


All vehicles

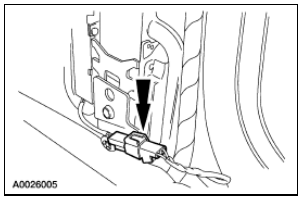
10. Connect the driver seat side air bag or driver seat side thorax air bag electrical connector.



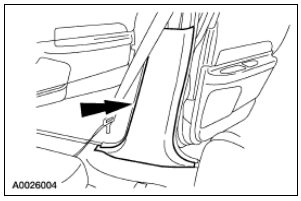
11. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger safety belt retractor pretensioner electrical connector.



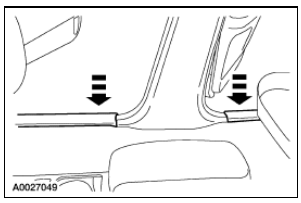
12. Connect the passenger side safety belt retractor pretensioner electrical connector.



13. Install the passenger side B-pillar lower trim panel.

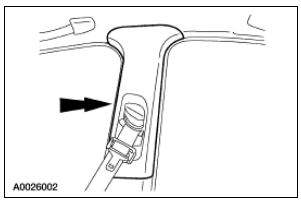


14. Install the passenger side front and rear door scuff plates.

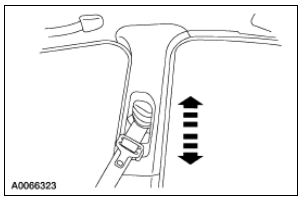


15. **NOTE:** Position the driver side safety belt shoulder height adjuster and B-pillar trim panel sliding panel to their highest point.

    Install the passenger side B-pillar upper trim panel.



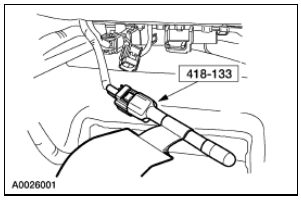
16. Operate the front seat shoulder strap adjuster. Make sure it travels from top to bottom and locks correctly in each position.



17. Install the passenger side B-pillar weatherstripping.

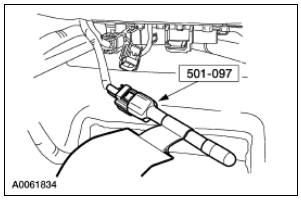
Vehicles without side air curtains

18. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side air bag electrical connector.



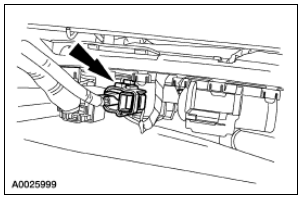
Vehicles with side air curtains

19. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger seat side thorax air bag electrical connector.



All vehicles

20. Connect the passenger seat side air bag or passenger seat side thorax air bag electrical connector.



21. Connect the battery ground cable. For additional information, refer to Section 414-00 .

22. Position the front seats rearward.

23. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

    The first row side impact sensors are located at or near the base of the B-pillars.

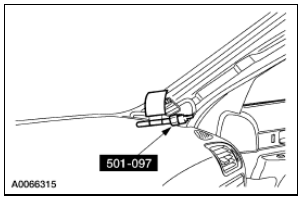
    The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

    To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

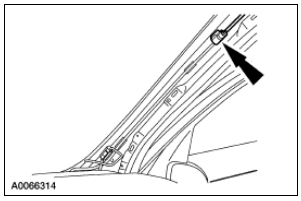
    Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

Vehicles with side air curtains

24. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger side air curtain module electrical connector.



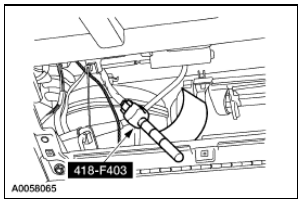
25. Connect the passenger side air curtain module electrical connector.



26. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .

All vehicles

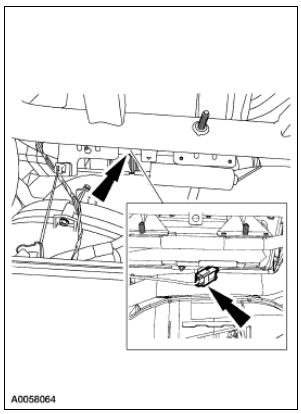
27. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.



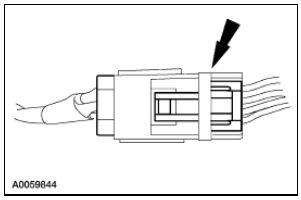
28. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

    Locate the passenger air bag module electrical connector.



29. Connect the passenger air bag module.

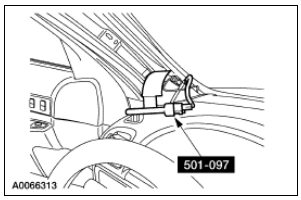


30. Install the glove compartment. For additional information, refer to Section 501-01 .

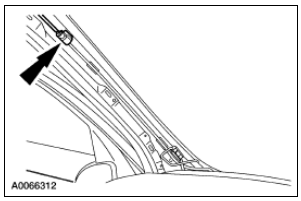
Vehicles with side air curtains

NOTE: If the headliner has the word "AIRBAG" embossed on it near each B-pillar, the vehicle is equipped with side air curtain modules.

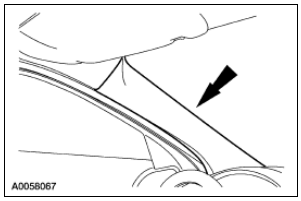
31. Remove the restraint system diagnostic tool from the vehicle harness side of the driver side air curtain module electrical connector.



32. Connect the driver side air curtain module electrical connector.

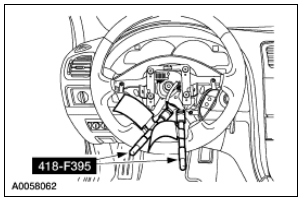


33. Install the A-pillar trim panel. For additional information, refer to Section 501-01 .



All vehicles

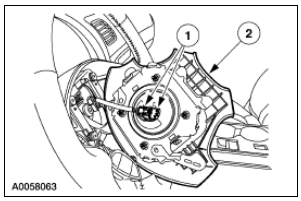
34. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



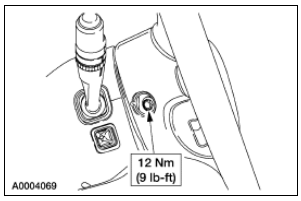
35. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

Connect and position the driver air bag module.

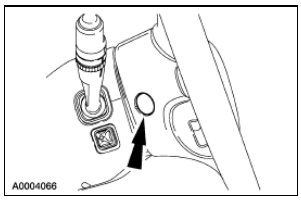
1. Connect the driver air bag module electrical connectors.
2. Position the driver air bag module to the steering wheel.



36. Install the two driver air bag module bolts (one shown).



37. Install the two steering wheel plugs (one shown).



38. Connect the battery ground cable. For additional information, refer to Section 414-00 .

39. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Section 501-20B .

40. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Inspection and Repair After a Supplemental Restraint System (SRS) Deployment

Printable View (11 KB)

⚠ WARNING: If the supplemental restraint system (SRS) is being serviced, the system must be deactivated and restraint system diagnostic tools must be installed. For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

The air bag restraint system diagnostic tools must be removed and the air bag modules reconnected when the system is reactivated to avoid non-deployment in a collision, resulting in possible personal injury.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: After diagnosing or repairing an SRS, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: After diagnosing or repairing a seat system, **the restraint system diagnostic tools must be removed before operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

1. When any deployable device (driver air bag, passenger air bag, seat side air bag, safety belt pretensioner, etc.) or combination of devices are deployed and/or the RCM has the DTC B1231 (Crash Data Memory Full) in memory, the repair of the vehicle's supplemental restraint system (SRS) is to include the removal of all deployed devices and the installation of new deployable devices, the removal and installation of new impact sensors, and the removal and installation of a new RCM.

2. When any damage to the impact sensor mounting points or mounting hardware has occurred, repair or install new mounting points and mounting hardware as needed.

3. When the driver air bag module has deployed a new clockspring must be installed.

4. Inspect the entire vehicle for damage, including the following components:
   - steering column.
   - instrument panel knee bolsters and mounting points.
   - instrument panel braces and brackets.
   - instrument panel and mounting points.
   - seats and seat mounting points.
   - safety belts, safety belt buckles, and safety belt retractors. For additional information, refer to Section 501-20A .
   - supplemental restraint system (SRS) wiring, wiring harnesses, and connectors.

5. After carrying out the review and inspection of the entire vehicle for damage, repair or install new components as needed.

Air Bag Disposal Deployed

Printable View (9 KB)

1. **WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.**

   Dispose of the deployed air bag modules and safety belt pretensioners in the same manner as any other part to be scrapped.

Air Bag Disposal Undeployed Inoperative

Printable View (39 KB)

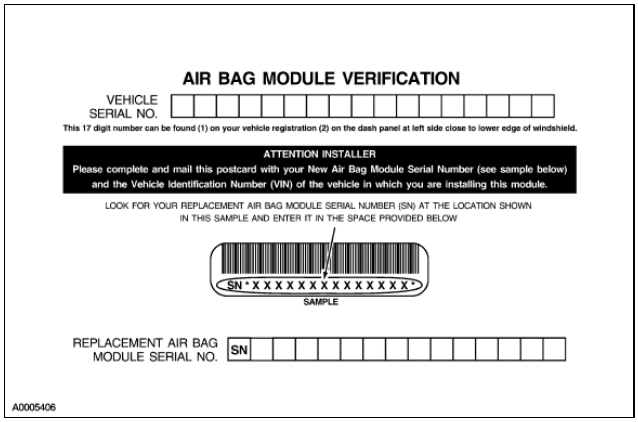
⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

NOTE: All inoperative air bag modules and safety belt pretensioners have been placed on the Mandatory Return List. All discolored or damaged air bag modules must be treated the same as any inoperative live air bag being returned.

1. Remove the inoperative component from the vehicle. For additional information, refer to the appropriate air bag procedure in this section.



2. **NOTE:** When installing a new air bag module, a prepaid return postcard is provided with the replacement air bag module. The serial number for the new part and the vehicle identification number (VIN) must be recorded and sent to Ford Motor Company.

   If installing a new air bag module, record the necessary information and return the inoperative air bag module to Ford Motor Company.

Air Bag Disposal Driver, Undeployed, Scrapped Vehicle

Printable View (130 KB)

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

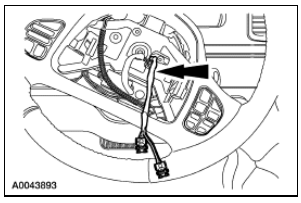
⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

NOTE: A typical driver air bag disposal is shown that is similar for all vehicles.

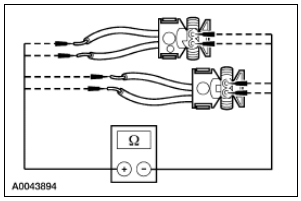
1. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes and instructions in the driver air bag module removal and installation procedure.**

   Remove the driver air bag module from the vehicle. For additional information, refer to Driver Air Bag Module in this section.

2. Cut the clockspring wire harness. Remove the sheathing over the wires.

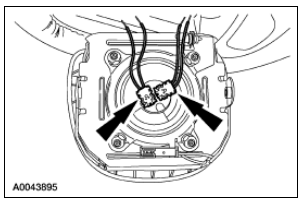


3. Strip the insulation from all four wires. Carry out an ohms check from the stripped end of each wire to the connector end. If any of the four wires reads more than 0.5 ohm use another connector.

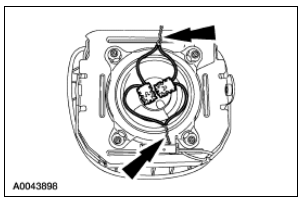


4. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

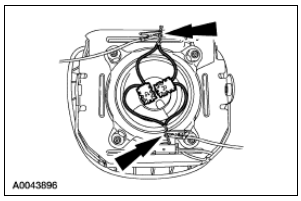
   Match the driver air bag module electrical connector key to the keyway in the driver air bag module. Connect the two driver air bag module electrical connectors to the driver air bag module.



5. Twist together one wire from each pair.



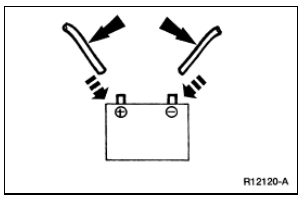
6. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to each twisted splice.



7. Place the air bag module on a flat surface in an open outdoor area with the trim cover and air bag facing up.

8. Remain at least 6.1 meters (20 feet) away from the air bag module.

9. Deploy the air bag module by touching the other ends of the two wires to the terminals of a 12-volt battery.



10. To allow for cooling, wait at least ten minutes before approaching the deployed air bag.

11. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.

Air Bag Disposal Passenger, Undeployed, Scrapped Vehicle

Printable View (84 KB)

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

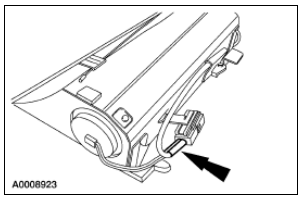
⚠ WARNING: Do not place the driver or passenger air bag module with the trim cover or deployment door facing down, as the forces of the deploying air bag could cause it to ricochet and cause personal injury.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

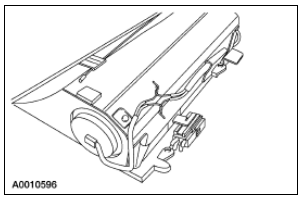
NOTE: A typical passenger air bag disposal is shown that is similar for all vehicles.

1. Remove the passenger air bag from the vehicle. For additional information, refer to Passenger Air Bag Module in this section.

2. Cut and strip all four wires at the air bag electrical connector.

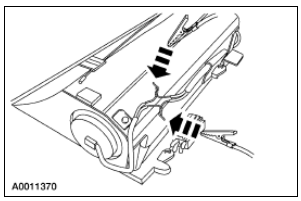


3. Twist together one wire from each pair.



4. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each

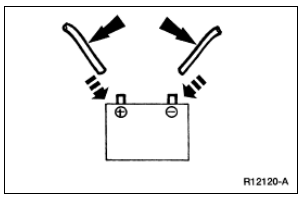
wire to each twisted splice.



5. Place the air bag module on a flat surface in an open outdoor area with the trim cover facing upward.

6. Remain at least 6.1 meters (20 feet) away from the air bag module.

7. Deploy the air bag module by touching the other ends of the two wires to the terminals of a 12-volt battery.



8. To allow for cooling, wait at least ten minutes before approaching the deployed air bag.

9. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.

Air Bag Disposal Side Air Curtain, Undeployed, Scrapped Vehicle

Printable View (46 KB)

Deactivation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

NOTE: A typical side air curtain disposal is shown that is similar for all vehicles.

NOTE: The side air curtain module deployment for a scrapped vehicle will occur in its installed position in the vehicle.

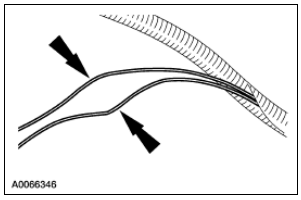
NOTE: The left hand side is shown, the right hand side is similar.

1. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

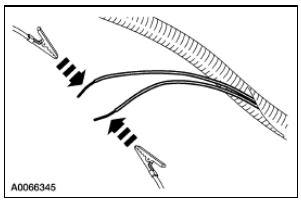
   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

2. Access the side air curtain electrical connector. For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation .

3. Cut and strip the wires near the component side electrical connector.



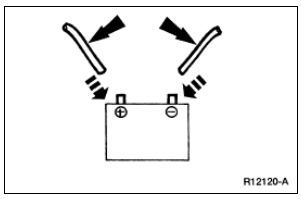
4. Obtain two wires (20 gauge minimum) at least 9.1 meters (30 feet) long and attach one end of each wire to the stripped wires on the side air curtain module.



5. Remain at least 6.1 meters (20 feet) away from the vehicle.

6. Deploy the side air curtain module by touching the other ends of the two wires to the terminals of a

12-volt battery.



7. To allow for cooling, wait at least ten minutes before approaching the deployed side air curtain module.

8. Dispose of the deployed side air curtain module in the same manner as any other part to be scrapped.

Air Bag Disposal Side, Undeployed, Scrapped Vehicle

Printable View (47 KB)

Remote Deployment

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module or safety belt retractor/pretensioner assembly. This will reduce the risk of injury in the event of an accidental deployment.

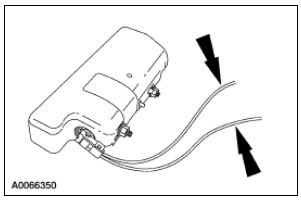
⚠ WARNING: Carry a live air bag module with the air bag and trim cover or deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the air bag is deployed, hearing protection is required.

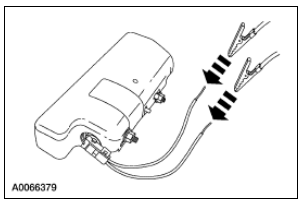
⚠ WARNING: Do not place the side air bag module with the tear seam facing down or the attaching studs facing upward, as the forces of the deploying air bag can cause it to ricochet and cause personal injury.

1. Remove the side air bag from the vehicle. For additional information, refer to Side Air Bag Module in this section.

2. Cut and strip the wires and connect the connector to the air bag module.



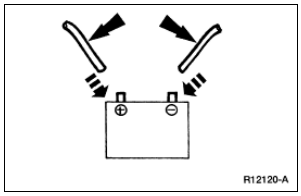
3. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the connector pins on the air bag module.



4. Place the air bag module on a flat surface in an open outdoor area with the tear seam facing upward and the attaching studs facing downward.

5. Remain at least 6.1 meters (20 feet) away from the air bag module.

6. Deploy the side air bag module by touching the other ends of the two wires to the terminals of a 12-volt battery.



7. To allow for cooling, wait at least ten minutes before approaching the deployed air bag.

8. Dispose of the deployed side air bag module in the same manner as any other part to be scrapped.

Safety Belt Pretensioner Disposal Deployed

Printable View (9 KB)

1. **WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.**

   Dispose of the deployed safety belt pretensioner in the same manner as any other part to be scrapped.

Safety Belt Pretensioner Disposal Undeployed, Inoperative

Printable View (10 KB)

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: Carry a live safety belt retractor pretensioner or safety belt buckle pretensioner so as to keep fingers and clothing away from moveable parts. This will reduce the risk of injury in the event of an accidental deployment.

NOTE: All inoperative safety belt buckle pretensioners and safety belt retractor pretensioners have been placed on the Mandatory Return List. All damaged safety belt buckle pretensioners and safety belt retractor pretensioners must be treated the same as any inoperative live safety belt buckle pretensioner or safety belt retractor pretensioner being returned.

1. Remove the inoperative safety belt buckle pretensioner or safety belt retractor pretensioner from the vehicle. For additional information, refer to Section 501-20A .

2. Package and return the inoperative safety belt buckle pretensioner or safety belt retractor pretensioner to Ford Motor Company.

Safety Belt Pretensioner Disposal Undeployed, Scrapped Vehicle

Printable View (56 KB)

Remote Deployment

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

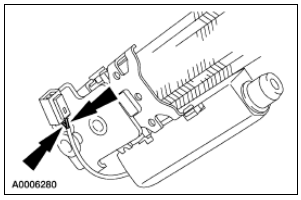
⚠ WARNING: Carry a live safety belt retractor/pretensioner assembly so as to keep fingers and clothing away from moveable parts. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Remote deployment is to be carried out outdoors with all personnel at least 6.1 meters (20 feet) away to ensure personal safety. Due to the loud report which occurs when the safety belt pretensioner is deployed, hearing protection is required.

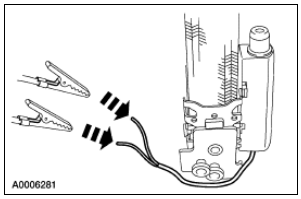
⚠ WARNING: Do not position the safety belt retractor/pretensioner assembly so that moveable parts contact the support surface, as the forces of the deploying pretensioner can cause it to ricochet and cause personal injury.

1. Remove the safety belt retractor/pretensioner assembly from the vehicle. For additional information, refer to Section 501-20A .

2. Cut off the electrical connector and strip 25 mm (1 inch) of insulation off the wires.



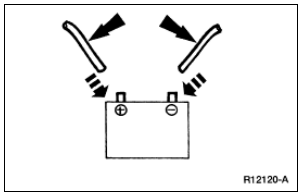
3. Obtain two wires (20 gauge minimum) at least 6.1 meters (20 feet) long and attach one end of each wire to the safety belt pretensioner wires.



4. Position the safety belt retractor/pretensioner assembly on a flat surface in an open outdoor area so that moveable parts do not contact the support surface.

5. Remain at least 6.1 meters (20 feet) away from the safety belt retractor/pretensioner assembly.

6. Deploy the safety belt pretensioner by touching the other ends of the two wires to the terminals of a 12-volt battery.



7. To allow for cooling, wait at least ten minutes before approaching the deployed safety belt pretensioner retractor/pretensioner assembly.

8. Dispose of the deployed safety belt retractor/pretensioner assembly in the same manner as any other part to be scrapped.

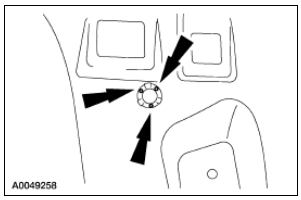
Weld Nut Repair Missing Weld Nut Printable View (50 KB)

⚠ CAUTION: Installing a J-nut in place of a weld nut is not a recommended repair.

NOTE: C-pillar repair shown, others similar.

1. Remove the component from where the weld nut is to be repaired. Refer to the appropriate removal and installation procedure in this section.

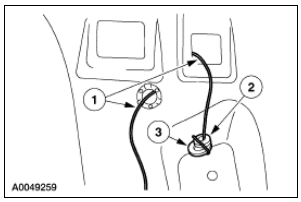
2. Drill three equally spaced 5/64 in (1.75 mm) holes in close proximity to where the weld nut face will be plug welded back to the sheet metal.



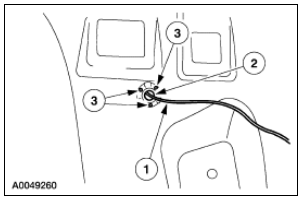
3. Obtain the appropriate 6 mm (0.24 in) or 8 mm (0.32 in) weld nut.

4. Obtain the appropriate 6 mm (0.24 in) by 1.0 or 8 mm (0.32 in) by 1.25 grounding screw (self-tapping).

5. Set up for the positioning of the weld nut.
    1. Route a sufficient length of wire through the weld nut clearance hole and back out an adjacent access hole.
    2. Position a weld nut, shoulder end up, onto the wire.
    3. Position a flat washer onto the wire and secure it so it cannot be pulled off.



6. Plug weld the weld nut into position.
    1. Pull the welding wire back through the clearance hole, allowing the weld nut and flat washer to follow the welding wire through and stop against the sheet metal.
    2. Make sure the weld nut shoulder is aligned through the clearance hole in the sheet metal.
    3. With the weld nut firmly held in position, plug weld the weld nut at the three holes drilled previously.



7. Metal finish as required.

8. Verify the nut is securely in place.
9. Install the component with the previously obtained screw.
10. Tighten the attaching screws to specification. For additional information, refer to Specifications in this section.

Weld Nut Repair Stripped Weld Nut

Printable View (7 KB)

1. Remove the component from where the weld nut is to be repaired. Refer to the appropriate removal and installation procedure in this section.

2. Inspect the weld nut and surrounding area for repair.
   - If there is not enough clearance for a larger bolt stud to go through or a larger bolt head to turn, then a threaded insert will have to be installed. Follow the instructions with the thread insert repair kit.

3. If a 6 mm weld nut is stripped, drill out the hole using a letter "H" or 0.26 in (6.5 mm) drill bit. Then tap, using an 8 mm by 1.25 bit.
   - Do not oversize a 6 mm weld nut by more than 8 mm.

4. If an 8 mm weld nut is stripped, drill the hole using a letter "R" or 0.3990 in (9.75 mm) drill bit. Then tap, using a 10 mm by 1.50 bit.
   - Do not oversize an 8 mm weld nut by more than 10 mm.

5. Obtain the appropriate oversized screw.

6. Install the attaching screw(s) to the component.

7. Tighten the attaching screws to specification. For additional information, refer to Specifications in this section.

Front Impact Severity Sensor

 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

⚠ WARNING: Vehicle sensor orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and correctly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

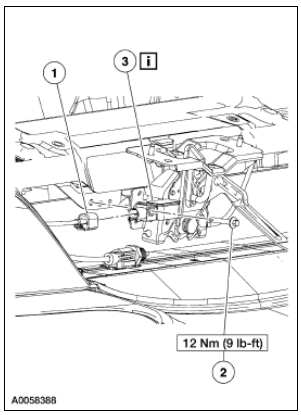
3. Remove the components in the order indicated in the following illustration and table.

4. ⚠ **WARNING: The tightening torque of the air bag front impact severity sensor retaining bolt is critical for correct system operation.**

   NOTE: Make sure the negative battery cable is still disconnected before continuing with the installation portion of this procedure.

   NOTE: Make sure the mounting bracket and front impact severity sensor mating surfaces are clean and free or foreign material.

   To install, reverse the removal procedure.



Item	Part Number	Description
1	14290	Connector
2	W707305-S	Front impact severity sensor bolt
3	14B006	Front impact severity sensor Installation Note

5. Connect the battery ground cable. For additional information, refer to Section 414-00 .

6. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

7. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

8. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

9. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

Item 3: Front Impact Severity Sensor Installation Note

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

1. Align the locator tabs of the front impact severity sensor to the openings in the mounting bracket sheet metal.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

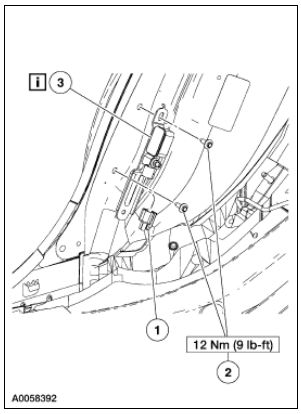
3. Remove the rear seat bolster on the side with the affected C-pillar side impact sensor. For additional information, refer to Rear Seat in the removal and installation portion of Section 501-10 .

4. Remove the components in the order indicated in the following illustration and table.

5. ⚠ **WARNING: The tightening torque of the air bag side impact sensor retaining bolts is critical for correct system operation.**

   NOTE: Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   To install, reverse the removal procedure.



Item	Part Number	Description
1	14A005	Connector
2	W707722-S	Side impact sensor bolts
3	14B345	Side impact sensor Installation Note

6. Connect the battery ground cable. For additional information, refer to Section 414-00 .

7. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt

Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

8. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

9. Install the rear seat bolster on the side with the affected C-pillar side impact sensor. For additional information, refer to Rear Seat in the removal and installation portion of Section 501-10 .

10. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

11. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

12. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Item 3: Side Impact Sensor Installation Note

1. Align the locator tab of the second row side impact sensor mounting bracket to the opening in the C-pillar sheet metal.

Restraints Control Module (RCM) Printable View (320 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

⚠ WARNING: The restraints control module (RCM) orientation is critical for correct air bag supplemental restraint system (SRS) operation. If a vehicle equipped with an SRS system has been involved in a collision in which the center tunnel area has been damaged, inspect the mounting and bracket for deformation. If damaged, the RCM must be replaced whether or not the air bags have deployed. In addition, make sure the area of the RCM mounting is restored to its original condition.

⚠ WARNING: Vehicle sensor orientation is critical for correct system operation. If a vehicle equipped with an air bag supplemental restraint system (SRS) is involved in a collision, inspect the sensor mounting bracket and wiring pigtail for deformation. Replace and correctly position the sensor or any other damaged supplemental restraint system (SRS) components whether or not the air bag is deployed.

⚠ CAUTION: Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage can result.

NOTE: When installing a new restraints control module (RCM), always make sure the correct RCM is being installed. If an incorrect RCM is installed, erroneous DTCs will result.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

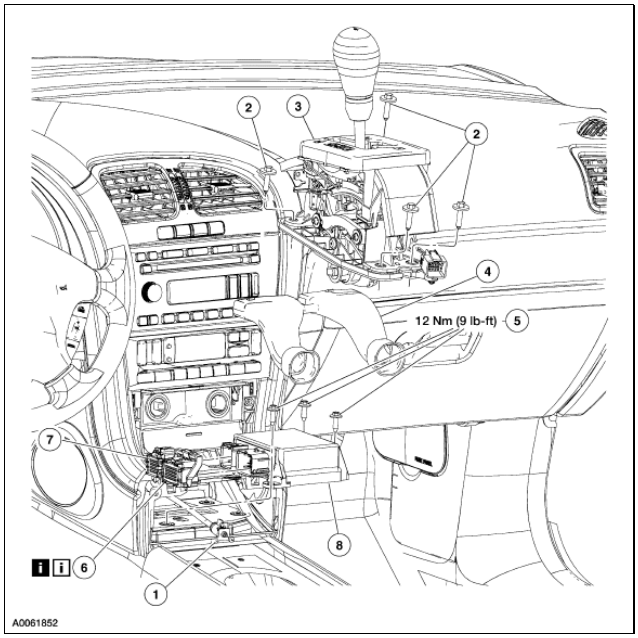
3. Remove the floor console. For additional information, refer to Section 501-01 .

4. Remove the components in the order indicated in the following illustration and table.

5. ⚠ **WARNING: The tightening torque of the air bag restraints control module (RCM) retaining bolts is critical for correct system operation.**

   NOTE: Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   To install, reverse the removal procedure.



Item	Part Number	Description
1	3F719	Shifter interlock cable (separate from the shifter)
2	W705638-S	Bolts
3	7210	Shifter assembly (position the shifter back)
4	19E714	Lower A/C connector duct
5	W707722-S	Bolts
6	14A005	Large electrical connector Removal Note
6	14A464	Large electrical connector Installation Note
7	14A005	Small electrical connector
8	14B321	Restraints control module (RCM)

6. Connect the battery ground cable. For additional information, refer to Section 414-00 .

7. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

8. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

9. Install the floor console. For additional information, refer to Section 501-01 .

10. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

11. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

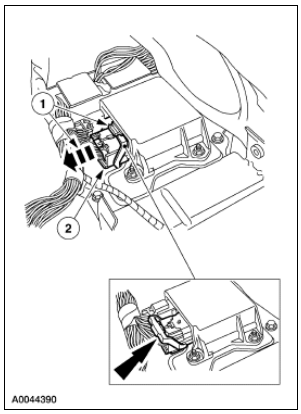
    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

Item 6: Large Electrical Connector Removal Note

1. **NOTE:** The instrument panel has been removed for clarity.

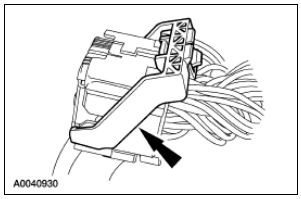
   Disconnect the large restraints control module (RCM) electrical connector.

   1. Pinch the thumb tab and pivot the connector position assurance lever all the way back until it stops.
   2. Pull out and disconnect the RCM electrical connector.



Item 6: Large Electrical Connector Installation Note

1. Make sure the connector position assurance lever is in the full release position before attempting to connect the connector.



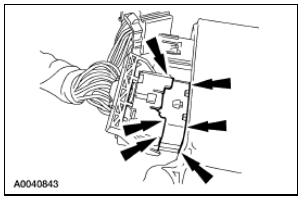
2. ⚠ **CAUTION: Putting the large RCM electrical connector into the RCM on an angle can cause bad electrical connections and damage components.**

   NOTE: The instrument panel has been removed for clarity.

   Position the large RCM electrical connector into the RCM.

   - ⚠ **CAUTION: Do not push the connector on to where the lever pivots and seats itself. Light pressure is needed to get the connector into position on the RCM before using the lever to fully seat the connector.**

     With the large RCM electrical connector uniformly aligned to the RCM, lightly push in until a subtle audible click is heard and a slight resistance is felt.



3. **NOTE:** The instrument panel has been removed for clarity.

   Connect the large RCM electrical connector.

   - Using the connector position assurance lever, pivot it toward the RCM, drawing the connector into the RCM.
     - ♦ Make sure the thumb tab is engaged to the retainer on the RCM and locked in place.

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. Refer to Section 414-00 for additional information.

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   NOTE: Within the Supplemental Restraint System (SRS) Deactivation and Reactivation procedure the driver air bag module is removed and restraint system diagnostic tools are attached at the appropriate locations.

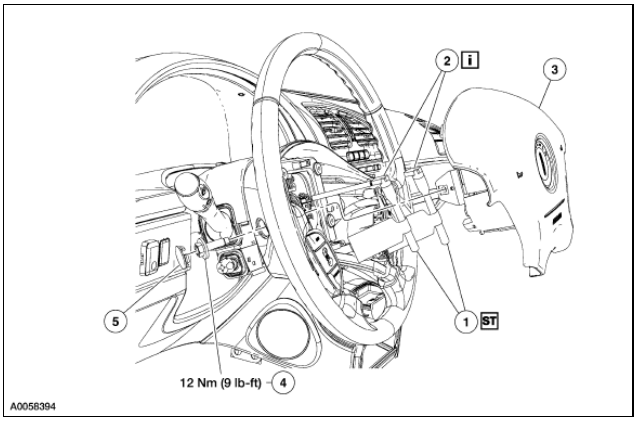
   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

Installation

⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.**

1. **NOTE:** Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description

1	418-F395	Restraint system diagnostic tools
2	14A664	Connectors Installation Note
3	54043B13	Driver air bag module
4	W705342-S	Bolts (2 req'd)
5	3L518	Steering wheel back cover plugs (2 req'd)

2. Connect the battery ground cable. For additional information, refer to Section 414-00 .

3. With the restraint system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

4. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

5. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

6. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

Item 2: Connectors Installation Note

1. ⚠ **CAUTION: The clockspring electrical connectors are unique and cannot be reversed when connected to the driver air bag module. Match the electrical connector key to the keyway in the driver air bag module. Do not force the electrical connectors into the driver air bag module.**

Match the electrical connector key to the keyway in the driver air bag module and connect the electrical connectors.

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and deployment door pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the deployment door face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged deployment doors must be replaced, not repainted.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

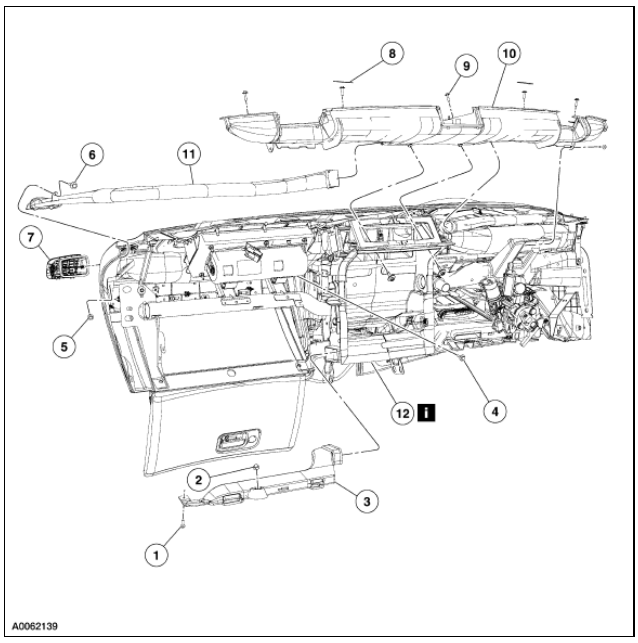
2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

3. Remove the instrument panel. For additional information, refer to Section 501-01 .

4. **NOTE:** Within the Supplemental Restraint System (SRS) Deactivation and Reactivation procedure the passenger air bag module is disconnected and a restraint system diagnostic tool is attached at the appropriate location.

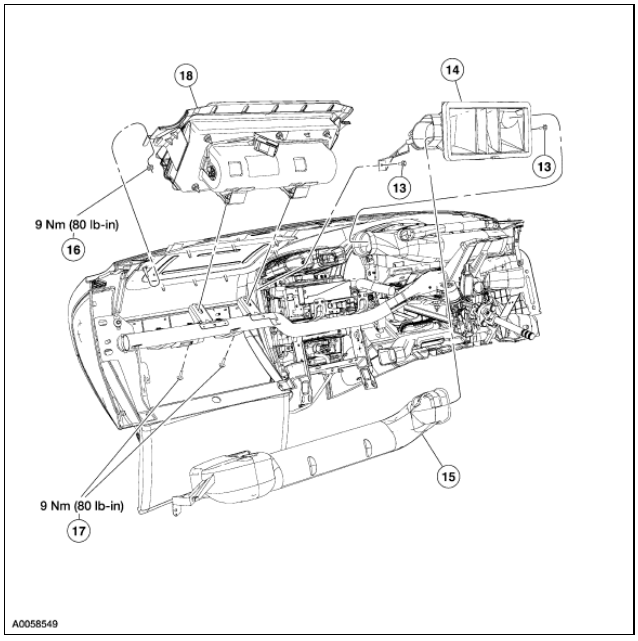
   Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W705314-S	Screw
2		Light socket
3		Heater duct
4	W704874-S	Screw
5	W704874-S	Screw
6	W704874-S	Screw
7	19893	A/C register
8		Insulator tape (2 req'd)
9	W705314-S	Screws (8 req'd)
10	18490	Defrost nozzle
11	19E630	Demister duct
12	19C698	A/C plenum chamber Removal Note

5. **NOTE:** Within the Supplemental Restraint System (SRS) Deactivation and Reactivation procedure the passenger air bag module is disconnected and a restraint system diagnostic tool is attached at the appropriate location.

   Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.

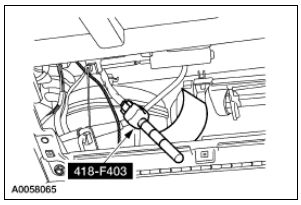


Item	Part Number	Description
13	W704874-S	Screw
14	19B680B	A/C junction duct assembly
15	19B680	A/C register duct
16		Nuts (8 req'd)
17		Bolt
18	54044A74	Passenger air bag module

6. To install, reverse the removal procedure.

7. Install the instrument panel. For additional information, refer to Section 501-01 .

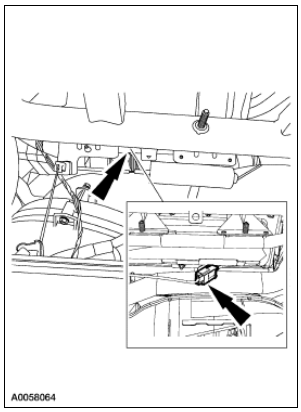
8. Remove the restraint system diagnostic tool from the vehicle harness side of the passenger air bag module electrical connector.



9. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

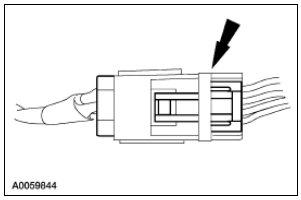
   NOTE: The passenger air bag module electrical connector is located in front of the cross-car beam attached by a pin-type retainer to a bracket on the back of the passenger air bag module.

   Locate the passenger air bag module electrical connector.



10. **NOTE:** The inset view of the illustration is looking up into the instrument panel from underneath.

    Connect the passenger air bag module electrical connector.



11. Install the glove compartment. For additional information, refer to Section 501-01 .

12. Connect the battery ground cable. For additional information, refer to Section 414-00 .

13. With the restraint system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

14. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel,**

console, door latches, strikers, seats and hood latches.

The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

15. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

16. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

Item 12: A/C Plenum Chamber Removal Note

1. Remove the A/C plenum chamber. For additional information, refer to Section 412-00 .

Side Air Bag Module

Printable View (253 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live side air bag module with the air bag and tear seam pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live side air bag module down on the cover tear seam. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Side air bag modules with damaged covers must be replaced.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: If a seat equipped with a seat mounted side air bag and/or a safety belt pretensioner (if equipped) system is being serviced, **the air bag system must be deactivated.**

NOTE: Restraint system diagnostic tools **MUST** be installed under the seats in the seat side air bag (if equipped) and safety belt pretensioner (if equipped) to floor connectors.

NOTE: Diagnostics or repairs are not to be carried out on a seat equipped with a seat side air bag with the seat in the vehicle. Prior to attempting to diagnose or repair a seat concern when equipped with a seat side air bag, the seat must be removed from the vehicle and the restraint system diagnostic tools must be installed in the seat side air bag electrical connectors. **The restraint system diagnostic tools must be removed prior to operating the vehicle over the road.**

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: If a side air bag deployment took place a new seat back pad, trim cover, and side air bag module must be installed. Install a new seat back frame if necessary.

NOTE: When installing a new side air bag after deployment, refer to Section 501-10 for additional information concerning the installation of a new side air bag.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

NOTE: The driver seat is shown, the passenger seat is similar.

NOTE: A seat side air bag module is shown, a seat side thorax air bag module is similar. For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.

NOTE: A seat with climate control and power lumbar is shown, all others are similar.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Remove the seat on the side with the affected side air bag module. For additional information, refer to Section 501-10 .

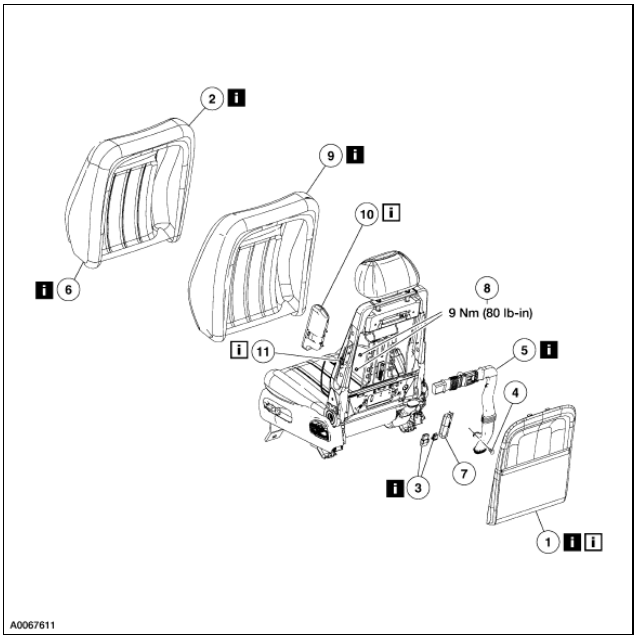
4. Remove the components in the order indicated in the following illustration and table.

5. **⚠ WARNING: Front seat back trim covers installed on seats equipped with side air bags cannot be repaired, they are to be replaced (cleaning is permissible).**

   ⚠ CAUTION: When removing the seat back trim panel, be careful not to damage the J-hooks. If the seat back trim panel J-hooks are damaged, install a new seat back trim panel.

   NOTE: If installing a new side air bag module, use new retaining nuts. If the same side air bag module is to be reused then reuse the side air bag module nuts.

   To install, reverse the removal procedure.



Item	Part Number	Description
1	60762	Seat back trim panel Removal Note
1	60762	Seat back trim panel Installation Note
2	64416	Seat back trim cover Removal Note
3	14C693	Connectors (2 req'd) Removal Note
4	807452	Pin-type retainer (if equipped)
5	18D512	Climate control duct Removal Note
6	64416	Seat back trim cover Removal Note
7	009036	Nut cover
8	N620480-S	Nuts (2 req'd)
9	64810	Seat back pad Removal Note
10	11791	Side air bag module Installation Note

11	14K155	Connector Installation Note

6. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   NOTE: Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   Install the seat on the side with the affected side air bag. For additional information, refer to Section 501-10 .

7. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

8. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

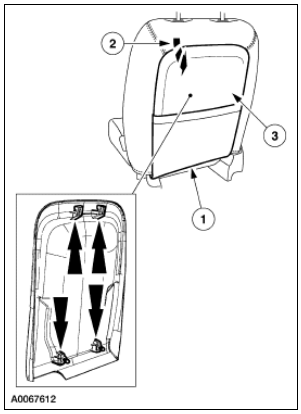
9. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

Item 1: Seat Back Trim Panel Removal Note

1. ⚠ **CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remain in the seat frame, replace the panel.**

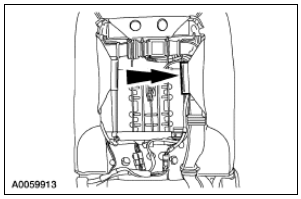
   Remove the seat back trim panel.

   1. Holding the panel at bottom center, pull rearward (not up) until both lower attachments are disengaged.
   2. While pushing in at the top of the panel, slide the panel down to disengage the upper J-hooks.
   3. Remove the panel.
      - ♦ Inspect the lower panel attachments. If either pin-type retainer remain on the seat frame, replace the panel.
      - ♦ Inspect the upper panel attachments. If either J-hook is cracked or damaged, replace the panel.
      - ♦ Before installing the panel, replace both pin-type retainers.



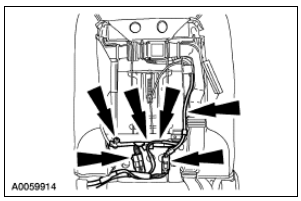
Item 2: Seat Back Trim Cover Removal Note

1. If equipped with climate control, release the trim cover J-clip over the climate control duct.



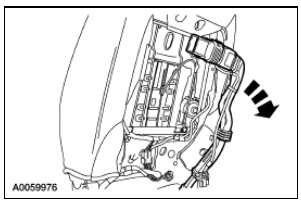
Item 3: Connector Removal Note

1. Disconnect the electrical connectors and separate all wire harness pin-type retainers from the lower seat back frame.



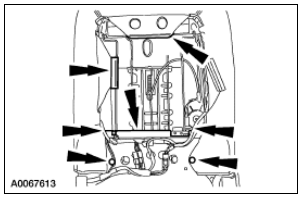
Item 5: Climate Control Duct Removal Note

1. If equipped, position the climate control duct away from the seat.



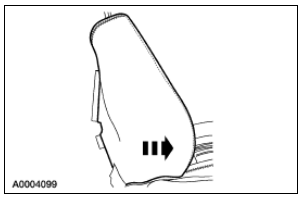
Item 6: Seat Back Trim Cover Removal Note

1. Detach all the seat back trim cover J-clips and the pin-type retainers.



Item 9: Seat Back Pad Removal Note

1. With one hand on the side air bag module, position the seat back trim cover and pad forward enough to access the side air bag module.



Item 11: Connector Installation Note

1. **⚠ CAUTION: Make sure the correct seat mounted air bag module is being used. The seat side air bag module and the seat side thorax air bag module electrical connectors are unique and will not interchange. Match the electrical connector key to the keyway in the air bag module. Do not alter or force the electrical connector into the seat mounted air bag module. For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Description and Operation portion of this section.**

   Match the electrical connector key to the keyway in the seat side air bag module or the seat side thorax air bag module and connect the electrical connector.

Item 10: Side Air Bag Module Installation Note

1. **⚠ WARNING: Inspect the mounting surfaces of the side air bag module for any foreign objects before installing the side air bag module. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   ⚠ WARNING: Inspect the side air bag deployment chute and the side air bag cavity in the seat back pad for any foreign objects. If any foreign objects are found remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: Before installing the side air bag module into the deployment chute, check it for damage and foreign objects. Install a new air bag module if it is damaged. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: If the air bag cover has separated or the air bag material has been exposed, install a new side air bag module. Do not attempt to repair the air bag module. Failure to do so may result in personal injury, in the event of an air bag deployment.

   ⚠ WARNING: Check the side air bag deployment chute for damage. The deployment chute must not be repaired. If there is any damage to the deployment chute, the seat back trim cover and deployment chute must be installed new as a unit.

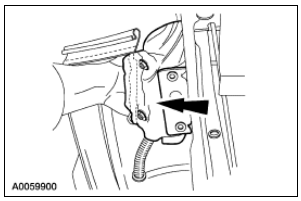
   ⚠ WARNING: If the air bag deployment chute is not correctly positioned, the side air bag may not deploy correctly.

   ⚠ WARNING: Inspect the mounting surfaces of the deployment chute and the seat back frame mounting bracket for any foreign objects, before installing the side air bag module/deployment chute assembly. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.

NOTE: The alignment pin will only allow the side air bag module to be installed to the seat back mounting bracket one way.

Position the side air bag module into the deployment chute.

- Position the side air bag module into the deployment chute with the alignment pin offset to the top and the electrical connector to the bottom of the seat back. This will position the alignment pin correctly when the side air bag module and deployment chute are mounted to the seat back frame mounting bracket.
- The side air bag module mounting studs must come through the deployment chute stud openings.



Item 1: Seat Back Trim Panel Installation Note

1. ⚠ **CAUTION: Inspect the seat back trim panel for damage. If the J-hooks are damaged or the pin-type retainers remain in the seat frame, replace the panel.**

   Align the seat back trim panel J-hooks to the seat back frame at the top and engage the pin-type retainers at the bottom of the seat back frame.

   - Inspect the lower panel attachments. If either pin-type retainer remain in the seat frame, replace the panel.
   - Inspect the upper panel attachments. If either J-hook is cracked or damaged, replace the panel.
   - Before installing the panel, replace both pin-type retainers.

Side Air Curtain Module

 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: To reduce the risk of personal injury from an accidental deployment, always carry or place a live side air curtain module with the curtain and tear seam pointed away from your body. Failure to do so can result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: After deployment, the surface of the curtain can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connector on the side air curtain module. Doing so can result in side air curtain deployment which can result in personal injury.

⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A, B, and C pillar upper trim panels and attaching hardware must be installed new along with any other damaged components and hardware. Failure to do so can result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: Vehicles equipped with side air curtain modules require a specific headliner. When installing a new headliner on a vehicle equipped with side air curtain modules, make sure a headliner for side air curtain modules is being used. The word "AIRBAG" will appear on the headliner where it meets each B-pillar trim panel. Failure to do so can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: Before installing a side air curtain module, inspect the roofline for any damage. If necessary, the sheet metal must be reworked to its original condition and structural integrity. All fasteners must be replaced and any foreign objects removed. Failure to do so may result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: The side air curtain must be installed in the vehicle using new torque-prevailing type U-nuts, part number W709759 or W520822. Use of this U-nut is mandatory so as to reduce the risk of loss of fastener effectiveness. Failure to follow these instructions may result in personal injury in the event of a side air curtain deployment.

⚠ WARNING: Inspect the side air curtain module before installation. If the side air curtain module is damaged or the cover has separated and the curtain material has been exposed, a new side air curtain module must be installed. Do not attempt to repair the side air curtain module. Failure to follow these instructions can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: To reduce the risk of injury, do not obstruct or place objects in the deployment path of the side air curtain module. Failure to follow these instructions can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: Never put any type of fastener or tie strap around any part of the side air curtain module or interior trim panel. This will prevent the side air curtain module from deploying correctly. Failure to do so can result in personal injury in the event of a side air curtain module deployment.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: The driver side is shown, the passenger side is similar.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

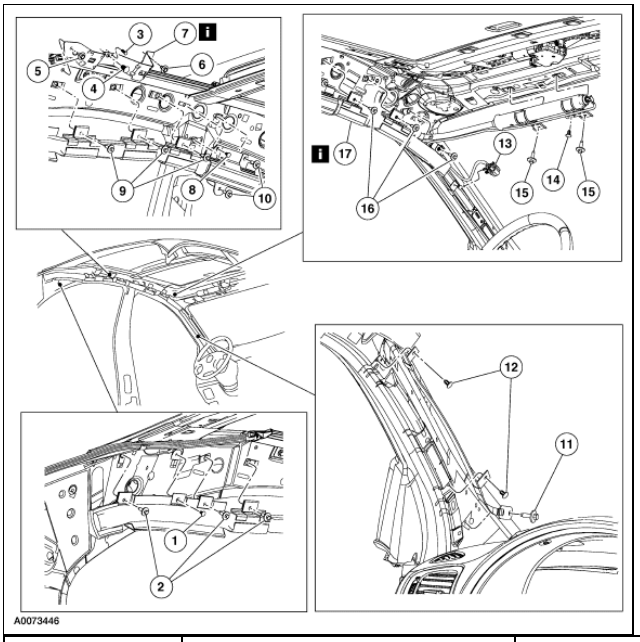
2. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

3. **⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A, B, and C pillar upper trim panels and attaching hardware must be replaced along with any other damaged components and hardware. Failure to do so may result in personal injury in the event of a side air curtain deployment.**

   Remove the headliner. For additional information, refer to Section 501-01 .

4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W705635-S	Pin-type retainer
2	W503924-S	Screws (2 req'd)
3	part of 54312A52	Pin-type retainer
4	part of 54312A52	Pin-type retainer

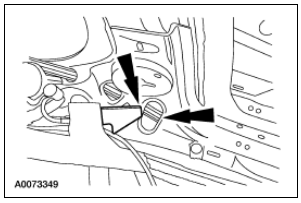
		Side air curtain Removal Note

Item 7: Bracket Removal Note

1. If the side air curtain is being serviced on the passenger side, remove the front row bracket also.

Item 17: Side Air Curtain Removal Note

1. Release the side air curtain alignment ear located through the sheet metal opening at the top of the A-pillar and remove the side air curtain.



Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.

1. **⚠ WARNING: The side air curtain must be installed in the vehicle using new torque-prevailing type U-nuts, part number W709759 or W520822. Use of this U-nut is mandatory so as to reduce the risk of loss of fastener effectiveness. Failure to follow these instructions may result in personal injury in the event of a side air curtain deployment.**

   Remove all U-nut fasteners and install new.

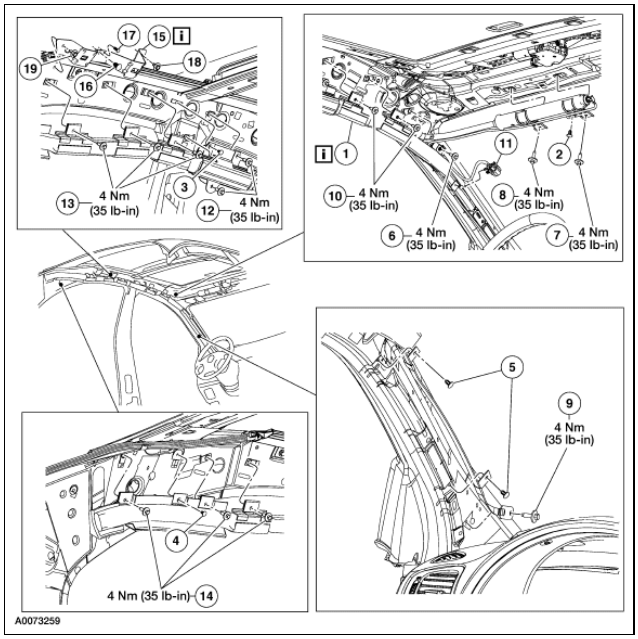
2. **⚠ WARNING: Before installing the side air curtain module, inspect the roofline for any damage. If necessary, the sheet metal must be reworked to its original condition and structural integrity. Install new fasteners and remove any foreign objects. Failure to do so may result in personal injury in the event of a side air curtain deployment.**

   ⚠ WARNING: Before installing the side air curtain module, if the module is damaged or the cover has separated or the side air curtain material has been exposed, install a new side air curtain module. Do not attempt to repair the side air curtain. Failure to follow these instructions could result in personal injury in the event of a side air curtain deployment.

   ⚠ WARNING: Never put any type of fastener or tie strap around any part of the side air curtain module or interior trim panel. This will prevent the side air curtain module from deploying correctly. Failure to do so can result in personal injury in the event of a side air curtain module deployment.

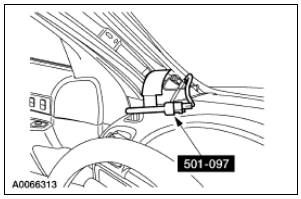
   NOTE: Make sure the battery negative cable is still disconnected before proceeding with the installation portion of this procedure.

   Install the components in the order indicated in the following illustration and table.

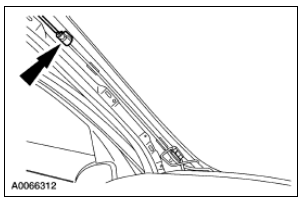


Item	Part Number	Description
1	54042D95	Side air curtain Installation Note
2	W705635	Pin-type retainer
3	W705635	Pin-type retainer
4	W705635	Pin-type retainer
5	W705635	Pin-type retainers
6	W503924-S	Screws
7	W503924-S	Screws
8	W503924-S	Screws
9	W503924-S	Screws
10	W503924-S	Screws
11	14A005	Connector
12	W503924-S	Screws
13	W503924-S	Screws
14	W503924-S	Screws
15	54312A53	Bracket Installation Note
16		Pin-type retainer (part of 54312A52)
17		Pin-type retainer (part of 54312A52)
18		Screw
19		Screw

3. Remove the restraint system diagnostic tool from the side air curtain electrical connector.



4. Connect the side air curtain module electrical connector.



5. Connect the battery ground cable. For additional information, refer to Section 414-00 .

6. With the restraint system diagnostic tools still installed at the remaining deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

7. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

8. **⚠ WARNING: Anytime the side air curtain has deployed, the headliner, and all A, B, and C pillar upper trim panels and attaching hardware must be replaced along with any other damaged components and hardware. Failure to do so may result in personal injury in the event of a side air curtain deployment.**

   Install the headliner. For additional information, refer to Section 501-01 .

9. **⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

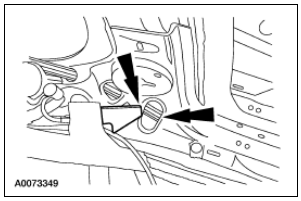
   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

10. **⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

Item 1: Side Air Curtain Installation Note

1. Align the side air curtain locating ear into the sheet metal opeining at the top of the A-pillar.



Item 15: Bracket Installation Note

1. If the side air curtain is being serviced on the passenger side, install the front row bracket also.

Clockspring

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Carry a live air bag module with the air bag and trim cover pointed away from your body. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Do not set a live air bag module down with the trim cover face down. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: After deployment, the air bag surface can contain deposits of sodium hydroxide, a product of the gas generant combustion that is irritating to the skin. Wash your hands with soap and water afterwards.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: Air bag modules with discolored or damaged trim covers must be replaced, not repainted.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Tilt the steering column all the way down and extend it all the way out.

2. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

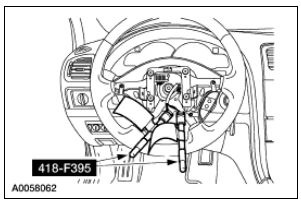
   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

4. Make sure the road wheels are in the straight-ahead position.

5. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.

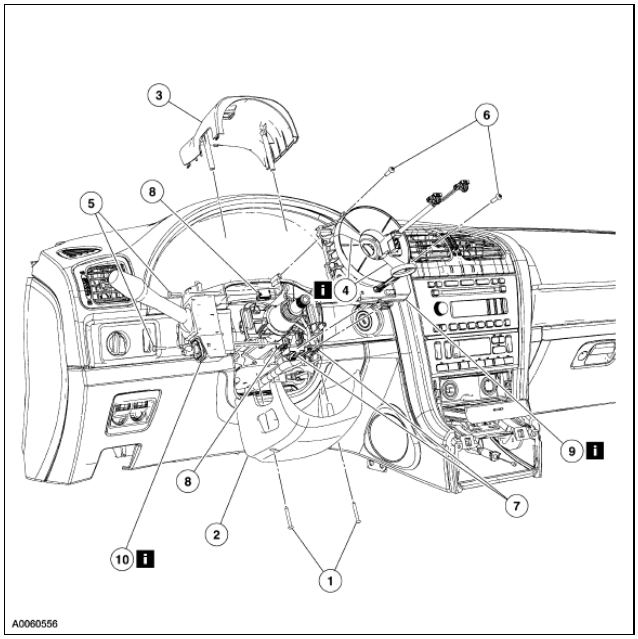


6. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the steering wheel removal and installation procedure.**

   Remove the steering wheel. For additional information, refer to Section 211-00 .

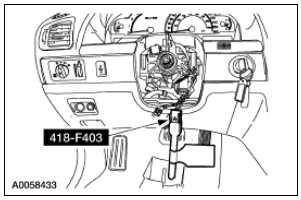
7. **NOTE:** If the clockspring is to be reinstalled, do not allow the clockspring to turn from its removal position.

   Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W504246-S	Screws
2	3530	Lower steering column shroud
3	3530	Upper steering column shroud
4		Tape Removal Note
5	W390345-S	Screws
6	W390345-S	Screw
7	14401	Connector
8	14401	Connector
9	14A664	Clockspring Removal Note
10	13K359	Multifunction switch Removal Note

8. Attach the restraint system diagnostic tool to the vehicle harness side of the clockspring electrical connector.



9. Connect the battery ground cable. For additional information, refer to Section 414-00 .

10. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

11. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to

Section 414-00 .

Item 4: Tape Removal Note

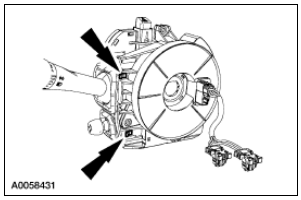
1. If installing the same clockspring, apply two strips of masking tape across the clockspring to prevent accidental rotation when the clockspring is removed.

Item 9: Clockspring Removal Note

1. Remove the clockspring and the multifunction switch as an assembly.

Item 10: Multifunction Switch Removal Note

1. Release the tabs and slide the multifunction switch out of the clockspring.



Installation

⚠ WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions and notes at the beginning of the removal procedure.

1. **⚠ WARNING: Incorrect centralization may result in premature component failure. If in doubt when centralizing the clockspring, repeat the centralizing procedure. Failure to follow this instruction may result in personal injury.**

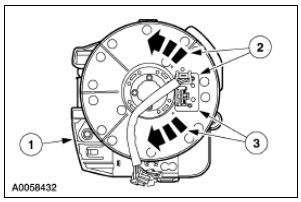
   ⚠ CAUTION: Make sure the road wheels are in the straight-ahead position.

   NOTE: A new clockspring is supplied in a centralized position and held there with a key.

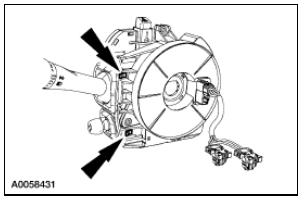
   If the clockspring has rotated out of center, follow these steps to center the clockspring.

   1. Hold the clockspring outer housing stationary.
   2. **⚠ CAUTION: Overturning will destroy the clockspring. The internal ribbon wire acts as the stop and can be broken from its internal connection.**

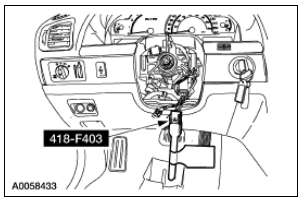
      While turning the rotor counterclockwise, carefully feel for the ribbon wire to run out of length and feel for a slight resistance. Stop turning at this point.
   3. Turn the clockspring clockwise approximately 2-1/2 turns. This is the center point of the clockspring.
   - Do not allow the rotor to turn from this position.



2. Align the multifunction switch to the clockspring and slide the two together.
   - Make sure the tabs are interlocked.

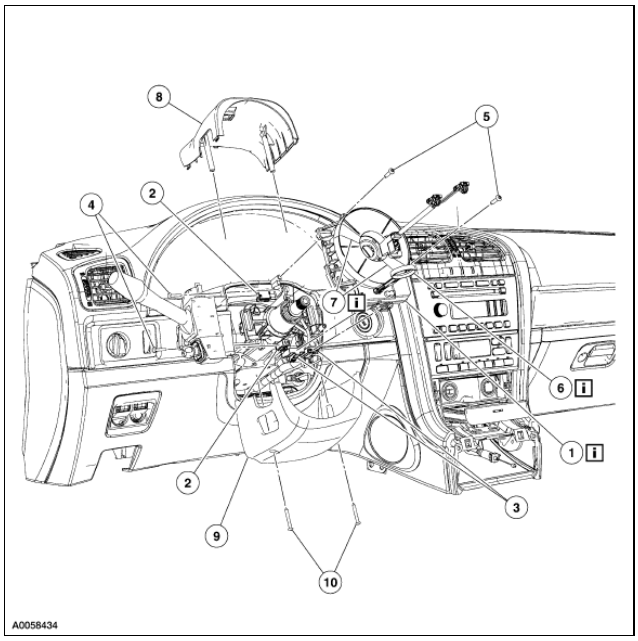


3. Remove the restraint system diagnostic tool from the vehicle harness side of the clockspring electrical connector.



4. **NOTE:** Make sure the negative battery cable is still disconnected before continuing with the installation portion of this procedure.

   Install the components in the order indicated in the following illustration and table.



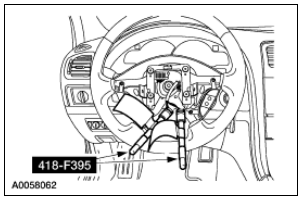
Item	Part Number	Description
1	14A664	Clockspring Installation Note
2	14401	Connectors (2 req'd)
3	14401	Connectors
4	W390345-S	Screws
5	W390345-S	Screw
6	14A664	Retaining pin Installation Note
7		Tape Installation Note
8	3530	Upper steering column shroud

9	3530	Lower steering column shroud
10	W504246-S	Screws

5. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the steering wheel removal and installation procedure.**

   Install the steering wheel. **Do not install the driver air bag module at this time.** For additional information, refer to Section 211-00 .

6. Attach the restraint system diagnostic tools to the clockspring electrical connectors at the top of the steering column.

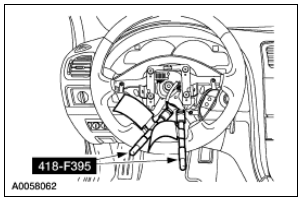


7. Connect the battery ground cable. For additional information, refer to Section 414-00 .

8. With the restraint system diagnostic tools installed at all deployable devices, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

9. Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-00 .

10. Remove the restraint system diagnostic tools from the clockspring electrical connectors at the top of the steering column.



11. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

12. Connect the battery ground cable. For additional information, refer to Section 414-00 .

13. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

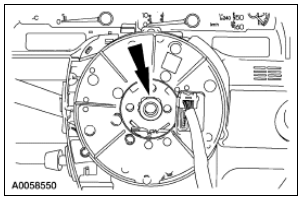
    With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental

Restraint System (SRS) in the Diagnosis and Testing portion of this section.

Item 1: Clockspring Installation Note

1. **NOTE:** Slight turning of the clockspring rotor is allowable for alignment purposes to the steering column.

   With the flat of the clockspring aligned to the flat of the steering column, slide the clockspring onto the steering column.



Item 6: Retaining Pin Installation Note

1. For vehicles receiving a new clockspring, remove the retaining pin.

Item 7: Tape Installation Note

1. For vehicles reusing the clockspring that was removed, remove the tape.

Occupant Classification Sensor Printable View (489 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Removal

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

⚠ CAUTION: If installing only a new front passenger seat cushion trim cover, the occupant classification sensor must be rezeroed.

NOTE: Occupant classification sensor (OCS) system components (seat cushion foam pad, bladder with pressure sensor and electronic control unit) are calibrated to each other and are serviced as an assembly. The OCS system components are not to be installed separately. If a new OCS system, OCS system component or seat cushion foam pad are needed, a new OCS system service kit (seat cushion foam pad, bladder with pressure sensor and electronic control unit) must be installed as an assembly.

NOTE: To identify between a production OCS system and a service OCS system (OCS service kit) inspect the ECU electrical connector. A production OCS system allows the disconnect of the ECU electrical

connector. A service OCS system (OCS service kit) has the ECU electrical connector glued to the ECU, it cannot and should not be disconnected or altered.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. ⚠ **WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel, console, door latches, strikers, seats and hood latches.**

   The first row side impact sensors are located at or near the base of the B-pillars.

   The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

   To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

   Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

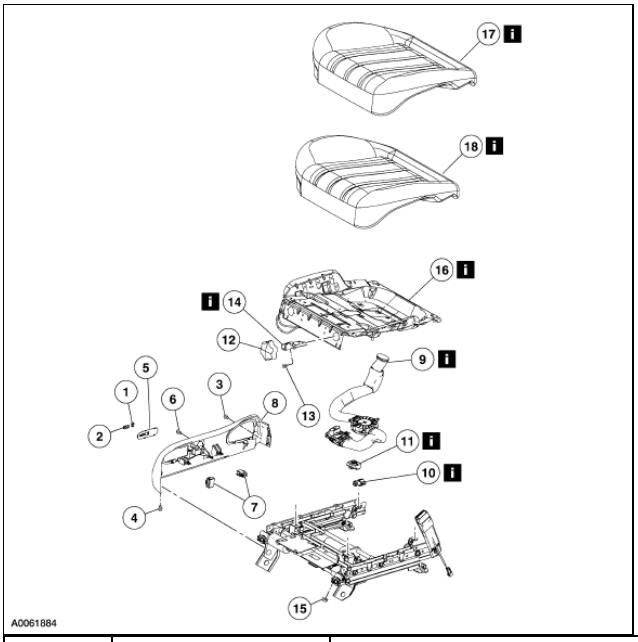
2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Remove the passenger seat. For additional information, refer to Section 501-10 .

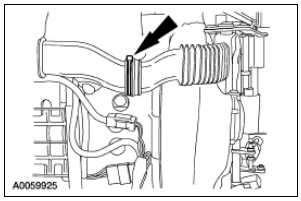
4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14711	Power seat switch knob
2	14711	Power seat switch knob
3	56902-S	Side shield screw
4	56902-S	Side shield screw
5	14A706	Power seat switch bezel
6	56902-S	Side shield screw
7	14A699	Power seat switch connectors (2 req'd)
8	62186	Side shield
9	19N550	Climate control duct (if equipped) Removal Note
10	14A699	Connectors (2 req'd) Removal Note
11	14A699	Connectors (3 req'd) Removal Note
12	C610A76	Manual lumbar knob (if equipped)
13		Screws (2 req'd)
14	61203	Manual lumbar adjuster (if equipped) Removal Note
15	N620482-S	Power seat track nuts (4 req'd)
16	63100	Seat cushion assembly Removal Note
17	62900	Seat cushion trim cover Removal Note
18	603B02	Occupant classification sensor (OCS) Removal Note

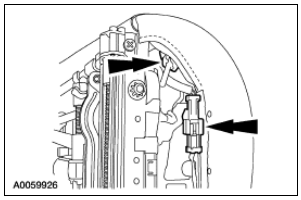
Item 9: Climate Control Duct Removal Note

1. Separate the climate control duct.



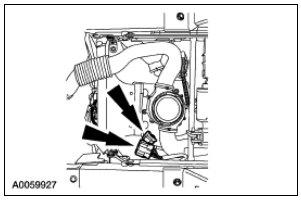
Item 10: Connector Removal Note

1. Disconnect the two electrical connectors.

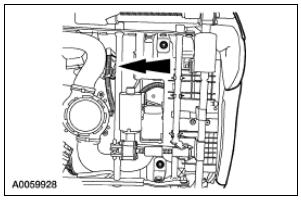


Item 11: Connector Removal Note

1. Separate the connectors from the seat cushion frame.

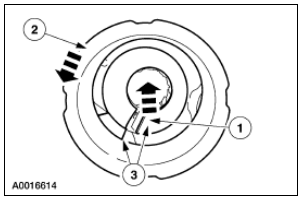


2. Separate and disconnect the blower motor electrical connector.



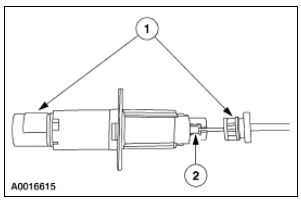
Item 14: Manual Lumbar Adjuster Removal Note

1. Release the manual lumbar adjustment screw.
    1. From inside the lumbar adjustment mechanism, push the screw stop in toward the center.
    2. While pushing the screw stop toward the center, rotate the lumbar adjustment mechanism counterclockwise.
    3. The screw stop will pass clear of the internal stop, releasing the manual lumbar adjustment screw.



2. Remove the manual lumbar cable.
    1. Continue turning the manual lumbar mechanism counterclockwise until the cable support comes out.

2. Push the screw out enough to remove the cable end.



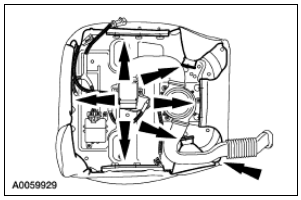
3. Route the manual lumbar adjuster cable out from the seat cushion frame.

Item 16: Seat Cushion Assembly Removal Note

1. Remove the seat cushion frame, trim cover, foam pad and occupant classification sensor as an assembly.

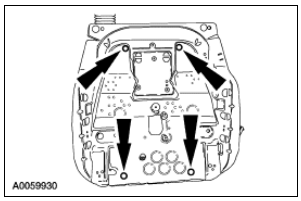
Item 17: Seat Cushion Trim Cover Removal Note

1. Separate the seat cushion trim cover retainers.
    - For vehicles with an original equipment occupant classification sensor (OCS), remove the seat cushion trim cover retainers and separate the seat cushion pad and trim cover from the seat cushion frame.
    - For vehicles with a service part OCS, remove the seat cushion trim cover retainers from the seat cushion frame.

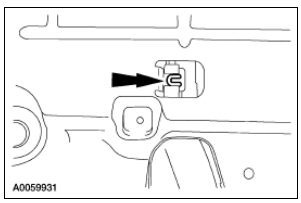


Item 18: Occupant Classification Sensor (OCS) Removal Note

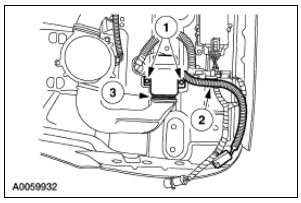
1. For vehicles with an original equipment occupant classification sensor (OCS), remove the pin-type retainers.



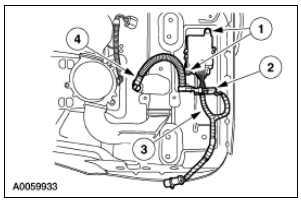
2. Releasing the pressure sensor retainer.
    - For vehicles with an original equipment OCS, fold the bladder away and pry up, releasing the pressure sensor retainer.
    - For vehicles with a service part OCS, fold the seat cushion pad and bladder away and pry up, releasing the pressure sensor retainer.



3. Remove the climate control components.
    1. Remove the screws.
    2. Separate the wire harness from the seat cushion pan.
    3. Separate the climate control duct and remove the assembly.



4. Remove the OCS.
    1. Remove the screws.
    2. Separate the pressure sensor.
    3. Separate the wire harness from the seat cushion pan.
    4. Route the OCS components back through the seat cushion pan and remove the assembly.



5. ⚠ **CAUTION: If installing only a new front passenger seat cushion trim cover, the occupant classification sensor must be rezeroed.**

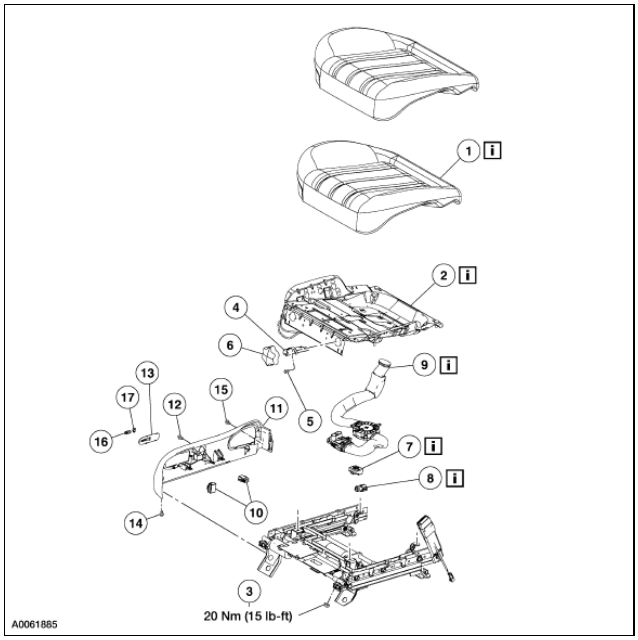
   Separate the trim cover from the seat cushion pad.

Installation

⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, and notes at the beginning of the removal procedure.**

1. **NOTE:** Make sure the battery ground cable is still disconnected before proceeding with the installation portion of this procedure.

   Install the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	603B02	Occupant classification sensor (OCS) Installation Note
2	63100	Seat cushion assembly Installation Note
3	N620482-S	Power seat track nuts (4 req'd)
4	61203	Manual lumbar adjuster (if equipped)
5		Screws (2 req'd)
6	C610A76	Manual lumbar knob (if equipped)
7	14A699	Connectors (3 req'd) Installation Note
8	14A699	Connectors (2 req'd) Installation Note
9	19N550	Climate control duct Installation Note
10	14A699	Connectors (2 req'd)
11	62186	Side shield
12	56902-S	Side shield screw
13	14A706	Power seat switch bezel
14	56902-S	Side shield screw
15	56902-S	Side shield screw
16	14711	Power seat switch knob
17	14711	Power seat switch knob

2. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   NOTE: Make sure the battery ground cable is still disconnected before proceeding with the installation portion of this procedure.

Install the passenger seat into the vehicle. Do not reactivate or prove out the system at this time. For additional information, refer to Section 501-10 .

3. ⚠ **CAUTION: The following precautions must be taken before rezeroing the OCS system:**

    - ♦ Make sure the OCS system components are connected and no faults are present.
    - ♦ Make sure the vehicle has not been exposed to temperatures below 6°C (42°F) or above 36°C (97°F) within four hours prior to the rezeroing process. If the vehicle has been exposed to temperatures outside the temperature limits (6-36°C [42-97°F]), the vehicle must be exposed and kept at a temperature within the limits for a minimum of four hours.
    - ♦ Make sure nothing is present on the passenger seat before rezeroing and nothing is placed on the seat during the rezeroing process.
    - ♦ Make sure a minimum five second time period has passed after cycling the ignition switch ON before the rezeroing process.

    NOTE: It is necessary to rezero the OCS system when a front passenger seat cushion is disassembled, a new trim cover installed, or an OCS service kit is installed. A scan tool is used to trigger the active command to carry out rezeroing of the OCS system.

    NOTE: When using a New Generation Star (NGS) tester, the OCS system rezero function is on the Ford Service Function (red) card. To rezero the OCS system:

    - select "SERVICE BAY FUNCTIONS"
    - select "RCM"
    - select "SYSTEM RESET"
    - select the vehicle from the menu
    - view the on-screen information then press "TRIGGER"

    The NGS screen will then display "OCS RESET: REZERO." Press "DONE" (button 8) to rezero the OCS system. The NGS will return to the vehicle menu once rezeroing of the OCS system is complete.

    NOTE: To rezero the OCS system using the Worldwide Diagnostic System (WDS):

    - select the "Toolbox" icon
    - select "Body" from the menu
    - select "Restraints" from the menu
    - select "Seat Weight Sensor ReZero"

    After selecting "Seat Weight Sensor ReZero", follow the on-screen prompts to carry out rezeroing of the OCS system.

    NOTE: If the first attempt to rezero the OCS system is unsuccessful, a second attempt must be made.

    Rezero the occupant classification sensor.

    - With the front passenger seat empty, use a scan tool to trigger the active command and rezero the occupant classification sensor.

4. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

    Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

5. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove**

from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

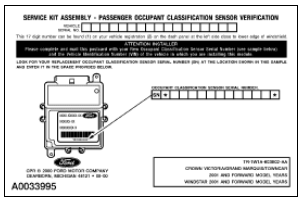
With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

6. Check the active restraint system for correct operation. For additional information, refer to Section 501-20A .

7. **NOTE:** When installing a new occupant classification sensor, a prepaid return postcard is provided with the new occupant classification sensor. The serial number for the new part and the vehicle identification number (VIN) must be recorded and sent to Ford Motor Company.

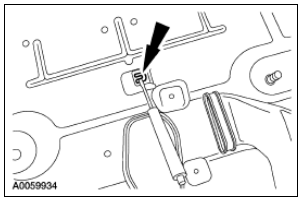
   Fill out the necessary information on the occupant classification sensor traceability card and return it along with the complete inoperative occupant classification sensor to Ford Motor Company.

   - When returning the inoperative occupant classification sensor include: seat cushion foam pad, bladder, electronic control unit, pressure sensor (transducer), hose, electrical connectors and wire harness (service part occupant classification sensor only).



Item 1: Occupant Classification Sensor Installation Note

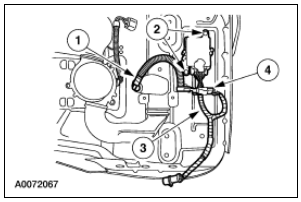
1. Bend the pressure sensor retaining tab back.



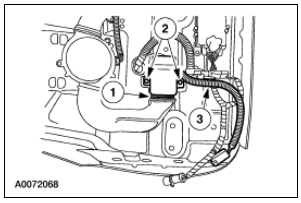
2. ⚠ **CAUTION: Inspect the occupant classification sensor assembly and seat cushion frame for any foreign objects before installing the occupant classification sensor assembly to the seat cushion frame. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

   Install the occupant classification sensor (OCS).

   1. Feed the OCS components back through the cushion pan opening.
   2. Position the electronic control unit and install the screws.
   3. Route the wire harness and install the pin-type retainers.
   4. Install the pressure sensor onto the bracket.

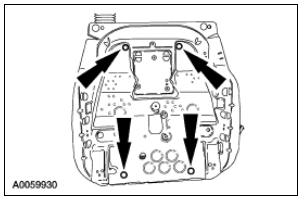


3. Install the climate control component.
    1. Position the climate control component into the duct and tie strap it in place.
    2. Install the screws.
    3. Route the wire harness and install the pin-type retainer to the seat cushion pan.



4. **⚠ CAUTION: Inspect the occupant classification sensor assembly and seat cushion frame for any foreign objects before installing the occupant classification sensor assembly to the seat cushion frame. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

    Vehicles having the original occupant classification sensor installed, position the bladder and install the pin-type retainers.



5. **⚠ CAUTION: Inspect the seat cushion pad and seat cushion trim cover for any foreign objects, before installing the seat trim cover to the seat cushion pad. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

    ⚠ CAUTION: If replacing only the front passenger seat cushion trim cover, the occupant classification sensor must be rezeroed.

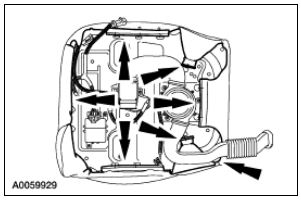
    Install the cushion trim cover to the cushion foam pad.

6. **⚠ CAUTION: Inspect the seat cushion frame and seat cushion pad for any foreign objects before installing the cushion pad and trim cover assembly to the seat cushion frame. If any foreign objects are found, remove them. Failure to do so may result in personal injury, in the event of an air bag deployment.**

    Attach the seat cushion trim cover retainers to the seat cushion frame.

    - For vehicles having a service part occupant classification sensor installed, position the seat cushion trim cover with foam pad and OCS bladder to the seat cushion frame and attach the trim cover to the frame.
    - For vehicles having the original occupant classification sensor installed, position the seat cushion trim cover with foam pad to the seat cushion frame and attach the trim cover to the

frame.

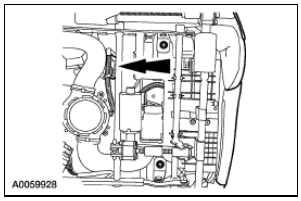


Item 2: Seat Cushion Assembly Installation Note

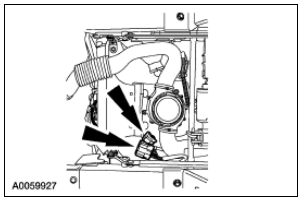
1. Align the seat cushion assembly to the seat track.

Item 7: Connector Installation Note

1. Connect and attach the blower motor electrical connector to the seat cushion frame.

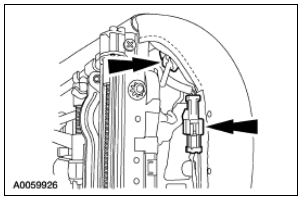


2. Attach the connectors to the seat cushion frame.



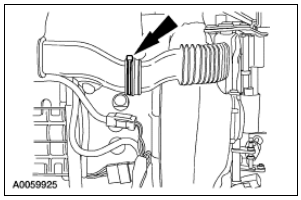
Item 8: Connector Installation Note

1. Connect the two electrical connectors.



Item 9: Climate Control Duct Installation Note

1. Attach the climate control duct and secure it with a tie strap.



Seat Position Sensor

Printable View (129 KB)

Special Tool(s)

ST2502-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F395 (014-R1079)
 ST2512-A	Diagnostic Tool, Restraint System (1 Req'd) 418-F403
 ST2507-A	Diagnostic Tool, Restraint System (2 Req'd) 418-133
 ST2507-A	Diagnostic Tool, Restraint System (4 Req'd) 501-097
 ST2506-A	Diagnostic Tool, Restraint System (2 Req'd) 418-F088 (105-R0012)

Removal and Installation

⚠ WARNING: Always wear safety glasses when repairing an air bag supplemental restraint system (SRS) vehicle and when handling an air bag module. This will reduce the risk of injury in the event of an accidental deployment.

⚠ WARNING: Never probe the connectors on the air bag module. Doing so can result in air bag deployment, which can result in personal injury.

⚠ WARNING: The safety belt pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

⚠ WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Repair is made by installing a new part only. If the new part does not correct the condition, install the original part and carry out the diagnostic procedure again.

1. Position the seat cushion all the way up.

2. **⚠ WARNING: To avoid accidental deployment and possible personal injury, the backup power supply must be depleted before repairing or replacing any front or side air bag supplemental restraint system (SRS) components and before servicing, replacing, adjusting or striking components near the front or side air bag sensors, such as doors, instrument panel,**

console, door latches, strikers, seats and hood latches.

The first row side impact sensors are located at or near the base of the B-pillars.

The second row side impact sensors (if equipped) are located at or near the base of the C-pillars.

To deplete the backup power supply energy, disconnect the battery ground cable and wait at least one minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped).

Disconnect the battery ground cable (14301) and wait at least one minute. For additional information, refer to Section 414-00 .

3. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Deactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

4. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

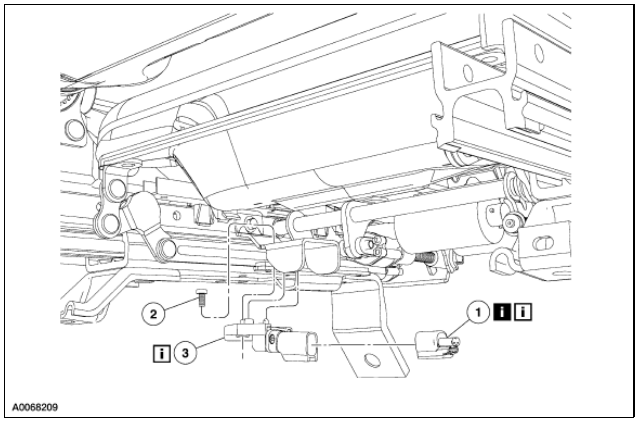
   Remove the driver seat. For additional information, refer to Section 501-10 .

5. Remove the components in the order indicated in the following illustration and table.

6. **NOTE:** The seat position sensor is mounted at the LH rear of the seat track.

   NOTE: Make sure the battery negative cable is still disconnected before continuing with the installation portion of this procedure.

   To install, reverse the removal procedure.



Item	Part Number	Description
1	14B719	Connector Removal Note
1	14B719	Connector Installation Note
2		Screw
3	14B416	

		Seat position sensor Installation Note

7. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the seat removal and installation procedure.**

   Install the driver seat. For additional information, refer to Section 501-10 .

   - After installation, position the driver seat from its forward most position to its rearmost position and then back again. While positioning the seat, make sure that the seat position sensor, the magnet and bracket or the wire harness do not come in contact with any other part of the seat that may cause damage.

8. ⚠ **WARNING: To reduce the risk of serious personal injury, read and follow all warnings, cautions, notes, and instructions in the supplemental restraint system (SRS) deactivation/reactivation procedure.**

   Reactivate the supplemental restraint system (SRS). For additional information, refer to Supplemental Restraint System (SRS) Deactivation and Reactivation in the General Procedures portion of this section.

9. ⚠ **WARNING: The restraint system diagnostic tool is for restraint system service only. Remove from the vehicle prior to road use. Failure to remove could result in injury and possible violation of vehicle safety standards.**

   With all the restraint system diagnostic tools removed, prove out the supplemental restraint system (SRS). For additional information, refer to Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in the Diagnosis and Testing portion of this section.

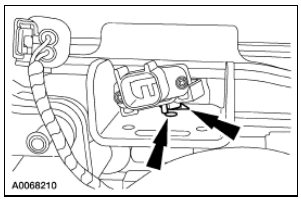
Item 1: Connector Removal Note

1. **NOTE:** Make note of the wire harness routing for installation purposes.

   Disconnect the seat position sensor electrical connector.

Item 3: Seat Position Sensor Installation Note

1. Align the seat position sensor locator tabs to the openings in the bracket.



Item 1: Connector Installation Note

1. **NOTE:** Route the wire harness as noted during removal.

   Connect the seat position sensor electrical connector.

Frame and Body Mounting System Component Location Index

Printable View (92 KB)

Printable View (9 KB)

Torque Specifications

Description	Nm	lb-ft	lb-in
Air conditioner line bracket bolt	10		89
Control arm cam nuts	175	129	
Engine support crossmember bolts	103	76	
Engine mount nuts	63	46	
Front I-brace bolts (front)	55	41	
Front I-brace bolts (rear)	30	22	
Front I-brace bracket shoulder bolts	30	22	
Front stabilizer bar link nuts	55	41	
Steering gear bolts	103	76	
Radiator support crossmember bolts	103	76	
Rear shock mount bolts	133	98

Rear brake line fitting	20	15	
Rear brake line bracket bolt	20	15	

Frame and Body Mounting

Printable View (8 KB)

Radiator Support Crossmember

The radiator support crossmember is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the front of the front suspension control arms.
- provide a mounting point for the front stabilizer bar.
- support the radiator.

Engine Support Crossmember

The engine support crossmember is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the rear of the front suspension control arms.
- provide a mounting point for the engine isolators.
- provide a mounting point for the underbody stiffener.

Front I-Brace and Bracket Assembly

The I-brace and bracket assemblies are bolted to the body and the engine crossmember and are used to:

- provide support for the engine crossmember.
- stiffen the underbody.

Rear Subframe

The rear subframe is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the rear suspension bar.
- provide mounting surfaces for the rear axle differential.
- provide a mounting point for the rear stabilizer.

If the rear subframe bushings become worn or damaged a new rear subframe must be installed as a unit. New rear subframe bushings cannot be installed.

Body Misalignment Check

Printable View (10 KB)

⚠ CAUTION: Do not attempt to correct any serious misalignment with one pulling/pushing operation. Damage to the structure could occur.

⚠ CAUTION: In case of severe or sharp bends, it may be necessary to use heat. Any attempt to cold-straighten a severely bent bracket may cause ruptures of the welds. It may also cause cracks in the bent part. Never heat the area to more than 650°C (1,202°F). Always use temperature-indicating crayons when applying heat to any part.

NOTE: All measurements should be made from the bare metal; remove the trim and bumper covers as necessary.

1. Repair the badly damaged areas before taking measurements for underbody alignment.

2. To check the underbody alignment, take the measurements between opposite reference points, such as crease lines or weld joints.

3. Monitor the upper body structure for excessive stress or movement while making any corrections to the underbody structure. Remove the windshield and back glass to prevent breakage. For additional information, refer to Section 501-00 .

Underbody Misalignment Check Printable View (80 KB)

1. The dimensions of the underbody must be restored to provide the correct front and rear wheel alignment geometry.

2. All the dimensions are measured between the centers of the existing holes in the underbody unless otherwise specified.

3. Inspect all underbody structural members for cracks, twists or bends. Check all welded connections for cracks. Inspect the support brackets for looseness. Carry out any necessary repairs or install new components as necessary.

4. The X axis is referenced from the front of the vehicle. The Y axis is referenced from the center line of the vehicle.

   Underbody Dimensions

Dimension	X axis mm(in)	Y axis mm(in)
1	2,044.59 mm (80.49 in)	614 mm (24.17 in)
2	2,164 mm (85.19 in)	273 mm (10.74 in)
3	3,258 mm (128.26 in)	224 mm (8.81 in)
4	3,275 mm (128.73 in)	675 mm (26.57 in)
5	4,150 mm (163.38 in)	365 mm (14.37 in)
6	4,490 mm (176.77 in)	240 mm (9.44 in)
7	5,100 mm (200.78 in)	500 mm (19.68)
8	5,250 mm (206.69 in)	50 mm (1.96)
9	2,044.59 mm (80.49 in)	614 mm (24.17 in)
10	2,164 mm (85.19 in)	273 mm (10.74 in)
11	3,258 mm (128.26 in)	224 mm (8.81 in)
12	3,725 mm (146.65 in)	675 mm (26.57 in)
13	4,150 mm (163.38 in)	365 mm (14.37 in)
14	4,490 mm (176.77 in)	240 mm (9.44 in)
15	5,100 mm (200.78 in)	500 mm (19.68 in)
16	1,118 mm (44.01 in)	
17	1,825 mm (71.85 in)	
18	1,990 mm (78.34 in)	
19	2,300 mm (90.55 in)

Crossmember

Printable View (149 KB)

Special Tool(s)

 ST2333-A	Three Bar Engine Support Kit 303-F072

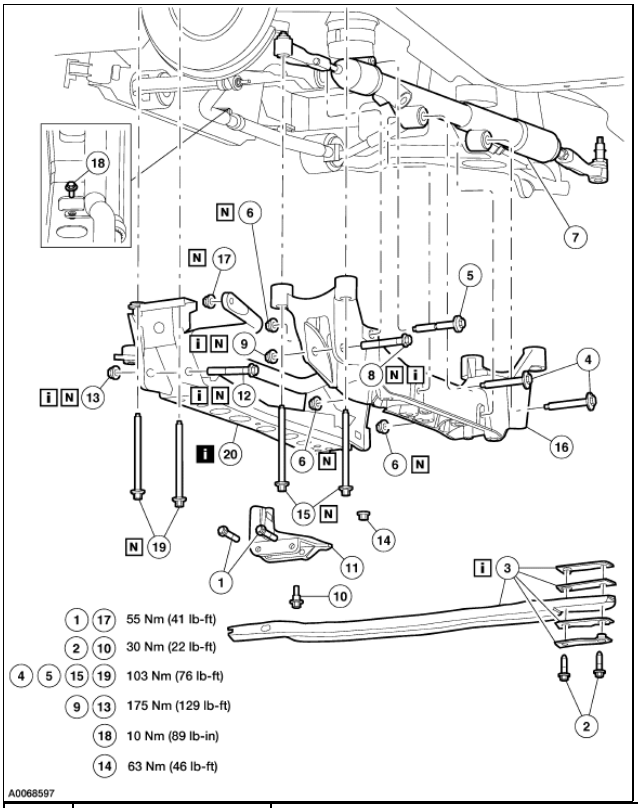
⚠ CAUTION: Suspension fasteners are critical parts because they affect the performance of vital components and systems and their failure can result in major repair expense. A new part with the same part number must be installed if installation is necessary. Do not use a new part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure of correct retention of these parts.

NOTE: New cam bolts and lock nuts must be installed whenever they are removed from the lower control arm.

1. If removing the engine support crossmember, use the special tool to support the engine.
2. Remove the front tire and wheel assemblies. For additional information, refer to Section 204-00 .
3. Remove the front valance panels.
4. Remove the radiator sight shield.
5. If removing the radiator support crossmember, support the radiator.
6. To remove individual components, only carry out the listed steps.

Component	Steps
I-brace	1-3
I-brace bracket	1-11
Engine support crossmember	1-16
Radiator support crossmember	1-11,17-20

7. Remove the components in the order indicated in the folowing illustration and table.



Item	Part Number	Description
1	W500727-S426	I-brace front bolts (2 each side)
2	N806899-S60	I-brace rear bolts (2 each side)
3	5A099	I-brace (LH) Installation Note
3	5A098	I-brace (RH) Installation Note
4	W705112-S426	Steering gear bolts (2 req'd)
5	W705051-S426	Steering gear bolt
6	W520214-S60	Steering gear nuts (3 req'd)
7	3504	Steering gear
8	38236	Control arm rear cam bolts (2 each side) Installation Note
9	W105518-S427	Control arm rear cam bolt nuts (2 each side) Installation Note
10	W707308-S426	I-brace bracket shoulder bolt
11	5A144	I-brace bracket (LH)
11	5A143	I-brace bracket (RH)
12	38236	Control arm front cam bolts (2 each side) Installation Note
13	W105518-S427	Control arm front cam bolt nuts (2 each side) Installation Note
14	N621942-S	Engine mount nuts (2 req'd)
15	W706329-S426	Engine support crossmember bolts (2 each side)
16	5025	Engine support crossmember
17	W520213-S	Sway brace link nuts (1 each side)
18	W705968-S	Air conditioner line bracket bolt

19	W708091-S426	Radiator crossmember bolts (4 req'd)
20	5019	Radiator crossmember Removal Note

8. To install, reverse the removal procedure.

Item 20: Radiator Crossmember Removal Note

1. On vehicles with V8 engines disconnect the block heater cable from the crossmember.

Item 3: I-brace Installation Note

1. Loosely install the front bolts and then the rear bolts. Then tighten them to specifications.

2. Make sure that all 4 insulators are correctly installed.

Item 8, 9, 12, 13: Lower Control Arm Nuts and Bolts Installation Note

1. A front end wheel alignment is required when these bolts are removed. For additional information refer to Section 204-00 .

Subframe

Printable View (158 KB)

1. Drain the fuel tank. For additional information, refer to Section 310-00 .

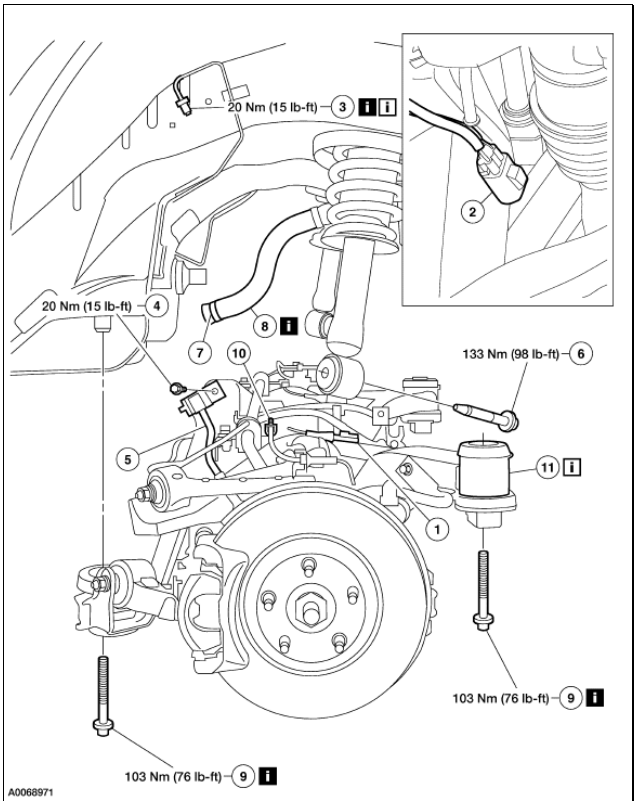
2. **NOTE:** If a new rear subframe is to be installed, the differential and halfshafts must be removed prior to removal of the rear subframe. For all other procedures, the differential, halfshafts and rear subframe are to be removed as an assembly.

   If installing a new subframe, remove the rear axle differential case. For additional information, refer to Section 205-00 .

3. If removing the subframe, remove the drive shaft. For additional information, refer to Section 205-00 .

4. If removing the subframe, remove the rear wheel and tire assemblies. For additional information, refer to Section 204-00 .

5. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	2C190	Anti-lock brake connector (2 req'd)
2	14A464	Electric parking brake electrical connector
3		Brake line fitting (part of 2C287) (2 req'd) Removal Note
3		Brake line fitting (part of 2C287) (2 req'd) Installation Note
4	N802191-S	Bolt (2 req'd)

5	2A442	Brake line (2 req'd)
6	W704884-S426	Strut bolt (2 req'd.)
7	N808238-S	Hose clamp
8	9047	Fuel filler hose Removal Note
9	W706614-S426	Sub frame mount bolts (4 req'd) Removal Note
10	2K	Pin-type retainer (two req'd)
11	5D042	Subframe and bushings assembly Installation Note

6. To install, reverse the removal procedure.

Item 3: Brake Line Fittings Removal Note

⚠ WARNING: Use of any other than approved DOT 3 or DOT 4 brake fluid will cause permanent damage to brake components and will render the brakes inoperative.

⚠ WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately.

⚠ CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

⚠ CAUTION: Do not allow the brake master cylinder reservoir to run dry during the bleeding operation. Keep the brake master cylinder reservoir filled with the specified brake fluid. Never reuse the brake fluid that has been drained from the hydraulic system.

1. Make sure to cap off all fluid lines and hoses.

Item 8: Fuel FIller Hose Removal Note

⚠ CAUTION: Prior to the removal of the fuel filler hose, care must be taken to avoid spillage of the residual fuel.

1. Disconnect the fuel filler hose from the fuel tank.

Item 9: Subframe Mount Bolts Removal Note

1. Paint or mark the position of the subframe to the body for assembly reference.

Item 3: Brake Line Fittings Installation Note

1. After the subframe is installed, bleed the brake system. For additional information, refer to Section 206-00 .

Item 11: Subframe And Bushings Assembly Installation Note

1. Use care not to damage the fuel tank when raising the subframe assembly.

2. If installing a new subframe, transfer the park brake assembly. For additional information, refer to Section 206-00 .

3. If installing a new subframe and bushings assembly, center the subframe on the body mounts.

4. When installing a new subframe and bushings assembly, transfer all the suspension components and carry out a wheel alignment. For additional information, refer to Section 204-00 .

Engine Printable View (10 KB)

⚠ WARNING: To avoid the possibility of personal injury or damage to the vehicle, do not operate the engine with the hood open until the fan blade has been examined for possible cracks and separation.

NOTE: Specifications show the expected minimum or maximum condition. Refer to the appropriate section in Group 303 for the procedure.

NOTE: If a component fails to meet the specifications, it is necessary to install a new component or refinish. If the component can be refinished, wear limits are provided as an aid to making a decision. A new component must be installed for any component that fails to meet specifications and cannot be refinished.

NOTE: This section contains information, steps and procedures that may not be specific to your engine.

This section covers general procedures and diagnosis and testing of the engine system, except for exhaust emission control devices, which are covered in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

The engine incorporates the following features. Refer to the appropriate section in Group 303 for the procedure.

- a crankcase ventilation or breather system.
- an exhaust emission control system.
- an evaporative emission control system.

Some engines incorporate a fail-safe cooling system. Refer to the appropriate section in Group 303 for the procedure.

The engine, fuel system, ignition system, emissions system and exhaust system all affect exhaust emission levels and must be maintained according to the maintenance schedule. Refer to the scheduled Maintenance Guide.

Correct engine identification is required to order parts. Refer to the appropriate section in Group 303 for the procedure.

For complete vehicle and engine identification codes, refer to Section 100-00 .

Special Tool(s)

ST1299-A	Quick Disconnect Compression Tester 134-R0212 or equivalent
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent
 ST1298-A	Engine Cylinder Leak Detection/Air Pressurization Kit 014-00708 or equivalent
ST1296-A	Oil Pressure Gauge 303-088 (T73L-6600-A)
ST1300-A	12 Volt Master UV Diagnostic Inspection Kit 164-R0756 or equivalent (Leak Detector)
ST1297-A	Vacuum/Pressure Tester 164-R0253 or equivalent

Inspection and Verification

1. Verify the customer concern by operating the engine to duplicate the condition.
2. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

   Visual Inspection Chart

Mechanical
• Engine coolant leaks • Engine oil leaks • Fuel leaks • Damaged or severely worn parts • Loose mounting bolts, studs and nuts

3. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.
4. If the concerns remain after the inspection, determine the symptoms. GO to Symptom Chart .

Symptom Chart

Symptom Chart

Component Tests

Engine Oil Leaks

NOTE: When diagnosing engine oil leaks, the source and location of the leak must be positively identified prior to repair.

Prior to carrying out this procedure, clean the cylinder block, cylinder heads, valve covers, oil pan and flywheel with a suitable solvent to remove all traces of oil.

Engine Oil Leaks Fluorescent Oil Additive Method

Use the 12 Volt Master UV Diagnostic Inspection Kit to carry out the following procedure for oil leak diagnosis.

1. Clean the engine with a suitable solvent to remove all traces of oil.

2. Add Gasoline Engine Oil Dye 164-R3705 meeting Ford specification ESE-M99C103-B1 or equivalent to the engine oil. Use a minimum 14.8 ml (0.5 ounce) to a maximum 40 ml (1.35 ounce) of fluorescent additive to all engines.

3. Run the engine for 15 minutes. Stop the engine and inspect all seal and gasket areas for leaks using the 12 Volt Master UV Diagnostic Inspection Kit. A clear bright yellow or orange area will identify the leak. For extremely small leaks, several hours may be necessary for the leak to appear.

Leakage Points Underhood

Examine the following areas for oil leakage:

- valve cover gaskets
- cylinder head gaskets
- oil cooler, if equipped
- oil filter adapter
- engine front cover
- oil filter adapter and filter body
- oil level indicator tube connection
- oil pressure sensor

Leakage Points Under Engine, With Vehicle on Hoist

- oil pan gaskets
- oil pan sealer
- sump sealer 8 cyl.
- engine front cover gasket
- crankshaft front seal
- crankshaft rear oil seal
- oil filter adapter and filter body
- oil cooler, if equipped

Leakage Points With Transmission and Flywheel Removed

- crankshaft rear oil seal
- rear main bearing cap parting line
- flexplate mounting bolt holes (with flexplate installed)
- pipe plugs at the end of oil passages

Oil leaks at crimped seams in sheet metal parts and cracks in cast or stamped parts can be detected when using the dye method.

Compression Test Compression Gauge Check

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level and that the battery is correctly charged. Operate the vehicle until the engine is at normal operating temperature. Turn the ignition switch to the OFF position, then remove all the spark plugs.

2. Set the throttle plates in the wide-open position.

3. Install a compression gauge such as the Compression Tester in the No. 1 cylinder.

4. Install an auxiliary starter switch in the starting circuit. With the ignition switch in the OFF position, and using the auxiliary starter switch, crank the engine a minimum of five compression strokes and record the highest reading. Note the approximate number of compression strokes necessary to obtain the highest reading.

5. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.

Compression Test Test Results

The indicated compression pressures are considered within specification if the lowest reading cylinder is at least 75 percent of the highest reading. For additional information, refer to the Compression Pressure Limit Chart.

Compression Pressure Limit Chart

Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure
924 kPa (134 psi)	696 kPa (101 psi)	1131 kPa (164 psi)	848 kPa (123 psi)	1338 kPa (194 psi)	1000 kPa (146 psi)	1544 kPa (224 psi)	1158 kPa (168 psi)
938 kPa (136 psi)	703 kPa (102 psi)	1145 kPa (166 psi)	855 kPa (124 psi)	1351 kPa (196 psi)	1014 kPa (147 psi)	1558 kPa (226 psi)	1165 kPa (169 psi)
952 kPa (138 psi)	717 kPa (104 psi)	1158 kPa (168 psi)	869 kPa (126 psi)	1365 kPa (198 psi)	1020 kPa (148 psi)	1572 kPa (228 psi)	1179 kPa (171 psi)
965 kPa (140 psi)	724 kPa (106 psi)	1172 kPa (170 psi)	876 kPa (127 psi)	1379 kPa (200 psi)	1034 kPa (150 psi)	1586 kPa (230 psi)	1186 kPa (172 psi)
979 kPa (142 psi)	738 kPa (107 psi)	1186 kPa (172 psi)	889 kPa (129 psi)	1303 kPa (202 psi)	1041 kPa (151 psi)	1600 kPa (232 psi)	1200 kPa (174 psi)
933 kPa (144 psi)	745 kPa (109 psi)	1200 kPa (174 psi)	903 kPa (131 psi)	1407 kPa (204 psi)	1055 kPa (153 psi)	1055 kPa (153 psi)	1207 kPa (175 psi)

1007 kPa (146 psi)	758 kPa (110 psi)	1214 kPa (176 psi)	910 kPa (132 psi)	1420 kPa (206 psi)	1062 kPa (154 psi)	1627 kPa (154 psi)	1220 kPa (177 psi)
1020 kPa (148 psi)	765 kPa (111 psi)	1227 kPa (178 psi)	917 kPa (133 psi)	1434 kPa (208 psi)	1075 kPa (156 psi)	1641 kPa (238 psi)	1227 kPa (178 psi)
1034 kPa (150 psi)	779 kPa (113 psi)	1241 kPa (180 psi)	931 kPa (135 psi)	1448 kPa (210 psi)	1083 kPa (157 psi)	1655 kPa (240 psi)	1241 kPa (180 psi)
1048 kPa (152 psi)	786 kPa (114 psi)	1255 kPa (182 psi)	936 kPa (136 psi)	1462 kPa (212 psi)	1089 kPa (158 psi)	1669 kPa (242 psi)	1248 kPa (181 psi)
1062 kPa (154 psi)	793 kPa (115 psi)	1269 kPa (184 psi)	952 kPa (138 psi)	1476 kPa (214 psi)	1103 kPa (160 psi)	1682 kPa (244 psi)	1262 kPa (183 psi)
1076 kPa (156 psi)	807 kPa (117 psi)	1282 kPa (186 psi)	965 kPa (140 psi)	1489 kPa (216 psi)	1117 kPa (162 psi)	1696 kPa (246 psi)	1269 kPa (184 psi)
1089 kPa (158 psi)	814 kPa (118 psi)	1296 kPa (188 psi)	972 kPa (141 psi)	1503 kPa (218 psi)	1124 kPa (163 psi)	1710 kPa (248 psi)	1202 kPa (186 psi)
1103 kPa (160 psi)	827 kPa (120 psi)	1310 kPa (190 psi)	979 kPa (142 psi)	1517 kPa (220 psi)	1138 kPa (165 psi)	1724 kPa (250 psi)	1289 kPa (187 psi)
1110 kPa (161 psi)	834 kPa (121 psi)	1324 kPa (192 psi)	993 kPa (144 psi)	1631 kPa (222 psi)	1145 kPa (166 psi)		

If one or more cylinders reads low, squirt approximately one tablespoon of engine oil meeting Ford specification on top of the pistons in the low-reading cylinders. Repeat the compression pressure check on these cylinders.

Compression Test Interpreting Compression Readings

1. If compression improves considerably, piston rings are worn or damaged.

2. If compression does not improve, valves are sticking or not seating correctly.

3. If two adjacent cylinders indicate low compression pressures and squirting oil on each piston does not increase compression, the head gasket may be leaking between cylinders. Engine oil or coolant in cylinders could result from this condition.
   Use the Compression Pressure Limit Chart when checking cylinder compression so that the lowest reading is within 75 percent of the highest reading.

Cylinder Leakage Detection

When a cylinder produces a low reading, use of the Engine Cylinder Leak Detection/Air Pressurization Kit will be helpful in pinpointing the exact cause.

The leakage detector is inserted in the spark plug hole, the piston is brought up to dead center on the compression stroke, and compressed air is admitted.

Once the combustion chamber is pressurized, a special gauge included in the kit will read the percentage of leakage. Leakage exceeding 20 percent is excessive.

While the air pressure is retained in the cylinder, listen for the hiss of escaping air. A leak at the intake valve will be heard in the throttle body. A leak at the exhaust valve can be heard at the tailpipe. Leakage past the piston rings will be audible at the positive crankcase ventilation (PCV) connection. If air is passing through a blown head gasket to an adjacent cylinder, the noise will be evident at the spark plug hole of the cylinder into

which the air is leaking. Cracks in the cylinder block or gasket leakage into the cooling system may be detected by a stream of bubbles in the radiator.

Oil Consumption Test

The following diagnostic procedure is used to determine the source of excessive internal oil consumption.

1. **NOTE:** High speed driving, towing, high ambient temperature and other factors may result in greater oil use.

   Define excessive oil consumption, such as the number of miles driven per liter (quart) of oil used. Also determine customer's driving habits, such as sustained high speed operation, towing, extended idle and other considerations.

2. Verify that the engine has no external oil leak as described under Engine Oil Leaks in the Diagnosis and Testing portion of this section.

3. Verify that the engine has the correct oil level dipstick.

4. Verify that the engine is not being run in an overfilled condition. Check the oil level at least five minutes after a hot shutdown with the vehicle parked on a level surface. In no case should the level be above MAX or the letter F in FULL. If significantly overfilled, carry out Steps 6a through 6d.

5. Verify the spark plugs are not oil saturated. If the spark plugs are oil saturated and compression is good it can be assumed the valve seals or valve guides are at fault.

6. Carry out an oil consumption test:

a. Drain the engine oil, remove the oil filter and refill with one liter (quart) less than the recommended amount.
b. Run the engine for three minutes (10 minutes if cold), and allow the oil to drain back for at least five minutes with the vehicle on a level surface.
c. Remove oil level dipstick and wipe clean. (Do not wipe with anything contaminated with silicone compounds.) Reinstall the oil level dipstick, being sure to seat it firmly in the oil level indicator tube. Remove the oil level dipstick and draw a mark on the back (unmarked) surface at the indicated oil level. This level should be about the same as the MIN or ADD mark on the face of the oil level dipstick.
d. Add one liter (quart) of oil. Restart the engine and allow to idle for at least two minutes. Shut off the engine and allow the oil to drain back for at least five minutes. Mark the oil level dipstick, using the procedure above.
e. Record the vehicle mileage.
f. Instruct the customer to drive the vehicle as usual and carry out the following:
   - Check the oil level regularly at intervals of 160 to 240 km (100-150 miles).
   - Return to the repair point when the oil level drops below the lower (MIN or ADD) mark on the oil level dipstick.
   - Add only full liters (quarts) of the same oil in an emergency. Note the mileage at which the oil is added.
g. Check the oil level under the same conditions and at the same location as in Steps 5c and 5d.
   - Measure the distance from the oil level to the UPPER mark on the oil level dipstick and record.
   - Measure the distance between the two scribe marks and record.
   - Divide the first measurement by the second.
   - Divide the distance driven during the oil test by the result. This quantity is the approximate

oil consumption rate in kilometers per liter or in miles per quart.

h. If the oil consumption rate is unacceptable, go to Step 7.

7. Check the crankcase ventilation or breather system.

8. Check for plugged oil drain-back holes in the cylinder heads and cylinder block.

9. If the condition still exists after carrying out the above steps, go to Step 10.

10. Carry out a cylinder compression test or cylinder leak detection test with Engine Cylinder Leak Detection/Air Pressurization Kit. This can help determine the source of oil consumption such as valves, piston rings or other areas.

11. **NOTE:** After determining if new parts should be installed, make sure correct new parts are used.

    Check valve guides for excessive guide clearance. Install new valve stem seals after verifying valve guide clearance.

12. Worn or damaged internal engine components can cause excessive oil consumption. Small deposits of oil on the tips of spark plugs can be a clue to internal oil consumption. If internal oil consumption still persists, proceed as follows:

    a. Remove the engine from the vehicle and place it on an engine work stand. Remove the intake manifolds, cylinder heads, oil pan and oil pump.
    b. If damage is found, install a new short block assembly.

13. Repeat the oil consumption test (Step 6) to confirm the oil consumption concern has been resolved.

Intake Manifold Vacuum Test

Bring the engine to normal operating temperature. Connect the Vacuum/Pressure Tester to the intake manifold. Run the engine at the specified idle speed.

The vacuum gauge should read between 51-74 kPa (15-22 in-Hg) depending upon the engine condition and the altitude at which the test is conducted. Subtract 4.0193 kPa (1 in-Hg) from the specified reading for every 304.8 m (1,000 feet) of elevation above sea level.

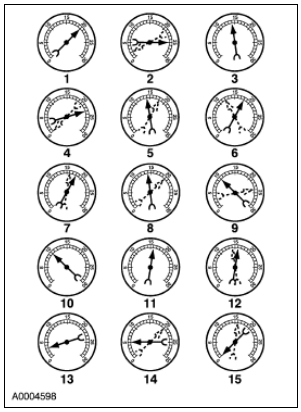
The reading should be steady. If necessary, adjust the gauge damper control (where used) if the needle is fluttering rapidly. Adjust the damper until the needle moves easily without excessive flutter.

Intake Manifold Vacuum Test Interpreting Vacuum Gauge Readings

A careful study of the vacuum gauge reading while the engine is idling will help pinpoint trouble areas. Always conduct other appropriate tests before arriving at a final diagnostic decision. Vacuum gauge readings, although helpful, must be interpreted carefully.

Most vacuum gauges have a normal band indicated on the gauge face.

The following are potential gauge readings. Some are normal; others should be investigated further.



1. NORMAL READING: Needle between 51-74 kPa (15-22 in-Hg) and holding steady.

2. NORMAL READING DURING RAPID ACCELERATION AND DECELERATION: When the engine is rapidly accelerated (dotted needle), the needle will drop to a low reading (not to zero). When the throttle is suddenly released, the needle will snap back up to a higher than normal figure.

3. NORMAL FOR HIGH-LIFT CAMSHAFT WITH LARGE OVERLAP: The needle will register as low as 51 kPa (15 in-Hg) but will be relatively steady. Some oscillation is normal.

4. WORN RINGS OR DILUTED OIL: When the engine is accelerated (dotted needle), the needle drops to 0 kPa (0 in-Hg). Upon deceleration, the needle runs slightly above 74 kPa (22 in-Hg).

5. STICKING VALVES: When the needle (dotted) remains steady at a normal vacuum but occasionally flicks (sharp, fast movement) down and back about 13 kPa (4 in-Hg), one or more valves may be sticking.

6. BURNED OR WARPED VALVES: A regular, evenly-spaced, downscale flicking of the needle indicates one or more burned or warped valves. Insufficient valve clearance will also cause this reaction.

7. POOR VALVE SEATING: A small but regular downscale flicking can mean one or more valves are not seating.

8. WORN VALVE GUIDES: When the needle oscillates over about a 13 kPa (4 in-Hg) range at idle speed, the valve guides could be worn. As engine speed increases, the needle will become steady if guides are responsible.

9. WEAK VALVE SPRINGS: When the needle oscillation becomes more violent as engine rpm is increased, weak valve springs are indicated. The reading at idle could be relatively steady.

10. LATE VALVE TIMING: A steady but low reading could be caused by late valve timing.

11. IGNITION TIMING RETARDING: Retarded ignition timing will produce a steady but somewhat low reading.

12. INSUFFICIENT SPARK PLUG GAP: When spark plugs are gapped too close, a regular, small pulsation of the needle can occur.

13. INTAKE LEAK: A low, steady reading can be caused by an intake manifold or throttle body gasket leak.

14. BLOWN HEAD GASKET: A regular drop of fair magnitude can be caused by a blown head gasket or warped cylinder head-to-cylinder block surface.

15. RESTRICTED EXHAUST SYSTEM: When the engine is first started and is idled, the reading may be normal, but as the engine rpm is increased, the back pressure caused by a clogged muffler, kinked tailpipe or other concerns will cause the needle to slowly drop to 0 kPa (0 in-Hg). The needle then may slowly rise. Excessive exhaust clogging will cause the needle to drop to a low point even if the engine is only idling.

16. When vacuum leaks are indicated, search out and correct the cause. Excess air leaking into the system will upset the fuel mixture and cause concerns such as rough idle, missing on acceleration or burned valves. If the leak exists in an accessory unit such as the power brake booster, the unit will not function correctly. Always fix vacuum leaks.

Excessive Engine Oil Consumption

The amount of oil an engine uses will vary with the way the vehicle is driven in addition to normal engine-to-engine variation. This is especially true during the first 16,100 km (10,000 miles) when a new engine is being broken in or until certain internal engine components become conditioned. Vehicles used in heavy-duty operation may use more oil. The following are examples of heavy-duty operation:

- trailer towing applications
- severe loading applications
- sustained high speed operation

Engines need oil to lubricate the following internal components:

- cylinder block cylinder walls
- pistons and piston, pin and rings
- intake and exhaust valve stems
- intake and exhaust valve guides
- all internal engine components

When the pistons move downward, a thin film of oil is left on the cylinder walls. As the vehicle is operated, some oil is also drawn into the combustion chambers past the intake and exhaust valve stem seals and burned.

The following is a partial list of conditions that can affect oil consumption rates:

- engine duty cycle
- operator driving habits
- ambient temperature
- quality and viscosity of the oil
- oil filler cap not seated
- oil level indicator not seated

Operation under varying conditions can frequently be misleading. A vehicle that has been run for several thousand miles on short trips or in below-freezing ambient temperatures may have consumed a "normal" amount of oil. However, when checking the engine oil level, it may measure up to the FULL or MAX on the oil level dipstick due to dilution (condensation and fuel) in the engine crankcase. The vehicle might then be driven at high speeds on the highway where the condensation and fuel boil off. The next time the engine oil is checked, it may appear that a liter (quart) of oil was used in about 160 km (100 miles). This perceived 160 km (100 miles) per liter (quart) oil consumption rate causes customer concern even though the actual overall oil consumption rate is about 2400 km (1500 miles) per liter (quart).

Make sure the selected engine oil meets the current recommended API performance category with SAE viscosity grade as shown in the vehicle Owner Literature. It is also important that the engine oil is changed at the intervals specified. For additional information, refer to the Vehicle Owner Literature.

Oil Pressure Test

1. Disconnect and remove the oil pressure sensor (9278) from the engine.
2. Connect the Engine Oil Pressure Gauge to the oil pressure sender oil galley port.
3. Run the engine until normal operating temperature is reached.
4. Run the engine at the specified rpm and record the gauge reading.
5. The oil pressure should be within specifications; For additional information, refer to the specification chart in the appropriate engine section.
6. If the pressure is not within specification, check the following possible sources:
    - insufficient oil
    - oil leakage
    - worn or damaged oil pump
    - oil pump screen cover and tube
    - excessive main bearing clearance
    - excessive connecting rod bearing clearance
    - VCT system leak
    - chain tensioner leak

Valve Train Analysis Engine Off, Valve Cover Removed

Check for damaged or severely worn parts and correct assembly. Make sure correct parts are used with the static engine analysis as follows.

Valve Train Analysis Engine Off

- Check for loose mounting bolts on camshaft caps.
- Check valve shim to camshaft gap.

Valve Train Analysis Engine Off, Camshaft Engines

- Check for broken or damaged parts.

Valve Train Analysis Valve Springs

- Check for broken or damaged parts.

Valve Train Analysis Engine Off, Valve Spring Retainer and Valve Spring Retainer Keys

- Check for correct seating of the valve spring retainer key on the valve stem and in valve spring retainer.
- Check for correct seating on the valve stem.

Valve Train Analysis Engine Off, Valves and Cylinder Head

- Check for plugged oil drain back holes.
- Check for worn or damaged valve tips.
- Check for missing or damaged valve stem seals or guide-mounted valve stem seal.
- Check valve tappet shim gap.
- Check for missing or worn valve spring seats.
- Check for plugged oil metering orifice in cylinder head oil reservoir (if equipped).

Static checks (engine off) are to be made on the engine prior to the dynamic procedure.

Valve Train Analysis Engine Off, Camshaft Lobe Lift OHC Engines

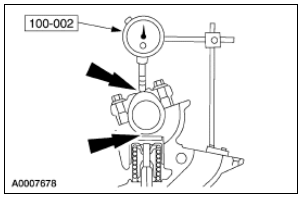
Check the lift of each camshaft lobe in consecutive order and make a note of the readings.

1. Remove the valve covers.

2. Remove the spark plugs.

3. Install the special tool so the rounded tip of indicator is on top of the camshaft lobe and on the same plane as the valve tappet.

4. Rotate the crankshaft using a breaker bar and socket attached to the crankshaft pulley retainer bolt. Rotate the crankshaft until the base circle of the camshaft lobe is reached.



5. Zero the dial indicator. Continue to rotate the crankshaft until the high-lift point of the camshaft lobe is in the fully-raised position (highest indicator reading).

6. To check the accuracy of the original indicator reading, continue to rotate crankshaft until the base circle is reached. The indicator reading should be zero. If zero reading is not obtained, repeat Steps 1 through 6.

7. Install the spark plugs.

8. Install the valve covers.

Valve Train Analysis Engine Off, Valve Tappet

Valve tappet noise can be caused by any of the following:

- excessive valve tappet shim gap
- excessive valve guide wear

Excessive collapsed valve tappet shim gap can be caused incorrect initial adjustment or wear of valve tappet shim face.

For additional information, refer to the valve train shim and gap inspection procedure in the appropriate engine section.

Sprockets

Printable View (36 KB)

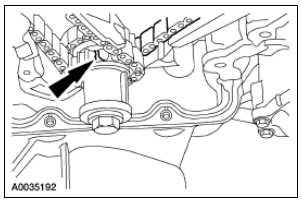
1. **WARNING: To avoid the possibility of personal injury or damage to the vehicle, do not operate the engine with the hood open until the fan blade has been examined for possible cracks and separation. Failure to follow these instructions may result in personal injury.**

   NOTE: Specifications show the expected minimum or maximum condition.

   NOTE: If a component fails to meet the specifications, it is necessary to install a new component or refinish the component. If the component can be refinished, wear limits are provided as an aid to making a decision. If a component fails to meet specifications and cannot be refinished, a new component must be installed.

   Inspect the timing chain/belt and the sprocket.

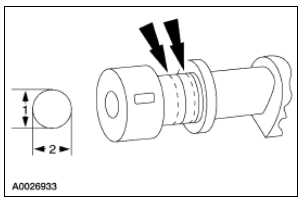
   - Install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Camshaft Journal Diameter

Printable View (17 KB)

1. Measure each camshaft journal diameter in two directions.
   - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Camshaft End Play OHC Engines

Printable View (40 KB)

Special Tool(s)

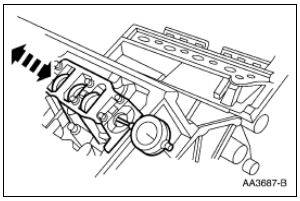
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. Use a Dial Indicator Gauge with Holding Fixture to measure camshaft end play.

2. Position the camshaft to the rear of the cylinder head.

3. Zero the indicator.

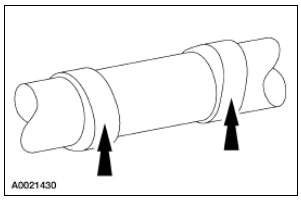
4. Move the camshaft to the front of the cylinder head. Note and record the camshaft end play.
   - If camshaft end play exceeds specifications, install new camshaft and recheck end play. Refer to the appropriate section in Group 303 for the procedure.
   - If camshaft end play exceeds specification after camshaft installation, install a new cylinder head. Refer to the appropriate section in Group 303 for the procedure.



Camshaft Surface Inspection

Printable View (16 KB)

1. Inspect camshaft lobes for pitting or damage in the contact area. Minor pitting is acceptable outside the contact area.
    - If excessive pitting or damage is present, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



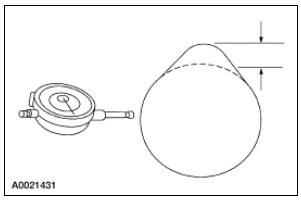
Camshaft Lobe Lift

Printable View (21 KB)

Special Tool(s)

	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. Use a Dial Indicator Gauge with Holding Fixture to measure camshaft intake/exhaust lobe lift.
   - Rotate the camshaft and subtract the lowest indicator reading from the highest indicator reading to figure the camshaft lobe lift.
   - Refer to the appropriate section in Group 303 for the procedure.



Camshaft Runout

Printable View (24 KB)

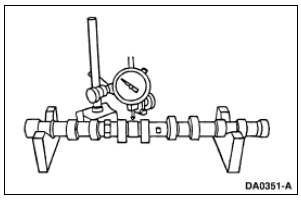
Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. **NOTE:** Camshaft journals must be within specifications before checking runout.

   Use a Dial Indicator Gauge with Holding Fixture to measure the camshaft runout.

   - Rotate the camshaft and subtract the lowest indicator reading from the highest indicator reading.
   - For additional information, refer to the specification chart in the appropriate engine section.
   - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Crankshaft End Play

Printable View (22 KB)

Special Tool(s)

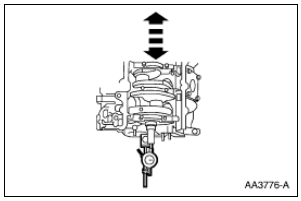
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

1. Measure the crankshaft end play. Use a Dial Indicator Gauge with Holding Fixture to measure crankshaft end play.

2. Position the crankshaft to the rear of the cylinder block.

3. Zero the indicator.

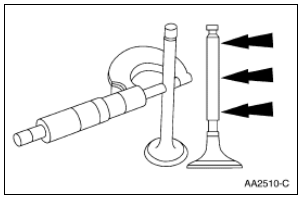
4. Move the crankshaft to the front of the cylinder block. Note and record the crankshaft end play.
   - If crankshaft end play exceeds specifications, install a new crankshaft thrust washer or crankshaft thrust main bearing. Refer to the appropriate section in Group 303 for the procedure.



Valve Stem Diameter

Printable View (17 KB)

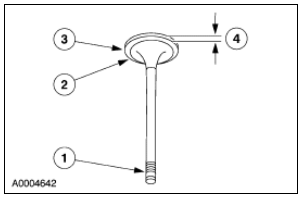
1. Measure the diameter of each intake and exhaust valve stem at the points shown. Verify the diameter is within specification.
    - Refer to the appropriate section in Group 303 for the procedure.
    - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Valve Inspection

Printable View (15 KB)

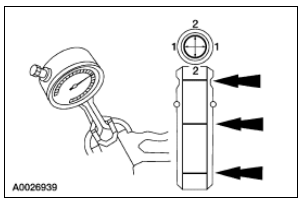
1. Inspect the following valve areas:
    1. the end of the stem for grooves or scoring
    2. the valve face and the edge for pits, grooves or scores
    3. the valve head for signs of burning, erosion, warpage and cracking
    4. the valve margin for wear



Valve Guide Inner Diameter

Printable View (20 KB)

1. Measure the inner diameter of the valve guides in two directions where indicated.
   - Refer to the appropriate section in Group 303 for the procedure.

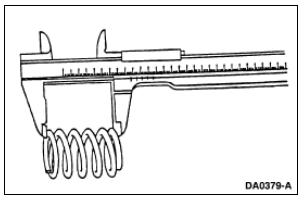


2. If the valve guide is not within specifications, install a new cylinder head assembly.

Valve Spring Free Length

Printable View (17 KB)

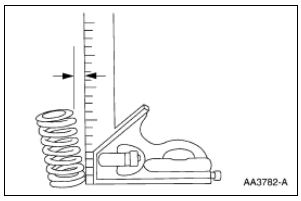
1. Measure the free length of each valve spring.
   - Refer to the appropriate section in Group 303 for the procedure.
   - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



Valve Spring Squareness

Printable View (16 KB)

1. Measure the out-of-square on each valve spring.
   - Turn the valve spring and observe the space between the top of the valve spring and the square. Install a new valve spring if out of square. Refer to the appropriate section in Group 303 for the procedure.



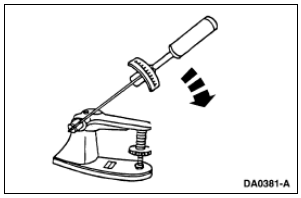
Valve Spring Strength

Printable View (21 KB)

Special Tool(s)

 ST1278-A	Pressure Gauge, Valve/Clutch Spring 303-006 (TOOL-6513-DD) or equivalent

1. Use a Valve/Clutch Spring Pressure Gauge to check the valve spring for correct strength at the specified valve spring length.
    - Refer to the appropriate section in Group 303 for the procedure.
    - If out of specification, install new components as necessary. Refer to the appropriate section in Group 303 for the procedure.



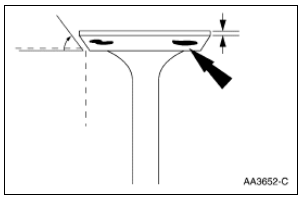
Valve Seat Inspection

Printable View (14 KB)

Valve and Seat Refacing Measurements

⚠ CAUTION: After grinding valves or valve seats, check valve clearance.

1. Check the valve head and seat.
   - Check valve angles.
   - Check margin width.
   - Refer to the appropriate section in Group 303 for the procedure.
   - Be sure margin width is within specification.



2. Inspect for abnormalities on the valve face and seat. Install a new cylinder head assembly if abnormalities are found.

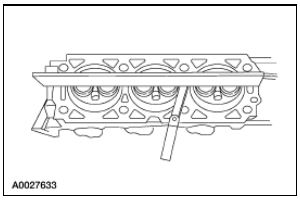
Cylinder Head Distortion

Printable View (21 KB)

Special Tool(s)

ST1246-A	Straight Edge 303-D039 (D83L-4201-A) or equivalent

1. Use a straight edge and a feeler gauge to inspect the cylinder head for flatness. If the cylinder head is distorted, install a new cylinder head.



A0027633

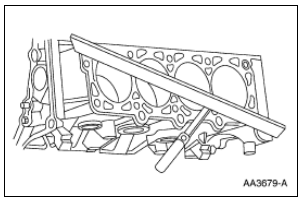
Cylinder Block Distortion

Printable View (35 KB)

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent
ST1246-A	Straight Edge 303-D039 (D83L-4201-A) or equivalent

1. Use a straight edge and a feeler gauge to inspect the cylinder block for flatness. If the cylinder block is distorted, install a new short block assembly.



AA3679-A

Cylinder Block Core Plug Replacement

Printable View (46 KB)

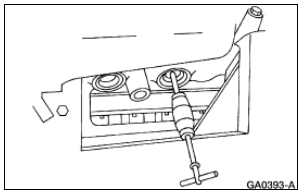
Special Tool(s)

ST1185-A	Slide Hammer 100-001 (T50T-100-A)

Material

Item	Specification
Threadlock® 262 E2FZ-19554-B or equivalent	WSK-M2G351-A6

1. Use a slide hammer or tools suitable to remove the cylinder block core plug.



GA0393-A

2. Inspect the cylinder block plug bore for any damage that would interfere with the correct sealing of the plug. If the cylinder block plug bore is damaged, bore for the next oversize plug.

3. **NOTE:** Oversize plugs are identified by the OS stamped in the flat located on the cup side of the plug.

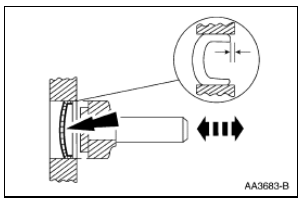
   Coat the cylinder block core plug and bore lightly with Threadlock® 262 and install the cylinder block core plug.

Cup-Type

4. ⚠ **CAUTION: Use care during this procedure so as not to disturb or distort the cup sealing surface.**

   ⚠ **CAUTION: When installed, the flanged edge must be below the chamfered edge of the bore to effectively seal the bore.**

   Use a tool suitable to seat the cup-type cylinder block core plug.

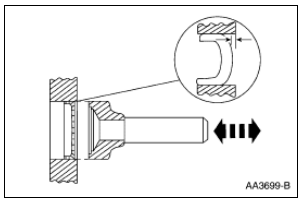


AA3683-B

Expansion-Type

1. ⚠ **CAUTION: Do not contact the crown when installing an expansion-type cylinder block core plug. This could expand the plug before seating and result in leakage.**

   Use tool suitable to seat the expansion-type cylinder block core plug.



Spark Plug Hole Thread Repair

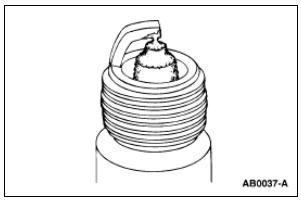
Printable View (7 KB)

1. There is no authorized repair for spark plug hole threads. If the threads are damaged, install a new cylinder head.

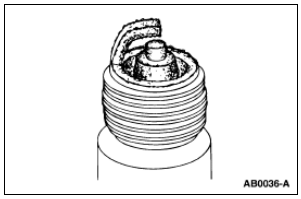
Spark Plug Inspection

Printable View (102 KB)

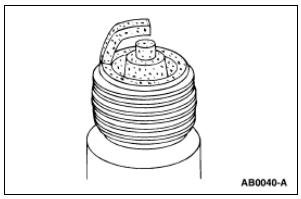
1. Inspect the spark plug for a bridged gap.
   - Check for deposit build-up closing the gap between the electrodes. Deposits are caused by oil or carbon fouling.
   - Clean the spark plug.



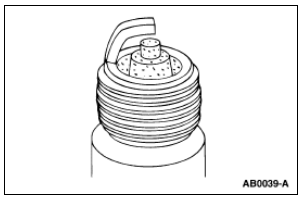
2. Check for oil fouling.
   - Check for wet, black deposits on the insulator shell bore electrodes, caused by excessive oil entering the combustion chamber through worn rings and pistons, excessive valve-to-guide clearance or worn or loose bearings.
   - Correct the oil leak concern.
   - Install a new spark plug.



3. Inspect for carbon fouling. Look for black, dry, fluffy carbon deposits on the insulator tips, exposed shell surfaces and electrodes, caused by a spark plug with an incorrect heat range, dirty air cleaner, too rich a fuel mixture or excessive idling.
   - Install new spark plugs.

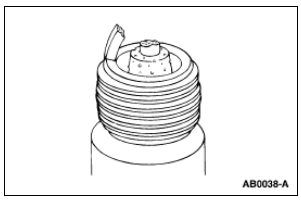


4. Inspect for normal burning.
   - Check for light tan or gray deposits on the firing tip.

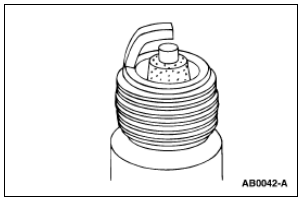


5. Inspect for pre-ignition, identified by melted electrodes and a possibly damaged insulator. Metallic deposits on the insulator indicate engine damage. This may be caused by incorrect ignition timing, wrong type of fuel or the unauthorized installation of a heli-coil insert in place of the spark plug threads.

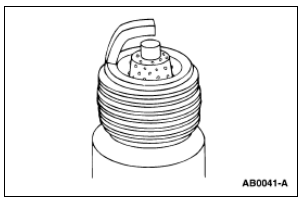
- Install a new spark plug.



6. Inspect for overheating, identified by a white or light gray spots and with bluish-burnt appearance of electrodes. This is caused by engine overheating, wrong type of fuel, loose spark plugs, spark plugs with an incorrect heat range, low fuel pump pressure or incorrect ignition timing.
    - Install a new spark plug.



7. Inspect for fused deposits, identified by melted or spotty deposits resembling bubbles or blisters. These are caused by sudden acceleration.
    - Install new spark plugs.



Exhaust Manifold Cleaning and Inspection

Printable View (24 KB)

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent
ST1246-A	Straight Edge 303-D039 (D83L-4201-A) or equivalent

1. Clean the exhaust manifold using a suitable solvent. Inspect the manifold for cracks or broken flanges.

2. Place a straight edge across the exhaust manifold flanges and check for warping with a feeler gauge.

Engine	
Displacement	3.0L (4V) (182 CID)
Number of cylinders	6
Bore	89.0 mm (3.5 in)
Stroke	79.5 mm (3.13 in)
Firing order	1-4-2-5-3-6
Oil pressure (hot 1,500 rpm)	138-310 kPa (20-45 psi)
Oil capacity (with filter change)	6.5 L (6.9 qts)
Compression ratio	10.5:1
Cylinder Head and Valve Train	
Cylinder head gasket surface flatness	0.12 mm (0.004 in)
Cylinder head gasket surface finish	TBD
Combustion chamber volume	45.7 ± 1.5 cc
Valve arrangement (front to rear)	TBD
Valve clearance intake	0.175-0.225 mm (0.0069-0.0089 in)
Valve clearance exhaust	0.325-0.375 mm (0.0128-0.0148 in)
Valve guide bore diameter	TBD
Valve stem diameter (standard) intake	5.492-5.477 mm (0.216-0.215 in)
Valve stem diameter (standard) exhaust	5.479-5.464 mm (0.215 in)
Valve stem-to-guide clearance intake	0.022-0.067 mm (0.0008-0.0026 in)
Valve stem-to-guide clearance exhaust	0.035-0.080 mm (0.001-0.003 in)
Valve head diameter intake	35 mm (1.38 in)
Valve head diameter exhaust	30 mm (1.18 in)
Valve head diameter gauge diameter	33.5 and 28.0 mm (1.318 and 1.102 in)
Valve face runout	0.02 mm (0.007 in)
Valve face angle	45.5 degrees
Valve seat width intake	1.1-1.4 mm (0.043-0.055 in)
Valve seat width exhaust	1.4-1.7 mm (0.055-0.066 in)
Valve seat runout	0.04 mm (0.001 in)
Valve seat angle	89-90 degrees
Valve spring free length (approx.)	44.2 mm (1.740 in)
Valve spring compression pressure (N @ spec. length)	

	400 ± 22 at 24.5 mm (89.92 ± 4.94 at 0.964 in)
Valve spring installed pressure (N @ spec. length)	175 ± 10 at 33.41 mm (39.34 ± 2.24 at 1.315 in)
Camshaft	
Theoretical valve lift @ 0 lash	TBD
Lobe lift intake	8.466 mm (0.333 in)
Lobe lift exhaust	9.461 mm (0.372 in)
Allowable lobe lift loss	TBD
Journal diameter	26.929-26.936 mm (1.060 in)
Camshaft journal bore inside diameter	TBD
Camshaft journal-to-bearing clearance standard	0.025-0.076 mm (0.001-0.0029 in)
Camshaft journal-to-bearing clearance service limit	0.151 mm (0.005 in)
Runout	TBD
End play standard	0.07-0.15 mm (0.002-0.005 in)
End play service limit	0.277 mm (0.010 in)
Cylinder Block	
Cylinder bore diameter grade 1	89.000-89.010 mm (3.503-3.504 in)
Cylinder bore diameter grade 2	89.010-89.020 mm (3.504 in)
Cylinder bore diameter grade 3	89.020-89.030 mm (3.504-3.505 in)
Cylinder bore maximum taper	0.020 mm (0.0007 in)
Cylinder bore maximum out-of-round limit	0.015 mm (0.0005 in)
Cylinder bore maximum out-of-round service limit	0.020 mm (0.0007 in)
Main bearing bore inside diameter	67.998-68.022 mm (2.677-2.6780 in)
Head gasket surface flatness	0.025-0.050 mm (0.0009-0.0019 in)
Head gasket surface finish	0.12 mm (0.004 in)
Crankshaft	
Main bearing journal diameter	62.968-62.992 mm (2.467-2.479 in)
Main bearing journal maximum taper	TBD
Main bearing journal maximum out-of-round	TBD
Main bearing journal-to-cylinder block clearance	TBD
Connecting rod journal diameter	49.970-49.990 mm (1.967-1.968 in)
Connecting rod journal maximum taper	TBD
Connecting rod journal maximum out-of-round	TBD
Crankshaft maximum end play	0.110-0.232 mm (0.004-0.009 in)
Piston and Connecting Rod	
Piston diameter coded grade 1	88.990-89.010 mm (3.5035-3.5043 in)
Piston diameter coded grade 2	88.998-89.022 mm (3.5039-3.5048 in)
Piston diameter coded grade 3	89.010-89.030 mm (3.5043-3.5051 in)
Piston-to-cylinder bore clearance	0.012-0.022 mm (0.0005-0.0009 in)
Piston ring end gap compression (top, gauge diameter)	0.100-0.250 mm (0.0039-0.0098 in)
Piston ring end gap compression (bottom, gauge diameter)	0.27-0.42 mm (0.0106-0.0165 in)
Piston ring end gap oil ring (steel rail, gauge diameter)	0.15-0.65 mm (0.0059-0.0255 in)
Piston ring end gap compression (top, service limit)	0.50 mm (0.0196 in) max.

Piston ring end gap compression (bottom, service limit)	0.65 mm (0.0255 in) max.
Piston ring end gap oil ring (steel rail, service limit)	0.90 mm (0.0354 in) max.
Piston ring groove width compression (top)	1.230-1.245 mm (0.0484-0.0490 in)
Piston ring groove width compression (bottom)	1.530-1.545 mm (0.0602-0.0608 in)
Piston ring groove width oil ring	3.030-3.055 mm (0.1192-0.0120 in)
Piston ring width	TBD
Piston ring-to-groove clearance	TBD
Piston pin bore diameter	21.017-21.031 mm (0.827-0.828 in)
Piston pin diameter	21.011-21.013 mm (0.8272 in)
Piston pin length	60.51-60.08 mm (2.382-2.365 in)
Piston pin-to-piston fit	-0.005 to +0.001 mm (0.0001-0.00003 in)
Piston-to-connecting rod clearance	TBD
Connecting rod-to-pin clearance standard	0.004-0.020 mm (0.0001-0.0007 in)
Connecting rod-to-pin clearance service limit	0.035 mm (0.0013 in)
Connecting rod pin bore diameter	TBD
Connecting rod length (center-to-center)	138.06-138.14 mm (5.435-5.38 in)
Connecting rod maximum allowed bend	0.038 mm per 25.0 mm (0.0014 in per 0.984 in)
Connecting rod maximum allowed twist	0.050 mm per 25.0 mm (0.0019 in per 0.984 in)
Connecting rod bearing bore diameter	TBD
Connecting rod bearing-to-crankshaft clearance	0.028-0.045 mm (0.0011-0.0017 in)
Connecting rod side clearance (assembled to crank) standard	0.100-0.30 mm (0.0039-0.0118 in)
Connecting rod side clearance (assembled to crank) service limit	0.35 mm (0.0137 in) max.

[a] Refer to the procedure in this section.

[b] Install oil filter until seal makes contact. Tighten an additional 270 degrees.

Engine Printable View (19 KB)

The 3.0L (4V) (182 CID) is a 60-degree V-6 engine with dual overhead camshafts (DOHC), four valves per cylinder and sequential multiport fuel injection (SFI). The engine has:

- an aluminum upper intake manifold.
- a lower intake manifold.
- aluminum cylinder heads.
- a cast aluminum upper cylinder block.

The ignition system is electronic (distributorless) with a single ignition coil located above each spark plug. This high-energy ignition system is required for fast-burn combustion.

A unique three-stage intake air system that utilizes two separate plenums, one for each side of the engine. The plenums can be connected through the operation of two special intake manifold tuning (IMT) valves to improve upper rpm power.

Identification

For quick identification refer to the safety certification decal:

- The decal is located on the LH front door lock face panel.
- An engine identification label is also attached to the engine.
- The symbol code on the identification tag identifies each engine for determining parts usage; for instance, engine displacement in liters or cubic inch displacement and model year.

Engine Code Information

The engine code information label is located on the front fender. The label contains, among other information:

- the engine calibration number.
- the engine build date.
- the engine plant code.
- the engine code.

Emission Calibration Label

NOTE: The engine codes and the calibration numbers must be used when making inquiries or ordering parts.

The emission calibration number label is located on the LH side door or LH door post pillar. It identifies:

- the engine calibration number.
- the engine code number.
- the revision level.

These numbers are used to determine if parts are unique to specific engines.

Exhaust Emission Control System

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Induction System

The fuel needed for burning in the cylinders is provided by a returnless, sequential multiport fuel injection (SFI).

- Fuel is supplied from the vehicle fuel tank by a high-pressure electric fuel pump mounted in the fuel tank.
- The fuel is filtered and sent to the fuel injection supply manifold.
- Fuel pressure is regulated by modulating pump output based upon readings from the fuel pressure sensor, located on the fuel rail.
- Fuel is metered into the intake air stream in accordance with engine by six solenoid-operated fuel injectors mounted in the lower intake manifolds.
- The six fuel injectors are mounted above the intake valves and connected in series with the fuel pressure regulator.

Crankshaft

The crankshaft is supported on the bottom of the cylinder block by four steel-backed, over-plated, aluminum crankshaft main bearings.

To provide smooth engine operation, the piston crankpins are positioned to provide a power impulse every 120 degrees of crankshaft rotation. The spacing provides smooth and quiet operation.

Two sprockets and timing chains connect the crankshaft with the camshafts and provide a 2:1 drive ratio.

Camshaft

The camshafts:

- are supported on four bearing inserts.
- thrust loads and end play are limited by a camshaft thrust plate.

Cylinder Head

The spark plug is installed in the center of the fuel/air roof-shaped combustion chamber to ignite the mixture in the combustion chamber. The central location of the spark plug causes the flame front to be evenly spread across the chamber, which also reduces spark knock.

Valve Train

Both camshafts are driven by a shared timing chain, and operate four valves per cylinder by means of a selective shim sitting on the top of a tappet. One spring on each valve is used to close the valve. The adjusting shims in the valve tappets can be changed to correct the valve clearance. These are available in 44 different thicknesses. The shim thickness is ink printed on the back of the shim. A high degree of accuracy is required during adjusting to avoid repeated changing of the shims. The camshaft cams run concentrically on the valve tappets. At engine speeds of about 3,000 rpm this causes the tappets to rotate, and they in turn transfer the rotation to the valves. This valve rotation is required because it produces an even valve seating and prevents the valves from wearing in a certain position which could cause them to leak.

Variable Camshaft Timing (VCT)

The VCT system changes camshaft timing dependent on engine speed, load and oil temperature. Oil pressure advances and retards camshaft timing to improve low and high speed engine performance, engine idle quality and exhaust emissions.

Positive Crankcase Ventilation System

The engine is equipped with a positive, closed-type crankcase ventilation system which recycles the crankcase vapors to the throttle body.

Engine Lubrication System

The engine lubrication system is of the force-feed type in which oil is supplied under full pressure to the crankshaft, connecting rod bearings, timing chain tensioners, and VCT solenoids. The flow of oil to the valve tappets and valve train is controlled by a restricting orifice located in the head gaskets.

Oil Pump

The lubrication system is designed to provide optimum oil flow to critical components of the engine through its entire operating range.

The heart of the system is a positive displacement internal gear oil pump. Generically this design is known as a G-rotor pump.

- The oil pump is mounted on the front face of the cylinder block.
- The inner rotor is piloted on the crankshaft post and is driven through the crankshaft.

System pressure is limited by an integral, internally vented relief valve which directs the bypassed oil back to the inlet side of the oil pump.

- Oil pump displacement has been selected to provide adequate volume so there is correct oil pressure both at hot idle and maximum speed.
- Relief valve calibration protects the system from excessive pressure during high viscosity conditions, yet is designed to provide adequate connecting rod bearing lubrication under high temperature and high speed conditions.

Engine Cooling System

The engine is liquid-cooled by a centrifugal coolant pump driven through the front engine accessory drive by the crankshaft.

A thermostat is used to restrict coolant flow until the engine reaches normal operating temperature.

Oil Pan

The oil pan is cast aluminum and is attached to the cylinder block and transmission.

- The oil pan acts as a reservoir holding lubricating oil that is pumped through the engine by the oil pump after start-up.

Drive Belt System

Accessories mounted on the front of the engine are belt-driven by the crankshaft and an automatically tensioned serpentine drive belt is routed over the following components:

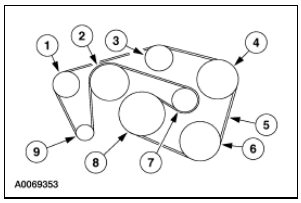
- coolant pump
- A/C compressor
- generator
- drive belt tensioner

- drive belt idler pulleys
- crankshaft pulley
- power steering pump pulley

Accessory Drive

Printable View (26 KB)

Component Locations 3.0L



Item	Part Number	Description
1	6C348	Belt idler pulley
2	8A528	Water pump pulley
3	6C348	Belt idler pulley
4	3D673	Power steering pump pulley
5	8620	Drive belt
6	19D784	A/C clutch pulley
7	6B209	Drive belt tensioner
8	6316	Crankshaft vibration damper
9	10A352	Generator pulley

Engine Emission Control

Printable View (17 KB)

⚠ CAUTION: Do not remove any part of the engine emission control system. Operating the engine without the engine emission control system will reduce fuel economy and engine ventilation. This will weaken engine performance and shorten engine life.

The engine emission control consists of the:

- positive crankcase ventilation (PCV) system.
- exhaust gas recirculation (EGR) system module.

The Vehicle Emission Control Information (VECI) decal shows:

- the components of the emission control system.
- the correct vacuum hose routing.

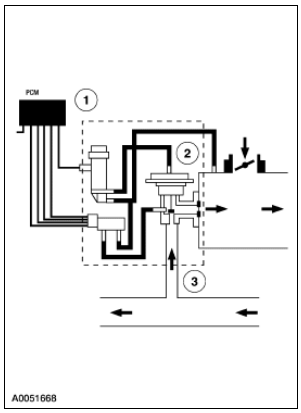
For additional information, refer to Section 100-00 .

The PCV system uses intake manifold vacuum to ventilate the crankcase and return the fumes to the intake manifold for combustion.

The PCV valve (3.0L only):

- controls the amount of ventilating air and blow-by gases going to the intake manifold.
- prevents a backfire from reaching the crankcase.

EGR System Components



Item	Part Number	Description
1	12A650	Powertrain control module
2	9J459	EGR system module
3	9D475	EGR valve-to-exhaust manifold tube

The EGR system returns a portion of the exhaust gas to the intake manifold to reduce the combustion temperature. This results in lower nitrous oxide formation.

The powertrain control module (PCM) controls the EGR vacuum regulator solenoid. The EGR vacuum regulator solenoid controls the vacuum to the EGR system module. When the EGR valve opens, exhaust gas flows to the intake manifold. The differential pressure feedback sensor measures the flow through the EGR

valve from the exhaust manifold tube and sends a signal to the PCM. A metering orifice in the EGR valve-to-exhaust manifold tube restricts the flow rate when the EGR valve is open.

Engine Printable View (7 KB)

Refer to Section 303-00 .

Accessory Drive

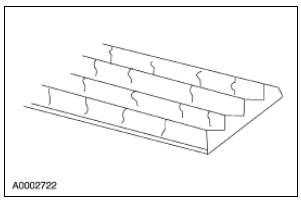
Printable View (47 KB)

Inspection and Verification

1. Verify customer concern by running the engine.
2. Inspect the drive belt for chunking, fraying, wear, and pilling.
3. Check the drive belt for correct routing.

Drive Belt Cracking/Chunking/Wear

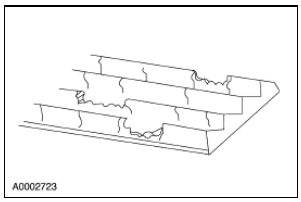
V-Ribbed Serpentine Drive Belt With Cracks Across Ribs



The accessory drive:

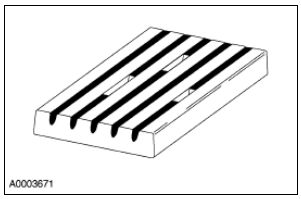
- has a single serpentine drive belt.
- has an automatic drive belt tensioner.
- does not require adjustment.
- does not require lubrication or belt dressing.

V-Ribbed Belt With Chunks of Rib Missing



V-Ribbed Belt With Pilling

NOTE: Pilling is an excessive buildup in the V-grooves of the belt.



Symptom Chart

Symptom Chart

Component Tests

Drive Belt Noise/Flutter

Drive belt chirp occurs due to pulley misalignment or excessive pulley runout. It can be the result of a damaged pulley or an incorrectly aligned pulley.

To correct, determine the area where the noise comes from. Check each of the pulleys in that area with a straightedge to the crankshaft pulley. Look for accessory pulleys out of position in the fore/aft direction or at an angle to the straightedge.

NOTE: Do not apply any fluids or belt dressing to the belt or pulleys.

Drive belt squeal is an intermittent noise that occurs when the drive belt slips on a pulley during certain conditions, such as: engine startup, rapid engine acceleration, A/C clutch engagement, 1-2 shift and power steering loading.

Drive belt squeal can occur under certain conditions:

- if the A/C discharge pressure goes above specifications:
  - ♦ the A/C system is overcharged.
  - ♦ the A/C condenser core airflow is blocked.
- if the A/C OFF equalized pressure (the common discharged and suction pressure that occurs after several minutes) exceeds specifications.
- if any of the accessories are damaged, have a worn or damaged bearing, or internal torsional resistance above normal. All accessories should be rotatable by hand in the unloaded condition. If not, inspect the accessory.
- if fluid gets on the drive belt. This includes power steering fluid, engine coolant, engine oil or air conditioning system lubricant. If excessive fluid does get on the drive belt during repair, install a new drive belt.
- if the drive belt is too long. A drive belt that is too long will allow the drive belt tensioner arm to go all the way to the arm travel stop under certain load conditions, which will release tension to the drive belt. If the drive belt tensioner indicator is outside the normal installation wear range, install a new drive belt.
- **NOTE:** The drive belt tensioner arm should rotate freely without binding.

  Install a new drive belt tensioner if the drive belt tensioner is worn or damaged.

Belt Tension

NOTE: Drive belt tension is not adjustable.

The drive belt tensioner automatically adjusts drive belt tension.

Belt Tensioner, Automatic

Check the automatic drive belt tensioner:

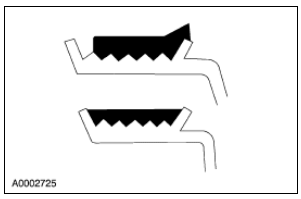
1. With the engine off, check for correct drive belt routing. For additional information, refer to Accessory Drive in this section. Repair as necessary.

2. Rotate the drive belt tensioner and check for a binding or frozen condition. Install new components as necessary.

Drive Belt Misalignment

⚠ CAUTION: Incorrect drive belt installation will cause excessive drive belt wear and can cause the drive belt to come off the drive pulleys.

Non-standard drive belts can track differently or incorrectly. If a drive belt tracks incorrectly, install a new drive belt to avoid performance failure or loss of the drive belt.



With the engine running, check drive belt tracking. If the edge of the drive belt rides beyond the edge of the pulleys, noise and premature wear can occur. Make sure the drive belt rides correctly on the pulley. If a drive belt tracking condition exists, proceed with the following:

- Visually check the drive belt tensioner for damage, especially the mounting pad surface. If the drive belt tensioner is not installed correctly, the mounting surface pad will be out of position. This will result in chirp and squeal noises.
- With the engine running, visually observe the grooves in the pulleys (not the pulley flanges or the pulley forward faces) for excessive wobble. Install new components as necessary.
- Check all accessories, mounting brackets and the drive belt tensioner for any interference that would prevent the component from mounting correctly. Correct any interference condition and recheck the drive belt tracking.
- Tighten all accessories, mounting brackets, and drive belt tensioner retaining hardware to specification. Recheck the drive belt tracking.

Engine Emission Control

Printable View (7 KB)

Refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Valve Clearance Check

Printable View (34 KB)

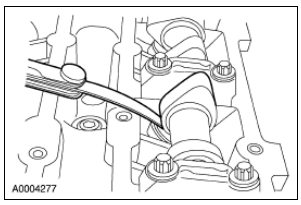
1. Remove the valve covers. For additional information, refer to Valve Cover LH or Valve Cover RH in this section.

2. Remove the spark plugs.

3. **NOTE:** The engine will have to be rotated with the crankshaft pulley bolt to bring each valve to base circle.

   NOTE: The valve clearance must be measured with the camshaft at base circle.

   Measure and record all valve clearances.



4. If the valve clearances are out of specification, refer to Valve Clearance Adjustment in this section.

5. To assemble, reverse the inspection procedure.

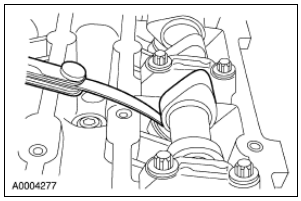
Valve Clearance Adjustment

Printable View (42 KB)

1. Remove the timing chains. For additional information, refer to Timing Drive Components in this section.

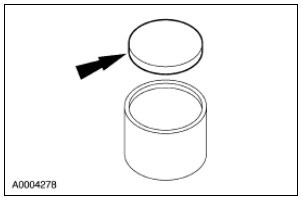
2. **NOTE:** Measure each valve clearance at base circle before removing the camshafts. The shims are not repairable with the camshafts in place. Failure to measure all clearances prior to removing the camshafts will cause unnecessary repetition of the procedure.

   Use a feeler gauge to measure each valve clearance and record its location.



3. Remove the camshafts. For additional information, refer to Camshaft, Valve Springs and Valve Seals in this section.

4. Remove the shims.



5. **NOTE:** The shims are marked for thickness; example: 2.22 mm = 222 on shim.

   NOTE: The corrected shims allow the following valve clearances.

   - Intake valve clearance: 0.18-0.22 mm (0.00709-0.00866 in)
   - Exhaust valve clearance: 0.33-0.38 mm (0.0128-0.0148 in)

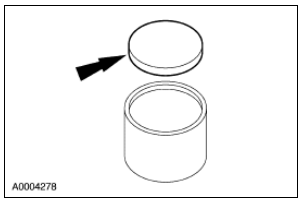
   NOTE: A midrange clearance is the most desirable:

   - Intake: 0.20 mm (0.00787 in)
   - Exhaust: 0.35 mm (0.014 in)

   NOTE: Select shims using this formula: required shim thickness = measured clearance plus the base shim thickness minus most desirable clearance.

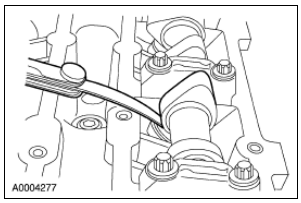
   Select shims and mark the installation location.

6. Install new shims.



7. Install the camshaft. For additional information, refer to Camshaft, Valve Springs and Valve Seals in this section.

8. Measure the new valve clearances.



9. Install the timing chains. For additional information, refer to Timing Drive Components in this section.

Accessory Drive Belt, Tensioner and Pulley

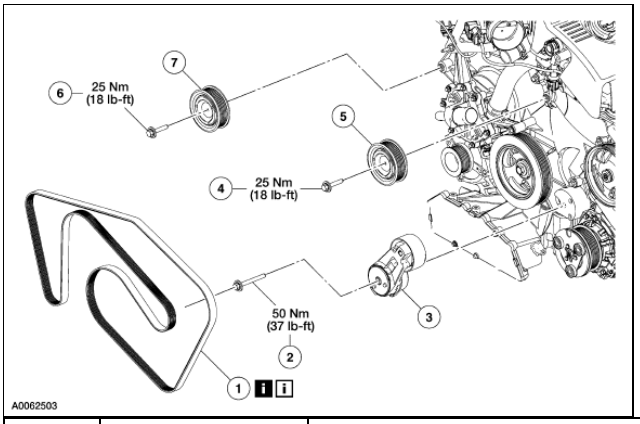
Printable View (116 KB)

Removal and Installation

1. Remove the air cleaner outlet tube. For additional information, refer to Section 303-04A .
2. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Accessory drive belt	1
Accessory drive belt tensioner	1-3
LH Accessory drive belt idler pulley	1, 4-5
RH Accessory drive belt idler pulley	1, 6-7

3. To install, reverse the removal procedure.



Item	Part Number	Description
1	8620	Accessory drive belt Removal Note
1	8620	Accessory drive belt Installation Note
2		Accessory drive belt tensioner bolt
3	6B209	Accessory drive belt tensioner
4		LH Accessory drive belt idler pulley bolt
5	6C348	LH Accessory drive belt idler pulley
6		RH Accessory drive belt idler pulley bolt
7	6C348	RH Accessory drive belt idler pulley

Item 1: Accessory Drive Belt Removal Note

1. Rotate the accessory drive belt tensioner counterclockwise to remove the accessory drive belt.

Item 1: Accessory Drive Belt Installation Note

1. ⚠ **CAUTION: Incorrect drive belt installation will cause premature drive belt failure.**

   NOTE: Make sure the drive belt is correctly installed on each pulley.

   Rotate the accessory drive belt tensioner counterclockwise to install the accessory drive belt.

Exhaust Gas Recirculation (EGR) Valve

Printable View (176 KB)

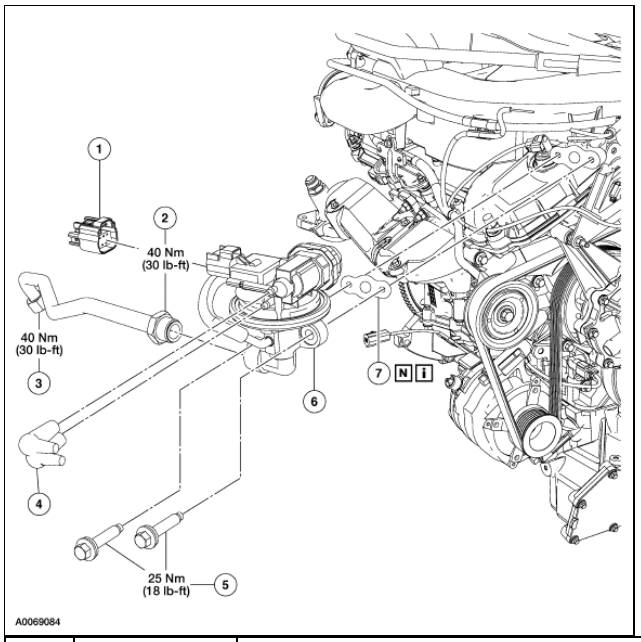
Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Exhaust gas recirculation (EGR) valve system module	1-2, 4-7
Exhaust manifold-to-EGR valve tube	2-3

3. To install, reverse the removal procedure.



Item	Part Number	Description
1		EGR valve system module electrical connector (part of 12A581)
2	9D477	Exhaust manifold-to-EGR valve tube fitting
3	9D477	Exhaust manifold-to-EGR valve fitting
4	9E499	EGR valve system module vacuum hoses (2 req'd)
5	HS1	EGR valve system module bolts (2 req'd)
6	9D475	EGR valve system module
7	9D476	EGR valve system module gasket Installation Note

Step 7: EGR Valve System Module Gasket Installation Note

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs, or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool to remove all traces of gasket material.**

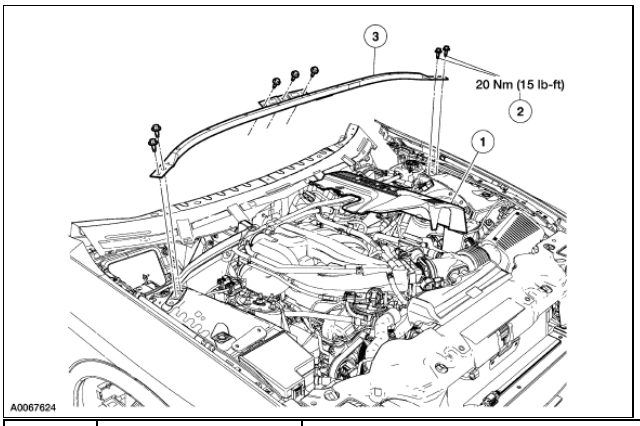
   Clean the EGR valve system module gasket mating surfaces. Install a new gasket.

Upper Intake Manifold

Printable View (763 KB)

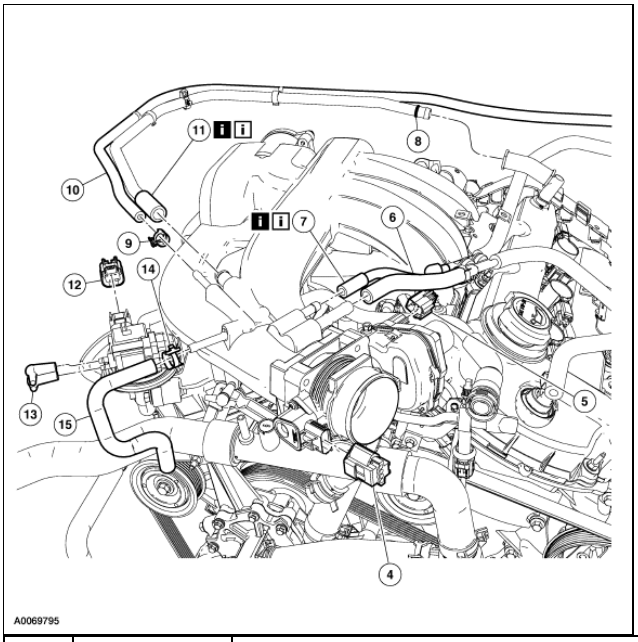
Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Drain the engine cooling system. For additional information, refer to Section 303-03 .
4. Remove the air cleaner outlet tube. For additional information, refer to Section 303-04A .
5. Remove the cowl vent screen. For additional information, refer to Section 501-00 .
6. Illustration 1 of 4. Remove the components in the order indicated in the following illustration and table.



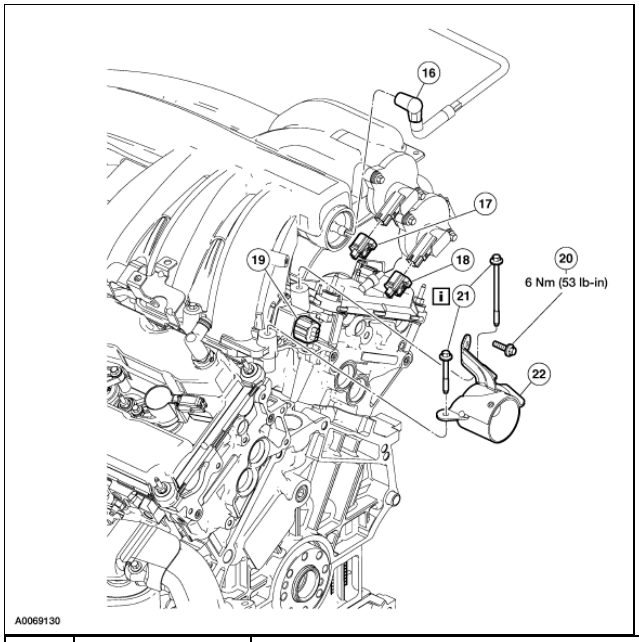
Item	Part Number	Description
1		Engine appearance cover
2	W708009	Strut tower brace mounting bolts (7 req'd)
3	3B328	Strut tower brace

7. Illustration 2 of 4. Remove the components in the order indicated in the following illustration and table.



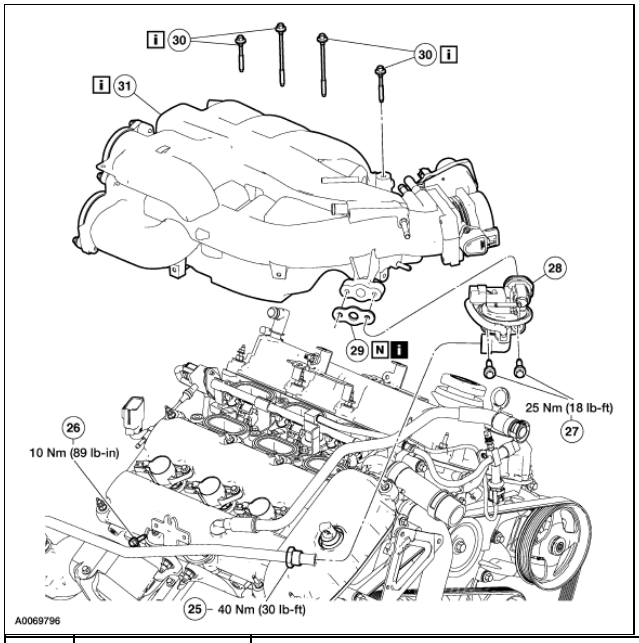
Item	Part Number	Description
4	14A464	Throttle position (TP) sensor electrical connector
5	14A464	Electronic throttle control electrical connector
6	9C490	Vacuum hose
7	9D289	Vapor management valve (VMV) vacuum hose Removal Note
7	9D289	VMV vacuum hose Installation Note
8	9D289	Positive crankcase ventilation (PCV) tube
9	15161	Coolant hose clamp
10	8906696	Coolant hose
11	9D289	PCV tube Removal Note
11	9D289	PCV tube Installation Note
12	14A464	Exhaust gas recirculation (EGR) valve system module electrical connector
13		EGR valve system module vacuum hoses (2 req'd)
14	15161	Coolant hose clamp
15	8276	Coolant hose

8. Illustration 3 of 4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
16	9E499	Vacuum hose
17	14A464	Intake manifold tuning valve electrical connector
18	14A464	Intake manifold tuning valve electrical connector
19	14A464	Fuel charging wiring harness electrical connector
20		Fuel pressure sensor shield mounting bolt
21	W701724	Fuel pressure sensor shield mounting bolts (2 req'd) Installation Note
22	9G609	Fuel pressure sensor shield

9. Illustration 4 of 4. Remove the components in the order indicated in the following illustration and table.

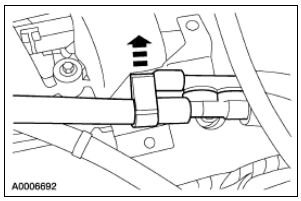


Item	Part Number	Description
25		EGR tube mounting nut

26	W701719	Intake manifold support brace bolt
27	W701625	EGR valve system module mounting bolts (2 req'd)
28	9Y456	EGR valve system module
29	9D476	EGR valve system module gasket Removal Note
30		Intake manifold mounting bolts (4 req'd) Installation Note
31	9424	Upper intake manifold Installation Note

Item 7: Vacuum Hose Removal Note

1. Remove the vacuum hoses from the mounting bracket.



Item 11: PCV Tube Removal Note

1. Position the PCV tube and coolant hose aside.

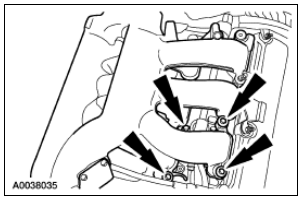
Item 29: EGR Valve System Module Gasket Removal Note

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs, or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool to remove all traces of gasket material.**

   Clean the EGR valve system module gasket mating surfaces. Install a new gasket.

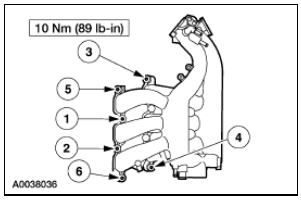
Items 30 and 31: Upper Intake Manifold and Mounting Bolts Installation Note

1. Position the upper intake manifold and install the bolts hand-tight.



Item 21: Fuel Pressure Sensor Shield Mounting Bolts Installation Note

1. Install the fuel pressure sensor shield mounting bolts hand-tight.
   - Tighten the upper intake manifold bolts in the sequence shown.

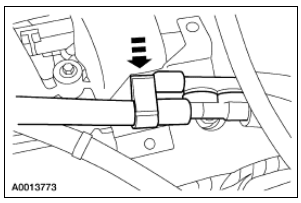


Item 11: PCV Tube Installation Note

1. Position the PCV tube and coolant hose to the intake manifold.

Item 7: Vacuum Hose Installation Note

1. Clip the vacuum hoses into the mounting bracket.



Lower Intake Manifold

Printable View (203 KB)

Special Tool(s)

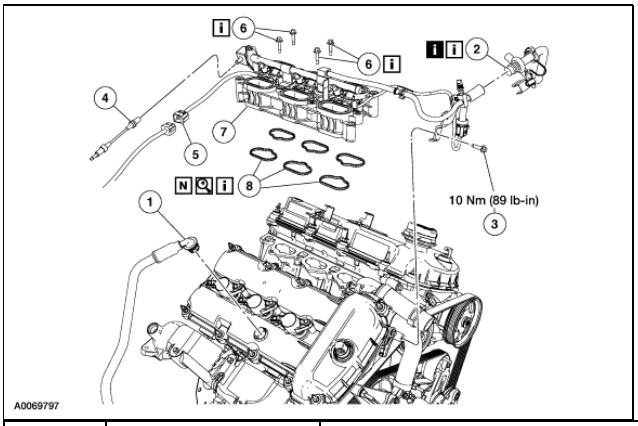
ST1147-A	Disconnect Tool, Spring Lock Coupling (1/2 inch) 310-D005 (D87L-9280-B) or equivalent

Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

Removal and Installation

1. Remove the upper intake manifold. For additional information, refer to Upper Intake Manifold .
2. Release the fuel system pressure. For additional information, refer to Section 310-00 .
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.

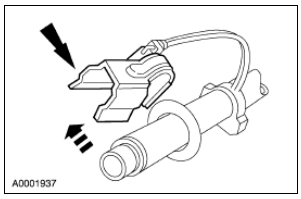


Item	Part Number	Description
1	6758	Breather tube
2	9J279	Fuel hose Removal Note
2	9J279	Fuel hose Installation Note
3	HS1	Fuel supply manifold bracket bolt
4	9E499	Fuel pressure sensor vacuum hose
5	14A163	Fuel pressure electrical connector
6	W701520	Lower intake manifold bolts (4 req'd) Installation Note

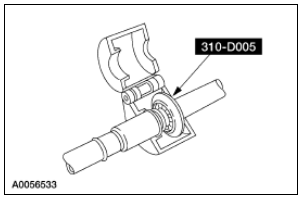
7	9424B	Lower intake manifold
8	9439	Lower intake manifold gaskets (6 req'd) Installation Note

Item 2: Fuel Hose Removal Note

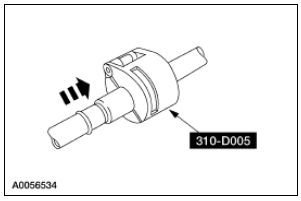
1. Remove the clip.



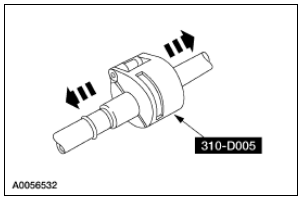
2. Install the special tool.



3. Close the special tool and push it into the open side of the cage.



4. Separate the fitting and remove the special tool.

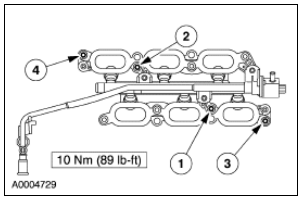


Item 8: Lower Intake Manifold Gaskets Installation Note

1. Clean and inspect the lower intake manifold gaskets. Install new gaskets if necessary.

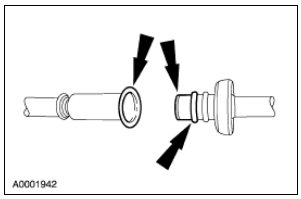
Item 6: Lower Intake Manifold Bolts Installation Note

1. Tighten the lower intake manifold bolts in the sequence shown.



Item 2: Fuel Hose Installation Note

1. Connect the spring lock coupling.
    - Clean and inspect both coupling ends.
    - Lubricate the O-rings with clean engine oil.
    - Connect the coupling.
    - Pull on the coupling to make sure it is fully engaged.
    - Install the clip.



Valve Cover LH

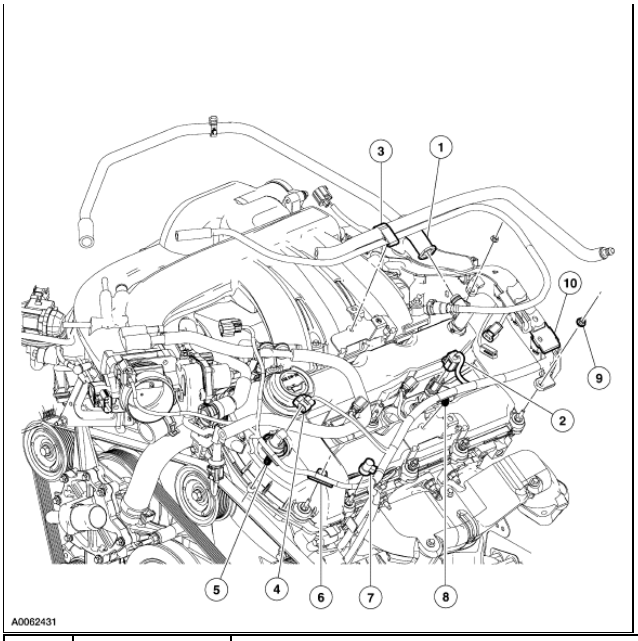
Printable View (451 KB)

Material

Item	Specification
Silicone Gasket and Sealant F7AZ-19554-EA or equivalent	WSE-M4G323-A4
Metal Surface Cleaner F4AZ-19A536-RA or equivalent	WSE-M5B392-A

Removal and Installation

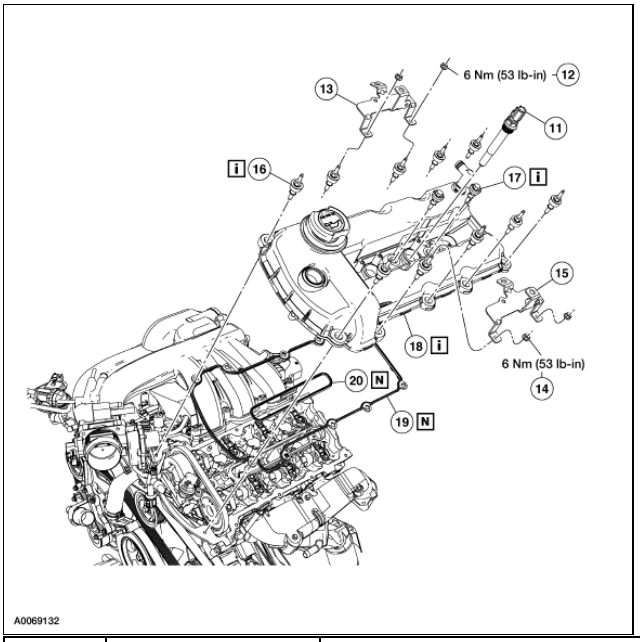
1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the LH ignition coils. For additional information, refer to Section 303-04A .
3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	957072	Positive crankcase ventilation (PCV) valve tube
2	12A581	Cylinder head temperature (CHT) sensor electrical connector
3	9C490	Hose retaining clip
4		Variable camshaft timing (VCT) solenoid electrical connector (part of 12A581)
5	13A506	Wiring harness retainer
6	13A506	Wiring harness retainer
7	14A163	Wiring harness retainer

8	13A506	Wiring harness retainer
9	W701539	Wiring harness shield nuts (2 req'd)
10	14A099	Wiring harness shield (position aside)

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
11	6G004	CHT sensor
12	W701539	Appearance cover bracket nuts (2 req'd)
13	9J444	Appearance cover bracket
14	W701539	Appearance cover bracket nuts (2 req'd)
15	9J444	Appearance cover bracket
16	6C519	LH valve cover stud bolts (10 req'd) Installation Note
17	6C519	LH valve cover bolts (2 req'd) Installation Note
18	6582	LH valve cover Installation Note
19	6584	LH valve cover gasket
20	6584	LH valve cover inner gasket

5. To install, reverse the removal procedure.

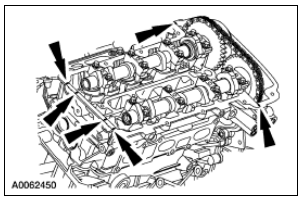
Items 16, 17, and 18 Valve Cover, Valve Cover Bolts and Valve Cover Stud Bolts Installation Note

1. Clean the cylinder head-to-valve cover sealing surface.

2. **NOTE:** RH shown, LH similar.

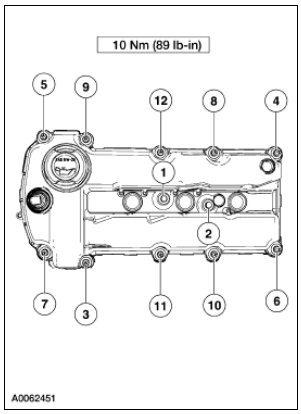
   NOTE: The valve cover must be installed within four minutes of sealant application.

Apply an 8 mm (0.32 in) bead of silicone gasket and sealant to the cylinder head half-round surface and to the front cover-to-cylinder head joint face.



3. **NOTE:** Locations 1 and 2 are bolts. Locations 3 - 12 are stud bolts.

   Install the LH valve cover, and tighten the bolts and stud bolts in the sequence shown.



Valve Cover RH

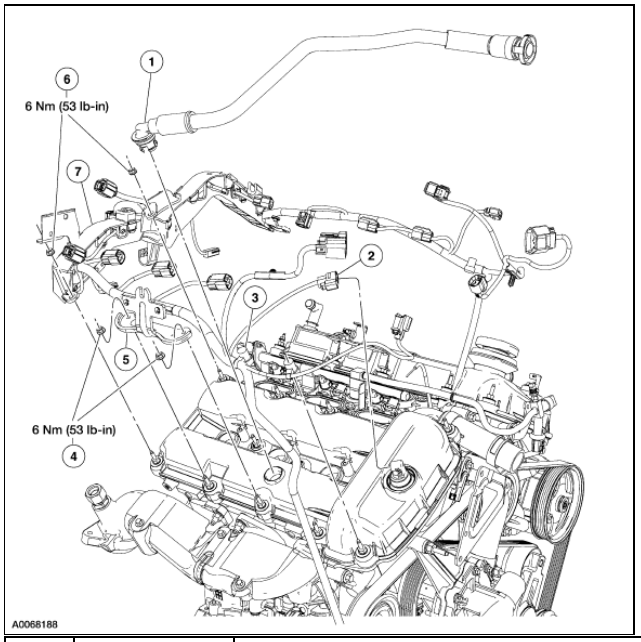
Printable View (494 KB)

Material

Item	Specification
Silicone Gasket and Sealant F7AZ-19554-EA or equivalent	WSE-M4G323-A4

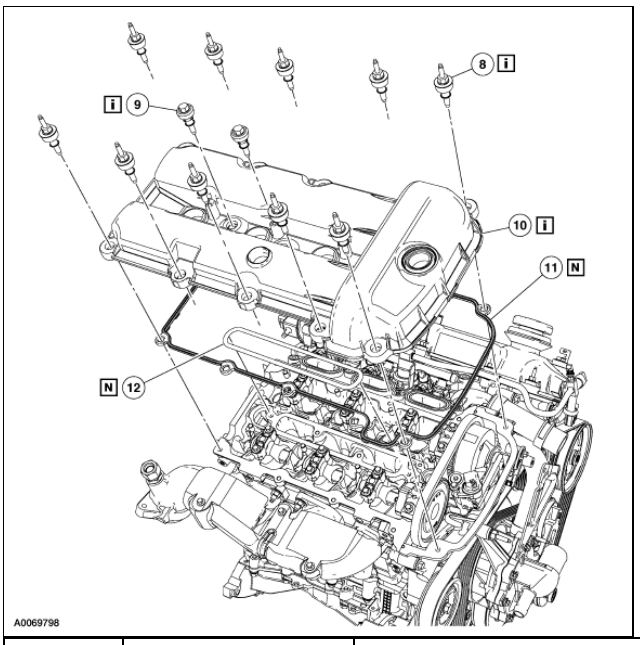
Removal and Installation

1. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
2. Remove the RH ignition coils. For additional information, refer to Section 303-04A .
3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	6750	Crankcase breather tube
2		Variable cam timing (VCT) solenoid electrical connector (part of 12A581)
3	14A163	Wiring harness retainer
4	W701539	Intake manifold support nuts (2 req'd)
5	9J444	Intake manifold support bracket (position aside)
6	W701539	Wiring harness shield nuts (4 req'd)
7	14A099	Wiring harness shield (position aside)

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
8	6C519	RH valve cover stud bolt (10 req'd) Installation Note
9	6C519	RH valve cover bolt (2 req'd) Installation Note
10	6582	RH valve cover Installation Note
11	6584	RH valve cover outer gasket
12	6584	RH valve cover inner gasket

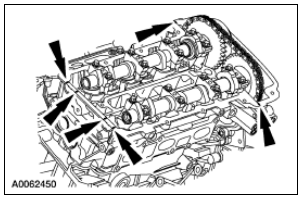
5. To install, reverse the removal procedure.

Items 8, 9, and 10: Valve Cover, Valve Cover Stud Bolts and Valve Cover Bolts Installation Note

1. Clean the cylinder head-to-valve cover sealing surface.

2. **NOTE:** The valve cover must be installed within four minutes of sealant application.

   Apply an 8 mm (0.32 in) bead of silicone gasket and sealant to the cylinder head half-round surface and to the front cover-to-cylinder head joint face.



3. **NOTE:** Locations 1 and 2 are bolts. Locations 3-12 are stud bolts.

   Install the RH valve cover, and tighten the bolts and stud bolts in the sequence shown.

Crankshaft Pulley and Crankshaft Seal

Printable View (272 KB)

Special Tool(s)

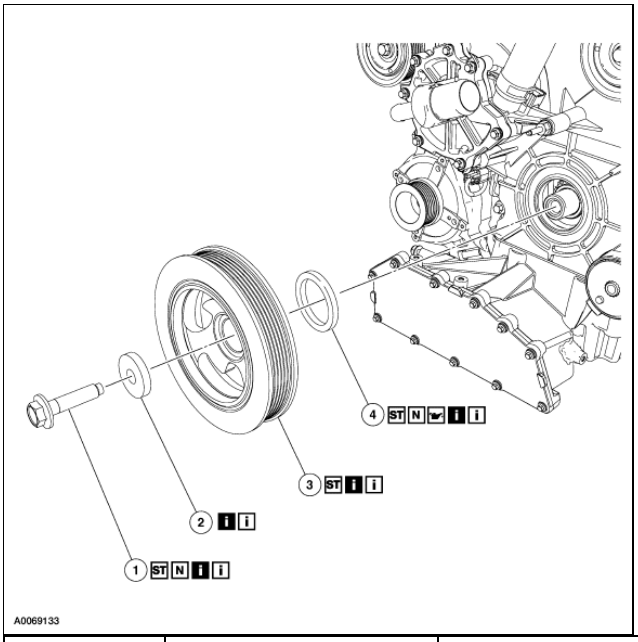
 ST1287-A	Installer, Crankshaft Vibration Damper 303-102 (T74P-6316-B)
ST1184-A	3-Jaw Puller 303-D121
ST1438-A	Strap Wrench 303-D055 (D85L-6000-A)
ST1385-A	Remover, Oil Seal 303-409 (T92C-6700-CH)
 ST1328-A	Installer, Front Cover Oil Seal 303-335 (T88T-6701-A)

Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H
Silicone Gasket and Sealant F7AZ-19554-EA or equivalent	WSE-M4G323-A4

Removal and Installation

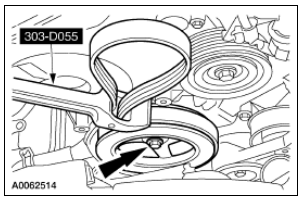
1. With the vehicle in neutral, position it on a hoist. For additional information, refer to Section 100-00 .
2. Remove the accessory drive belt. For additional information, refer to Accessory Drive Belt, Tensioner and Pulley in this section.
3. Remove the front center splash shield.
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	6A340	Crankshaft pulley bolt Removal Note
1	6A340	Crankshaft pulley bolt Installation Note
2	6378	Crankshaft pulley washer Removal Note
2	6378	Crankshaft pulley washer Installation Note
3	6312	Crankshaft pulley Removal Note
3	6312	Crankshaft pulley Installation Note
4	6278	Crankshaft front seal Removal Note
4	6278	Crankshaft front seal Installation Note

Items 1 and 2: Crankshaft Pulley Bolt and Washer Removal Note

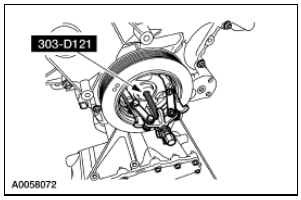
1. Using the special tool to hold the crankshaft pulley, remove and discard the bolt.



Item 3: Crankshaft Pulley Removal Note

1. ⚠ **CAUTION: The special tool must grab the inside of the damper or damage to the damper can occur.**

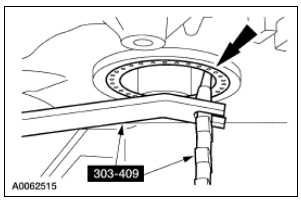
   Using the special tool, remove the crankshaft pulley.



Item 4: Crankshaft Front Seal Removal Note

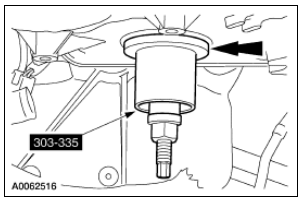
1. ⚠ **CAUTION: Use care not to scratch the crankshaft surface while removing the seal.**

   Using the special tool, remove the crankshaft front seal.



Item 4: Crankshaft Front Seal Installation Note

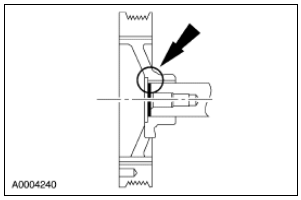
1. Lubricate the inside diameter of the crankshaft front seal with clean engine oil.
2. Using the special tool, install the crankshaft front oil seal.



Item 3: Crankshaft Pulley Installation Note

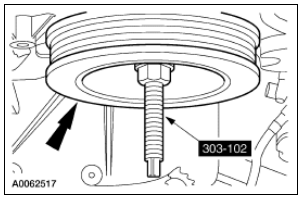
1. **NOTE:** Sealing surface must be free of dirt and oil.

   Apply silicone gasket and sealant to the end of the keyway slot.



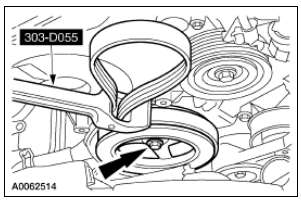
2. **NOTE:** Lubricate the outside diameter sealing surface of the crankshaft pulley with clean engine oil.

   Using the special tool, install the crankshaft pulley.



Items 1 and 2: Crankshaft Pulley Bolt and Washer Installation Note

1. Using the special tool to hold the crankshaft pulley, install a new bolt. Tighten the bolt in four stages:
    - Stage 1: Tighten to 120 Nm (89 lb-ft).
    - Stage 2: Loosen one full turn (360 degrees).
    - Stage 3: Tighten to 50 Nm (37 lb-ft).
    - Stage 4: Tighten an additional 90 degrees.



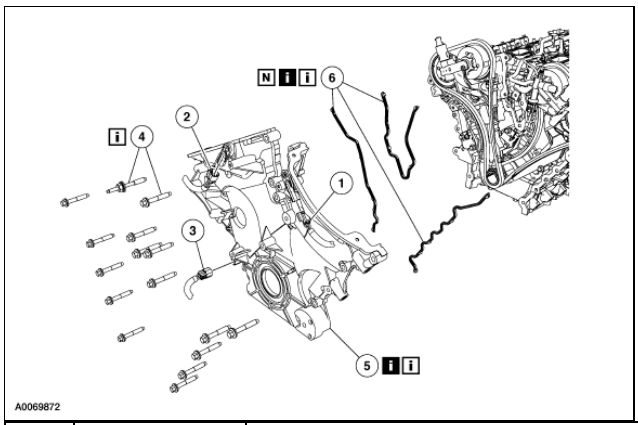
Engine Front Cover

Printable View (224 KB)

Material

Item	Specification
Silicone Gasket and Sealant F7AZ-19554-EA or equivalent	WSE-M4G323-A4

1. Remove the RH valve cover. For additional information, refer to Valve Cover RH in this section.
2. Remove the LH valve cover. For additional information, refer to Valve Cover LH in this section.
3. Remove the belt idler pulleys and the belt tensioner. For additional information, refer to Accessory Drive Belt, Tensioner and Pulley in this section.
4. Remove the coolant pump. For additional information, refer to Section 303-03 .
5. Disconnect the upper radiator hose.
6. Disconnect the lower radiator hose.
7. Remove the oil pan. For additional information, refer to Oil Pan, Oil Pump, Oil Pump Screen and Pickup Tube in this section.
8. Remove the power steering pump. For additional information, refer to Section 211-00 .
9. Remove the crankshaft front oil seal. For additional information, refer to Crankshaft Pulley and Crankshaft Seal in this section.
10. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	14A464	LH camshaft position (CMP) sensor electrical connector

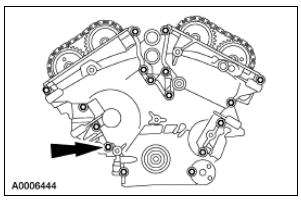
5	6C086	Engine front cover Installation Note
6		Engine front cover gaskets (3 req'd) Removal Note
6		Engine front cover gaskets (3 req'd) Installation Note

Items 5 and 6: Engine Front Cover and Engine Front Cover Gaskets Removal Note

1. Remove the fasteners and the engine front cover.
    - Discard the gasket.



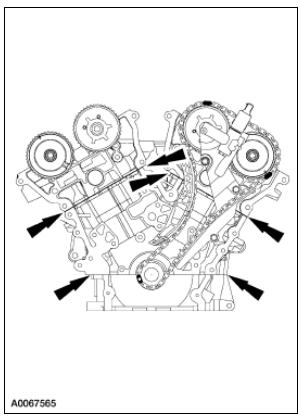
Items 4-6: Engine Front Cover, Engine Front Cover Fasteners and Engine Front Cover Gaskets Installation Note

1. Clean the sealing surfaces on the engine and the engine front cover.

2. **NOTE:** Install the engine front cover within four minutes of sealant application.

   Apply a 6 mm (0.24 in) diameter dot of silicone gasket and sealant to the areas indicated.

    - Install a new gasket.



3. **NOTE:** Number 14 is a stud and washer assembly.

   Position the front cover and tighten the bolts in the sequence shown.

Timing Drive Components

Printable View (2260 KB)

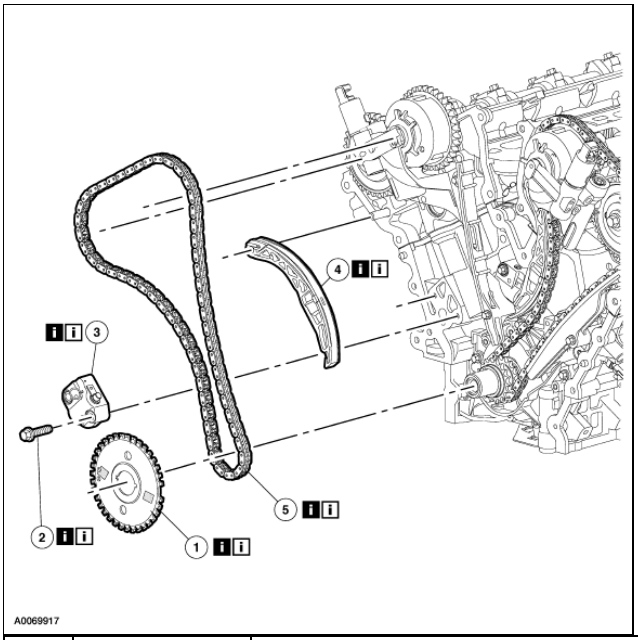
1. Remove the engine front cover. For additional information, refer to Valve Cover RH in this section.

2. If neccesary, install a new variable camshaft timing (VCT) system oil filters. For additional information, refer to Variable Camshaft Timing (VCT) System Oil Filter in this section.

3. Remove the components in the order indicated in the following illustration and table. To remove individual components, only carry out the listed steps.

Component	Steps
Timing drive components	1-29
RH variable camshaft timing (VCT) solenoid housing assembly	1-9
LH VCT solenoid housing assembly	10-17
RH VCT actuator	1-9, 18-19
LH VCT actuator	10-17, 23-24

4. Illustration 1 of 4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	12A227	Ignition pulse wheel Removal Note
1	12A227	Ignition pulse wheel Installation Note
2	W704566	RH timing chain tensioner mounting bolts (2 req'd) Removal Note

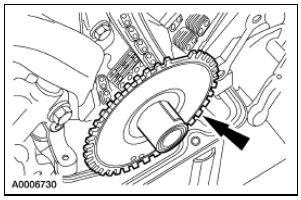
25	W704566	LH exhaust camshaft sprocket bolt Installation Note
26	W704566	LH exhaust camshaft sprocket washer Removal Note
26	W704566	LH exhaust camshaft sprocket washer Installation Note
27	W704566	LH exhaust camshaft sprocket Removal Note
27	W704566	LH exhaust camshaft sprocket Installation Note
28	6306	RH timing chain crankshaft sprocket Removal Note
28	6306	RH timing chain crankshaft sprocket Installation Note
29	6306	LH timing chain crankshaft sprocket Removal Note
29	6306	LH timing chain crankshaft sprocket Installation Note

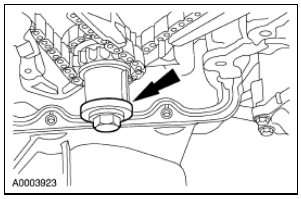
8. To install, reverse the removal procedure.

Items 1-17: Timing Drive Components Removal Note

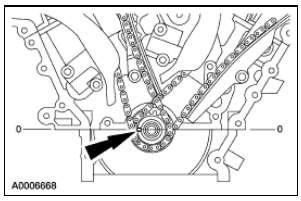
1. Remove the ignition pulse wheel.



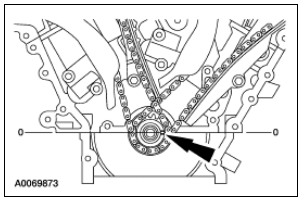
2. Install the crankshaft damper bolt and washer.



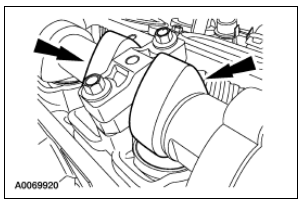
3. Rotate the crankshaft clockwise to position the crankshaft keyway to the nine o'clock position.



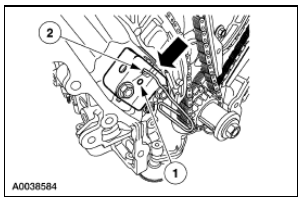
4. Rotate the crankshaft clockwise to position the crankshaft keyway to the three o'clock position.



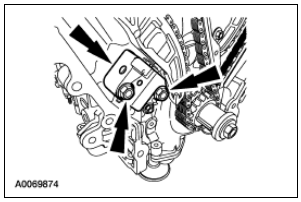
5. Verify that the front two intake camshaft lobes are pointing up.



6. Compress the timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

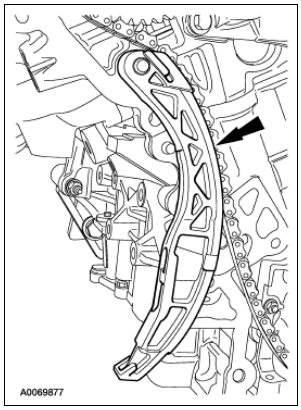


7. Remove the bolts and the RH timing chain tensioner.

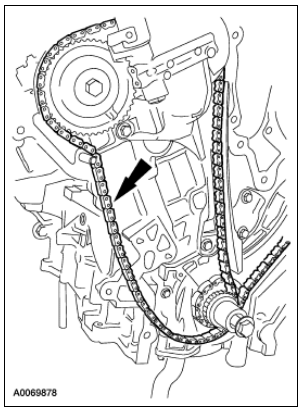


8. ⚠ **CAUTION: If the RH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

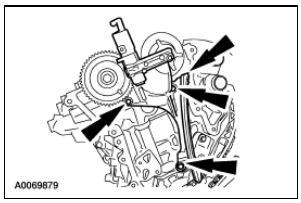
   Remove the RH timing chain tensioner arm.



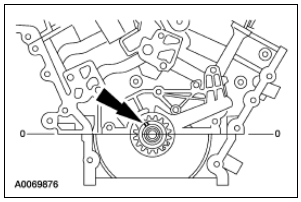
9. Remove the RH timing chain.



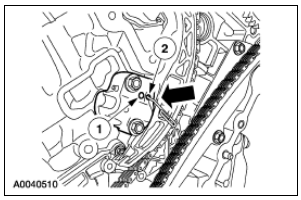
10. Remove the bolts and the RH variable camshaft timing (VCT) soleniod housing assembly.



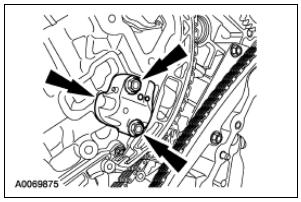
11. Rotate the crankshaft counterclockwise to position the crankshaft keyway to the eleven o'clock position.



12. Compress the timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

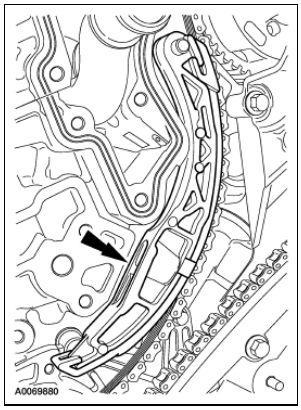


13. Remove the bolts and the LH timing chain tensioner.

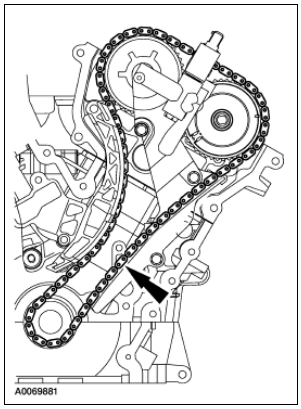


14. ⚠ **CAUTION: If the LH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

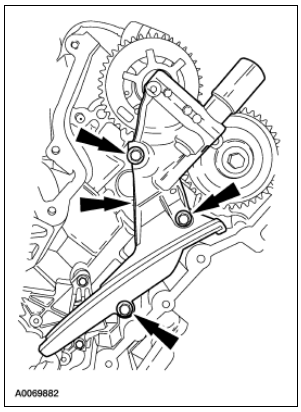
    Remove the LH timing chain tensioner arm.



15. Remove the LH timing chain.

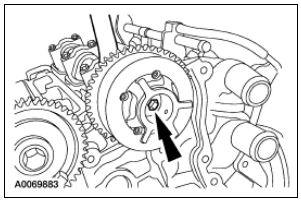


16. Remove the LH VCT solenoid housing assembly.

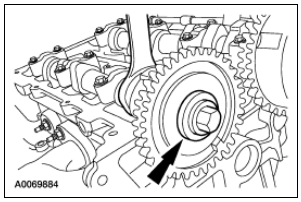


Items 18-29: Variable Camshaft Timing (VCT) Actuators, Exhaust Camshaft Sprockets, Bolts, Washers and Crankshaft Sprockets Removal Note

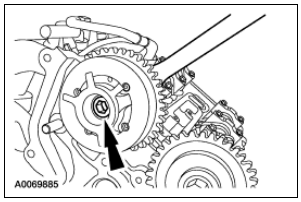
1. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH VCT actuator.
    - Discard the bolt.



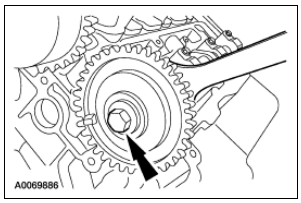
2. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH exhaust camshaft sprocket.
    - Discard the bolt.



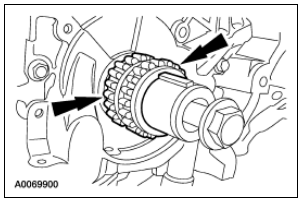
3. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH VCT actuator.
    - Discard the bolt.



4. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH exhaust camshaft sprocket.
    - Discard the bolt.

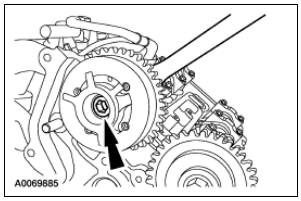


5. Remove the crankshaft sprockets.

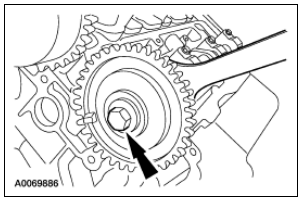


Items 18-29: Variable Camshaft Timing (VCT) Actuators, Exhaust Camshaft Sprockets, Bolts, Washers and Crankshaft Sprockets Installation Note

1. Install the LH variable camshaft timing (VCT) actuator and install a new bolt hand tight. Use a wrench on the flats of the camshaft to hold it in position and tighten the bolt in two stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.

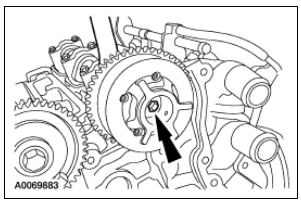


2. Install the LH exhaust camshaft sprocket and install a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.

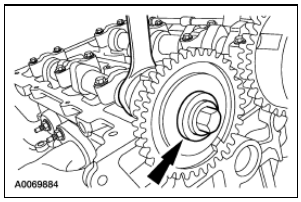


3. Install the RH variable camshaft timing (VCT) actuator and install a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the VCT actuator bolt to 20 Nm (15 lb-ft).

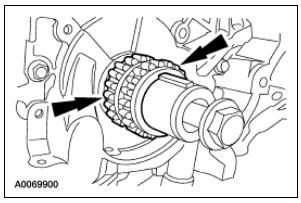
- Stage 2: Tighten an additional 90 degrees.



4. Install the RH exhaust camshaft sprocket and install a new bolt hand tight. Using a wrench on the flats of the camshaft, hold the camshaft in position and tighten the bolt in two stages.
    - Stage 1: Tighten the exhaust camshaft sprocket bolt to 20 Nm (15 lb-ft).
    - Stage 2: Tighten an additional 90 degrees.

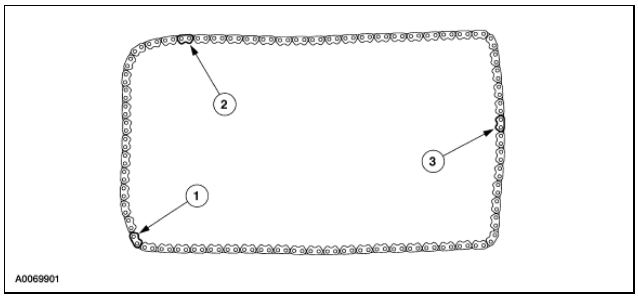


5. With the two keyways facing forward, install the crankshaft sprockets.

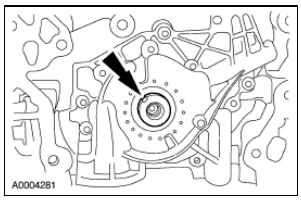


Items 1-17: Timing Drive Components Installation Note

1. If timing marks in the timing chains are not evident, use a permanent-type marker to mark the crankshaft and camshaft timing marks on the LH and RH timing chains.
    1. Mark any link to use as the exhaust camshaft timing mark.
    2. Starting with the exhaust camshaft timing mark, count 16 links and mark the link as the intake camshaft sprocket timing mark.
    3. Starting with the intake camshaft timing mark, count 25 links and mark the link as the crankshaft sprocket timing mark.

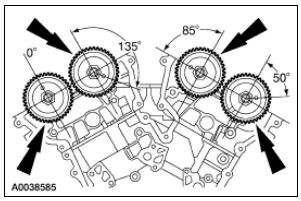


2. Verify that the crankshaft keyway is in the eleven o'clock position.



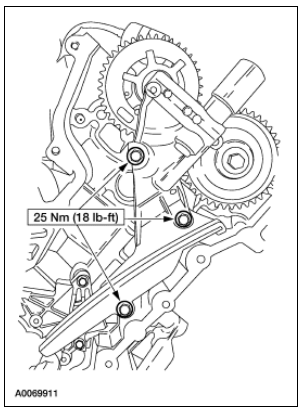
3. **⚠ CAUTION: The crankshaft keyway must remain in the eleven o'clock position until the cams are located in the neutral position, or damage to the valves can occur.**

   Rotate the LH and RH intake and exhaust camshafts to locate them in their neutral positions.

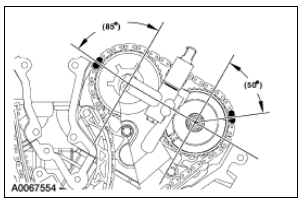


4. **NOTE:** The gold colored bolt must be installed in its original location.

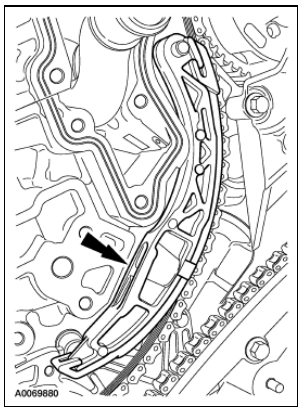
   Install the LH VCT solenoid housing assembly and the bolts.



5. Install the LH timing chain, aligning the copper (or marked) link with the marks on the camshaft and crankshaft sprockets.

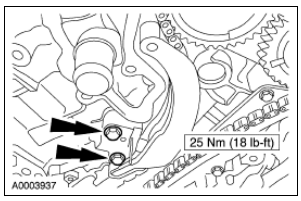


6. Install the LH timing chain tensioner arm.

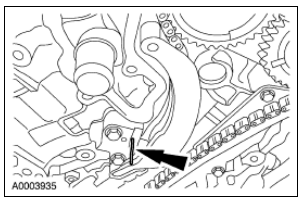


7. **NOTE:** Be sure to position the tensioner so that the tensioner piston is fully engaged in the tensioner arm.

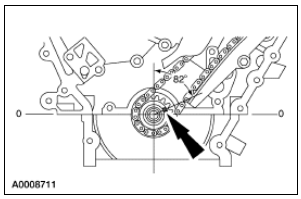
Install the LH timing chain tensioner and bolts.



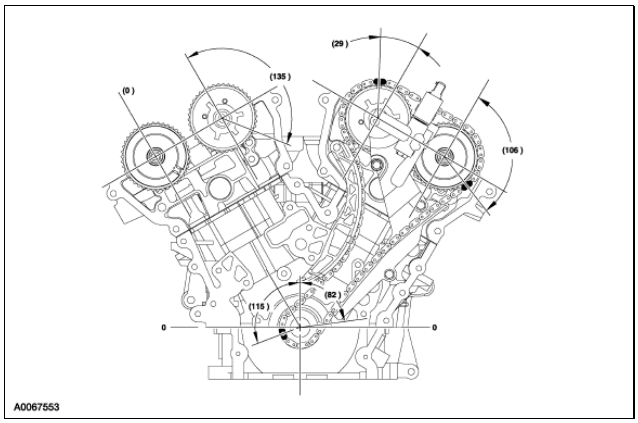
8. Remove the wire or paper clip from the tensioner.



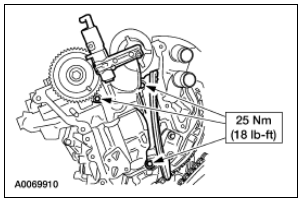
9. Rotate the crankshaft clockwise and position the keyway at the three o'clock position for RH timing chain installation.



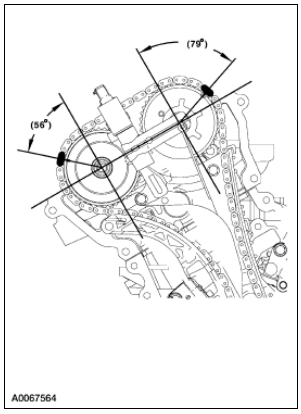
10. Verify that the copper (or marked) links on the LH timing chain are in alignment with the timing marks on the camshaft and crankshaft sprockets.



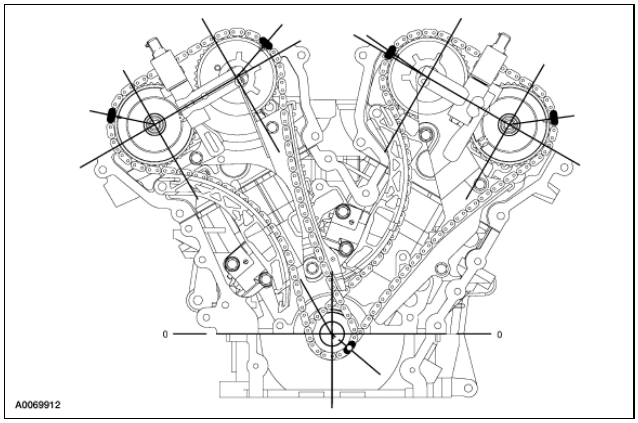
11. Install the RH VCT solenoid housing assembly and bolts.



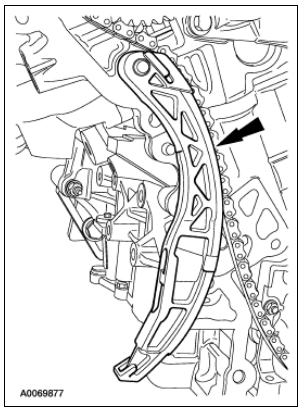
12. Install the RH timing chain, aligning the copper or (marked) links with the marks on the camshaft and crankshaft sprockets.



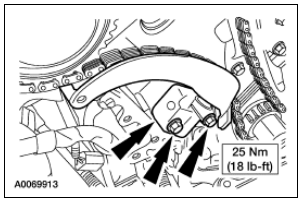
13. Verify that the copper (or marked) links on the RH timing chain are in alignment with the timing marks on the camshaft and crankshaft sprockets.



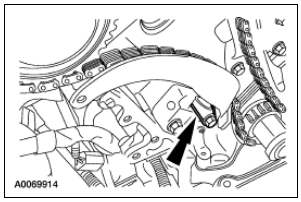
14. Install the RH timing chain tensioner arm.



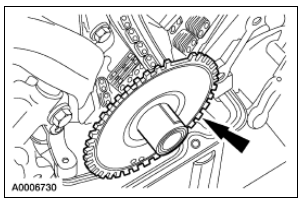
15. Install the RH timing chain tensioner and bolts.



16. Remove the wire or paper clip from the RH timing chain tensioner.



17. Install the ignition pulse wheel using the orange marked keyway slot and the teeth facing forward.



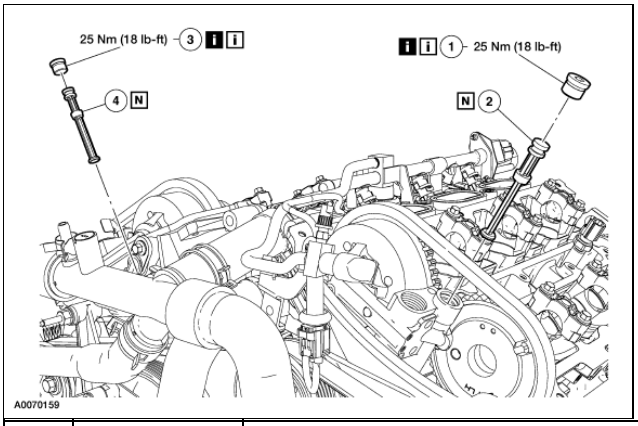
Variable Camshaft Timing (VCT) System Oil Filter

Printable View (197 KB)

Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

1. Remove the LH valve cover. For additional information, refer to Valve Cover LH in this section.
2. Remove the RH valve cover. For additional information, refer to Valve Cover RH in this section.
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal order.

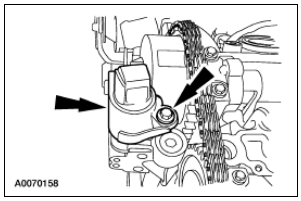


Item	Part Number	Description
1	6C260	LH Variable camshaft timing (VCT) system oil filter plug Removal Note
1	6C260	LH Variable camshaft timing (VCT) system oil filter plug Installation Note
2		LH VCT oil filter (part of 6C260)
3	6C260	RH VCT system oil filter plug Removal Note
3	6C260	RH VCT system oil filter plug Installation Note
4		RH VCT oil filter (part of 6C260)

Items 1 and 3: Variable Camshaft Timing (VCT) System Oil Filter Cap Removal Note

1. **NOTE:** LH is shown, RH is similar.

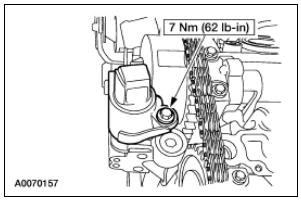
Remove the bolt and the variable camshaft timing (VCT) solenoid.



Items 1 and 3: VCT System Oil Filter Cap Installation Note

1. **NOTE:** LH is shown, RH is similar.

   Install VCT solenoid and the bolt.



Camshaft, Valve Springs and Valve Seals

Printable View (483 KB)

Special Tool(s)

 ST2489-A	Compressor, Valve Spring 303-648

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

Removal and Installation

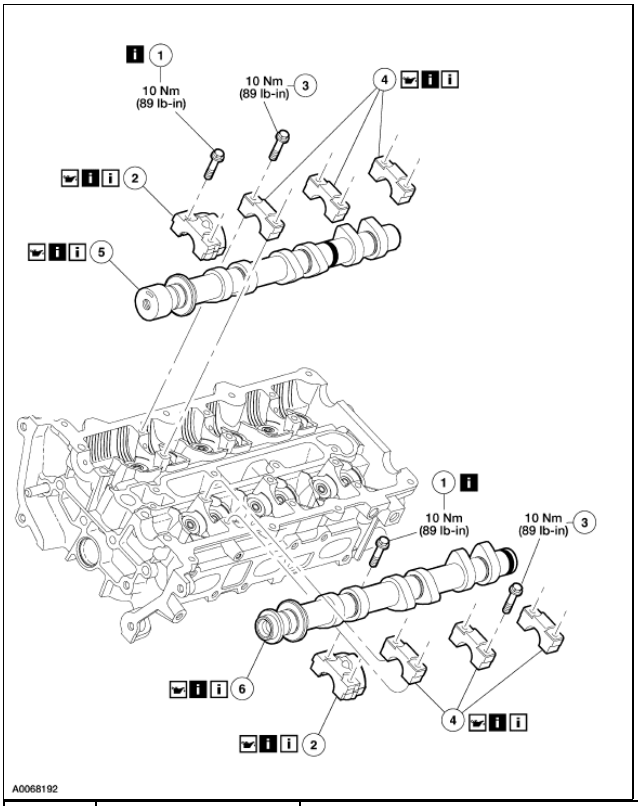
⚠ CAUTION: Cylinder head camshaft journal caps and cylinder heads are numbered to be sure they are assembled in their original positions. Keep camshaft journal caps with the cylinder head from which they were removed. Do not mix with camshaft journal caps from another cylinder head.

1. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.

2. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the listed steps.

Component	Steps
Camshafts	1-5
Valve springs and valve seals	1-12

3. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	W705391	Camshaft journal thrust cap bolts (4 req'd) Removal Note
2	6B280	Camshaft journal thrust caps (2 req'd) Removal Note
2	6B280	Camshaft journal thrust caps (2 req'd) Installation Note
3	W705391	Camshaft journal bolts (12 req'd)
4	6B281	Camshaft journal caps (6 req'd) Removal Note
4	6B281	Camshaft journal caps (6 req'd) Installation Note

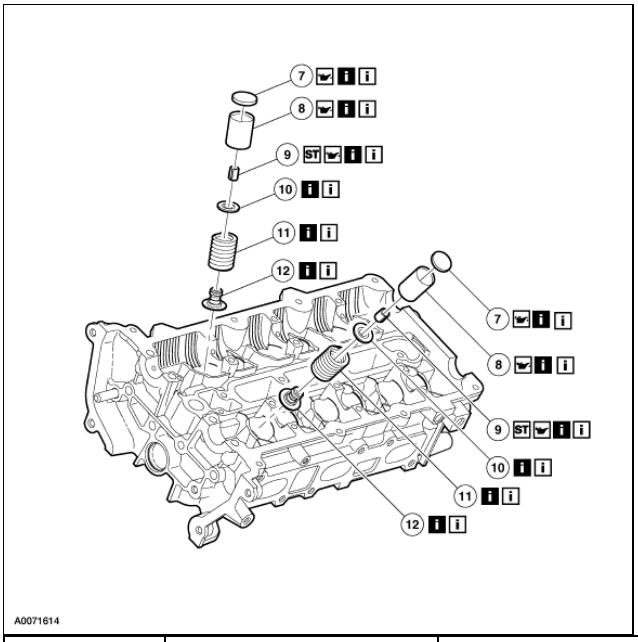
5	6A269	Intake camshaft Installation Note
6	6A267	Exhaust camshaft Removal Note
6	6A267	Exhaust camshaft Installation Note

4. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
7	6K514	Shim Removal Note
7	6K514	Shim Installation Note
8	6500	Tappet Removal Note
8	6500	Tappet Installation Note
9	6518	Valve spring retainer key Removal Note
9	6518	Valve spring retainer key Installation Note
10	6514	Valve spring retainer Removal Note
10	6514	Valve spring retainer Installation Note
11	6513	Valve spring Removal Note
11	6513	Valve spring Installation Note
12	6A517	Valve stem seal Removal Note
12	6A517	Valve stem seal Installation Note

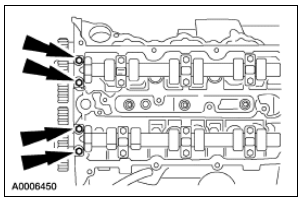
Item 1: Camshaft Journal Thrust Cap Bolts Removal Note

1. **⚠ CAUTION: Remove the camshaft journal thrust caps prior to loosening the other camshaft journal cap bolts. Damage to the camshaft journal thrust caps can occur if not removed first.**

   ⚠ CAUTION: Cylinder head camshaft journal caps and cylinder heads are numbered to be sure they are assembled in their original positions. Keep camshaft journal caps with the

cylinder head from which they were removed. Do not mix with camshaft journal caps from another cylinder head.

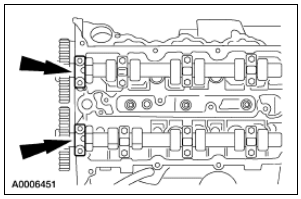
Remove the bolts.



Item 2: Camshaft Journal Thrust Cap Removal Note

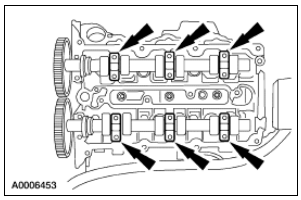
1. **NOTE:** The camshaft journal thrust caps have alignment dowels.

   Using a soft-faced mallet, gently loosen and remove the camshaft journal thrust caps.



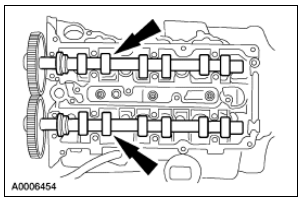
Item 4: Camshaft Journal Caps Removal Note

1. Using a soft-faced mallet, gently loosen and remove the remaining camshaft journal caps.



Items 5 and 6: Intake And Exhaust Camshafts Removal Note

1. Use care when lifting out the camshafts.



Items 7 and 8: Tappet and Shim Removal Note

1. ⚠ **CAUTION: Do not use any means of marking the shims other than a permanent type marker. Any scratches or paint on the shims can result in incorrect lash adjustment and severe engine damage.**

   ⚠ **CAUTION: The tappets and shims must be installed in their original position to make sure of correct valve lash settings.**

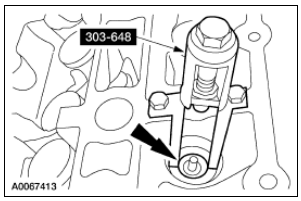
   Remove the tappet and shim.

Items 9-12: Valve Spring Retainer Key, Retainer, Valve Spring and Valve Stem Seal Removal Note

1. Remove the spark plug for the cylinder being serviced.

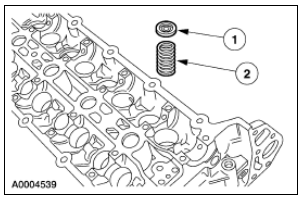
2. Position the piston for the cylinder being serviced at the top of its stroke and pressurize the cylinder with compressed air.

3. Using the special tool, compress the valve spring and remove the retainer keys.

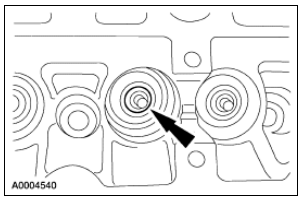


4. Repeat the procedure for all of the cylinders to be serviced.

5. Remove the valve spring.
    1. Remove the retainer.
    2. Remove the valve spring.

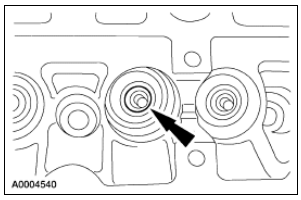


6. Remove the valve stem seal.



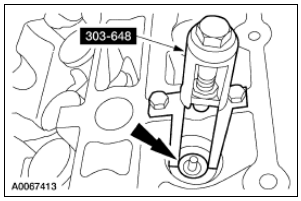
Items 9-12: Valve Spring Retainer Key, Retainer, Valve Spring and Valve Stem Seal Installation Note

1. Install the valve stem seal.



2. Install the valve spring and retainer.

3. Using the special tool, compress the valve spring and install the retainer keys.



4. Release the compressed air used to hold the valves closed.

5. Install the spark plug. For additional information, refer to Section 303-04A .

Items 7 and 8: Tappet and Shim Installation Note

1. **⚠ CAUTION: The tappets and shims must be installed in their original position to make sure of correct valve lash settings.**

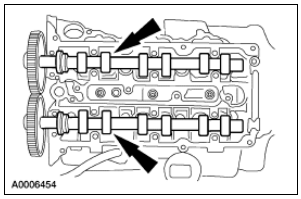
   NOTE: Lubricate the tappet shims and camshaft lobes with clean engine oil.

   Install the tappet and shim.

Items 5 and 6: Exhaust and Intake Camshafts Installation Note

1. **NOTE:** Be sure camshaft bearing caps are installed in their original positions.

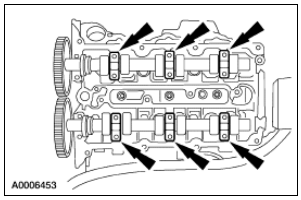
   Lubricate camshafts with clean engine oil and carefully position the camshafts into the cylinder head.



Item 4: Camshaft Journal Caps Installation Note

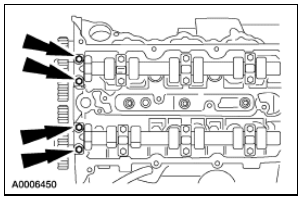
1. **⚠ CAUTION: Do not install the camshaft journal thrust caps until all of the camshaft bearing caps have been installed, or damage to the thrust caps can occur.**

   Lubricate the bearing surfaces of the camshaft bearing caps with clean engine oil, install the bearing caps, and loosely install the bolts.

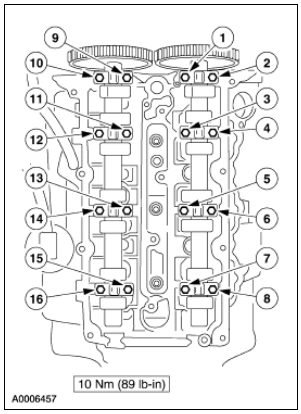


Item 2: Camshaft Journal Thrust Cap Installation Note

1. Lubricate the bearing surfaces of the camshaft journal thrust caps with clean engine oil, install the caps, and loosely install the bolts.

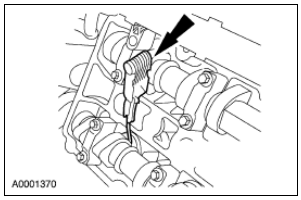


2. Tighten the bolts in the sequence shown.



3. ⚠ **CAUTION: If any components are installed new, the engine must be reshimmed or engine damage can occur.**

   Using a feeler gauge, confirm that the tappet and shim clearances are within specification. For additional information, refer to Valve Clearance Check in this section.



4. If tappet and shim clearances are not within specifications, adjust the clearance. For additional information, refer to Valve Clearance Adjustment in this section.

⚠ **CAUTION: Verify that the crankshaft is in the nine o'clock position before rotating the camshafts, or damage to the valve train can result.**

5. Rotate the camshafts to be sure they are not binding. If binding occurs, check to make sure that all bearing caps are in the original positions. Loosen all bearing cap bolts in reverse order and then tighten again.

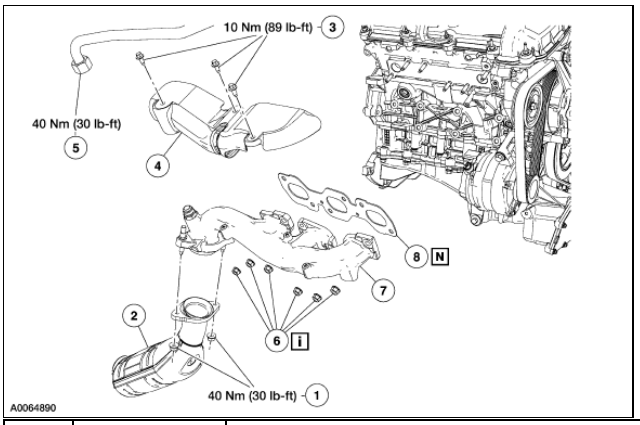
6. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

Exhaust Manifold RH

Printable View (127 KB)

Removal and Installation

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
2. Remove the RH lower splash shield.
3. Remove the components in the order indicated in the following illustration and table.
4. To install, reverse the removal procedure.



Item	Part Number	Description
1	HN1	Catalytic converter-to-exhaust manifold nuts (2 req'd)
2	5E212A	Catalytic converter (position aside)
3	HS1	Heat shield bolts (3 req'd)
4	9A462A	RH heat shield
5	9D477	Exhaust manifold-to-exhaust gas recirculation (EGR) valve tube (position aside)
6	HN1	Exhaust manifold nuts (6 req'd) Installation Note
7	9430A	RH exhaust manifold
8	9448	RH exhaust manifold gasket

Item 6: RH Exhaust Manifold Nuts Installation Note

1. **NOTE:** To verify the seal, the manifold bolts must be tightened to the same specification two times.

   Tighten the exhaust manifold nuts in the sequence shown in two stages:

   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten to 20 Nm (15 lb-ft).

Cylinder Head LH Printable View (295 KB)

Special Tool(s)

 ST2425-A	Three Bar Engine Support Kit 303-F072

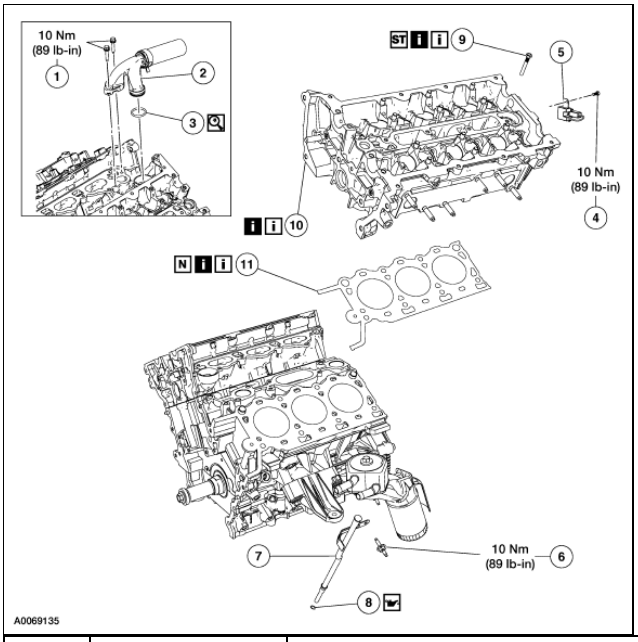
Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

Removal and Installation

⚠ CAUTION: Some of the following references contain referrals to other procedures that also must be completed. These procedures must be carried out in their entirety in order to complete this procedure.

1. Remove the LH camshafts. For additional information, refer to Camshaft, Valve Springs and Valve Seals in this section.
2. Remove the LH exhaust manifold. For additional information, refer to Exhaust Manifold LH in this section.
3. Remove the lower intake manifold. For additional information, refer to Lower Intake Manifold in this section.
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	W701669	Coolant outlet pipe mounting bolts (2 req'd)
2	8548	Coolant outlet pipe
3		Coolant outlet pipe O-ring seal
4	W500213	Radio ignition interference capacitor bolt
5	18801	Radio ignition interference capacitor
6	W701822	Oil level indicator tube mounting stud
7	6754	Oil level indicator tube
8		Oil level indicator tube O-ring seal

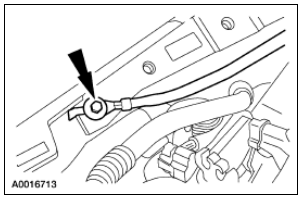
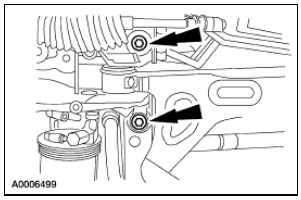
10	6050	Cylinder head Installation Note
11	6083	Cylinder head gasket Removal Note
11	6083	Cylinder head gasket Installation Note

Items 9, 10 and 11: Cylinder Head Gasket, Cylinder Head and Cylinder Head Bolts Removal Note

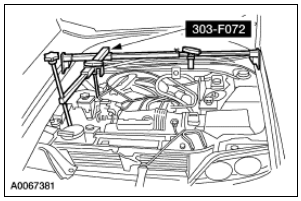
1. Remove the ground strap.



2. Install the four crossmember bolts.



3. Remove the special tool.



Items 9, 10 and 11: Cylinder Head Bolts, Cylinder Head, and Cylinder Head Gasket Installation Note

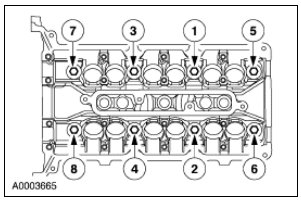
1. **⚠ CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**

   ⚠ CAUTION: New cylinder head bolts must be installed. They are tighten-to-yield designed and cannot be reused.

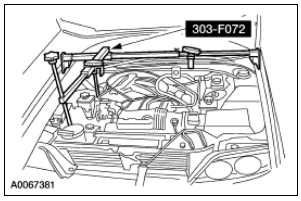
   NOTE: LH and RH cylinder head gaskets are not interchangeable.

   Using a new cylinder head gasket and bolts, install the LH cylinder head and loosely install the bolts.

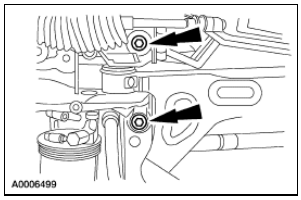
2. Tighten the bolts in six stages in the sequence shown.
   - Stage 1: Tighten to 30 Nm (22 lb-ft).
   - Stage 2: Rotate 90 degrees.
   - Stage 3: Back out a minimum of one full turn (360 degrees).
   - Stage 4: Tighten to 30 Nm (22 lb-ft).
   - Stage 5: Rotate 90 degrees.
   - Stage 6: Rotate all bolts an additional 90 degrees.



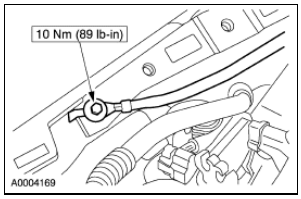
3. Install the special tool.



4. Remove the four crossmember bolts.



5. Install the ground strap.



Cylinder Head RH Printable View (285 KB)

Oil Cooler

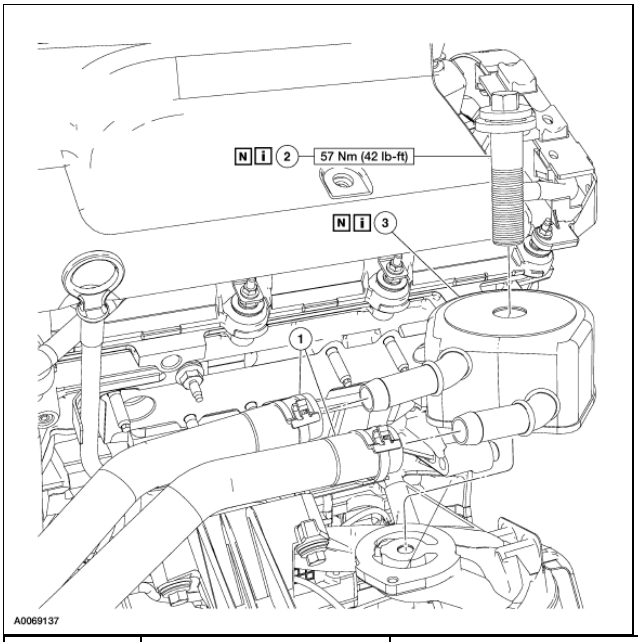
Printable View (195 KB)

Material

Item	Specification
Motorcraft Premium Gold Engine Coolant VC-7-A (in Oregon VC-7-B) or equivalent (yellow color)	WSS-M97B51-A

Removal and Installation

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
2. Drain the engine cooling system. For additional information, refer to Section 303-03 .
3. Remove the LH exhaust manifold. For additional information, refer to Exhaust Manifold LH in this section.
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.

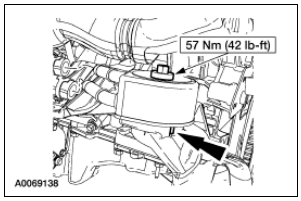


Item	Part Number	Description
1	8286	Oil cooler hoses (2 req'd)
2		Oil cooler bolt (part of 6A642) Installation Note
3	6A642	Oil cooler Installation Note

6. Fill and bleed the engine cooling system. For additional information, refer to Section 303-03 .

Items 2 and 3: Oil Cooler Bolt and Oil Cooler Installation Note

1. Install the oil cooler and bolt finger-tight. Rotate the oil cooler clockwise until the locating pin hits the stop. Tighten the bolt to specification.



Oil Filter Adapter

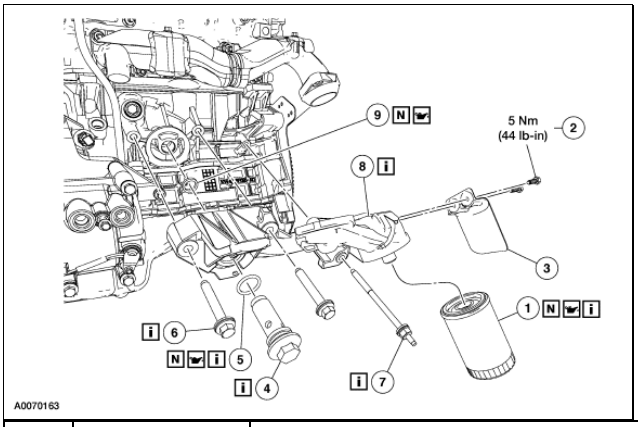
Printable View (116 KB)

Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

Removal and Installation

1. Remove the LH engine mount. For additional information, refer to Engine Mount - LH in this section.
2. If equipped, remove the oil cooler. For additional information, refer to Oil Cooler in this section.
3. Drain the engine oil.
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	6731	Oil filter Installation Note
2		Oil filter shield bolt
3	6N634	Oil filter shield
4	6894	Oil filter adapter banjo bolt Installation Note
5	6L709	O-ring seal Installation Note
6	HB1	Oil filter adapter bolts (2 req'd) Installation Note
7	HT1	Oil filter adapter stud bolt Installation Note
8	6881A/B	Oil filter adapter (oil cooler equipped/not equipped)

		Installation Note
9	6840	O-ring seal

6. Fill the engine with clean engine oil.

Item 8: Oil Filter Adapter Installation Note

1. Clean and inspect the oil filter adapter and engine mating surfaces.

Items 4- 7, Oil Filter Adapter Banjo Bolt, O-ring, Oil Filter Adapter Bolts, and Oil Filter Adapter Stud Bolt Installation Note

1. Install the O-ring seal on the banjo bolt and lubricate with clean engine oil.

2. Install the oil filter adapter banjo bolt, bolts, and studbolt hand tight. Tighten the bolts in six stages.
   - Stage 1: Tighten the banjo bolt to 30 Nm (22 lb-ft).
   - Stage 2: Tighten the bolts to 26 Nm (19 lb-ft).
   - Stage 3: Tighten the studbolt to 25 Nm (18 lb-ft).
   - Stage 4: Tighten the banjo bolt to 155 Nm (114 lb-ft).
   - Stage 5: Tighten the bolts to 40 Nm (30 lb-ft).
   - Stage 6: Tighten the bolts an additional 90 degrees.

Item 1: Oil Filter Installation Note

1. Using an oil filter strap wrench, install the oil filter until the seal makes contact. Tighten an additional 270 degrees.

Oil Pressure Switch

Printable View (119 KB)

Removal and Installation

1. Remove the components in the order indicated in the following illustration and table.
2. To install, reverse the removal procedure.

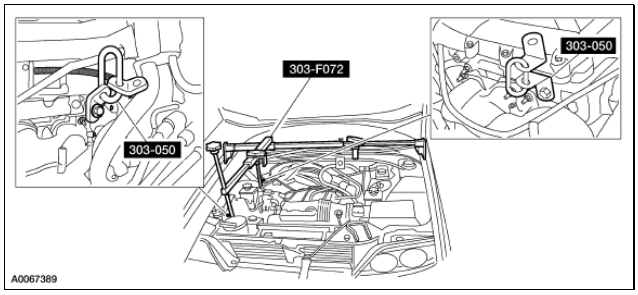
Silicone Gasket and Sealant F7AZ-19554-EA or equivalent	WSE-M4G323-A4

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Remove the radiator upper sight shield.
3. Remove the air cleaner assembly. For additional information, refer to Section 303-04A .
4. Install the special tools.

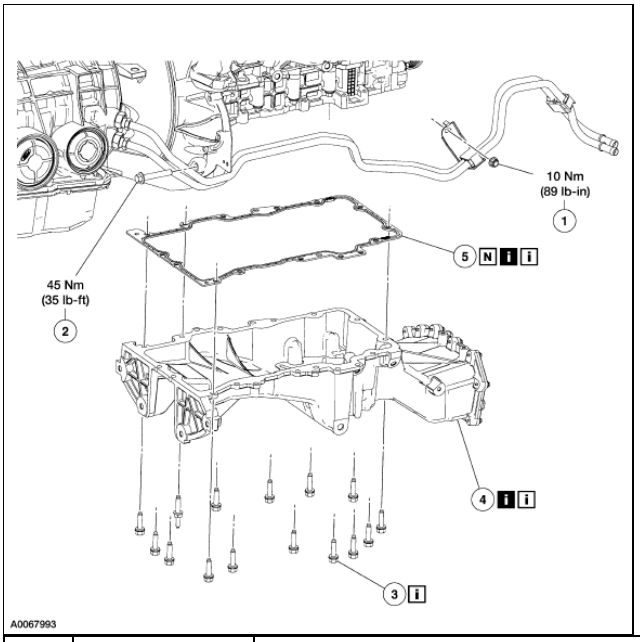


5. Remove the steering gear. For additional information, refer to Section 211-00 .
6. Remove the RH front splash shield, the LH front splash shield, and the front center splash shield.
7. Remove the generator. For additional information, refer to Section 414-00 .
8. Remove the A/C compressor. For additional information, refer to Section 412-00 .
9. Drain the engine oil.

10. To remove individual components, only carry out the listed steps.

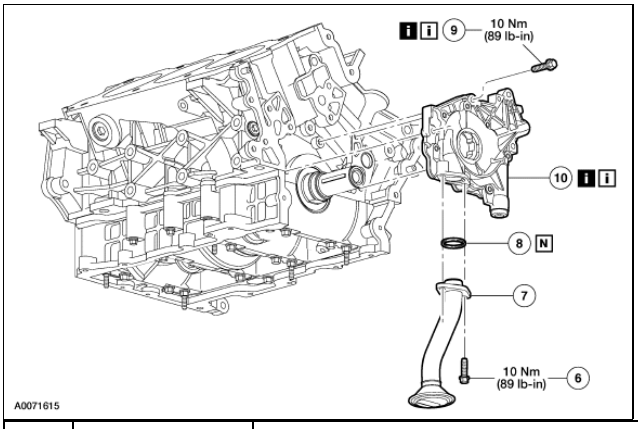
Component	Steps
Oil pan	1-5
Oil pump screen and pickup tube	1-9
Oil pump	1-11

11. Illustration 1 of 2. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Oil cooler tube mounting bolt
2		Transmission-to-oil pan mounting bolts (4 req'd)
3	W701605	Oil pan fasteners (5 req'd) Installation Note
4	6675	Oil pan Removal Note
4	6675	Oil pan Installation Note
5	6710	Oil pan gasket Removal Note
5	6710	Oil pan gasket Installation Note

12. Illustration 2 of 2. Remove the components in the order indicated in the following illustration and table.

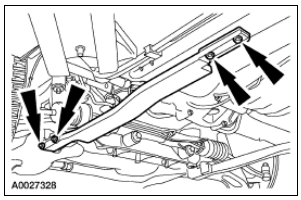


Item	Part Number	Description
6	W700005	Screen and pick-up tube mounting bolts (2 req'd)
7	6622	Screen and pick-up tube
8		Screen and pick-up tube O-ring seal
9	W704566	Oil pump mounting bolts (4 req'd) Removal Note
9	W704566	Oil pump mounting bolts (4 req'd) Installation Note
10	6621	Oil pump Removal Note
10	6621	Oil pump Installation Note

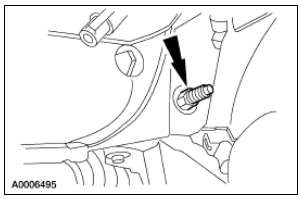
13. To install, reverse the removal procedure.

Item 4: Oil Pan Removal Note

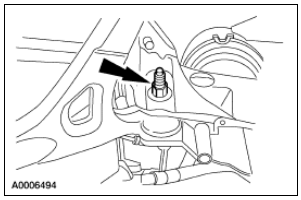
1. Remove the eight bolts and the two front I-braces.



2. Remove the LH lower control arm through-bolt.

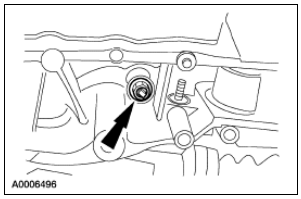


3. Remove the RH lower control arm through-bolt.

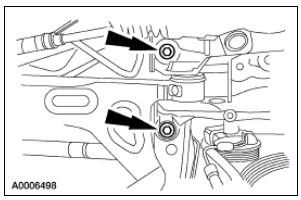


4. **NOTE:** LH shown; RH similar.

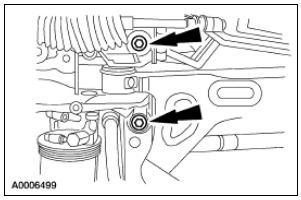
   Remove the LH and RH engine mount nuts.



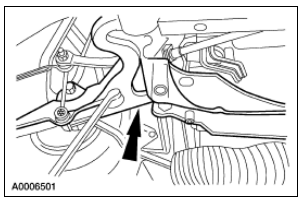
5. Remove the LH subframe bolts.



6. Remove the RH subframe bolts.



7. Gently pry the subframe down and remove the oil pan.



Item 5: Oil Pan Gasket Removal Note

1. ⚠ **CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. Use a plastic scraping tool to remove all traces of gasket material.**

   Discard the oil pan gasket.

Items 9 and 10: Oil Pump and Bolts Removal Note

1. Remove the timing drive components. For additional information, refer to Timing Drive Components in this section.

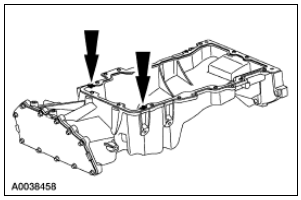
Items 9 and 10: Oil Pump and Bolts Installation Note

1. Install the timing drive components. For additional information, refer to Timing Drive Components in this section.

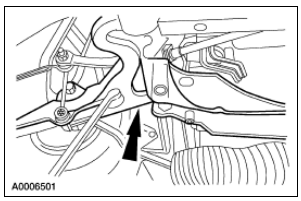
Items 3, 4, and 5: Oil Pan Fasteners, Oil Pan, and Oil Pan Gasket Installation Note

1. ⚠ **CAUTION: The oil pan must be installed and the bolts tightened within four minutes of the sealant application.**

   Apply a 10 mm (0.40 in) dot of silicone gasket and sealant to the oil pan gasket in the indicated positions.



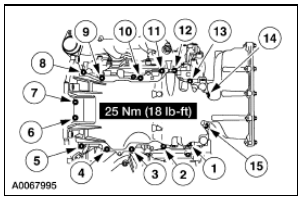
2. Gently pry the subframe down and install the oil pan.



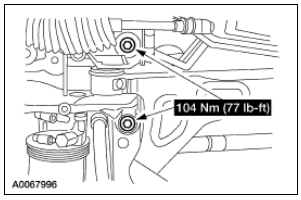
3. **NOTE:** Fasteners No. 4 and No. 9 are studs.

   Position the oil pan and install the studs and bolts.

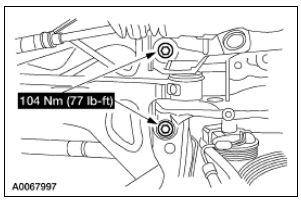
   - Tighten the bolts in the sequence shown.



4. Install the RH subframe bolts.

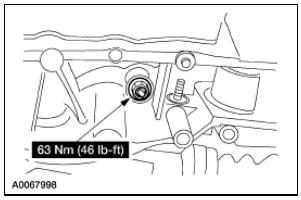


5. Install the LH subframe bolts.

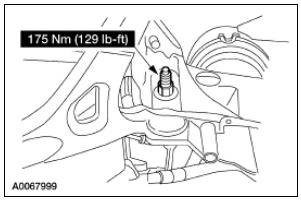


6. **NOTE:** LH shown; RH similar.

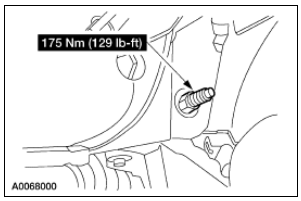
   Install the LH and RH engine mount nuts.



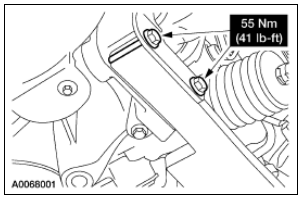
7. Install the RH lower control arm through-bolt.



8. Install the LH lower control arm through-bolt.



9. Install the eight bolts and the two front I-braces.



Flexplate or Flywheel and Crankshaft Rear Seal

Special Tool(s)

 ST1187-A	Slide Hammer 307-005 (T59L-100-B)
 ST1382-A	Remover, Crankshaft Rear Oil Seal 303-519 (T95P-6701-EH)
 ST1333-A	Installer Bolts, Crankshaft Rear Main Oil Seal 303-384 (T91P-6701-A)
 ST1327-A	Installer, Crankshaft Rear Main Oil Seal 303-178 (T82L-6701-A)

Material

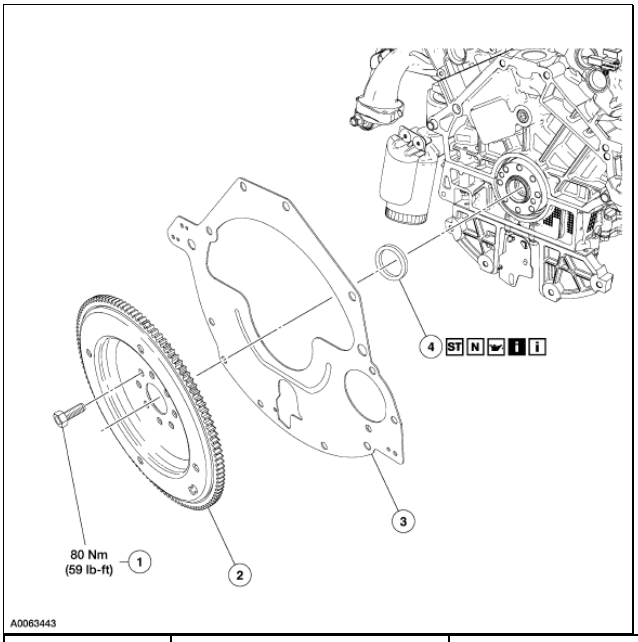
Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

Removal and Installation

1. Remove the transmission. For additional information, refer to Section 307-01 .
2. Remove the components in the order indicated in the following illustration and table. To remove individual components, carry out only the listed steps.

Component	Steps
Flexplate	1-2
Crankshaft rear seal	1-4

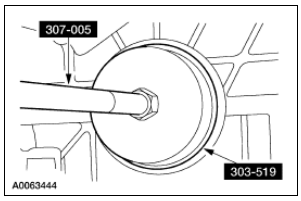
3. To install, reverse the removal procedure.



Item	Part Number	Description
1	6379	Flexplate bolts (8 req'd)
2	6375	Flexplate
3	6A372	Spacer plate
4	6701	Crankshaft rear seal Removal Note
4	6701	Crankshaft rear seal Installation Note

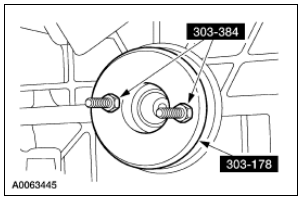
Item 4: Crankshaft Rear Seal Removal Note

1. Using the special tools, remove the crankshaft rear seal.



Item 4: Crankshaft Rear Seal Installation Note

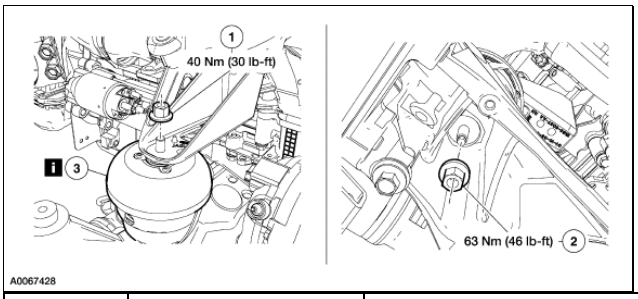
1. Lubricate the outer lips and the inner seal on the crankshaft rear seal with clean engine oil.
2. Using the special tools, install the crankshaft rear oil seal.



Engine Mount RH Printable View (107 KB)

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Remove the intake manifold tuning valves. For additional information, refer to Section 303-04A .
3. Remove the fresh air inlet duct housing. For additional information, refer to Section 303-04A .
4. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1	N621942	Engine mount upper mounting nut
2	N621942	Engine mount lower mounting nut
3	6A003	RH engine mount Removal Note

5. To install, reverse the removal procedure.

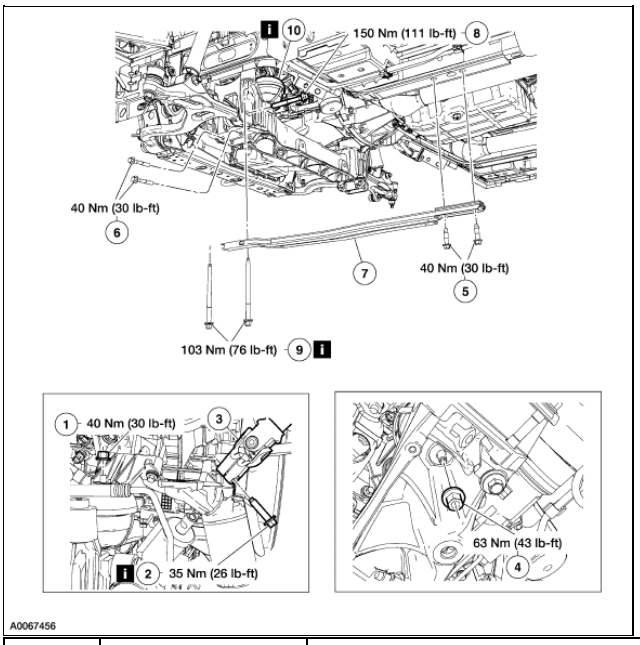
Item 3: RH Engine Mount Removal Note

1. Raise the engine and remove the engine mount.

Engine Mount LH Printable View (182 KB)

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-00 .
2. Remove the intake manifold tuning valves. For additional information, refer to Section 303-04A .
3. Remove the fresh air inlet duct housing. For additional information, refer to Section 412-00 .
4. Remove the components in the order indicated in the following illustration and table.
5. To install, reverse the removal procedure.



Item	Part Number	Description
1	N621942	LH engine mount upper nut
2	W705133	Intermediate shaft pinch bolt Removal Note
3	3C662	Intermediate shaft
4	N621942	LH engine mount lower nut
5	W707186	Crossmember brace bolts (rear) (4 req'd)
6	N804518	Crossmember brace bolts (front) (4 req'd)
7	5A099	Crossmember brace
8	W706933	Lower control arm through-bolt
9	W706239	Center crossmember bolts (4 req'd) Removal Note
10	6A003	LH engine mount Removal Note

Item 2: Intermediate Shaft Pinch Bolt Removal Note

1. ⚠ **CAUTION: The steering wheel must be in the locked position, or the lower end of the column wired in such a way that the steering column does not rotate, resulting in damage to air bag sliding contact.**

   Disconnect the steering coupling.

Item 9: Center Crossmember Bolts Removal Note

1. Loosen the center crossmember bolts.

Item 10: LH Engine Mount Removal Note

1. Raise the engine and lower the center crossmember to remove the LH engine mount.

Engine

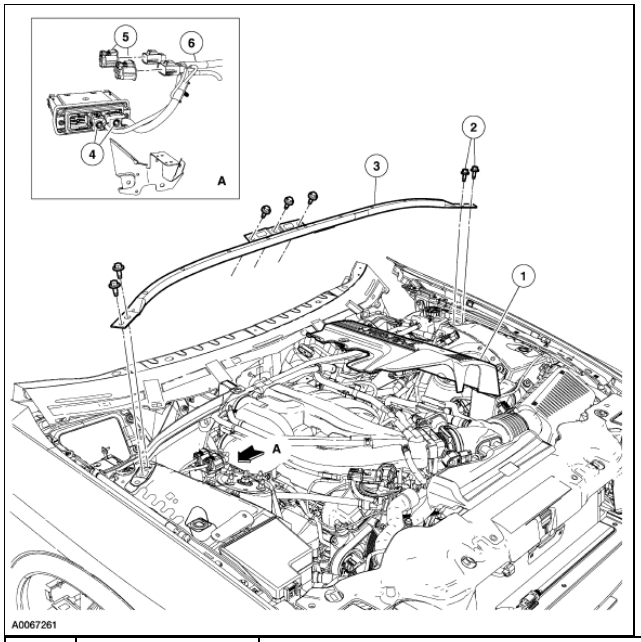
ST1147-A	Disconnect Tool, Spring Lock Coupling (1/2 inch) 310-D005 (D87L-9280-B)
ST1602-A	Spreader Bar 303-D089 (D93P-6001-A3)
ST1595-A	Engine Lifting Brackets 303-050

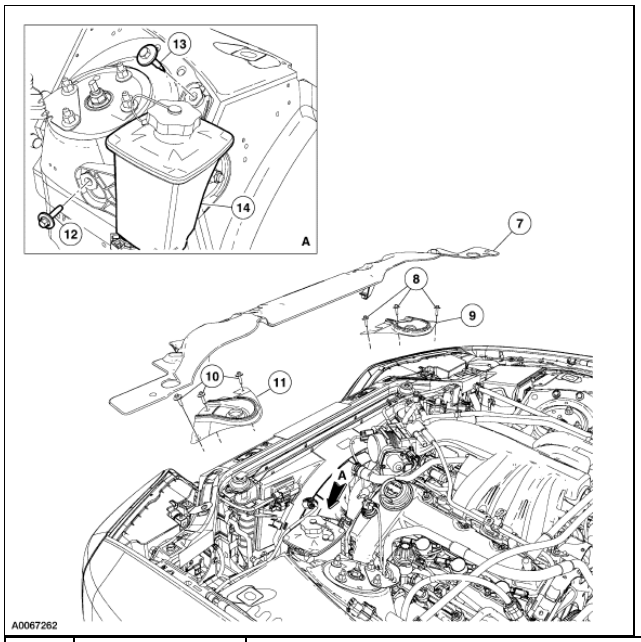
Removal

1. With the vehicle in NEUTRAL, position on a hoist. For additional information, refer to Section 100-00 .
2. Disconnect the battery ground cable. For additional information, refer to Section 414-00 .
3. Remove the air cleaner assembly. For additional information, refer to Section 303-04A .
4. Release the fuel system pressure. For additional information, refer to Section 310-00 .
5. Drain the engine cooling system. For additional information, refer to Section 303-03 .
6. Discharge the A/C system. For additional information, refer to Section 412-00 .
7. Remove the clean air inlet duct. For additional information, refer to Section 412-00 .
8. Remove the drive shaft. For additional information, refer to Section 205-00 .
9. Remove the exhaust system. For additional information, refer to Section 309-00 .
10. Remove the RH and LH inner fender splash shields.
11. Remove the front splash shield.
12. Remove the RH and LH subframe splash shields.
13. Illustration 1 of 17. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
1		Engine appearance cover
2	W708009	Cross-vehicle support mounting bolts (7 req'd)
3	3B328	Cross-vehicle support
4	14A464	Powertrain control module electrical connectors
5	14A464	Engine wiring harness electrical connectors
6	12B637	Engine wiring harness

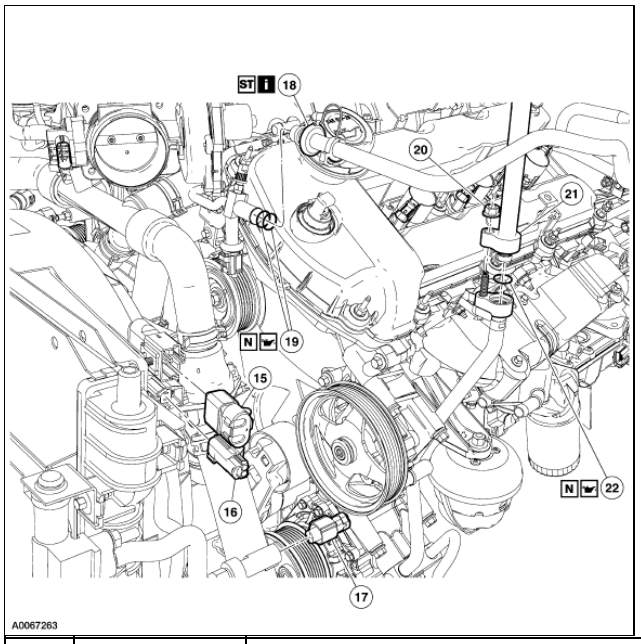
14. Illustration 2 of 17. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
7	8C291	Radiator upper sight shield
8	N606677	Radiator upper support bracket mounting bolts (3 req'd)

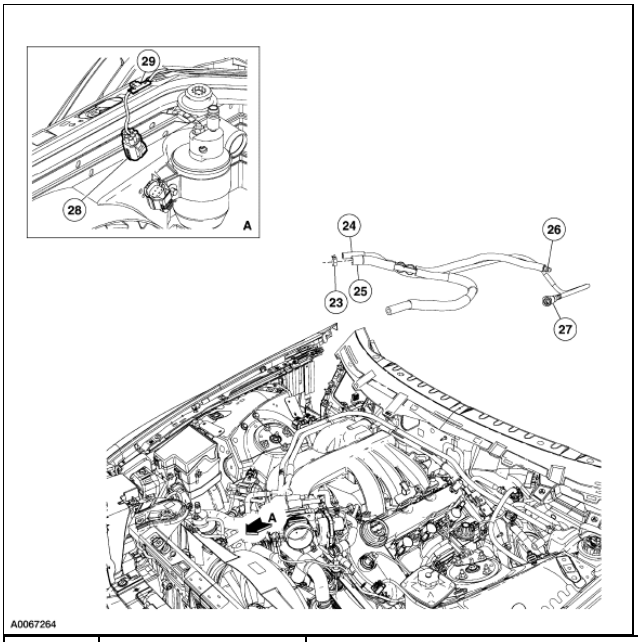
9	8226	Radiator upper support bracket (right)
10	N606677	Radiator upper support bracket mounting bolts (3 req'd)
11	8226	Radiator upper support bracket (left)
12	w705012	Power steering reservoir mounting bolt
13	N803382	Power steering reservoir mounting bolt
14	3R700	Power steering reservoir

15. Illustration 3 of 17. Remove the components in the order indicated in the following illustration and table.



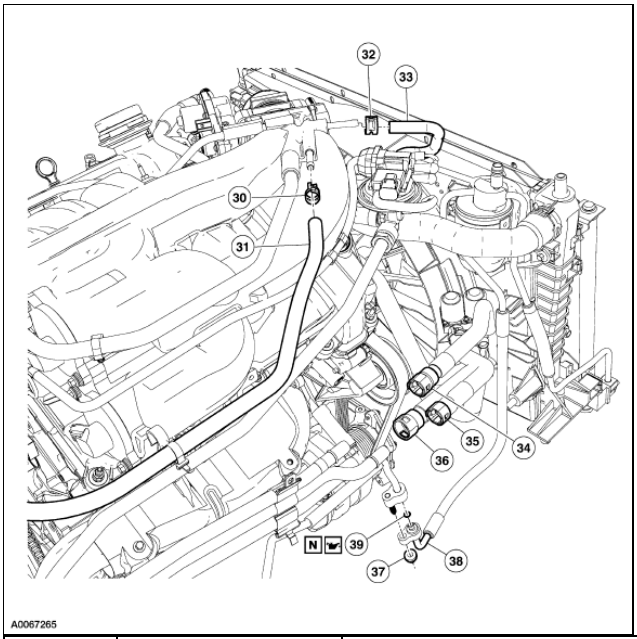
Item	Part Number	Description
15	14A464	Electric cooling fan electrical connector
16	14A464YB	Electric cooling fan electrical connector
17		A/C high pressure switch electrical connector (part of 14A464)
18	9J280	Fuel hose Removal Note
19		Fuel hose O-ring seals (2 req'd)
20	W520413	A/C manifold nut
21	190850	A/C manifold tube
22		A/C manifold tube O-ring seal

16. Illustration 4 of 17. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
23	382999	Vacuum hose clamp
24	9D289	Vacuum hose
25	9C490	Vacuum hose
26	9C490	Brake booster vacuum hose fitting
27	9D289	Vacuum hose quick-connect fitting
28	14A464	Coolant control valve electrical connector
29	12A464	Coolant control valve wiring harness

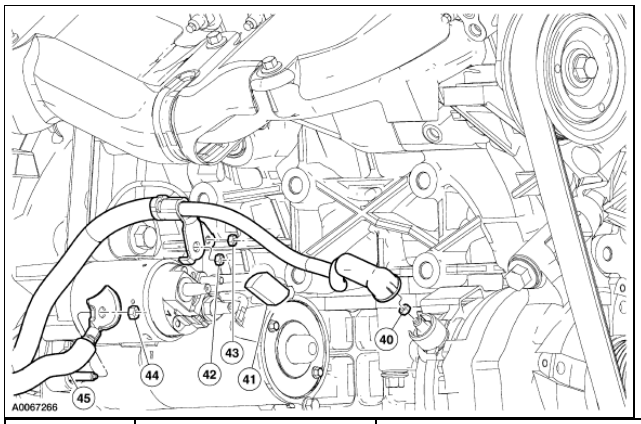
17. Illustration 5 of 17. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
30	15161	Coolant hose clamp
31	89066697	Coolant hose
32	15161	Coolant hose clamp

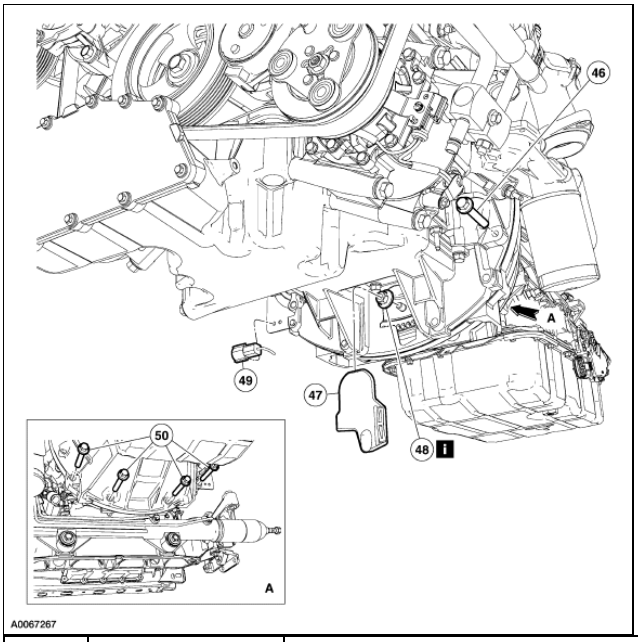
33	89066697	Coolant hose
34	18C266	Coolant hose
35	18C266	Coolant hose
36	18C266	Coolant hose
37	W520413	A/C high-pressure tube mounting nut
38		A/C high-pressure tube
39		A/C high-pressure tube O-ring seal

18. Illustration 6 of 17. Remove the components in the order indicated in the following illustration and table.



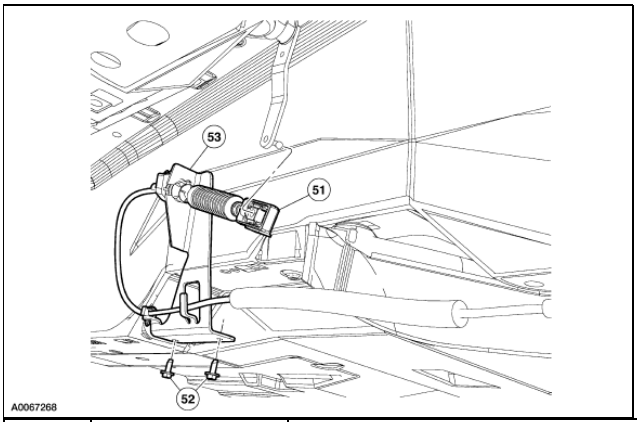
Item	Part Number	Description
40	N805403	Alternator terminal nut
41	11N087	Starter terminal dust cover
42	N800136	Starter solenoid battery cable nut
43	N800156	Starter solenoid wire nut
44	N500617	Ground strap nut
45	14305	Ground strap

19. Illustration 7 of 17. Remove the components in the order indicated in the following illustration and table.



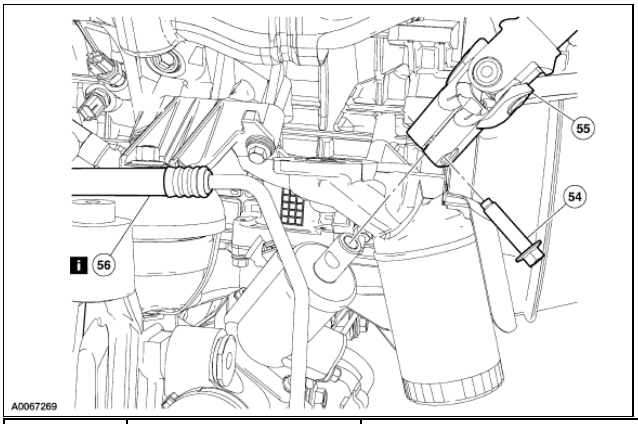
Item	Part Number	Description
46	W500128	Transmission mounting bolt
47		Torque converter access cover
48		Torque converter nuts (4 req'd) Removal Note
49	14A464	Electrical connector
50	W500120	Transmission lower mounting bolts (4 req'd)

20. Illustration 8 of 17. Remove the components in the order indicated in the following illustration and table.



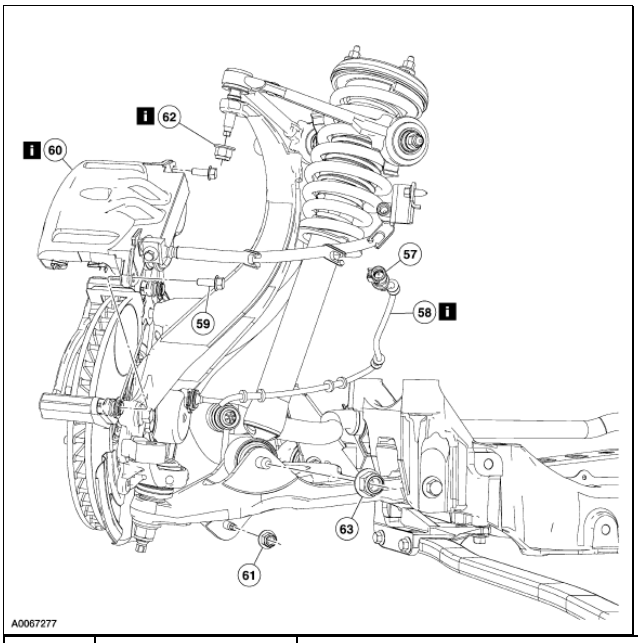
Item	Part Number	Description
51		Transmission shifter cable
52	W707491	Transmission shifter bracket mounting bolts
53	7B229	Transmission shifter bracket

21. Illustration 9 of 17. Remove the components in the order indicated in the following illustration and table.



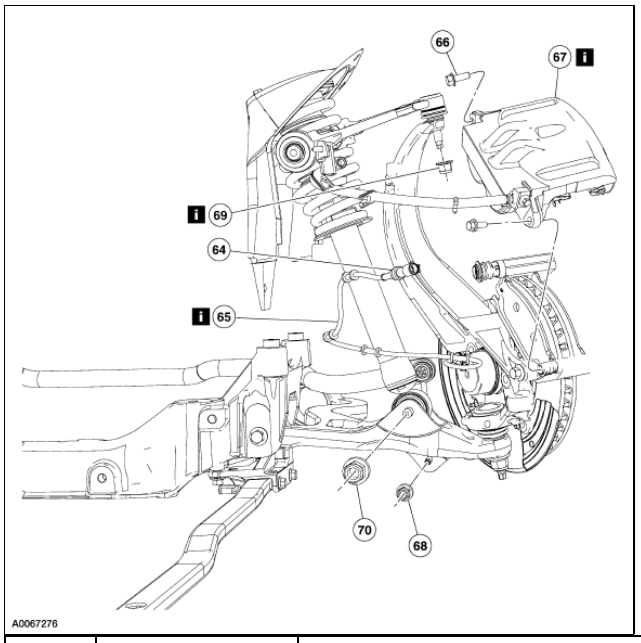
Item	Part Number	Description
54	W705113	Intermediate shaft pinch bolt
55	3C662	Steering column intermediate shaft
56	3A713	Power steering hose Removal Note

22. Illustration 10 of 17. Remove the components in the order indicated in the following illustration and table.



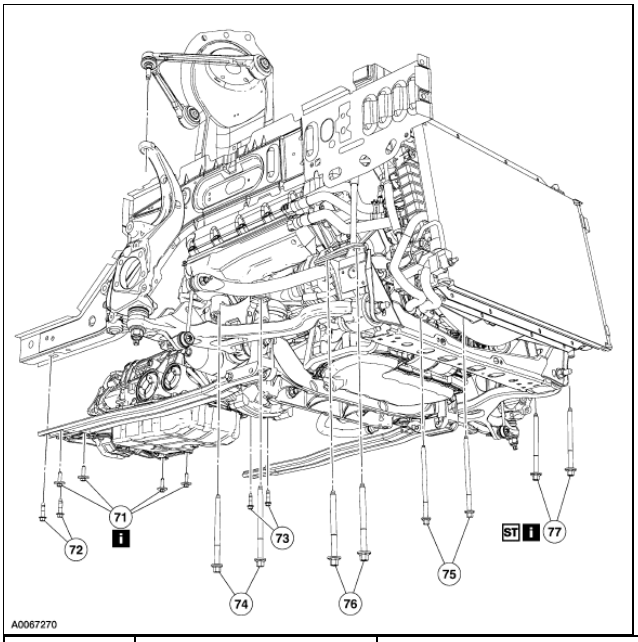
Item	Part Number	Description
57	2B663	Anti-lock brake sensor electrical connector
58	2B663	Anti-lock brake sensor harness Removal Note
59	2B118	Brake caliper bolts (2 req'd)
60	2B119	Brake caliper Removal Note
61	W50213	Stabilizer bar nut
62	W520214	Upper ball joint nut Removal Note
63	W50213	Lower strut mount nut and bolt

23. Illustration 11 of 17. Remove the components in the order indicated in the following illustration and table.



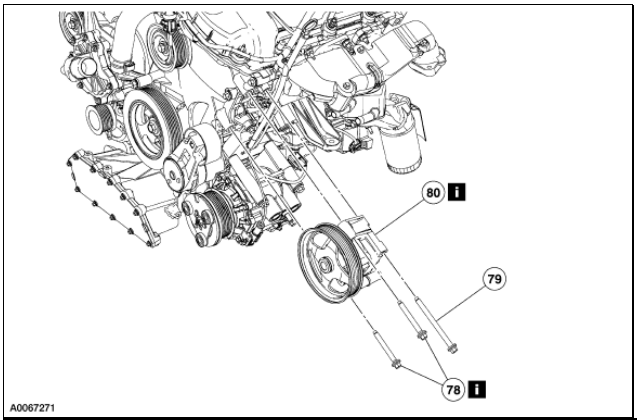
Item	Part Number	Description
64	2B663	Anti-lock brake sensor electrical connector
65	2B663	Anti-lock brake sensor harness Removal Note
66	2B118	Brake caliper bolts (2 req'd)
67	2B119	Brake caliper Removal Note
68	W50213	Stabilizer bar nut
69	W520214	Upper ball joint nut Removal Note
70	W50213	Lower strut mount nut and bolt

24. Illustration 12 of 17. Remove the components in the order indicated in the following illustration and table.



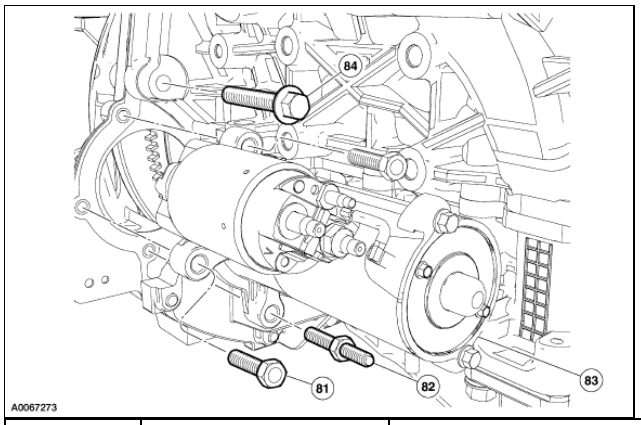
Item	Part Number	Description
71	W704971	Transmission crossmember bolts Removal Note
72	W707186	Crossmember brace bolts (right)
73	W707186	Crossmember bolts (left)
74	W706239	Center crossmember bolts (right)
75	W706239	Center crossmember bolts (left)
76	W708091	Front crossmember bolts (left)
77	W708091	Front crossmember bolts (left) Removal Note

25. Illustration 13 of 17. Remove the components in the order indicated in the following illustration and table.



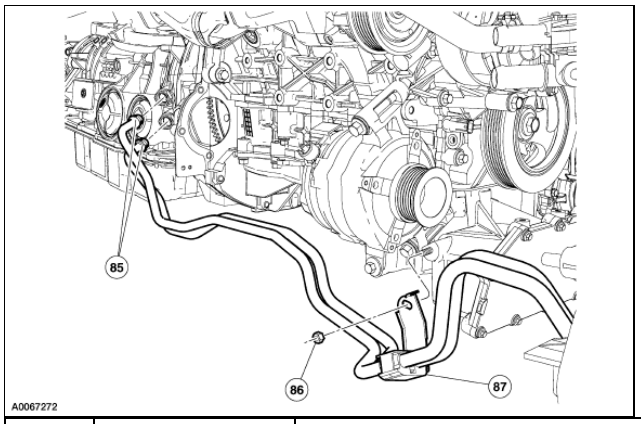
Item	Part Number	Description
78	W706902	Power steering pump mounting bolts (2 req'd) Removal Note
79	W701532	Power steering pump mounting bolt
80	3A696	Power steering pump Removal Note

26. Illustration 14 of 17. Remove the components in the order indicated in the following illustration and table.



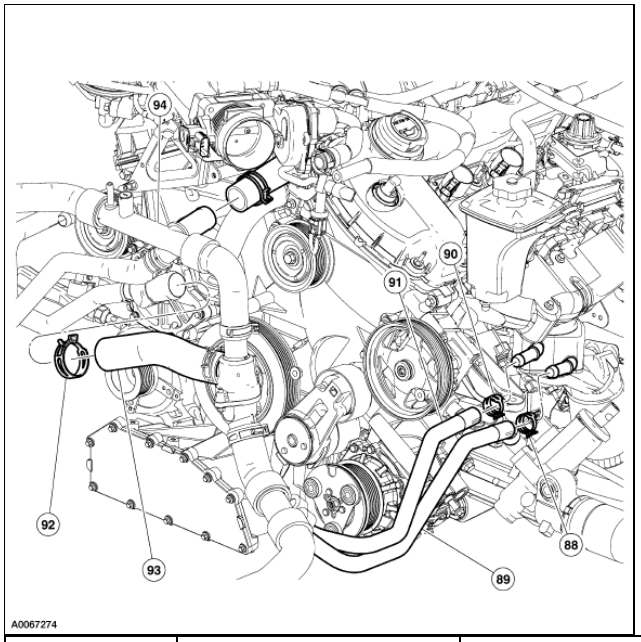
Item	Part Number	Description
81	W704666	Starter mounting bolts (2 req'd)
82	W705359	Starter mounting stud
83	11000	Starter
84	W704666	Transmission-to-engine bolt

27. Illustration 15 of 17. Remove the components in the order indicated in the following illustration and table.



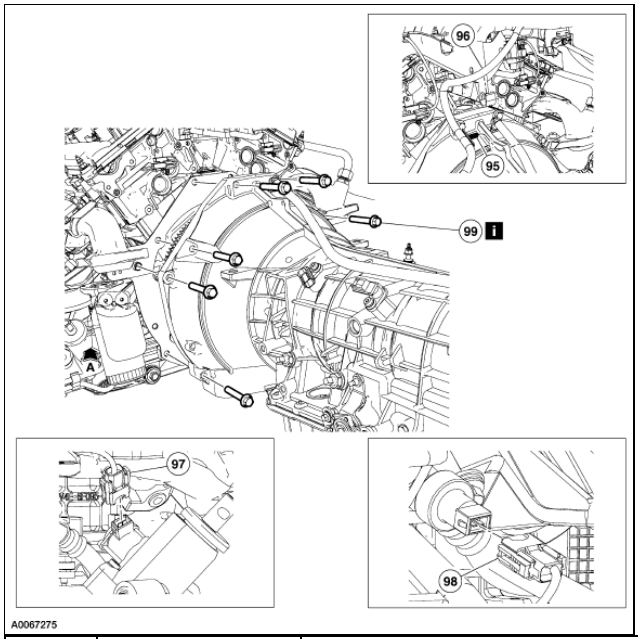
Item	Part Number	Description
85		Transmission cooler tubes
86	W701706	Transmission cooler mounting nut
87		Transmission cooler tube mounting bracket

28. Illustration 16 of 17. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
88	15161	Coolant hose clamp
89	8B273	Coolant hose
90	15161	Coolant hose clamp
91	8B273	Coolant hose
92	15161	Coolant hose clamp
93	98945697	Coolant hose
94	129949	Coolant tube assembly

29. Illustration 17 of 17. Remove the components in the order indicated in the following illustration and table.

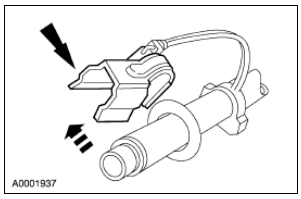


Item	Part Number	Description
95		Wiring harness retainer (part of 7E443)
96	7E443	Transmission wiring harness
97		Power steering electrical connector

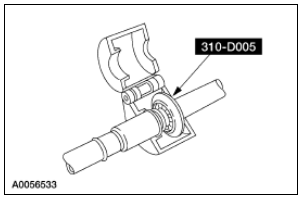
98		Engine wiring harness electrical connector
99	W500128	Transmission mounting bolts (7 req'd) Removal Note

Item 18: Fuel Hose Removal Note

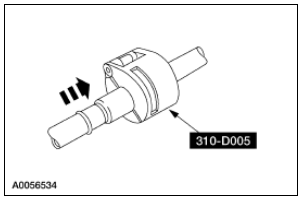
1. Remove the clip.



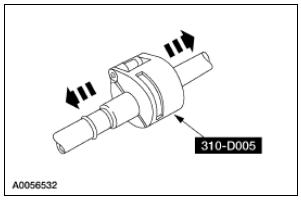
2. Install the special tool.



3. Close the special tool and push it into the open side of the cage.



4. Separate the fitting and remove the special tool.

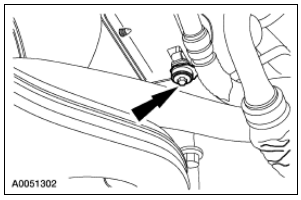


Item 48: Torque Converter Nuts Removal Note

1. Make sure to mark the torque converter-to-flywheel location.

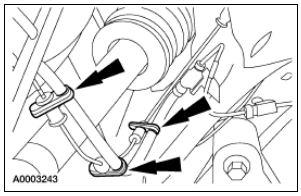
Item 56: Power Steering Hose Removal Note

1. Remove the power steering hose bracket bolt.



Item 58: Anti-lock Brake Sensor Harness Removal Note

1. Unclip the anti-lock brake harness from the brake hose.



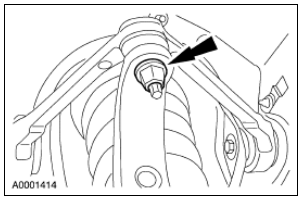
Item 60: Brake Caliper Removal Note

1. Position and secure the brake caliper aside.

Item 62: Upper Ball Joint Nut Removal Note

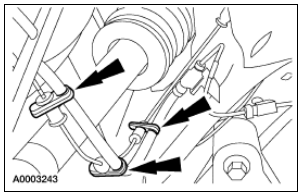
1. **NOTE:** Hold the external hex when removing the ball joint nuts to prevent damage to the ball joint.

   Remove the nut and separate the ball joint from the spindle.



Item 65: Anti-lock Brake Sensor Harness Removal Note

1. Unclip the anti-lock brake harness from the brake hose.



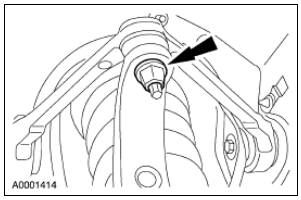
Item 67: Brake Caliper Removal Note

1. Position and secure the brake caliper aside.

Item 69: Upper Ball Joint Nut Removal Note

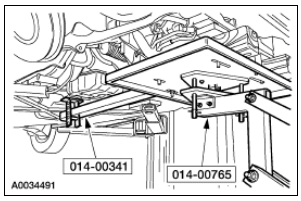
1. **NOTE:** Hold the external hex when removing the ball joint nuts to prevent damage to the ball joint.

   Remove the nut and separate the ball joint from the spindle.



Item 71: Transmission Crossmember Bolts Removal Note

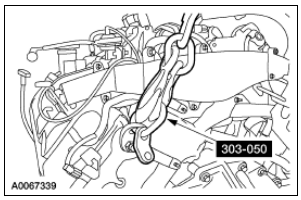
1. Support the engine, transmission, front and center crossmembers, and the cooling system with a powertrain lift and transmission support bracket.



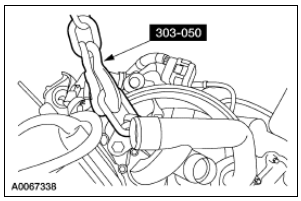
Item 77: Front Crossmember Bolts Removal Note

1. Carefully lower the engine, transmission, front and center crossmembers, and the cooling system from the vehicle.

2. Install the special tool to the engine.



3. Install the special tool to the engine.

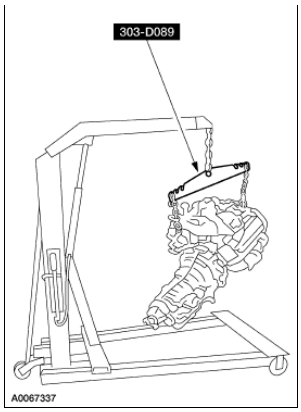


Items 78 and 80: Power Steering Pump and Bolts Removal Note

1. Drain the power steering pump into a suitable container.

Item 99: Transmission Mounting Bolts Removal Note

1. Using the special tool and an engine crane, remove the engine from the subframe assembly.



Engine

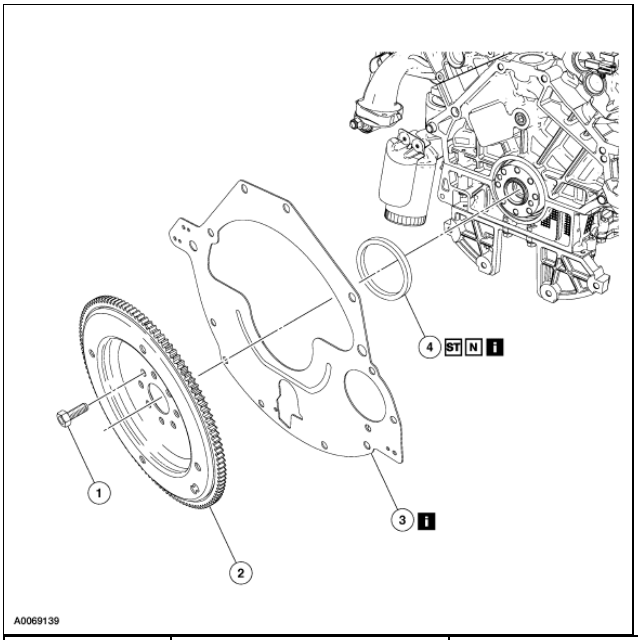
Disassembly

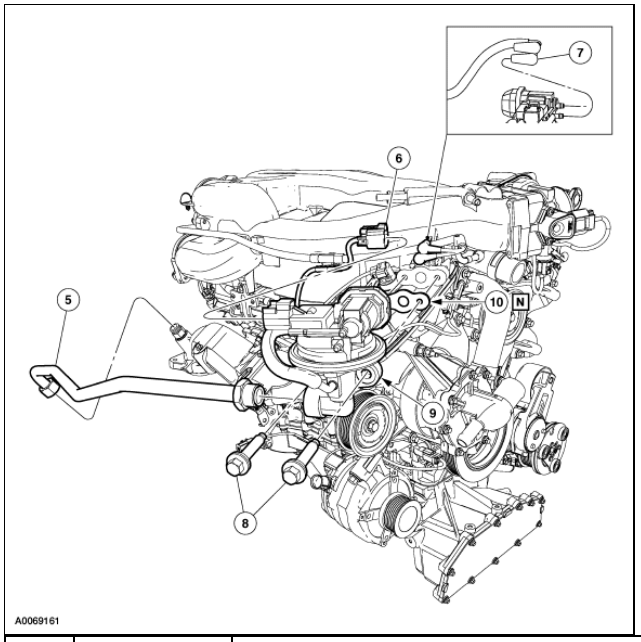
1. Remove the components in the order indicated in the following illustration and table. Illustration 1 of 21.



Item	Part Number	Description
1	W707366	Flexplate bolts (8 req'd)
2	6375	Flexplate
3	6A373	Spacer plate Disassembly Note

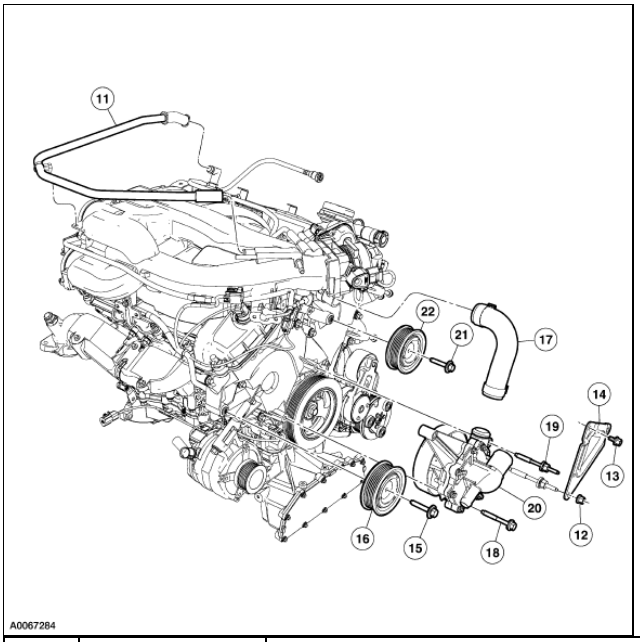
4	6701	Crankshaft rear seal Disassembly Note

2. Remove the components in the order indicated in the following illustration and table. Illustration 2 of 21.



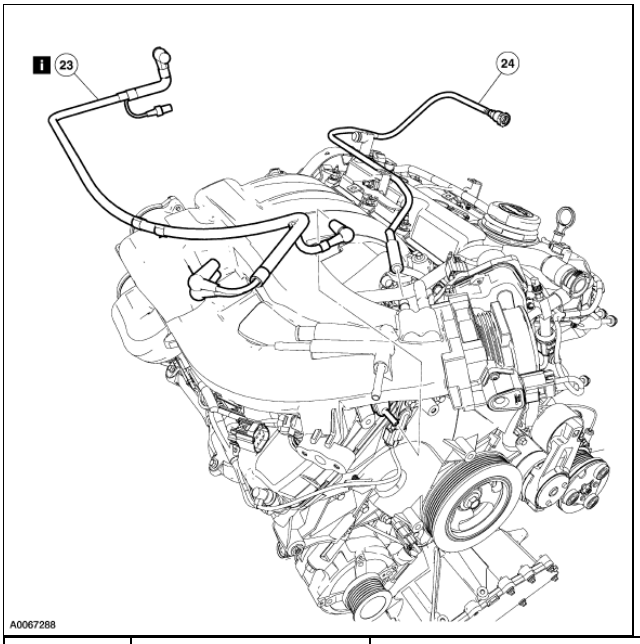
Item	Part Number	Description
5	9D477	Exhaust gas recirculation (EGR) system module-to-exhaust manifold tube
6	6754-B	EGR system module electrical connector
7	6A005	EGR system module vacuum hoses
8	W701625	EGR system module bolts (2 req'd)
9	9Y456	EGR system module
10	9D476	EGR system module gasket

3. Remove the components in the order indicated in the following illustration and table. Illustration 3 of 21.



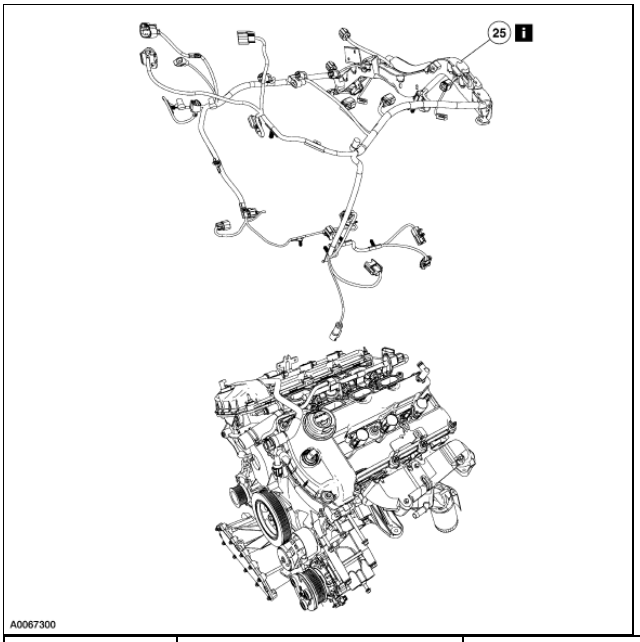
Item	Part Number	Description
11	6K817	Crankcase emission valve-to-intake hose
12	W701542	Intake manifold support bracket nut
13	W701719	Intake manifold support bracket bolts (2 req'd)
14	9J444	Intake manifold support bracket
15	W704851	Accessory drive idler pulley bolt
16	6C348	Accessory drive idler pulley
17		Coolant hose
18	W704920	Coolant pump bolt
19	W704919	Coolant pump studs (2 req'd)
20	8501	Coolant pump
21	W704851	Accessory drive idler pulley bolt
22	6C348	Accessory drive idler pulley

4. Remove the components in the order indicated in the following illustration and table. Illustration 4 of 21.



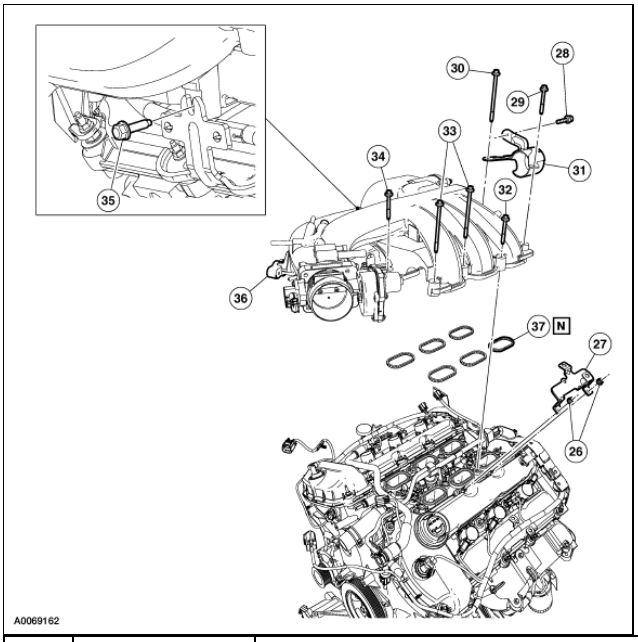
Item	Part Number	Description
23	9E498	Emissions vacuum hose assembly Disassembly Note
24	9D289	Fuel vapor hose

5. Remove the components in the order indicated in the following illustration and table. Illustration 5 of 21.



Item	Part Number	Description
25	12B637	Engine wiring harness Disassembly Note

6. Remove the components in the order indicated in the following illustration and table. Illustration 6 of 21.



Item	Part Number	Description
26	W701539	Appearance cover support bracket nuts (2 req'd)
27	9J444	Appearance cover support bracket
28	W705779	Fuel regulator shield stud
29	W701520	Fuel regulator shield bolt
30	W701724	Fuel regulator shield bolt
31	9G609	Fuel regulator shield
32	W701520	Upper intake manifold bolt
33	W701724	Upper intake manifold bolts (2 req'd)

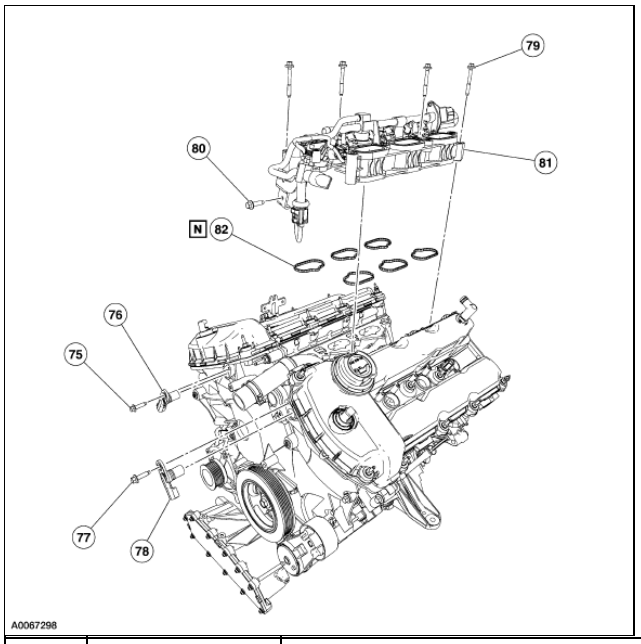
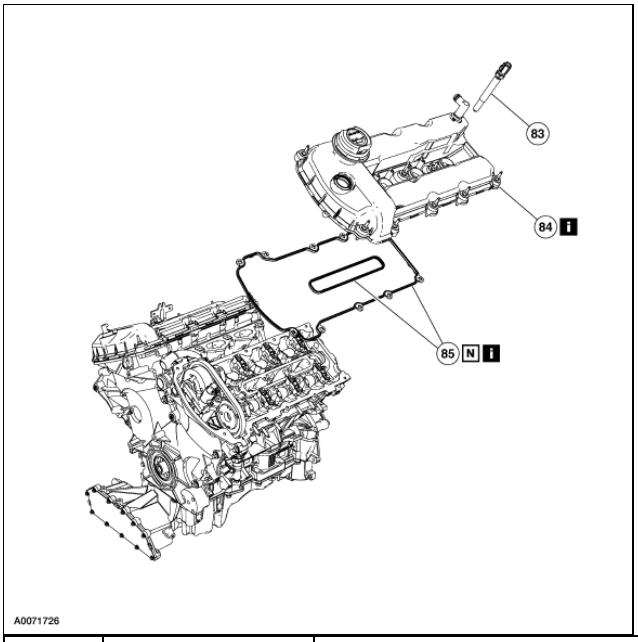
72	9430	RH exhaust manifold Disassembly Note
73	W704747	Generator bolts (3 req'd)
74	10300	Generator

12. Remove the components in the order indicated in the following illustration and table. Illustration 12 of 21.



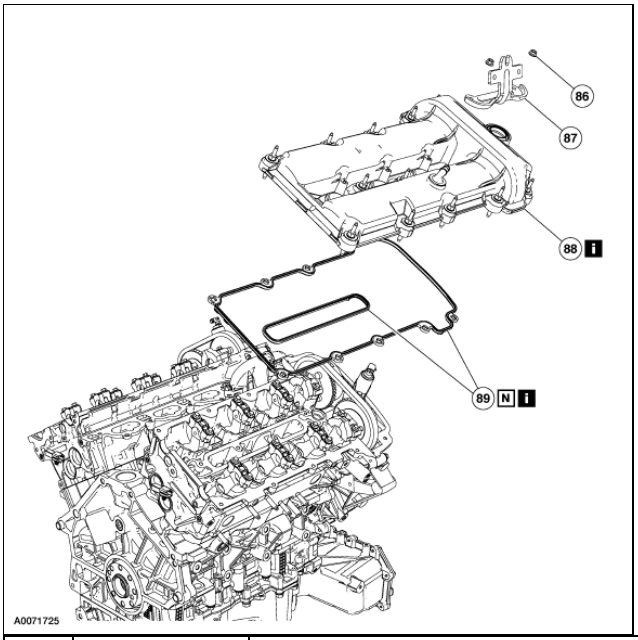
Item	Part Number	Description
75	W500204	RH camshaft position (CMP) sensor bolt
76	6B288	RH CMP sensor
77	W500204	LH CMP sensor bolt
78	6B288	LH CMP sensor
79	W701520	Lower intake manifold bolts (4 req'd)
80	W701504	Fuel supply manifold-to-intake manifold bolt
81	9J447	Lower intake manifold assembly
82		Lower intake manifold gaskets (6 req'd)

13. Remove the components in the order indicated in the following illustration and table. Illustration 13 of 21.



Item	Part Number	Description
83	66004	Cylinder head temperature (CHT) sensor
84		LH valve cover Disassembly Note
85	6584	LH valve cover gaskets (2 req'd) Disassembly Note

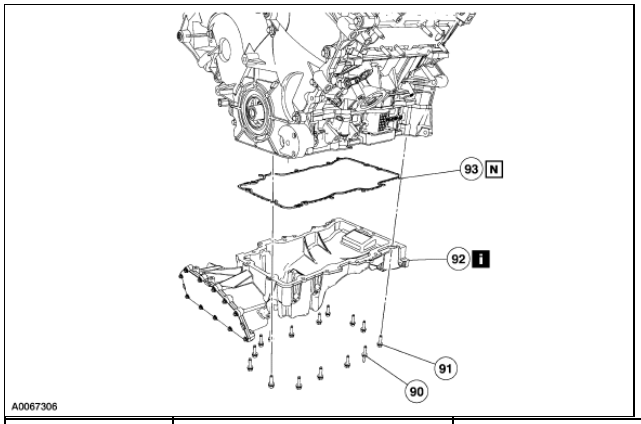
14. Remove the components in the order indicated in the following illustration and table. Illustration 14 of 21.



Item	Part Number	Description
86	W701539	Upper intake manifold support bracket nuts (2 req'd)
87	9J444	Upper intake manifold support bracket
88		RH valve cover Disassembly Note

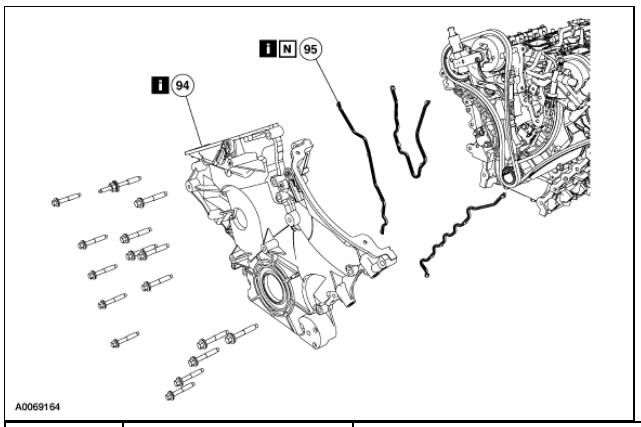
89	6A559	RH valve cover gaskets (2 req'd) Disassembly Note

15. Remove the components in the order indicated in the following illustration and table. Illustration 15 of 21.



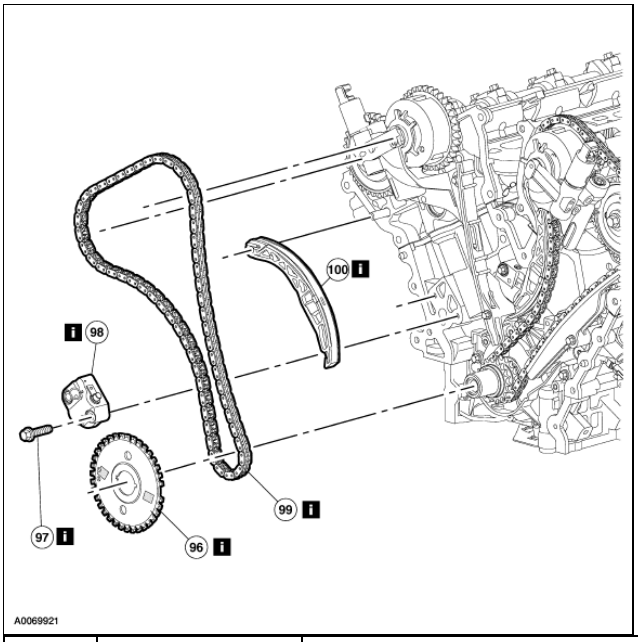
Item	Part Number	Description
90	6065	Oil pan stud
91	6049	Oil pan bolts (14 req'd)
92	6051	Oil pan assembly Disassembly Note
93	6065	Oil pan gasket

16. Remove the components in the order indicated in the following illustration and table. Illustration 16 of 21.



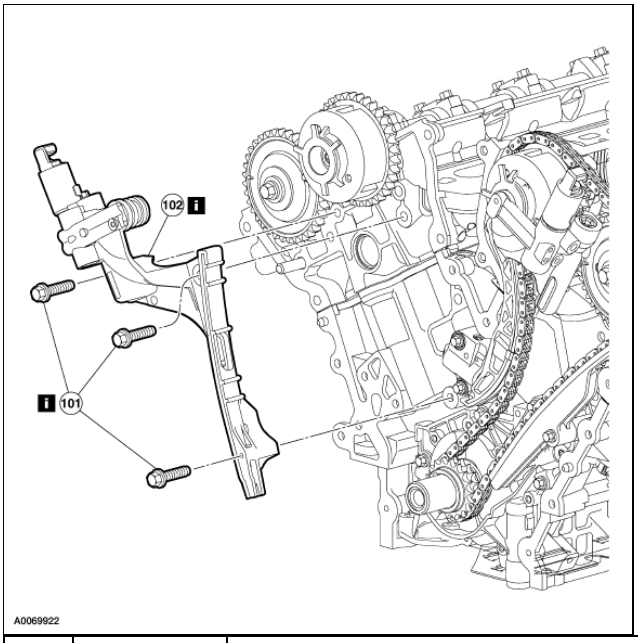
Item	Part Number	Description
94	6065	Engine front cover Disassembly Note
95	6049	Engine front cover gaskets (3 req'd) Disassembly Note

17. Remove the components in the order indicated in the following illustration and table. Illustration 17 of 21.



Item	Part Number	Description
96	12A227	Ignition pulse wheel Disassembly Note
97	W704566	RH timing chain tensioner mounting bolts Disassembly Note
98	6L266	RH timing chain tensioner Disassembly Note
99	6268	RH timing chain Disassembly Note
100	6K255	RH timing chain tensioner arm Disassembly Note

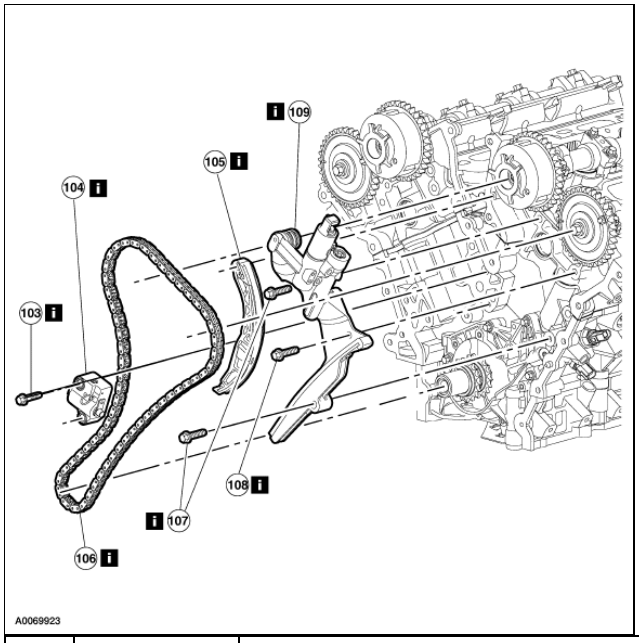
18. Remove the components in the order indicated in the following illustration and table. Illustration 18 of 21.



Item	Part Number	Description

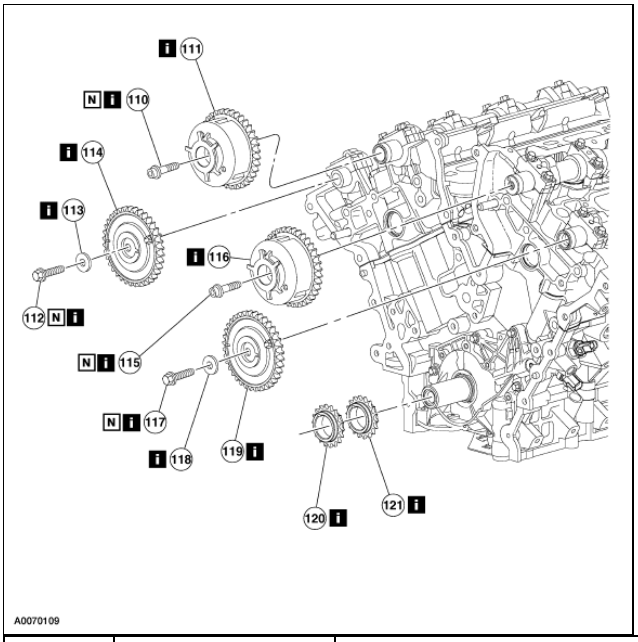
101	W704567	RH variable camshaft timing (VCT) solenoid housing assembly mounting bolts (3 req'd) Disassembly Note
102	6C260	RH VCT solenoid housing assembly Disassembly Note

19. Remove the components in the order indicated in the following illustration and table. Illustration 19 of 21.



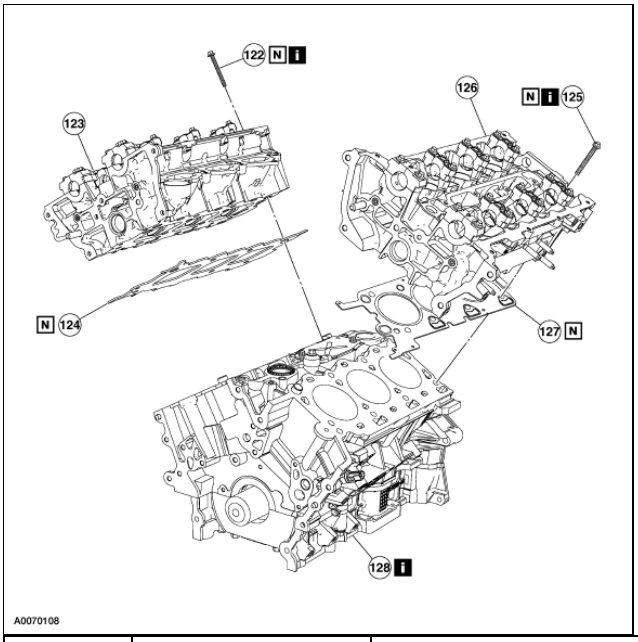
Item	Part Number	Description
103	W704566	LH timing chain tensioner mounting bolts (2 req'd) Disassembly Note
104	6L266	LH timing chain tensioner Disassembly Note
105	6K255	LH timing chain tensioner arm Disassembly Note
106	6268	LH timing chain Disassembly Note
107	W704566	LH VCT solenoid housing assembly mounting bolts (2 req'd) Disassembly Note
108	W701759	LH VCT solenoid housing assembly mounting bolt (gold in color) Disassembly Note
109	6C261	LH VCT solenoid housing assembly Disassembly Note

20. Illustration 20 of 21. Remove the components in the order indicated in the following illustration and table.



Item	Part Number	Description
110	W704566	RH VCT actuator bolt Disassembly Note
111	6L266	RH VCT actuator Disassembly Note
112	6K255	RH exhaust camshaft sprocket bolt Disassembly Note
113	6268	RH exhaust camshaft sprocket washer Disassembly Note
114	6306	RH exhaust camshaft sprocket Disassembly Note
115	W704566	LH VCT actuator bolt Disassembly Note
116	W704566	LH VCT actuator Disassembly Note
117	W704566	LH exhaust camshaft sprocket bolt Disassembly Note
118	W704566	LH exhaust camshaft sprocket washer Disassembly Note
119	W704566	LH exhaust camshaft sprocket Disassembly Note
120	6306	RH timing chain crankshaft sprocket Disassembly Note
121	6306	LH timing chain crankshaft sprocket Disassembly Note

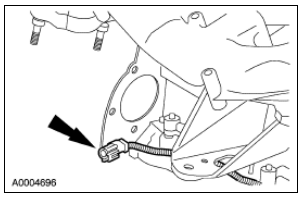
21. Remove the components in the order indicated in the following illustration and table. Illustration 21 of 21.



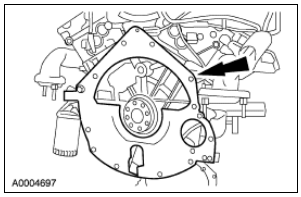
Item	Part Number	Description
122	6065	RH cylinder head bolts (12 req'd) Disassembly Note
123	6049	RH cylinder head
124	6051	RH cylinder head gasket
125	6065	LH cylinder head bolts (12 req'd) Disassembly Note
126	6050	LH cylinder head
127	6083	LH cylinder head gasket
128		Engine assembly Disassembly Note

Item 3: Spacer Plate Disassembly Note

1. Unclip the LH and RH wiring harness retainers.

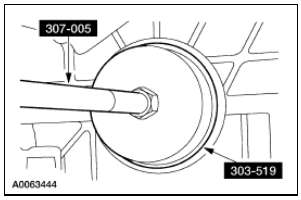


2. Remove the rear separator plate assembly.



Item 4: Crankshaft Rear Seal Disassembly Note

1. Using the special tools, remove the crankshaft rear seal.

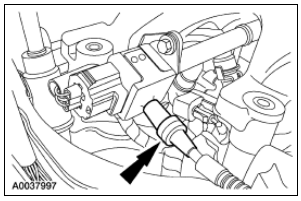


2. Mount the engine on an engine stand.

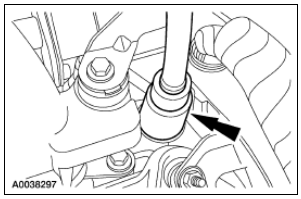
3. Remove the lifting equipment.

Item 23: Emissions Vacuum Hose Disassembly Note

1. Disconnect the fuel pressure sensor jumper from the main vacuum harness.

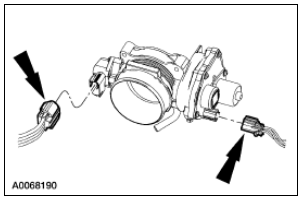


2. Disconnect the positive crankcase ventilation (PCV) tube at the rear of the upper intake manifold.

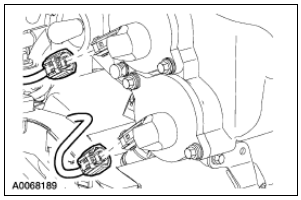


Item 25: Engine Wiring Harness Disassembly Note

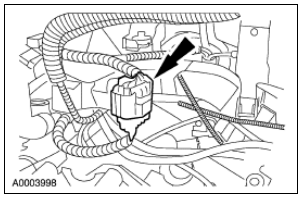
1. Disconnect the throttle body electrical connectors.



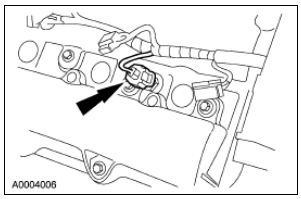
2. Disconnect the intake manifold tuning (IMT) valve electrical connectors.



3. Disconnect the fuel injector wiring harness connector.

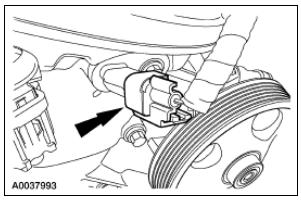


4. Disconnect the cylinder head temperature (CHT) sensor electrical connector.

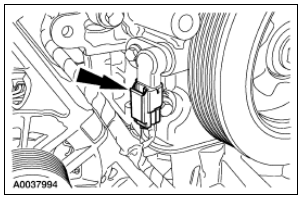


5. **NOTE:** LH is shown, RH is similar.

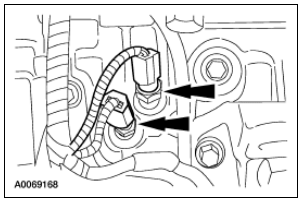
   Disconnect the LH and RH camshaft position (CMP) sensor electrical connectors.



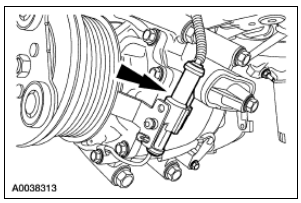
6. Disconnect the crankshaft position (CKP) sensor electrical connector.



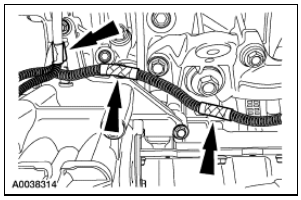
7. Disconnect the oil pressure switch and oil temperature sensor electrical connectors.



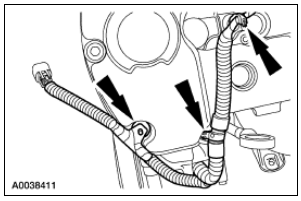
8. Disconnect the A/C electrical connector.



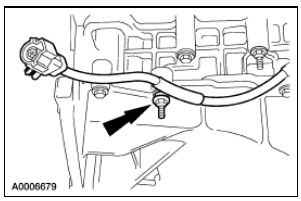
9. Detach the three wiring harness retainers from the block.



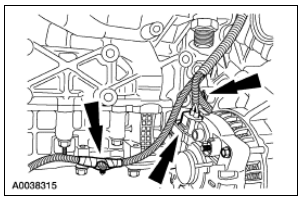
10. Detach the three wiring harness retainers.



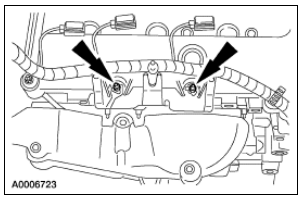
11. Remove the nut and wiring harness from the stud.



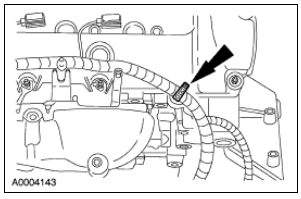
12. Detach the two wiring harness retainers from the block. Disconnect the generator electrical connector.



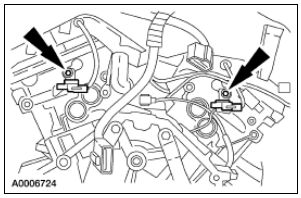
13. Disconnect the wiring harness retainers.



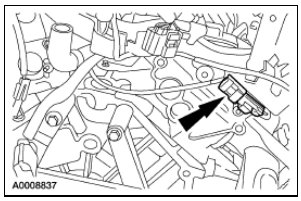
14. Unclip the wiring harness retainer.



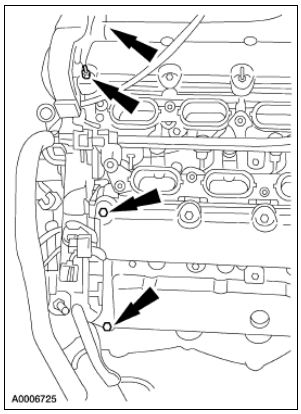
15. Remove the bolts and the radio ignition interference capacitors.



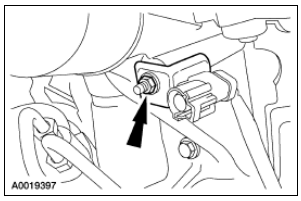
16. Unclip and disconnect the knock sensor (KS) electrical connector.



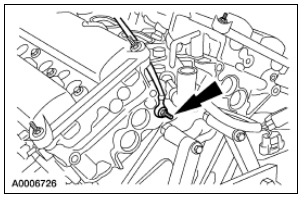
17. Remove the four nuts and the wiring harness.



18. Remove the nut and the bracket.



19. Remove the nut and the ground strap.

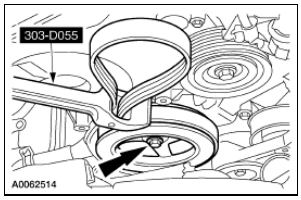


Item 48: LH Exhaust Manifold Disassembly Note

1. Discard the exhaust manifold gasket.

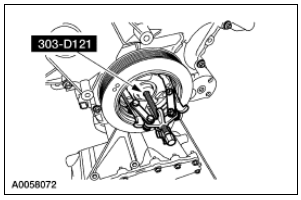
Items 49-51: Crankshaft Pulley, Bolt, and Washer Disassembly Note

1. Using the special tool to hold the crankshaft pulley, remove and discard the bolt and washer.



2. ⚠ **CAUTION: The special tool must grab the inside of the damper or damage to the damper can occur.**

   Using the special tool, remove the crankshaft pulley.

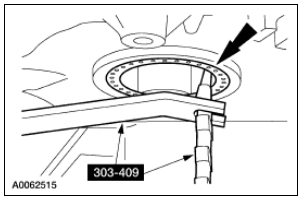


Item 52: Crankshaft Front Seal Disassembly Note

1. ⚠ **CAUTION: Use care not to scratch the crankshaft surface while removing the seal.**

   Using the special tool, remove the crankshaft front seal.

   - Discard the crankshaft front seal.

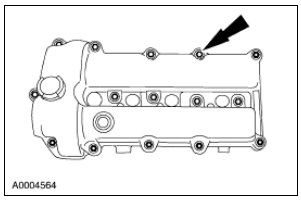


Item 72: RH Exhaust Manifold Disassembly Note

1. Discard the exhaust manifold gasket.

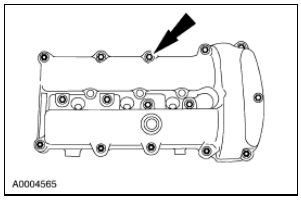
Items 84 and 85: LH Valve Cover and Valve Cover Gaskets Disassembly Note

1. Remove the studs and bolts and remove the LH valve cover and gaskets.
   - Discard the gaskets.



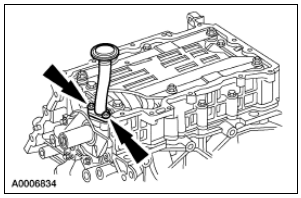
Items 88 and 89: RH Valve Cover and Valve Cover Gaskets Disassembly Note

1. Remove the studs and bolts and remove the RH valve cover and gaskets.
   - Discard the gaskets.

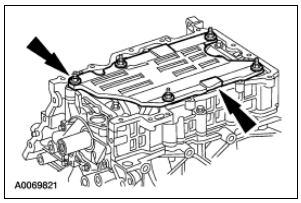


Item 92: Oil Pan Disassembly Note

1. Remove the bolts and the oil pick-up tube.
    - Inspect the O-ring seal for damage.

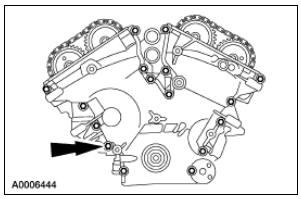


2. Remove the nuts and the oil pan baffle.



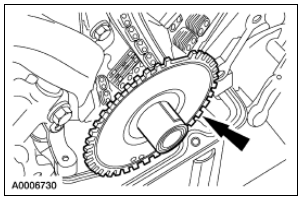
Items 94 and 95: Engine Front Cover and Front Cover Gaskets Disassembly Note

1. Remove the bolts, the engine front cover and the gasket.
    - Discard the gasket.

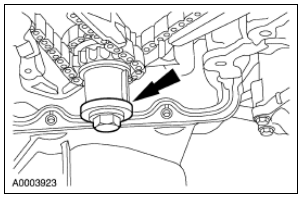


Items 96-109: Timing Drive Components Disassembly Note

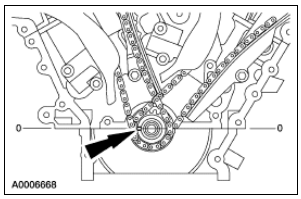
1. Remove the ignition pulse wheel.



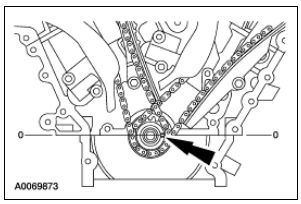
2. Install the crankshaft damper bolt and washer.



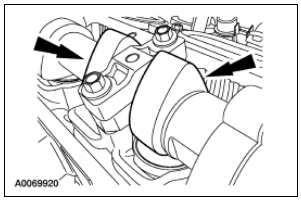
3. Rotate the crankshaft clockwise to position the crankshaft keyway to the nine o'clock position.



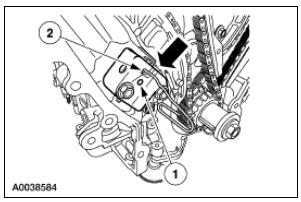
4. Rotate the crankshaft clockwise to position the crankshaft keyway to the three o'clock position.



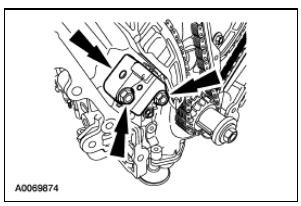
5. Verify that the front two intake camshaft lobes are pointing up.



6. Compress the timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

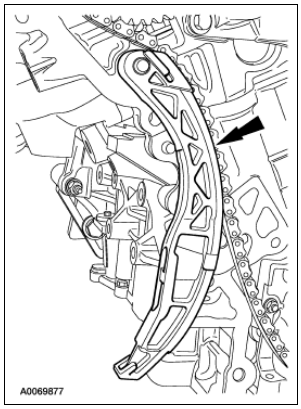


7. Remove the bolts and the RH timing chain tensioner.

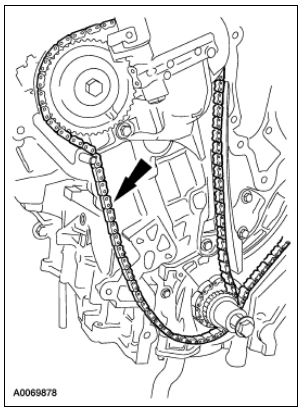


8. **⚠ CAUTION: If the RH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

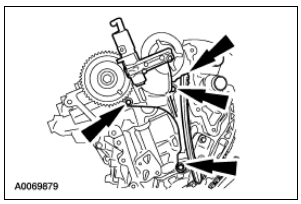
    Remove the RH timing chain tensioner arm.



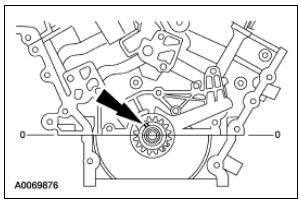
9. Remove the RH timing chain.



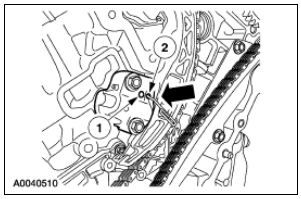
10. Remove the bolts and the RH variable camshaft timing (VCT) soleniod housing assembly.



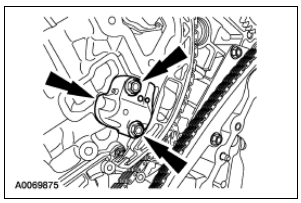
11. Rotate the crankshaft counterclockwise to position the crankshaft keyway to the eleven o'clock position.



12. Compress the timing chain tensioner.
    1. Release the racheting pawl.
    2. Compress the timing chain tensioner and install a stiff wire or paper clip.

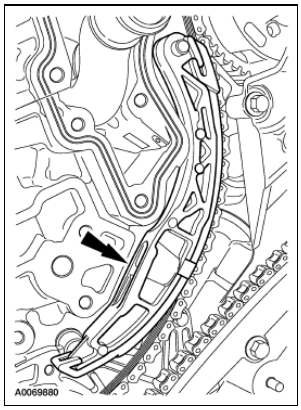


13. Remove the bolts and the LH timing chain tensioner.

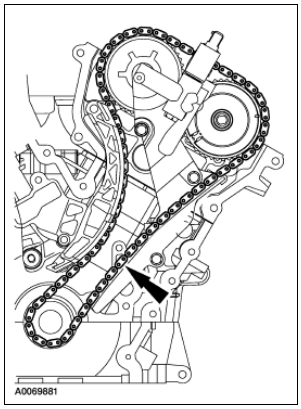


14. ⚠ **CAUTION: If the LH timing chain tensioner arm is to be reused, mark the position to make sure that it is installed on the correct side when reassembled.**

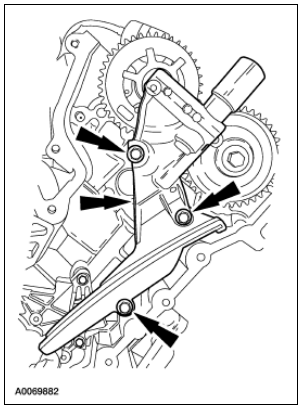
    Remove the LH timing chain tensioner arm.



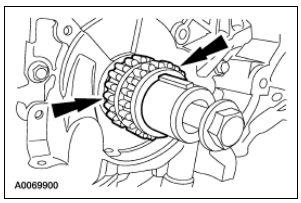
15. Remove the LH timing chain.



16. Remove the LH VCT solenoid housing assembly.

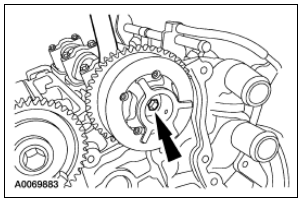


17. Remove the crankshaft sprockets.

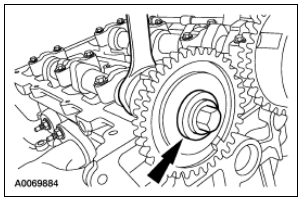


Items 110-114: RH Variable Camshaft Timing (VCT) Actuator, RH Exhaust Camshaft Sprocket and Bolts Disassembly Note

1. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH VCT actuator.
    - Discard the bolt.

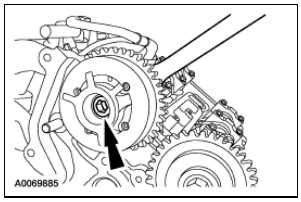


2. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the RH exhaust camshaft sprocket.
    - Discard the bolt.

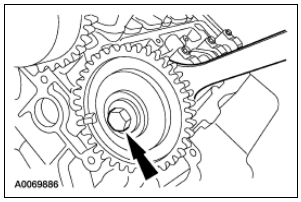


Items 115-121: LH Variable Camshaft Timing (VCT) Actuator, LH Exhaust Camshaft Sprocket and Bolts, and Timing Chain Crankshaft Sprockets Disassembly Note

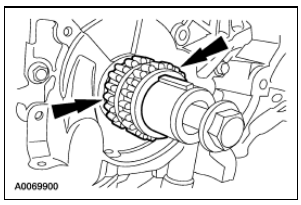
1. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH VCT actuator.
    - Discard the bolt.



2. Using a wrench on the flats of the camshaft, hold the camshaft in position and remove the bolt and the LH exhaust camshaft sprocket.
    - Discard the bolt.



3. Remove the crankshaft sprockets.

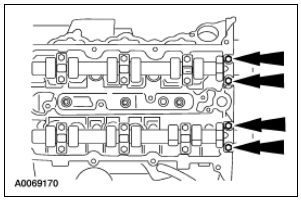


Items 122 and 125: RH and LH Cylinder Head Bolts Disassembly Note

1. **⚠ CAUTION: Remove the camshaft journal thrust caps prior to loosening other camshaft journal cap bolts. Damage to the camshaft journal thrust cap can occur if not removed first.**

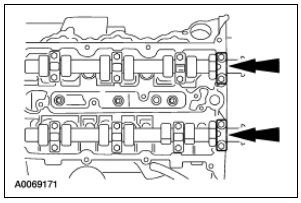
   ⚠ CAUTION: Cylinder head camshaft journal caps and cylinder heads are numbered for assembly in their original positions. Keep camshaft journal caps with the cylinder head from which they were removed. Do not mix with camshaft journal caps from another cylinder head.

   Remove the bolts.

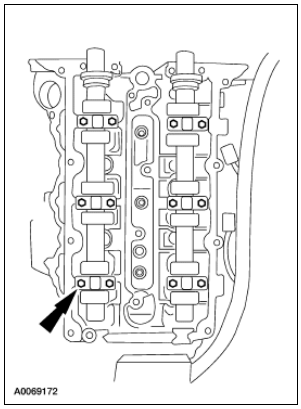


2. **NOTE:** The camshaft journal thrust caps have alignment dowels.

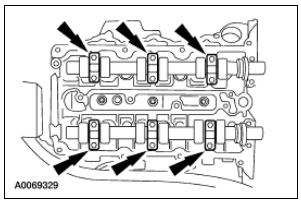
   Using a soft-faced mallet, gently loosen and remove the camshaft journal thrust caps.



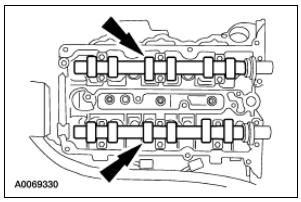
3. Remove the remaining camshaft journal cap bolts.



4. Using a soft-faced mallet, gently loosen and remove the remaining camshaft journal caps.



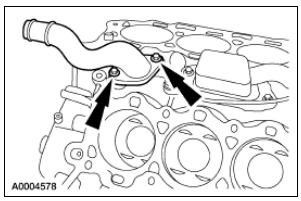
5. Carefully lift out the camshafts.



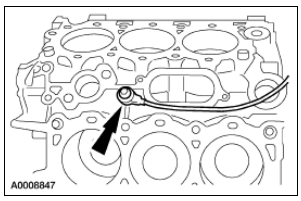
6. Remove and discard the cylinder head bolts.

Item 128: Engine Assembly Disassembly Note

1. Remove the bolts and the inlet tube.



2. Remove the bolt and the top-mounted knock sensor (KS).



Cylinder Head

Special Tool(s)

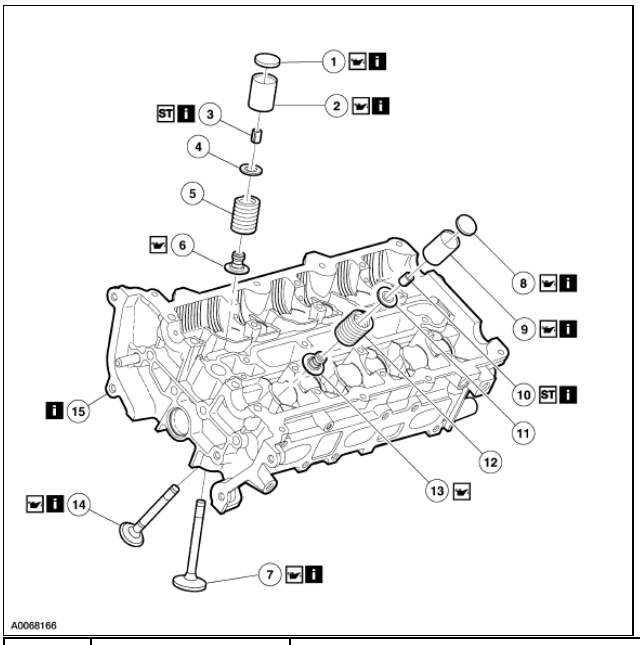
 ST2489-A	Compressor, Valve Spring 303-648

Material

Item	Specification
Motorcraft Premium Synthetic Blend SAE 5W-20 Motor Oil XO-5W20-QSP or equivalent	WSS-M2C153-H

Disassembly and Assembly

1. Disassemble the components in the order indicated in the following illustration and table.
2. To assemble, reverse the disassembly procedure.



Item	Part Number	Description
1	6A536	Tappet shim (6 req'd) Disassembly Note
2	6505	Tappet (6 req'd) Disassembly Note
3	6518	Intake valve spring retainer keys (6 req'd) Disassembly Note
4	2762	Intake valve spring retainers (6 req'd)
5	6513	Intake valve springs (6 req'd)

6	6A536	Intake valve stem seals (6 req'd)
7	6507	Intake valve (6 req'd) Disassembly Note
8	6A536	Tappet shim (6 req'd) Disassembly Note
9	6505	Tappet (6 req'd) Disassembly Note
10	6518	Exhaust valve spring retainer keys (6 req'd) Disassembly Note
11	2762	Exhaust valve spring retainers (6 req'd)
12	6513	Exhaust valve springs (6 req'd)
13	6A536	Exhaust valve stem seals (6 req'd)
14	6505	Exhaust valve (6 req'd) Disassembly Note
15	6507	Cylinder head Disassembly Note

3. Repeat the procedure until all of the valves are removed.

Items 1, 2, 8, and 9: Tappet Shim and Tappet Disassembly Note

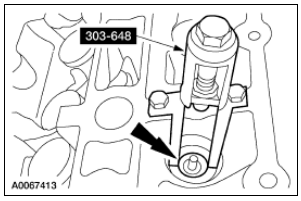
1. **⚠ CAUTION: Do not use any means of marking the shims other than a permanent- type marker. Any scratches or paint on the shims may result in incorrect lash adjustment and severe engine damage.**

   ⚠ CAUTION: The tappets and shims must be installed in their original position to make sure of correct valve lash settings.

   Remove the tappet and shim.

Items 3 and 10: Intake and Exhaust Valve Spring Retainer Keys Disassembly Note

1. Using the special tool, compress the valve spring and remove the retainer keys.



Items 7 and 14: Intake and Exhaust Valves Disassembly Note

1. For component tests of the valve, refer to Section 303-00 .

2. Lubricate the valve stem and the valve stem seal with clean engine oil prior to installation.

Item 15: Cylinder Head Disassembly Note

1. For component tests of the cylinder head, refer to Section 303-00 .

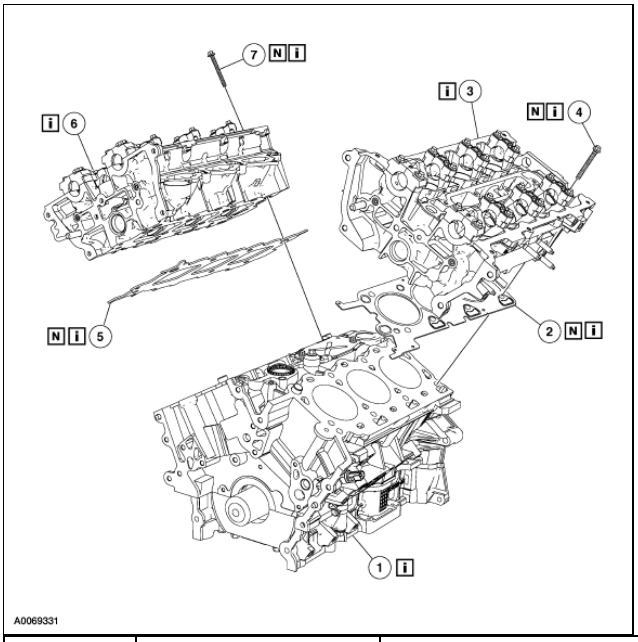
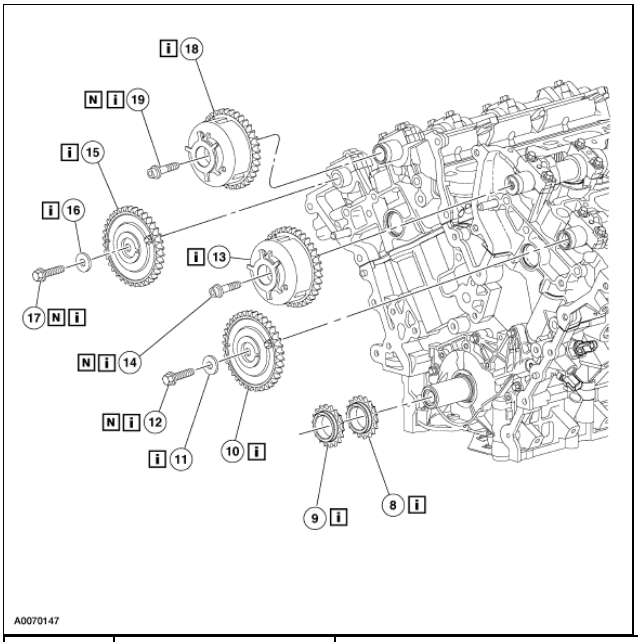
1. Install the components in the order indicated in the following illustration and table. Illustration 1 of 21.



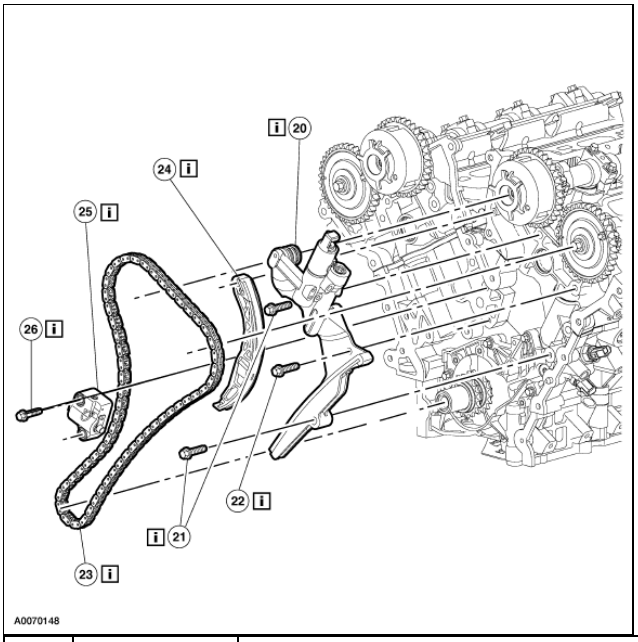
Item	Part Number	Description
1		Engine assembly Assembly Note
2	6083	LH cylinder head gasket Assembly Note
3	6050	LH cylinder head Assembly Note
4	6065	LH cylinder head bolts (8 req'd) Assembly Note
5	6051	RH cylinder head gasket Assembly Note
6	6049	RH cylinder head Assembly Note
7	6065	RH cylinder head bolts (8 req'd) Assembly Note

2. Install the components in the order indicated in the following illustration and table. Illustration 2 of 21.



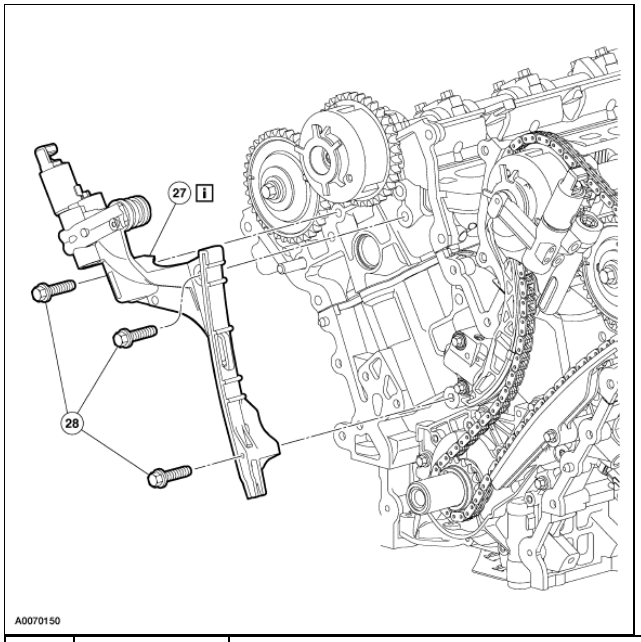
Item	Part Number	Description
8	6306	LH timing chain crankshaft sprocket Assembly Note
9	6306	RH timing chain crankshaft sprocket Assembly Note
10	W704566	LH exhaust camshaft sprocket Assembly Note
11	W704566	LH exhaust camshaft sprocket washer Assembly Note
12	W704566	LH exhaust camshaft sprocket bolt Assembly Note
13	W704566	LH VCT actuator Assembly Note
14	W704566	LH VCT actuator bolt Assembly Note
15	6306	RH exhaust camshaft sprocket Assembly Note
16	6268	RH exhaust camshaft sprocket washer Assembly Note
17	6K255	RH exhaust camshaft sprocket bolt Assembly Note
18	6L266	RH VCT actuator Assembly Note
19	W704566	RH VCT actuator bolt Assembly Note

3. Install the components in the order indicated in the following illustration and table. Illustration 3 of 21.



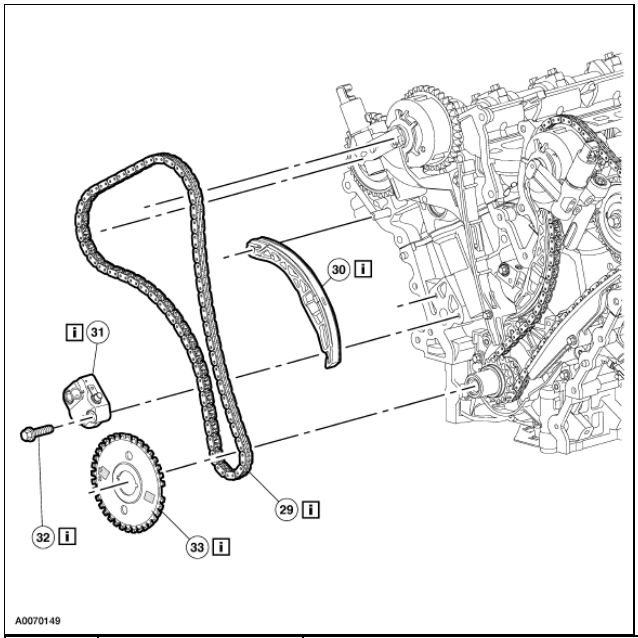
Item	Part Number	Description
20	6C261	LH variable camshaft timing (VCT) solenoid housing assembly Assembly Note
21	W704566	LH VCT solenoid housing assembly mounting bolts (2 req'd)
22	W701759	LH VCT solenoid housing assembly mounting bolt (gold in color)
23	6268	LH timing chain Assembly Note
24	6K255	LH timing chain tensioner arm Assembly Note
25	6L266	LH timing chain tensioner Assembly Note
26	W704566	LH timing chain tensioner mounting bolts (2 req'd) Assembly Note

4. Install the components in the order indicated in the following illustration and table. Illustration 4 of 21.



Item	Part Number	Description
27		RH VCT solenoid housing assembly Assembly Note
28	W704567	RH variable camshaft timing (VCT) solenoid housing assembly mounting bolts (3 req'd)

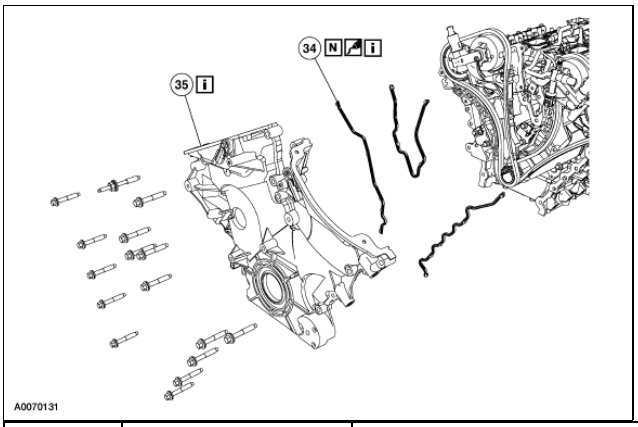
5. Install the components in the order indicated in the following illustration and table. Illustration 5 of 21.



Item	Part Number	Description
29	6268	RH timing chain Assembly Note
30	6K255	RH timing chain tensioner arm Assembly Note
31	6L266	RH timing chain tensioner Assembly Note

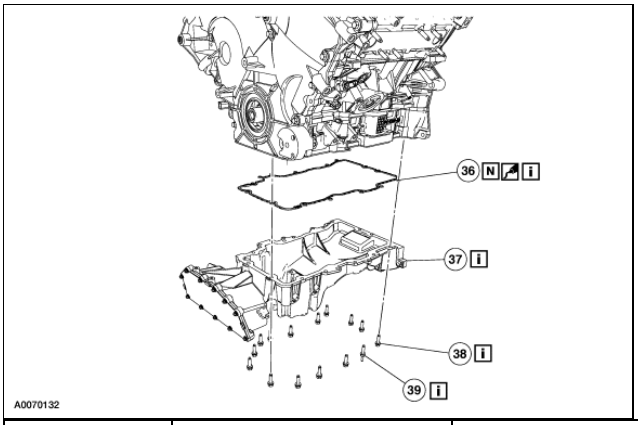
32	W704566	RH timing chain tensioner mounting bolts Assembly Note
33	12A227	Ignition pulse wheel Assembly Note

6. Install the components in the order indicated in the following illustration and table. Illustration 6 of 21.



Item	Part Number	Description
34	6049	Engine front cover gaskets (3 req'd) Assembly Note
35	6065	Engine front cover Assembly Note

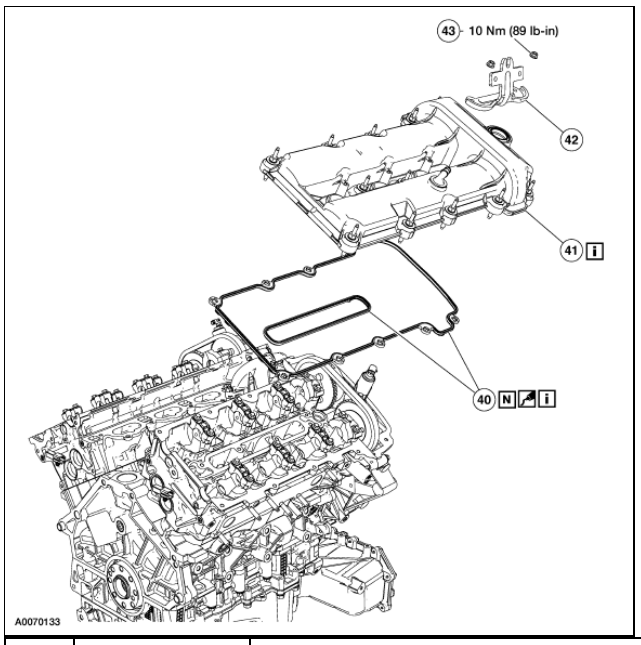
7. Install the components in the order indicated in the following illustration and table. Illustration 7 of 21.



Item	Part Number	Description
36	6710	Oil pan gasket Assembly Note
37	6625	Oil pan assembly Assembly Note
38	W701605	Oil pan bolts (14 req'd) Assembly Note
39	W701606	Oil pan stud Assembly Note

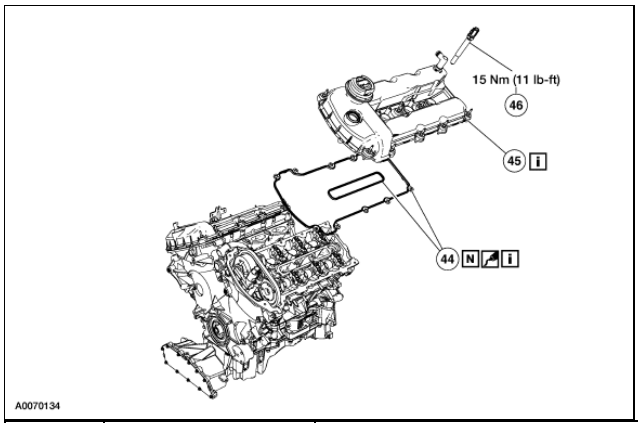
8. Install the components in the order indicated in the following illustration and table. Illustration 8 of

21.



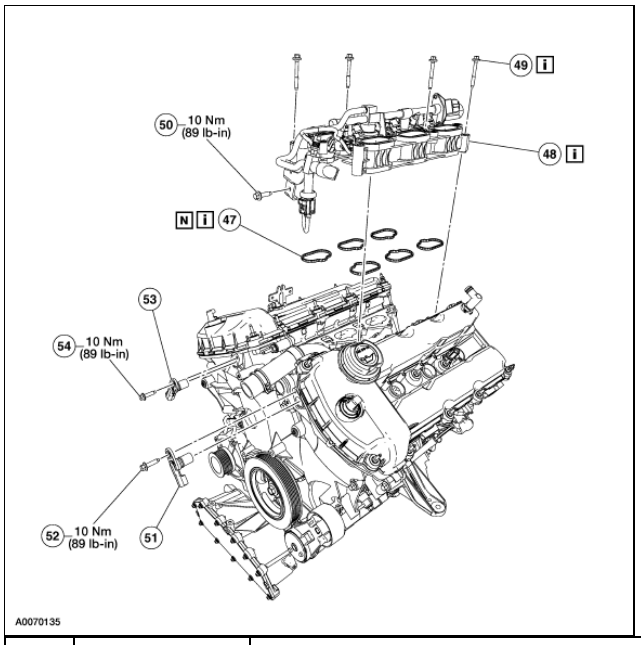
Item	Part Number	Description
40	6C527	RH valve cover gaskets (2 req'd) Assembly Note
41	6582	RH valve cover Assembly Note
42	9J444	Upper intake manifold support bracket
43	W701539	Upper intake manifold support bracket nuts (2 req'd)

9. Install the components in the order indicated in the following illustration and table. Illustration 9 of 21.



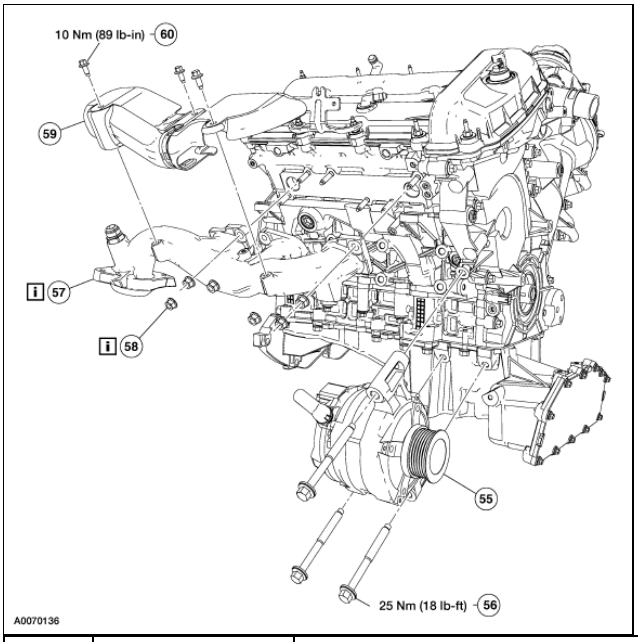
Item	Part Number	Description
44	6C527	LH valve cover gaskets (2 req'd) Assembly Note
45	6A505	LH valve cover Assembly Note
46	6G004	Cylinder head temperature (CHT) sensor

10. Install the components in the order indicated in the following illustration and table. Illustration 10 of 21.



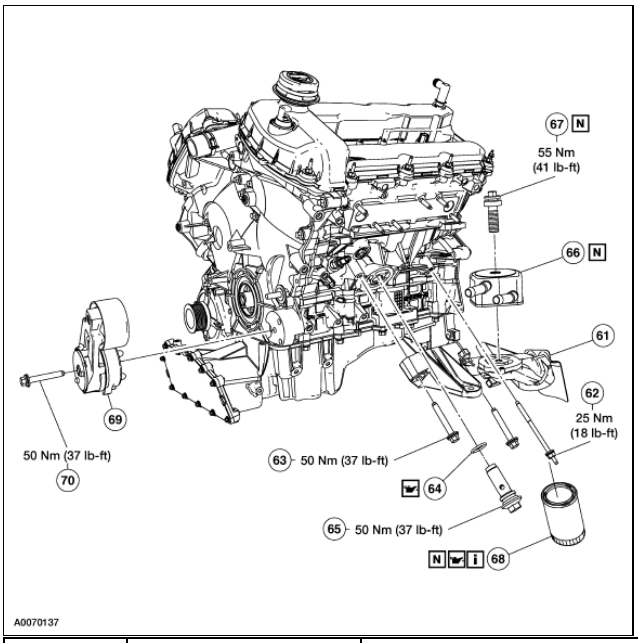
Item	Part Number	Description
47		Lower intake manifold gaskets (6 req'd) Assembly Note
48	9J447	Lower intake manifold assembly Assembly Note
49	W701520	Lower intake manifold bolts (4 req'd) Assembly Note
50	W701504	Lower intake manifold fuel tube support bracket bolt
51	6B288	LH camshaft position (CMP) sensor
52	W500204	LH CMP sensor bolt
53	6B288	RH CMP sensor
54	W500204	RH CMP sensor bolt

11. Install the components in the order indicated in the following illustration and table. Illustration 11 of 21.



Item	Part Number	Description
55	10300	Generator
56	W704747	Generator bolts (3 req'd)
57	9430	RH exhaust manifold Assembly Note
58	W701706	RH exhaust manifold nuts (6 req'd) Assembly Note
59	9Y427	Exhaust manifold heat shield
60	W500211	Exhaust manifold heat shield nuts (3 req'd)

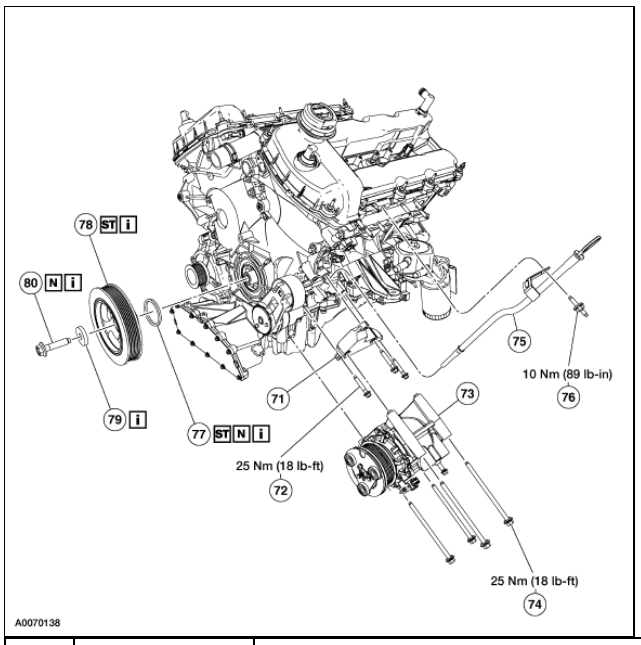
12. Install the components in the order indicated in the following illustration and table. Illustration 12 of 20.



Item	Part Number	Description
61	6881	Oil filter adapter
62	W705811	Oil filter adapter stud

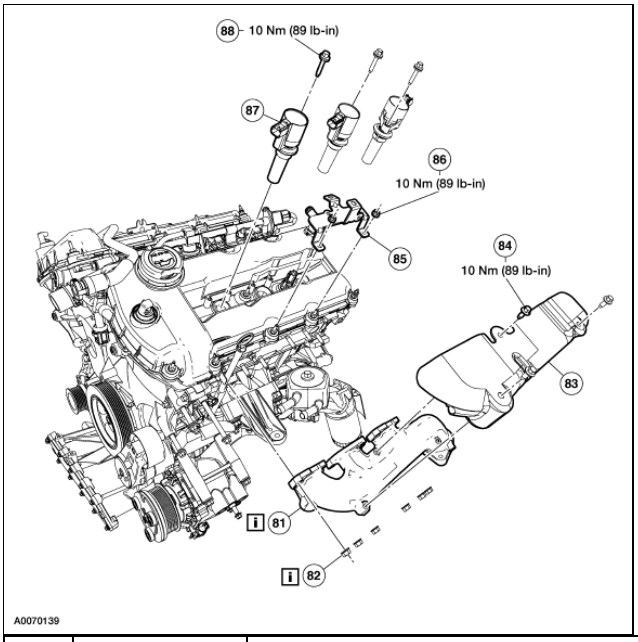
63	W704822	Oil filter adapter bolts (2 req'd)
64		Oil filter adapter bolt O-ring seal
65	6894	Oil filter adapter bolt
66	6A642	Oil cooler
67		Oil cooler bolt
68	6714	Oil filter Assembly Note
69	6B209	Accessory drive belt tensioner
70	W500329	Accessory drive belt tensioner bolt

13. Install the components in the order indicated in the following illustration and table. Illustration 13 of 21.



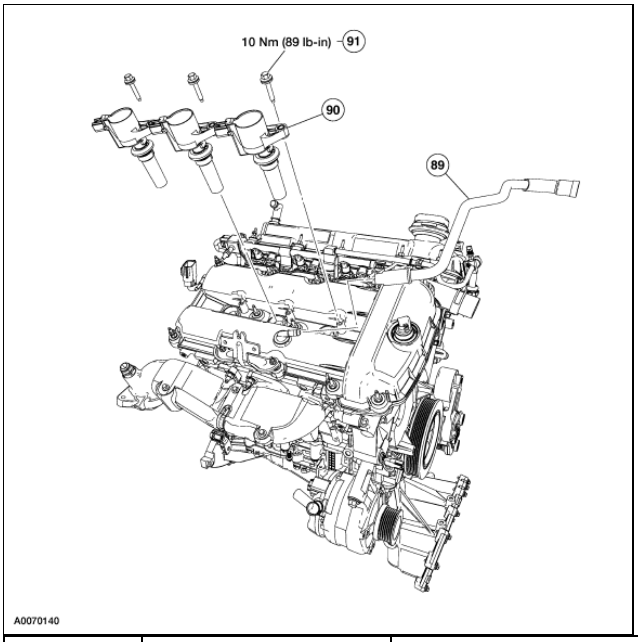
Item	Part Number	Description
71	19N586	A/C compressor mounting bracket
72	W701524	A/C compressor mounting bracket bolts (3 req'd)
73	19D629	A/C compressor
74	W701629	A/C compressor bolts (4 req'd)
75	6754	Oil level indicator
76	W709065	Oil level indicator stud
77	6700	Crankshaft front oil seal Assembly Note
78	6316	Crankshaft pulley Assembly Note
79	N806165	Crankshaft pulley bolt washer Assembly Note
80	W701512	Crankshaft pulley bolt Assembly Note

14. Install the components in the order indicated in the following illustration and table. Illustration 14 of 21.



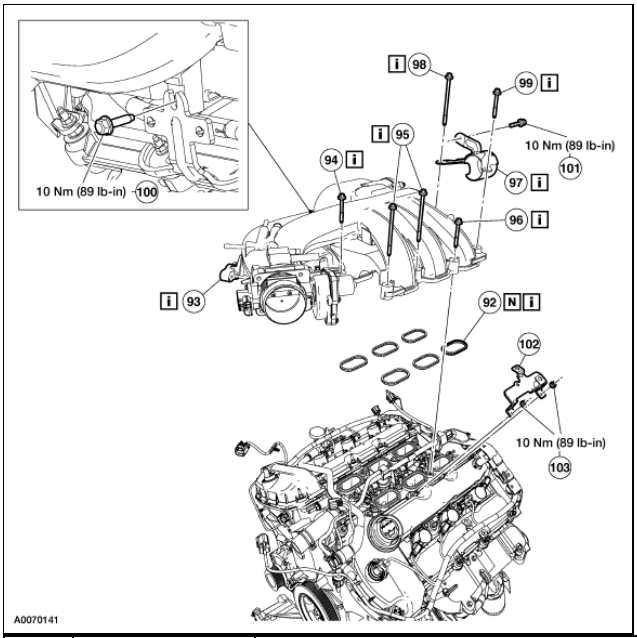
Item	Part Number	Description
81	9431	LH exhaust manifold Assembly Note
82	W701706	LH exhaust manifold nuts (6 req'd) Assembly Note
83	9Y427	Exhaust manifold heat shield
84	W500211	Exhaust manifold heat shield bolts (3 req'd)
85	9J444	Engine appearance cover support bracket
86	W701539	Engine appearance cover support bracket nuts (2 req'd)
87	12A366	LH ignition coils (3 req'd)
88	W708833	LH ignition coil bolts (3 req'd)

15. Install the components in the order indicated in the following illustration and table. Illustration 15 of 21.



Item	Part Number	Description
89		Crankcase vent hose
90	12A366	RH ignition coils (3 req'd)
91	W708833	RH ignition coil bolts (3 req'd)

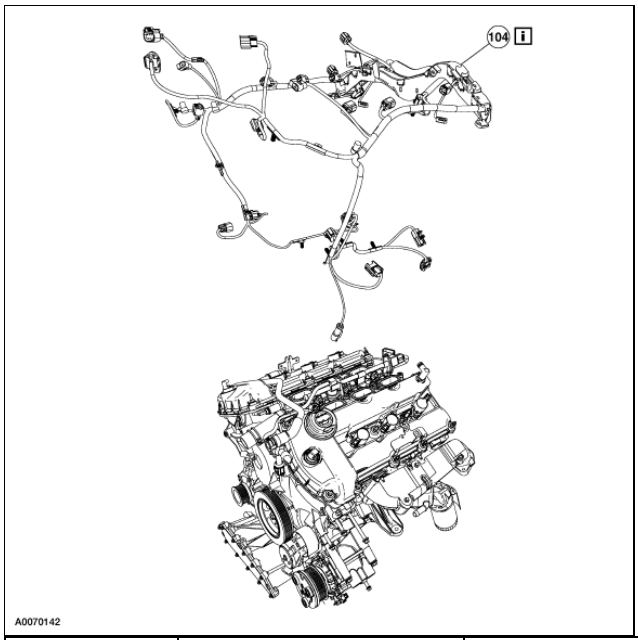
16. Install the components in the order indicated in the following illustration and table. Illustration 16 of 21.



Item	Part Number	Description
92		Upper intake manifold gaskets (6 req'd) Assembly Note
93	9424	Upper intake manifold Assembly Note
94	W701719	Upper intake manifold bolt Assembly Note
95	W701724	Upper intake manifold bolts (2 req'd)

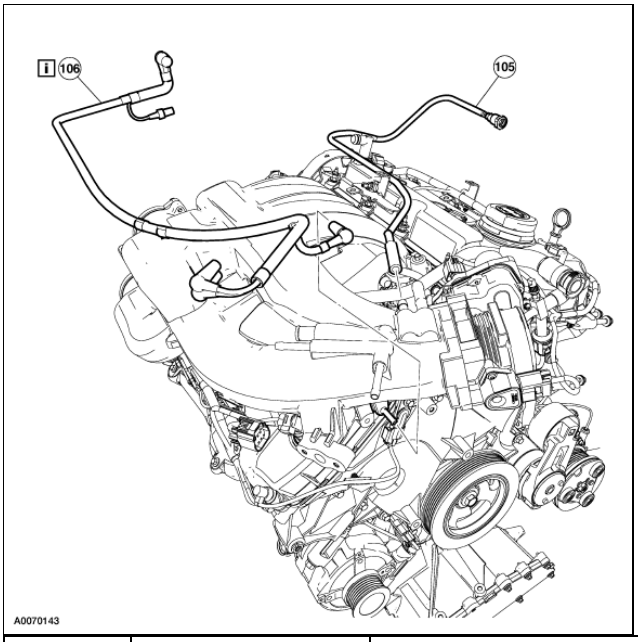
		Assembly Note
96	W701520	Upper intake manifold bolt Assembly Note
97	9G609	Fuel regulator shield Assembly Note
98	W701724	Fuel regulator shield bolt Assembly Note
99	W701520	Fuel regulator shield bolt Assembly Note
100	W701520	Support bracket-to-intake manifold bolt
101	W705779	Fuel regulator shield stud
102	9J444	Appearance cover support bracket
103	W701539	Appearance cover support bracket nuts (2 req'd)

17. Install the components in the order indicated in the following illustration and table. Illustration 17 of 21.



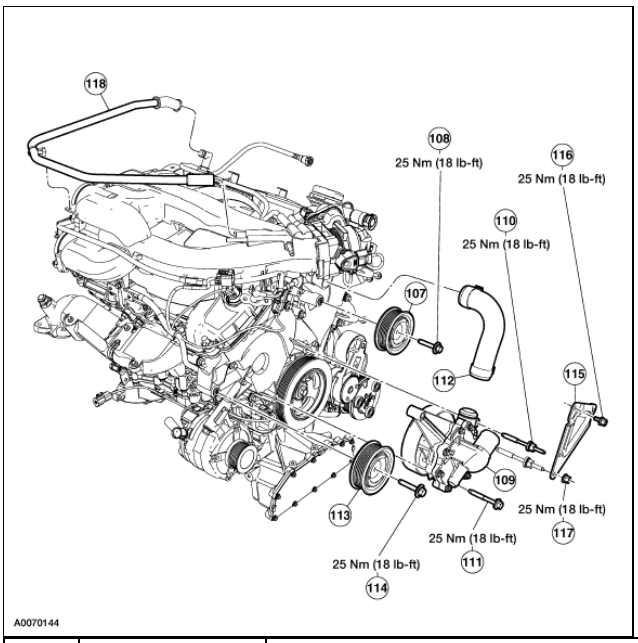
Item	Part Number	Description
104	12B637	Engine wiring harness Assembly Note

18. Install the components in the order indicated in the following illustration and table. Illustration 18 of 21.



Item	Part Number	Description
105	9D289	Fuel vapor hose
106	9E498	Emissions vacuum hose assembly Assembly Note

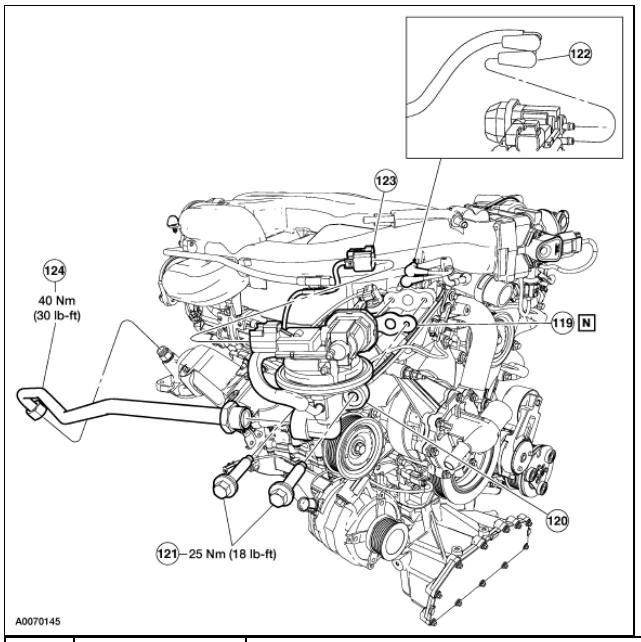
19. Install the components in the order indicated in the following illustration and table. Illustration 19 of 21.



Item	Part Number	Description
107	6C348	Accessory drive idler pulley
108	W704851	Accessory drive idler pulley bolt
109	8501	Coolant pump
110	W704919	Coolant pump studs (2 req'd)
111	W704920	Coolant pump bolt
112		Coolant hose
113	6C348	Accessory drive idler pulley

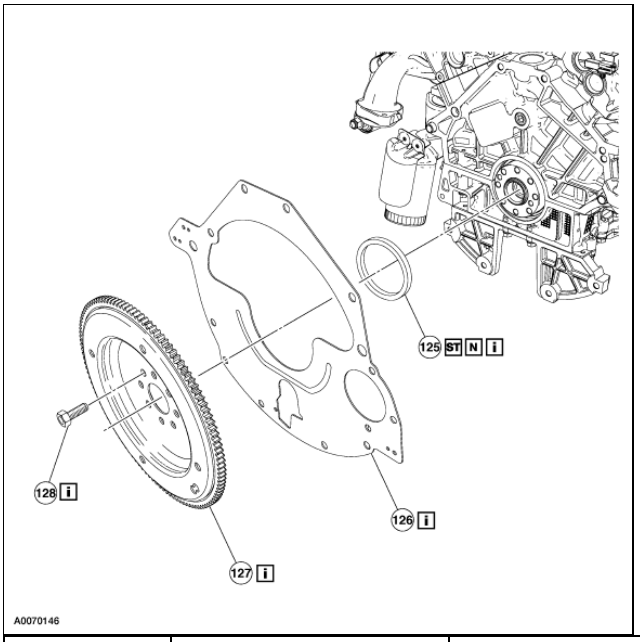
114	W704851	Accessory drive idler pulley bolt
115	9J444	Intake manifold support bracket
116	W701719	Intake manifold support bracket bolts (2 req'd)
117	W701542	Intake manifold support bracket nut
118	6K817	Crankcase emission valve-to-intake hose

20. Install the components in the order indicated in the following illustration and table. Illustration 20 of 21.



Item	Part Number	Description
119	9D476	Exhaust gas recirculation (EGR) system module gasket
120	9Y456	EGR system module
121	W701625	EGR system module bolts (2 req'd)
122	6A005	EGR system module vacuum hoses
123	6754-B	EGR system module electrical connector
124	9D477	EGR system module-to-exhaust manifold tube

21. Install the components in the order indicated in the following illustration and table. Illustration 21 of 21.



Item	Part Number	Description
125	6701	Crankshaft rear oil seal Assembly Note
126	6A373	Spacer plate Assembly Note
127	6375	Flexplate Assembly Note
128	W707366	Flexplate bolts (6 req'd) Assembly Note

Item 1: Engine Assembly Assembly Note

1. Rotate the crankshaft to position the keyway at the nine o'clock position.
